51ST CONGRESS, 1st Session. } HOUSE OF REPRESENTATIVES. { EX. DOC. No. 392.

MESSAGE

FROM THE

PRESIDENT OF THE UNITED STATES,

RELATING TO

The importation of breadstuffs and provisions. A report from the Secretary of State on the subject.

MAY 9, 1890.—Referred to the Committee on Ways and Means.

To the House of Representatives:

In answer to the resolution of the House of Representatives of March 31, 1890, respecting the importation into foreign countries of breadstuffs and provisions from the United States, and the rates of duty imposed upon such articles, I transmit, herewith, a report from the Secretary of State on the subject, together with the accompanying papers.

BENJ. HARRISON.

EXECUTIVE MANSION,
Washington, May 8, 1890.

THE PRESIDENT:

The Secretary of State, who was requested by the resolution of the House of Representatives of the 31st of March last—

to furnish to the House of Representatives a statement showing what, if any, changes have been made by foreign countries since 1879, in the rates of duty imposed upon breadstuffs and provisions imported from the United States, and what laws, if any, have been enacted or regulations have been made in such countries since said date, prohibiting, obstructing, or in any manner interfering with the importation or sale of such articles—

has the honor to submit to the President the papers enumerated in the subjoined list showing such changes made by foreign countries since 1879, so far as statistics on file in this Department justify, to be by him transmitted to the House of Representatives, if, in his opinion, this course be not incompatible with the public interest.

The countries included in the tabular statement, herewith, are: Austria-Hungary, Belgium, France, Germany, Italy, Portugal, Spain, Switzerland, Sweden, the Argentine Republic, Brazil, the Dominion of Canada, and Mexico. From the foot-notes to these statements it appears that—

The importation of American pork and lard into Austria-Hungary has been prohibited since March, 10, 1881, and the sale of American canned meats was prohibited in Hungary in 1884.

The importation of American pork into France has been prohibited since February 18, 1881, and all lard imported from the United States is now subjected to inspection.

The importation of American pork into Germany has been prohibited since June 25, 1880, and American potatoes have been prohibited since 1875.

The importation of American pork into Italy has been prohibited since February 20, 1879.

The importation of American potatoes into Spain is prohibited, and American pork and lard subjected to government inspection.

The importation of American cattle and swine, save in bond, into Ontario, was prohibited April 23, 1880.

The importation of American pork into the Ottoman Dominions has been prohibited since 1881.

The publications herewith transmitted cover previous correspondence on the prohibition of the importation of American pork.

Respectfully submitted.

JAMES G. BLAINE.

DEPARTMENT OF STATE,
Washington, May 8, 1890.

List of accompanying papers.

No. 1.—Tariff changes, in the several countries, on breadstuffs and provisions, since 1879, in tabular form, viz: Austria-Hungary, Belgium, France, Germany, Italy, Spain, Switzerland, Portugal, Sweden, Argentine Republic, Brazil, Dominion of Canada, and Mexico.

No. 2.—Prohibition of American pork in Asia Minor; report by Consul Duncan, of Smyrna, April 20, 1881.

American potatoes are prohibited entry into Spain. American pork and lard are subject to governmental microscopical inspection. The expenses of such inspection are as follows:

Cases containing up to 100 hams, 38.6 cents per case. Cases containing up to 300 shoulders, feet, knees, or tongues, 29 cents per case. Cases containing up to 30 pieces, or flitches, of bacon, 29 cents per case. Lard obtained through fusion, and bacon without muscular parts, are not subject to examination.

* Ten per cent. less than the tariff of 1882.

In submitting the tariff for 1887 Consul General McCall says: "Under the tariff system of Brazil certain rates of duty are established called 'Duties of consumption,' to each and every one of which 60 per cent. is added." Thus 60 per cent. should be added to the amounts in the 1887 column above. There should also be added to said amounts 5 per cent. for "Emancipation tax."

No. 2.

PROHIBITION OF AMERICAN PORK IN ASIA MINOR.

REPORT BY CONSUL DUNCAN, OF SMYRNA.

Turkey also catches the contagion of *Porkophobia* from France, and other European countries that have followed her lead, and forbids the importation of American salted pork into the Ottoman Empire.

This may be regarded as a most extraordinary solicitude on the part of the Sublime Porte for the health and well being of her *Christian* subjects, for it is well known that neither Turk nor Jew ever deigns to touch this polluted meat in any form. This action, then, is taken entirely in the interest of her Christian subjects. The Turks even propose to surpass the French in their zeal, in so far that they order all American pork already in the country to be seized and destroyed, while, I believe, the French Government consents to admit what was actually on the way. Thus, one of the important items of American trade at Smyrna and in the entire Levant is destroyed as the result of the hasty and inconsiderate action, as it would now seem, of the French Government, for the other governments have only followed in the wake of the French. Of course, if it be a fact that American pork is generally, or even very frequently, infected with trichinæ, and therefore dangerous to the public health, every government has not only the right, but it is its duty, to forbid the importation, just as it has the right to establish quarantine against contagious diseases. But if we can credit not only the official reports of several of our most distinguished consuls in Europe, but also so important and trustworthy a body as the Chamber of Commerce of Havre, the French Government would seem to have based its action on entirely incorrect information as to the actual condition of American pork. The latter body urges its own government, as I see in the papers, to rescind its order entirely on the ground that there was never any good reason for issuing it.

For the French Government still to maintain this order after all the information and evidence produced as to the perfectly healthy condition of American pork, and in view of the great damage it has already done, and is likely to continue to do, to an important article of American production and foreign trade, could hardly be construed otherwise than as an intentional hostility to important American interests; and she could not reasonably complain of any measures our Government might see fit to adopt in the interest of public health against adulterated French wines and brandies, which are universally admitted to be very injurious to health, probably much more so than our salted pork.

B. O. DUNCAN,
Consul.

UNITED STATES CONSULATE,
Smyrna, April 20, 1881.

No. 3.

AMERICAN PORK.

RESULT OF AN INVESTIGATION MADE UNDER AUTHORITY OF THE DEPARTMENT OF STATE OF THE UNITED STATES.

REPORT.

DEPARTMENT OF STATE,
Washington, April 26, 1881.

Hon JAMES G. BLAINE,
Secretary of State, &c., &c., &c.:

SIR: In compliance with your instructions, that I should visit the cities of Chicago and Cincinnati and report on the pork industries of those great centers of the trade, I left Washington on the 23d ultimo and arrived in Chicago on the 25th.

Following your directions that I should spare no pains to render my investigations of the various phases of the pork industry, from the raising of the hogs until the product is ready for consumption, as complete as possible, I have the honor to state that I have visited (generally accompanied by stenographers and experts) representive hog-raisers, buyers, shippers, packing-houses, stock-yards, rendering establishments, forwarding agencies, and all others nearly or remotely connected with the pork trade, as well as health offices, and to submit the following report, with accompanying papers, as the result of my investigations.

The statistics and testimony herewith presented were obtained from various sources, and are of such a nature as should forever set at rest all fears or suspicions respecting the sanitary condition of American hogs and the quality of the American pork product, and at the same time entitle the trade to immunity from the attacks of those whose interests might be subserved by injuring the reputation of American pork and lard.

THE HOG AND HOG PRODUCTS OF ILLINOIS.

HOG CHOLERA.

The recent alarm in England consequent upon published reports concerning the prevalence of "hog-cholera" in Illinois—reports said to be based upon published returns of the department of agriculture of that State—made it my first duty to visit Springfield, the capital, to seek an explanation thereof.

Having waited upon Governor Cullom and explained my mission, his excellency gave me a letter to Mr. Fisher, secretary of the agricultural department of the State, who has the supervision of the publication of all agricultural reports.

The agricultural department, it would seem, published two sets of returns—one set supplied by the State assessors and the other by correspondents of the department.

The discrepancy between these returns is very marked, and their publication without an accompanying explanation has afforded a seeming official foundation for reports of a very misleading character. For example, in the returns of the "farmer correspondents" the number of hogs which died of hog cholera in the State of Illinois during the year 1879 is given by the department of agriculture as 182,577, while the number of deaths for the same year, as reported by the assessors, is given by the department as 676,738. It was the publication of these last figures which caused so much needless alarm in England.

I submit herewith an official report from the secretary of the department of agriculture concerning the losses in the State of Illinois from "hog cholera" and his explanation of the apparent discrepancy in the returns above noted:

STATE OF ILLINOIS.

DEPARTMENT OF AGRICULTURE, SECRETARY'S OFFICE,
Springfield, March 28, 1881.

SIR: I have the honor to acknowledge the receipt of your favor of the 26th instant asking for information concerning the extent of loss of hogs in this State from "hog cholera."

The following table gives the percentage of loss of hogs from so-called "hog cholera" during the past five years, as well as the average weights of the diseased hogs, and the figures are taken from the official reports received by this department. Said reports were made by farmers of experience, selected by this department by reason of their high standing and thorough knowledge of the actual state of affairs in their several localities:

Year.	Percentage of hogs died from hog cholera.	Average weight of hogs died of the cholera.
		Pounds.
1876	17+	103
1877	12+	104
1878	14+	108
1879	6+	98
1880	7+	104

The foregoing figures conclusively prove that there is no foundation for the exaggerated statements in circulation concerning the increase in numbers of hogs dying in this State from so-called hog cholera.

There has been a large and steady decrease in the loss of hogs in the State from so-called hog cholera—from 17 per cent. of the entire number of hogs assessed in 1876 to 7 per cent. of the number assessed in 1880.

The number of deaths from so-called hog cholera, as returned by assessors, is given below for the years 1877, 1878, and 1879, which also shows that there is a decrease of over 50 per cent. in the numbers of hogs dying of this disease in 1879 when compared with the previous year. The apparent discrepancy in the return of assessors in the following table is partially accounted for by the fact that spring pigs are not as a rule included in the returns of assessors for taxation, and the principal loss by disease is among young pigs.

The table gives the number of hogs assessed for taxation, number marketed, and the number died of cholera for the years 1877, 1878, and 1879, and conclusively proves that the great majority of hogs reported as having died from so-called cholera were pigs not considered of sufficient age and value to be listed for taxation.

Year.	Number of hogs assessed.	Number of hogs marketed.	Number of hogs died of cholera.	Number marketed and died of cholera.	Number marketed and died exceeds assessment.
1877	2,961,366	2,455,573	1,445,268	3,900,849	939,475
1878	3,335,550	2,273,493	1,391,422	3,662,915	327,365
1879	2,799,051	2,543,278	676,738	3,220,016	421,065

During the years named above there were not less on an average than six hundred thousand brood sows in the State, which number, added to the figures in the last column, will approximate the total number of hogs and pigs in the State in 1877, 1878, and 1879.

The decrease in numbers of hogs dying from so-called hog cholera from 1,391,422 in 1878 to 676,738 in 1879 is about fifty per cent., and the percentage of loss by disease the past year (1880) is about the same as in 1879.

All diseases of hogs are included under the caption of hog cholera, so called.

Your attention is invited to the difference between the average live weight of hogs marketed, 252 pounds, and the average weight, during the past five years, of hogs dying from so-called hog cholera, of 103 pounds, and this difference shows that the deaths occur chiefly among young hogs and pigs.

In view of the above fact, there seems to be very little occasion to question the healthy condition of mature hogs when ready for market.

The production of pork has been one of the leading industries of this State for many years, and the various conditions affecting this interest have been thoroughly investigated by intelligent men of extensive practical experience for years, with a view of obtaining the best results as to economy of production and quality of product.

The improvement in the quality of swine in Illinois has probably received as much if not more attention than in any of the States, and it is a well established fact, confirmed by packers of many years' experience, that for superiority of quality the hog products of Illinois are not surpassed.

The increased attention given to the sanitary management of swine has doubtless had much to do with the decrease of mortality.

Yours, very truly,

S. D. FISHER,
Secretary.

MICHAEL SCANLAN, Esq.,
Chief of the Bureau of Statistics, Department of State, Washington, D. C.

It will be observed by Secretary Fisher's report that the lesser figures are from "farmer correspondents selected by the department by reason of their high standing and thorough knowledge of the actual state of affairs in their several localities." It would appear that these farmer correspondents did not include in their returns*† the deaths of pigs among which the principal losses by disease occur as being of no present marketable value, while the assessors included all.

Taking either statement into consideration, it is apparent that the loss of hogs by cholera in the State of Illinois has decreased from 17 per cent. in 1876 to 7 per cent. in 1880. It should be borne in mind that all deaths of hogs, whether from disease or accident, are "placed under the caption of hog 'cholera.'" It appears from the official returns that the number of hogs assessed in the State of Illinois during the year 1880 was 3,133,557, while the number of deaths from hog cholera and all other diseases as well as accidents was 227,259.

It should be borne in mind that no attempt whatever is made, either in Illinois or Ohio, to deny the existence of the disease known as "hog cholera." Hog cholera, or disease similar thereto, and equally fatal, prevails in all hog-raising countries, as is fully verified by various statements hereto atached. But the prevalence or absence of "hog cholera" may be shown to have no bearing on the quality of the hogs which enter into the market nor on the quality of the meats produced therefrom, it being naturally impossible for hogs which have died from disease or any cause whatever to enter into consumption.

Having visited and conversed with some of the principal hog raisers and well known experts, in Illinois and Ohio, I submit the following

---

* It is more than probable that much confusion has been caused in Europe by the term "pig" as applied in the United States. Here the animal is call a "pig" until it arrives at the age of about six months; and it is not called a hog until it has reached maturity. In Europe the word "pig" is applied in the same sense as the word hog is applied in the United States. Hence, when the Europeans read of so many "pigs" dying of cholera in the United States, they give the word its European application.

† See in connection, statement of Morrison & Co., p. 32, appendix.

statement, fully substantiated by the annexed papers, to show the manner in which the American hog is raised for the market.

HOG RAISING IN ILLINOIS AND OHIO.

The hogs of Illinois and Ohio (and doubtless the same statement would be true in respect of the hogs of the other Western States) are of various improved breeds, mainly high-grade Berkshire and Poland-Chinas, and, as fully attested by Mr. Foster, a well known British expert, in his letter herewith,* are unsurpassed for purity by the hogs of the best British fancy breeders.

The pigs are generally farrowed in April and May and, as soon as they are able to do so, are allowed to follow corn-fed cattle, with the range of grass pasture and pure running water during the summer and fall. When not following corn-fed cattle, the pigs are fed with corn until the spring grass and their age make it possible for the animals to subsist and thrive on grass alone.

Formerly hog-killing was all done during the winter, and the farmers consequently had a special season for preparing their hogs for market; but now that summer-killing, especially in Chicago, has attained proportions nearly as large as the winter-killing, the farmer can find a market for his hogs at any time during the year, and has only to consult his own convenience as to the time for fattening, being sure of finding a market whenever he has a car-load ready for transportation.

When the hog reaches the age of six months or more—and it is previous to this age, and while he has no present marketable value to the farmer, that the principal deaths from "hog cholera" occur—he is put into pens and well fed upon corn and is also given access to pure spring water. Should the hog be attacked with cholera during this period, he is immediately separated from his fellows, and the disease being fatal, the dead animal must be disposed of by burial or utilized as a fertilizer. The suddenness with which this disease affects the hog is shown in the accompanying statement of Dr. Stetson† who observes that "it destroys life almost at once" and adds that "it is impossible to make good meat of such a hog, by any process whatever, decomposition setting in before the death of the animal in most cases."

It may, in fact, be stated as beyond a doubt that all rumors or reports that American hogs, dying of disease, or even by accident, ever enter upon any market in the shape of meat or lard,‡ are founded wholly upon malice and ignorance, for it is not in the power of the hog-meat *curer* or lard refiner, whatever his inclination, to utilize the meat of hogs which have died of cholera, in any edible form that could pass the most superficial inspection.

Mr. Morrison, one of the leading packers of Cincinnati, of thirty years' experience in the business, says:

> I was brought up as a farmer in Europe, and know that the chances of getting diseased hogs into the American market are as one to a thousand in getting the Old World hogs into the Old World markets, for the simple reason, that in Europe the hogs are generally killed by the farmers, who, when they find a hog getting sick, send for the butcher at once, while in America all the killing, for foreign markets especially, is done in certain central localities—three or four days' journey from the feeding grounds—rendering it impossible for hogs attacked by disease to be disposed of as in Europe.

---

* Page 17, appendix.
† Page 22, appendix.
‡ See statement of J. C. Black, esq., page 30, appendix.

A hog that dies from disease or accident can not be cured; he will betray himself immediately. The discoloration of the flesh and skin is such that no art of the curer can remove. Such a hog could be detected at sight in a thousand boxes of meat.

Dr. Ezra Stetson of Neponset, Illinois, a well-known stock-raiser and scientist, remarks as follows:

It makes no practical difference whether Mr. Crump's (the British vice-consul at Philadelphia) estimates are too high or too low. That quite a large percentage of young pigs and a few old hogs die of a disease known as hog cholera all are willing to admit. The loss falls on the producer and not on the consumer, except in the enhanced price paid for the product. It is simply a loss of numbers. It has no effect whatever upon those that survive. The ranks of the human family are being constantly depleted by contagious diseases, but those that escape or survive are in no way injured in their bodily health. Hogs that die of this or any other disease do not find their way to market; those only that are healthy are used in commerce. Since the disease has been known and recognized, no case has ever been reported, or, for that matter, ever can be reported, where swine's flesh has been the cause of human disease.

There is no pork made anywhere in the world that can compare in cleanliness, healthfulness, and all that goes to make a delicious article of swine's flesh, with our American corn-fed pork.

The farmer having a drove of hogs ready for the market sells them to the buyers, who are continually going through the country for this purpose, or he ships them direct to the stock-yards at Chicago or Cincinnati.

Whatever the mode of shipment may be, the shipper knows that it would be useless to forward anything but the very soundest and best animals, for none else could possibly pass the inspection to which they are sure to be subjected, as will be seen further on. As the hogs are from two to five days in railroad transit, and as this transit could not be made by unsound animals, it would prove unprofitable to ship any but the best.

One good effect of the scrutiny which the animals now undergo before being accepted by the packer or exporter has been to completely check the careless handling of hogs which prevailed some years ago.

Instead of driving the hogs to the railroad, as in former times, the farmer, to insure their good condition, now generally hauls them in sleighs or wagons—the mark of a whip-lash, prodding, &c., being sufficient cause for the rejection of a hog by the packers.

They are shipped in well-ventilated cars, fed and watered at regular intervals, and handled with all possible care en route. All that arrive dead or maimed at the stock-yards are almost a complete loss to the shipper.

Upon arrival at the stock-yards* the commission salesman sees to the feeding and watering of the hogs, in order to preserve them in the best possible condition for market.

The dead hogs (for, notwithstanding all precautions, deaths occur in the cars from suffocation, fatigue, omission to water, &c.), are taken possession of by the employés of a company empowered by charter with the exclusive right to seize all dead animals found within the yards. This company fixes an arbitrary price to be paid the owners of such dead hogs—a price so profitable to the company as to insure the watchfulness of its employés.

That a dead hog could escape the vigilance of these interested parties is, at least, not probable. The disposition made of these dead hogs will be shown further on.

---

* Particular reference is here had to the Union Stock-yards, at Chicago. The subsequent description of the purchasing, killing, and curing has reference to Chicago packers. It may be said, however, that in all essentials, surveillance, inspection, curing, &c., what applies to Chicago is equally applicable to Cincinnati.

PURCHASING, KILLING, AND CURING.

One of the most experienced buyers at the Union Stock-yards at Chicago, whose statement is annexed hereto,* says:

As proof of the health and soundness of American hogs, it may be mentioned that the number of dead hogs which arrive at the stock-yards will not average one hog to each car-load, although the cars frequently contain between 90 and 100 hogs each, and will average 70 hogs to the car on the receipts the year round. It must also be borne in mind that some hogs are on the railroad for four, five, and even six days in making the journey to Chicago from points of shipment in the far West, and even these come to hand after all the delay in excellent condition.

I have seen hogs arrive at Birmingham and Wolverhampton, from Liverpool, after being eight or ten hours in transit, and the average of dead hogs to the car was many per cent. more than the average on hogs that I have seen arriving at the Union Stock-yards from the Missouri River, after a three or four days' run.

Mr. Williams, secretary of the Union Stock-yards at Chicago, in his communication annexed hereto,† remarks as follows:

The great bulk of hogs arriving at this market are raised in Illinois, Kansas, Missouri, Wisconsin, Ohio, and Indiana.

They are generally well fatted, weighing from 150 to 450 pounds per head. Upon arriving at these yards they are placed in covered pens, fed with the best of corn, and good pure water given them. If any are crippled in transit they are sold to the cheap markets in the city. Dead hogs are taken possession of by the Rendering Company and made into grease and fertilizer. As to the health of the hogs arriving here, I will say that I have been familiar with this market and have been located in the yards for about twenty-six years, and during all those years I have never known the hogs to be in such excellent condition, so healthy, as they have been during the past year.

It is proper to observe here that this report gives full details, from the farrowing of the pig until the meat product is placed upon the local and foreign markets, and that the various details which follow of purchase, inspection, weighing, driving to the slaughter-house, and the process of manufacture for export are the result of a personal examination made by me, accompanied by a stenographer and experts.

The house at which the examinations were made is one of the largest in the world, and kills and cures both for the English and the home markets. As my visit was unexpected, there was no opportunity for any special display on the occasion, even were it possible or necessary to vary the regular course of business of such a vast establishment, where more than a million of hogs are annually slaughtered. Indeed the packers and hog-dealers of Chicago and Cincinnati were only too anxious for the fullest and severest investigation, feeling confident that through such investigation they could refute calumny and correct erroneous opinions in regard to their trade in the most direct and positive manner.

Upon the arrival of the hogs at the Union Stock-yards ‡ at Chicago, the trains are run along-side a platform and unloaded, the animals passing down an inclined plane into pens. The hogs belonging to each owner being collected into large separate pens, the buyers of the different packers examine each lot with a view to purchase. All purchases are made with the understanding that the purchaser has the right of selection and rejection.

After the lot has been purchased and a selection made out of the general drove, the selected animals are removed to what is known as a sort-

---

* See statement of Mr. Foster, p. 20, appendix.

† Page 24, appendix.

‡ See, in this connection, p. 27, appendix, statement of John H. Porter, esq., of Cincinnati.

ing-pen, where each hog is inspected by the packer's expert, called a sorter. The severity of this "sorting" is such that no animal can pass unless in the best condition.

As no diseased or crippled animal can *reach* this stage, all those rejected are rejected for reasons not connected with disease or injury.

The rejected consist of sows, stags, rough hogs, hogs having any marks from whips or sticks, &c.

After this careful examination, the selected hogs are driven to the scales of the Union Stock-yard Company and weighed, and an official certificate issued.

The price originally agreed upon is paid by the purchaser on the basis of this official weight.

Up to this point the hogs are subject to the rules and regulations of the stock-yard company, and the owners and purchasers must conform to said rules.

Considering the transportation of the hogs by rail from the farm to the yards, and the handling, selecting, and driving to which they are subject from their unloading until they are weighed in the company's scales, it is apparent that neither diseased nor inferior animals can possibly pass the ordeal.

From the company's scales the hogs may be said to come fully into the possession of the purchaser.

The hogs are then driven up an inclined plane, carefully prepared, into the chute which leads to the packing-house. These chutes are elevated covered-ways, connecting the scales and packing-houses, and running over sheds, pens, and roads, thus facilitating the passage of the hogs to their destination. These chutes are from a quarter to half a mile in length, according to the position of the packing-houses. In winter they protect the animals from storms, and in summer (while they get plenty of air, and fresh water being sprinkled from time to time as they slowly move forward), from the heat of the sun. Should any of the hogs become tired they are lifted into vehicles contrived for the purpose, and hauled along after the drove to the resting pen.

Arrived at the packing-house the drove is allowed to rest, in well-constructed buildings, from twenty-four to forty-eight hours, according to the season, so that the hogs may be thoroughly cooled and in suitable condition for killing.

At the slaughtering place is a pen which is generally supplied with about a dozen hogs at a time.

A chain is fastened around one of the hind legs of the hog, and the animal is hoisted, head downwards, and passed on by machinery to the sticker. It is asserted by experts that this is the speediest and best method of killing the hog, preparing him for quick and complete bleeding when stuck. The noise and struggles of the animal when hoisted have almost entirely ceased by the time the sticker is reached, and when it is considered that as many as eight or ten hogs are killed in the short space of a minute, in the large houses, during their busy seasons, it is evident that the time for struggling must be very short.

After being stuck, the hog is passed along by the same machinery which hoisted him, and is allowed to hang until he is thoroughly bled and life is extinct.

With the perfection of their machinery and the expertness and number of their employés, the large houses in Chicago can kill and handle 4,000 hogs in a day with perfect ease and precision.

All the hogs killed are fully and thoroughly bled, and life is extinct before they have passed from the hanging position into the tank of boil-

ing water, preparatory to their being scraped and relieved of hair and bristles, which latter operation is generally done by an ingenious machine through which each hog is drawn.

After passing through this machine the work of scraping is completed by hand.

The hog is next suspended by the hind legs from a rail, opened, the intestines taken out, the head severed from the body, and the inside thoroughly washed with cold water.

The hog is then slit down the back, the spine removed, and the two sides moved along into a room, where the temperature is always maintained at 32° (Fahrenheit). Here it is allowed to hang between forty-eight and seventy-two hours, for the purpose of removing all animal heat, and to prepare it for cutting up.

From this preparatory room the hogs are taken to the cutting-room, where each is examined to ascertain what his weight and quality fit him for. The lightest and choicest are set aside and carefully cut into sides and hams to suit the English market; the sides and hams being most carefully and scientifically trimmed by expert knivesmen into cuts suitable for the different English districts, viz, Staffordshire, Yorkshire, Cumberland, Wiltshire, etc.

The hams and sides are then conveyed to the cellar and assorted into different piles, according to weight. They are here carefully powdered with English refined saltpeter, which gives them the fine color so much admired by the English buyer; the fleshy parts are sprinkled with a mixture of Liverpool salt and the best granulated sugar. They are then carefully laid one upon another, to a height of about four feet, in which position they are kept for ten days. They are then changed, sprinkled with the same preparation, salt and sugar, and the sides which were at bottom placed on top, and *vice versa*. The cellars where these operations take place are flagged, and are kept scrupulously clean, all light being excluded. Here, at a temperature of 40° (Fahrenheit), the meats are kept undergoing the process of curing for sixteen to thirty days, according to the weight of the pieces, and are then removed to the packing rooms. Here they are thoroughly scraped, cleaned, and retrimmed, and the meat minutely inspected for imperfections, such as bruises, taint, etc. The perfect pieces are carefully sorted into uniform sizes, and according to thickness and weight; and are then weighed and packed in boxes containing about 500 pounds each. Each piece before being placed in the box is rolled in fine Liverpool salt, and salt is also sprinkled between the layers.

The boxes are made of the best quality of lumber, grooved and tongued, the aim being to have them as air-tight as possible. The boxes are made of various sizes to suit the different cuts of meat. Each box is branded with particulars of contents and the packer's and company's names.

The meats are now ready for shipment to Europe. They are shipped in special refrigerator cars, built for the purpose, which in summer are kept at a temperature of 45° (Fahrenheit).

The houses which kill and cure for the English market ship their goods in special trains to the port of shipment, where the meats are immediately transferred to the steamer.

They have special agents at the port of shipment, to insure prompt transfer from the cars to the steamer, and branch houses on the other side to take charge of the meats upon arrival, and give them the care-

ful handling which is so necessary, and for lack of which, as will be told further on, meats, originally good and pure, may become unsalable.

The foregoing process of curing, it will be remarked, is the special process of curing for the European markets, both for the Continent and the British Isles.

The same care is taken in the inspection and killing of the hogs for home consumption, but the sides and hams are cut into shapes to suit the American market, and are cured in American salt, without any addition of saltpeter or sugar. The pieces are handled with as much nicety and precision as for the English market, fresh salt being added at intervals of ten to fifteen days.

Although not cured, sized, and cut in the same style, the home meats are in general fully equal to those cured for the English market; and the entire process of buying, inspecting, killing, curing, and packing home meats is the same, except in some details, as that which characterizes the handling of meats for the English markets, so similar indeed that a description of the process of killing and curing for the American market would be almost a repetition of the foregoing remarks.

The preparation of "mess pork" for the home market is as follows: The sides of the hog, exclusive of the hams and shoulders, are cut into strips of from 6 to 8 inches in width, and packed fresh into barrels, with Turk's Island salt. The barrels are then filled with pickle.

Domestic hams are cured in sweet pickle, composed of salt, saltpeter, molasses, and water, in which they are allowed to remain for sixty days, when they are taken out, dried, smoked, and canvased ready for the market.

In this connection, I can do no better than refer you to a communication, hereto annexed, from one of the largest and most experienced curers and dealers in the West (see statement* by William Henry Davis, esq., of Cincinnati, entitled "American ham-curing for the home and foreign markets," which gives a clear and succinct account of the curing of American hams, both for home and foreign consumption). I had the pleasure of going through the establishment, and of seeing the care and expertness with which the hams were handled until they were packed ready for export, and as this house may be said to represent ham-curing in the United States, it appears to me that no hams in the world can surpass the American for purity, cleanliness, and flavor.

In continuation of the disposition of the hogs by the packers, for everything is utilized and nothing allowed to go to waste, it seems necessary to make some statement respecting the lard product.

Leaf-lard and the fat trimmings from the sides and hams are rendered in iron tanks with steam, at a pressure of from 35 to 40 pounds, and cooked continuously from twelve to sixteen hours; after which the tanks are allowed to settle, when the lard is drawn off into tierces, containing about 330 pounds each.

In this condition the lard is an article of commerce, but before reaching the consumer it generally passes through the hands of the refiner. The settlings of the tanks are valued as a fertilizer.

The lean meat trimmings from the hams and sides are made into sausauge; the feet are sold to the glue manufacturers; the tenderloins and spare-ribs are sold fresh to local consumers; the blood, when dried, is used as a fertilizer; the intestines and salt trimmings collected at the time of preparation for packing are rendered in specially prepared tanks and made into soap-grease; the refuse of these tanks is also used as a fertilizer.

* Page 25, Appendix.

HOW HOGS DYING OF DISEASE OR ACCIDENT ARE DISPOSED OF.

In view of the reports of our consuls during the last few years, of the recklessness with which statements tending to injure the reputation of American lard have been disseminated through Europe, and the skillful manner in which interested parties have played upon the fears of the consumers as to the probability of "lard" manufactured from hogs dying of cholera or other disease, or even dying from accidental causes, being shipped from the United States and sold to Europeans as a good article, special pains were taken to investigate this part of the hog-product question.

Consul Potter, of Stuttgart, Germany, transmitted to this Department, in the latter part of 1880, a translation, from a leading German journal, of a communication from a correspondent in Chicago, of which the following is a paragraph:

> You are perhaps not aware that in the stink factories at Globe Station, near Chicago, large quantities of lard are produced from animals which have died from disease, and that much of this lard is exported to England and Germany. It is said that it is only used for lubricating purposes, but who can tell what disposition is made of it by the dealers? This lard is as white as snow and is odorless; and it is possible that many poor persons employ it for culinary purposes who have not the remotest idea of how it is manufactured.

The manner in which this paragraph, by its extravagance, overleaps all probability would render it unworthy of serious consideration or refutation were it not for the fact that the fears of the masses in Europe are excited by all such published statements in regard to American lard. No matter how absurd they may seem to us they gain a certain amount of credence in Europe, and their refutation consequently becomes a duty.

All hogs found dead in the cars upon arrival at the Union Stock-yards at Chicago, or dying therein, are taken possession of by the Union Rendering Company,* a company chartered by the legislature of Illinois for this purpose, and shipped to their rendering works at Globe Station, on the Indiana State line.

The company pays the owners of dead hogs an absolute price fixed by itself, which, as was the intention of the legislature when granting the charter, make the business so profitable as to excite the watchfulness of the employés of the company to such a degree that no dead or diseased animal can escape detection.

Accompanied by a stenographer I visited the rendering works at Globe Station, and was shown through the establishment by its very intelligent foreman, a German, who has had twenty-five years' experience in the business. In passing through, this foreman described, in detail, the process of extracting the grease from the dead animals and converting the residue into a fertilizer.

Upon receipt of the dead hogs from the Union Stock-yards they are run up an inclined plane, by steam power, to the top of the building, and then put into the cooking-tanks. After the animals are thoroughly cooked the grease is drawn off and the residue is treated as a fertilizer.

The grease is then barreled and branded according to quality, "White grease" and "Brown grease."

The time occupied in converting the dead animals into these products is but twenty-four hours.

---

* See statement of the foreman of this company, p. 28, Appendix. Also statement of Dr. Dewolf, commissioner of health of the city of Chicago, p. 33, Appendix.

The grease, both white and brown, is principally sold to soap manu facturers.

Upon being interrogated as to the possibility of any of this grease being sold in Europe as lard,* the foreman of the establishment said:

> There is a smell from this grease, after our severest refining, which renders it impossible to be palmed off as lard. The hogs dying a natural death decompose so rapidly that it is impossible to convert them into meat or lard.

In Cincinnati the same care is taken to seize and send to the rendering houses all dead and diseased hogs. Mr. Thompson,† the very efficient city contractor for the removal of dead animals, says:

> It would seem to be impossible that diseased hogs could be converted into human food in Cincinnati. Our very efficient board of health would render the opportunity to do so almost impossible, even were there persons bad enough to attempt it. The hogs are inspected as they are unloaded from the cars, and if there is anything wrong with them they are immediately taken possession of by the employés of the city contractor, who renders them down for the grease, which is marked "Dead hog grease," and which is wholly used for soap and other manufacturing purposes, and nothing else. No person could possibly mistake this grease, in any form, for lard.

TRICHINÆ.

In addition to the testimony which is presented herewith, from gentlemen whose professional duties brought this subject within the line of their special supervision and investigation, the general testimony of all intelligent and practical men with whom I conversed concerning trichinæ in pork, is, that in all the West not the slightest fears are entertained in this regard.

Of course this general testimony assumes that pork shall not be eaten without being well cooked. All persons, scientists, farmers, packers, consumers, etc., were unanimous in the assertion that all cases of trichinosis, or suspected trichinosis, coming within the range of their observations, were caused by eating pork in a raw state, generally in the form of sausage, and the very inferior scraps which were rejected as unfit for human food.

The people of the United States may be said to be the greatest pork eaters in the world, the agricultural classes eating thereof two or three times a day during the greater portion of each year, and the subject of trichinæ never troubles them.

In the cities pork also constitutes the meat-food of the working classes almost altogther; and when it is taken into consideration that those portions of the hog not cured by the packers (and so never entering at all into the export trade), such as the tenderloin and spare-rib, are considered by scientists as the portions most likely to infested with trichinæ, and that such portions are sold to the local dealers for local consumption, the few cases of deaths from trichinosis in Chicago, and these the result of eating the raw and inferior scraps, afford conclusive evidence of the purity and wholesomeness of American pork. It may be doubted whether any other animal food, if subjected to so much suspicion and inspection, would show so clean a health record.

In regard to the great pork-eating city of Cincinnati, Dr. A. J. Mills, health officer, says:

> In reply to your inquiry in regard to the prevalence of *trichinæ spiralis* in this city, I beg to state that there has not been a single case of this disease during my term of office; and the records do not show a single case occurring in this city at any time previous to that time.

---

* See paper headed "Ohio Hogs and Hog Products," p. 35, Appendix.
† See Mr. Thompson's further statement, p. 35, Appendix.

Thus it would appear that no case of trichinosis has ever been reported as having occurred in Cincinnati. All outside testimony, so far as the investigations went, fully corroborated the statement of Dr. Mills.

Dr. John H. Rauch, secretary to the Illinois State board of health, prepared, at my request, the following official statement:

> Since 1866 eleven deaths have occurred in the State of Illinois of trichinosis, and those deaths, in every instance, resulted from eating raw ham or sausage.*
>
> As a sanitarian, I regard the danger of life from this source as practically amounting to nothing, it being so easily prevented by thorough cooking. No doubt more deaths occur from many other articles of diet that are regarded as harmless, no record of the same being made.

Dr. Oscar C. DeWolf, commissioner of health for the city of Chicago, says:

> Our mortality in this city for the last four years ranged from 8,000 in 1877 to 10,000 in 1880, and only two cases of trichinæ have been reported during that period;† and the fact that the meat rejected by the packers is consumed locally, and is more likely to be infected than that exported, adds materially to the importance of this statement.

Dr. Ezra Stetson, of Neponset, Ill., a scientist and practical stock-breeder and farmer, upon being questioned concerning trichinæ, considered the subject as scarcely worthy of consideration, remarking as follows:

> I suppose you will eat pork with us at dinner to-day. We eat it ourselves continually. We have neither fears nor scruples in this regard so long as it has been well cooked. Trichinæ is not confined to the hog alone; horses, cows, and rabbits are subject thereto; that is, the true parasite. This parasite is effectually destroyed and rendered innocuous by thorough cooking. Just as soon, and no sooner, as all flesh, and even fish, is cooked before eating, trichinæ will cease to be a bugbear.

CONCLUSIONS ARRIVED AT.

The conclusions arrived at in this report are as follows:

1. That the swine of America are of the best and purest breeds,‡ and are fed and fattened for market on corn. It is not believed that swine are thus fed in any other country.

2. That the reports published in Europe concerning the deaths of American hogs from hog cholera are gross exaggerations.

3. That the percentage of deaths among American swine from disease is no greater than the percentage of deaths among European swine from similar diseases.

4. That American hogs which have died or may die of cholera, or from any cause whatever, can have no relation to the meat product (except to decrease it), as such animals can not by any possibility pass the severe scrutiny and inspection to which hogs destined for killing and curing are subject; that, even if it were possible to pass such inspection, no art of the curer could convert such animals into meat which could pass the inspection, in the words of a leading curer, "even of a blind man."

5. That the fears excited and fostered in parts of Europe by interested persons, that any portion of hogs, which have died or may die of cholera or from any other cause, is or can be converted into merchantable lard, are founded on the grossest ignorance, for merchantable lard can not be produced from such dead animals.

---

* During this period the average population of Illinois was over two and a half millions.

† This shows only two cases of trichinosis in nearly 40,000 deaths, whose causes are here reported.

‡ See statement of Charles F. Mills, p. 31, Appendix; also statement of J. H. Cunningham, p. —, Appendix.

6. That every pound of the product rendered from diseased hogs, except that part used as a fertilizer, is plainly marked "brown grease," "white grease," or "dead hog's grease," and sold as such largely to soap manufacturers, and that its color and odor preclude it from being mistaken for lard.

7. That the same care is taken in the handling and manufacture of American lard which is taken in the handling and curing of American meats; and that, as the corn-fed American hog* is the cleanest of its species anywhere, it is undeniable that American lard is the purest lard in any market.

8. That the percentage of American hogs infected with trichinæ (though this question is thus far largely one of supposition) is in all probability, by reason of the superiority of the breed and feed, much less than that among the hogs in any other country.

9. That the freedom from trichinosis of the two great pork-consuming centers of the West, Chicago and Cincinnati, furnishes the strongest possible evidence of the purity of American pork. In Chicago, for a series of years in which forty thousand deaths were reported with their causes, only two cases of trichinosis were reported. In Cincinnati during the same period not one case was reported.

10. That the reported cases of trichinosis have resulted from eating uncooked meat,† shown to be inferior or rejected, and that thorough cooking entirely destroys this parasite and removes all danger, in this regard, from eating pork.

11. That the selection, inspection, and killing of American hogs, and the subsequent handling and curing of the meat, are not surpassed, if at all equaled, for care, precision, and understanding, by the packers or meat-curers of any other country.

12. That, as a rule, the hogs selected for foreign trade are in all respects equal to the very best disposed of in our home market.

13. That the great exaggerations so industriously spread in regard to diseased pork have been aided by the different significations attached to the word "pig." In Europe it is used as the synonym of hog, whereas in America it means the young swine under six months and generally refers to those only a few weeks old. The number of "pigs" that die from various causes compared with the numbers of "hogs" that die is very large, and grossly erroneous conclusions are formed by confounding the two words.

As an earnest of the conclusions to which it is hoped and believed the goverments of Europe which have excluded American pork, as well as other governments, may arrive; and in view of your suggestion, Mr. Secretary, that its publication is due to the candid spirit in which the Government of His Majesty the King of the Belgians has met the charges made against the pork product of the United States, I have the honor to add that, as appears by a circular address on the 28th April last by the Belgian minister of the interior to the governors of His Majesty's provinces, the question of excluding American pork from that country has been decided in favor of the United States.

The charge against our product, under which it had been excluded from Franse, is disposed of in this circular by conclusions the substance of which is—

That disease generated by trichinæ in unknown in countries where, as in Belgium, pork is sufficiently cooked; and that it has been demonstrated by many experiments that the trichinæ can not resist a temperature of 56° Centigrade, and that they are invariably killed at a temperature of 75° to 100° C.

---

* See report headed "Pork-packing in Cincinnati," p. 37, Appendix.
† See statement of Morrison & Co., p. 32, Appendix.

This report also says:

It is important to make known the fact that pork well cooked, whatever trichinæ it may contain, is entirely inoffensive, and consequently no one need suffer from this cause, unless he wishes to, and nothing is necessary except scrupulous persistence in the use of needful precautions of the kitchen.

Remarking that these conclusions of the Belgian minister of the interior are based on a careful report of the Belgian official council of public health, I have the honor to be, Mr. Secretary, your obedient servant,

MICHAEL SCANLAN,
Chief of the Bureau of Statistics, Department of State.

APPENDIX.

[In addition to the gentlemen who prepared the following statements, special thanks are due, for valuable services rendered in the investigations necessary to the preparation of this report, to Charles Randolph, esq., secretary of the Board of Trade of Chicago; John A. Atkinson, esq., and Mortimer Scanlan, Chicago; Col. Sidney D. Maxwell, secretary of the Chamber of Commerce of Cincinnati, and Hon. J. W. Fitzgerald, of the same city.]

AMERICAN AND BRITISH HOGS AND HOG PRODUCTS COMPARED.

Statement of Michael Foster, esq., of Chicago.

MICHAEL SCANLAN, Esq.,
Chief of Bureau of Statistics, Department of State, &c.:

SIR: Having heard that you are out here collecting information and figures relating to hog raising and pork packing in the West, I take the liberty of addressing you on the subject and stating some facts in this connection that may possibly throw some light on this very much misrepresented though all important question. I am aware that the agitation of the public mind on this subject at present in both the Old and New World renders it absolutely necessary that a matter of such international importance should be approached with caution and touched only by those whose experience and observation have gained them a knowledge on the subject of such an extent and character as may be deemed reliable. With this view I therefore wish to say that whatever I here state are facts and not mere assertions; and when I state that my experience with hogs and hog products runs back over a quarter of a century in the leading marts of the world for these two articles of merchandise, I may be allowed the privilege of claiming a certain reliability if not authority for what I state.

I have before me a letter lately received from a friend in Ireland. It is dated "Limerick, February 16, 1881," and contains the following passage:

"The pig trade is very bad at present, in consequence of a scarcity, and the price of pigs here just now is sixty-five shillings per hundred-weight."

To explain this more fully, I will say that the price for the *dressed weight* for the hog in Limerick is equal to about $16 per "long" hundred, or 112 pounds of dressed pork, making it necessary to obtain on the London market no less than eighty shillings, or say $20 per 112 pounds, for the manufactured article out of the Limerick hog, in order to remunerate the packer or "bacon curer" for his investment.

Taking this fact alone simply proves the market price of Irish bacon in London; but when I tell you that at about the same time 80*s.* to 83*s.*, or say $20 to $21 per hundred-weight was being paid for this Limerick cured bacon you could select the finest brands of Chicago bacon in Liverpool at from 45*s.* to 52*s.*, or $11 to $13 per hundred-weight, you will naturally ask, "What is the cause of this great difference in price? Is the American hog so far inferior to the Irish or English hog?" In answer to this last query I say, emphatically, "No;" and I will undertake to prove not only that such is not the case, but that the reversed condition to that implied by this question is the actual position of the hogs of the two countries in any comparison as to quality that may be instituted between them. I have handled in large numbers hogs raised and fed in every county in Ireland, from 1857 to 1871; as a member of the live-stock firm of Thomas Foster & Sons, Smithfield, Birmingham, I handled 50 per cent. of the imported hog supply for the great manufacturing midland counties of England; I have bought hogs out of the crack pedigree droves of England, including that of William Looker, esq., Clenchwarton Hall, King's Lynn, Norfolk,

one of the most celebrated breeders of pedigree hogs in England; I have handled hogs from the royal farms and from the Smithfield Club Show, London, and the Bingley Hall Show at Birmingham; and in all my Irish and English experience I *never saw* finer or purer-bred hogs than I have seen and handled at the Union Stock-yards, Chicago.

I make these statements, knowing well that the "hog question" is at present receiving keen attention from numerous interested p rties on both sides of the Atlantic, and therefore to take up any position from which one may have to back down is not alone impolitic but unwise.

In Ireland, generally speaking, the hogs are bred promiscuously, unless in exceptional cases where the landlord or large bacon curer introduces fine-bred stock for the free use of the peasantry, which is notably the case in the counties of Waterford and Tipperary, and parts of the counties of Kilkenny, Wexford, Cork, and Limerick; but strict adherence to the principles of pure breeding from pedigree stock is "honored more in the breach than in the observance," and hence the diversity of breeds to be found in the national hog of Ireland. In England, likewise, the different breeds of swine are not kept as pure as they are in a general way in America, though of course there are many "fancy" breeders in England who are as fastidious regarding the "pedigree" of their prize pig" as if the ultimate climax of the hog's earthly career was to be the two thousand guineas or the Derby instead of making sausage and pork pies and boiling with cabbage for the sturdy Britons.

Before leaving the subject of breeding I will give some general impressions you very readily get in moving among hogs in the three countries. In Ireland and England you have to hunt up fine-bred hogs if you wish to see any, and even then, as I before stated, you only find them in "spots," the principal portion of the hogs showing unmistakable evidence of the utter lack of care in breeding from any one particular stock. But in western America, as represented at the Union Stock Yards, your attention is frequently arrested by the singular purity of the breeding of whole car loads of hogs, and even passing over these cases where exclusive breeding seems to have been rigidly observed, you can not help remarking how uniformly first-class pedigree shows through most of the hogs that arrive to supply the demands of the day. It is not an unusual occurrence to see all the hogs of one train of, say from twenty to thirty, cars, exhibiting such strong signs of having sprung from the same original stock as to indicate to the most casual observer that they had all been raised in and shipped from the same section. Now as to the question of feeding, I will state that the American hog is the best fed, simply because he feeds and fattens on Indian corn, the finest grain that grows out of the earth, while "slop" butchers' garbage, brewers' grains, distillery swill, and vegetable matter of various kinds enter largely into the diet of hogs in both Ireland and England, with of course a considerable portion of damaged Indian corn, barley, meal, and poor oats. There is this difference, that, as a rule food of all kinds except oats is cooked for the hogs in Ireland and England, thereby eliminating any "oily" or greasy property in the food, while in America the hog gets the corn "neat" or raw, and as there is 8 per cent. more oil in Indian corn than in any other grain, the "oily" or "greasy" condition is present in a more or less degree in American pork and bacon, though the same amount of care in preparation for market as is given to Irish or English bacon, and a little more age than is generally accorded to it by the trade in this country, would certainly free it from this one detrimental though not unhealthy quality.

I will give a very pointed example here to prove that grain in a "raw" state is apt to make "soft" pork if constantly fed to hogs. In parts of Connaught the hogs are chiefly fed on black oats, and first-class bacon curers discriminate so sharply against them that they are unwilling to buy them even at a large reduction from what they pay for hogs from other parts of Ireland, simply because they are apt to be "soft" in the fat. If any proof were necessary to show that Indian corn is the best food in the world for fattening I would call attention to the fact that while the best beeves in Great Britain are "forced" and pampered with "oil-cake" and other artificial food the mammoth steer of the Western plains is brought up to the splendid condition and huge proportions of a prize winner on the pure "golden grain." In this connection I will recite one more case relating to corn as an article of sound, healthful food for hogs. I once bought hogs for a packing firm that was engaged in putting up fancy cuts of meat for the English market, and we were desirous of getting a test as to the relative merits of hogs from the different sections of the country tributary to Chicago. In fact, it took the form of a test between Michigan and Missouri, because the one (Missouri) represented the "pure corn-fed" hog and the other (Michigan) the "mixed-fed" hog; for be it known that Michigan is supposed to feed in no meager proportion such vegetables as pumpkins, melons, squashes, and other similar "truck," with a small modicum of corn to her hogs. There were accordingly bought for this purpose two droves of hogs on two different days, but of an equal number and weight, and as even and nearly alike in every respect as it was possible to get them. They were killed, cut, and cured separately with the following result: The Missouri hogs

yielded 71½ per cent. product and shrank 1½ per cent. in the curing process, while the Michigan hogs yielded 67½ per cent. product and shrank 3½ per cent. in the curing process, thereby proving most conclusively that "corn was king." The idea suggests itself right here that corn should be cooked for hog feeding in this country, but the labor and expense attending such a system precludes all probability of it ever coming into general practice in the West, where hogs are fed in such large droves.

Given that the hogs in Western America are well bred and well fed, does it follow that they should be more subject to disease than the hogs of any other country? I think this question admits of no answer but the one suggested by reason and common sense, which clearly establishes the negative in any unprejudiced mind. You will remember one thing, that the circumstances surrounding the case admit of no comparison whatever between the relative mortality among hogs and cattle in this country, for the reason that a farmer having a cow on the eve of calving takes particular care that the welfare of the cow just then shall be assiduously looked after, as he can realize from $5 to $10 for the calf after having fed it with the cow's milk for, say, from two to four weeks, whereas the sow under similar circumstances is allowed to take care of herself, because her offspring are more numerous, and will, under favorable conditions, take from eight to ten months to put on the 200 pounds of solid pork required at present price of hogs in the country to realize $10.

Thus it will be seen that very young pigs have no present, but a prospective value and that only, on the farm where they are raised. A sow generally will have from 7 to 12 pigs at a farrow, and the death, through accident or otherwise, of any of the brood causes little if any notice from the farmers as there is no feeling of present loss, so that reports of deaths among the very young swine are taken pretty much as a matter of course, especially on farms where the fruitful and healthy sows are constantly increasing the porcine population. At the age of three or four months the pig begins to have a commercial value and also begins to attract some notice from the farmer, but even then he is expected to get his own living in some shape or other around the farm, and as he instinctively understands the maxim "root hog or die," he will do some "tall" rooting in pursuit of his sustenance. It is at this stage of his existence that his troubles come on him, and he may possibly be called on to help swell "cholera reports" and "mortality statistics," but I don't see why it should be matter of surprise if a young pig has to encounter sickness and every other trouble incidental to extreme youth when it is an established fact that all animals, both rational and irrational, undergo a continued struggle for life during the period of passing from immaturity to maturity.

Generally about the age of six months the pig is penned up in the feed lot and is fed all the corn he can eat until he becomes ripe and fit for market, and at this stage disease seldom claims him for a victim. Now, it is monstrously unjust to try to circulate the belief that the American hog selfishly claims a monopoly of the "hog cholera," when the hogs in Ireland and England suffer to a much greater extent proportionately from the same disease, but under different names. What the scientific name of the disease is I do not know, but it is popularly known in Ireland as the "sudor," and in England as the "purples," and as I have seen hogs affected with the disease in all three countries, I unhesitatingly say that it is one and the same, both in regard to its epidemic nature, its symptoms, and its results.

But to assume that "hog cholera" cuts any figure or in any way enters into the manufacture of cured meats for home or foreign consumptions argues a very imperfect knowledge of the pork-packing business of the present day. Certainly "hog cholera" exists in a more or less degree among American swine, as it also does among the porkers of Great Britain, and it will so exist as long as hogs are bred, but then in America it only represents the "waste" of the industry of hog raising, in the same manner that the broken vases, the cracked crockery, the faulty fire-arm, the false mirror, the tainted bacon, and the locomotive wheel with a flaw in it are the "waste" of the business in which the several makers of these articles are engaged.

With the manufacturers here alluded to, the "waste" occurs at the workshop generally during the early stage of the process of making the goods, and in like manner the "waste" occurs with the farmer at a similar stage in his production of live pork, so that "cholera hogs" rarely find their way into the hands of a pork-packer, who, in fact, is doubly guarded, as I shall show, against such an unwished-for visitation. Drovers who travel through the country in the pursuit of their calling are not easily imposed upon, and are therefore not very likely to buy sick hogs from a farmer. In studying their own interests they ship their stock in good condition, and so it invariably arrives at the stock-yards unless delayed on the road by storm or some other untoward circumstance. Arrived at the stock-yard the hogs are taken in charge by a commission salesman, who is particular to have them well fed and watered before putting them on the market for sale, or at all events before they are weighed to the party who has purchased them. The dead hogs, should there be any in the car, through suffocation, the fatigue of travel, or other causes, are taken by the agents or employés of a company having a charter from Springfield, Ill., for the exclusive right

to purchase all dead animals within the premises of the Union Stock Yard and Transit Company, so that no packer, butcher, or outside dealer can have an opportunity, if so disposed, to convert the fat or any portion of the dead hog into an article of human food.

As proof of the health and soundness of American hogs, it may be mentioned that the number of dead hogs which arrive at the stock-yards will not average one hog to each car-load, although the cars frequently contain between 90 and 100 hogs and will average near 70 hogs to each car on the receipts the year round. It must also be borne in mind that some hogs are on the railroad for four, five, and even six days in making the journey to Chicago, from points of shipment in the far West, and even these come to hand after all in excellent condition. I have seen hogs arrive at Birmingham and Wolverhampton from Liverpool, after being about eight or ten hours in transit, and the average of dead hogs to the car was many per cent. more than the average on hogs that I have seen arrive at the Union Stock Yards from the Missouri River, after three and four days' run. I have said that packers were doubly guarded against "sick" or unmerchantable hogs in their operations at the stock-yards, and in doing so I simply stated a fact that admits of no contradiction. Every packer doing business at this point has one or more buyers as the extent of his business may require, and each buyer has an expert assistant whose duty it is to select from a drove the grade of hogs suitable for the house for which the purchasing and assorting is done, and as the "sorter" is quite a factor in the manipulations of the hog business at the stock-yards, I will here quote from an article on the subject I published some time ago in a local live-stock paper:

"Take, for instance, the grading of hogs, or what is known to the trade as 'sorting,' which is very little understood, except by persons actually engaged in the business. The newspapers may state, as they frequently do, that, for some specified reason, the buyers of certain grades of hogs got a 'good sort' or a 'bad sort,' a 'close sort' or a 'liberal sort;' but, no matter what variations the 'sort' may assume, the phrase is Greek, and the meaning a perfect mystery to the untutored in the classic language of 'swinedom.' We will suppose a case where the buyer for a packing-house engaged exclusively in putting up English meats buys one or more car-loads of hogs from a salesman on the condition that they are to be 'sorted' to suit the requirements of the house for which the purchase is made. To facilitate this 'sorting' there are several 'sorting' pens, popularly called 'mills,' established in close proximity to each scale, and it is here in these 'mills' that the really important branch of the hog business is carried out, for it is certainly here that good or bad, prime or inferior hogs are ground out by the man who does the 'grinding' business in the 'mill' in the capacity of 'hog sorter.'"

With the arrangements so elaborate and perfect for selecting just such hogs as the packer wants, it is difficult to see how he can get any but the primest hogs for use in his trade, and having got them by the systematic methods I have just described, it is not likely that he will relax any of his wonted vigilance in having the hogs converted into the choicest cuts of meat, either for foreign or domestic trade.

It may appear strange to that portion of the public who are not aware that pork-packing ranks third in importance in the industrial records of this country—I say it may appear strange that all this fineness of detail is observed in what is popularly supposed to be a very rough and ready, commonplace business, but nevertheless such is the fact, and furthermore the principle on which several pork-packers here at the stock-yards and throughout the West run their business is to shut their "eyes on expenses," and endeavor by every means that the skill and ingenuity of experienced workmen can devise to get up an article that will be a credit to their houses and satisfactory to their customers. The majority of the packing-houses located here pay their skilled hands from $3 to $5 a day, and generally hire them for a season at these figures. Foremen over the different departments of the house get from $1,500 to $1,800 a year, according to their knowledge of the trade, and generally superintendents are paid from $1,800 to $2,500 a year.

The work is divided into gangs as follows: The killing gang, the cutting gang, the cellar gang, the packing gang, and the "roustabout" or "shoo-fly" gang. Each gang is under the direction of a "boss" who is accountable to the foreman of his department for the work performed by the men under him, and the foreman in his turn is held responsible for the running of the section of the house over which he is placed. This I should say is pretty good discipline for a packing-house, or indeed for any enterprise where organized labor is brought together for the prosecution of a class of work that depends mainly on skill and unremitting care for a successful result.

To describe the working of a large packing-house in detail is not necessary here; therefore I will confine myself to a brief mention of the cutting, curing, and packing. I have always found that the operations of the cutting gang have had more interest for strangers and even old habitues of a packing-house than any other section of the work. There is something almost akin to fascination in watching how deftly a well-

trained knifesman carves a picture in pale pink and white out of the rough side of fresh pork that is placed before him on the cutting bench. It looks like exaggeration to call a side of bacon a picture, but when the "trimmer" puts it out of his hands ready for the cellar his enthusiasm may well be excused when the symmetry, squared ends, and fine lines of the work give it the appearance of having been cast in a mold, and though not a picture in the artistic sense it certainly is a masterpiece from the hands of a mechanic. From the cutting room the meat is sent down through a chute into the cellar, where it is subjected to an ice-cooling process to drive out the last remaining particle of animal heat, after which it is very lightly sprinkled with saltpeter or some other mixed "cure," of which, however, this last-named article is the principal ingredient. After this it is thoroughly salted and piled one on the other with as much mathematical precision as if the work were done under the guidance of a plumb-line. After it has lain in salt for a week or so, it is again "overhauled," though overhauling is not looked upon with favor by packers who want to get a fine "cherry-red" color on their meat.

Packing day comes around in due time and the meat is shipped out under the inspection of an inspecter belonging to the house or one who has been sent to get out some order that has been bought from the house for shipment. In either case the strictest attention is paid to the quality of the meat its age and condition: and everything that does not rank first-class is re-inspected and will ultimately be packed and shipped to the pineries, the mines, the plains, the fisheries, the collieries, and the South, or any other market where they wish a second-class article at hard-pan prices and where epicurean tastes are not cultivated as they are with the over-fed Briton or the dainty Gaul.

With this showing, it is not an unreasonable assumption to contend that the American pork-packer equals the manufacturer or merchant of any country in his desire to put before the public an honest article of food; and when it is considered that his wishes in that direction are backed by proverbial enterprise, unfaltering liberality, and unlimited means, it may safely be stated that he has achieved a genuine success which will surely overwhelm the obstacles that jealously has ineffectually thrown in his way.

In this review of the hog trade at this point, I have not as much as once mentioned trichina, the prime cause of the present great outcry against American pork. I have omitted this purposely to avoid a purely scientific question that I am incapable of handling, but I can nevertheless give my ideas on the subject from a practical man's stand-point. I do not know whether it is known to the American public, but at all events it is well known to the people of Ireland and England, that measles exist to a very great extent among the hogs in both the countries named, and when packers or "bacon-curers" happen to get some of them in their purchases, they simply "dock" the seller of such pig 4*s.* or $1 per hundredweight on the measled pig. In England they are more severe in their dealing with measly pigs; they sell the fat to the tallow-chandler and destroy the lean meat.

I believe the trichina of America and the measles of Great Britain are analogous from the many similar features they present, but I never knew of any one being injured from eating "measly" pork in either England or Ireland, because they cook pork and all other white meat to the point where it is certainly "overdone," and if it had not been for the cannibalism of some of the people in this and some European countries, who persist in eating raw pork, we perhaps would never have heard of trichinæ outside the laboratory of the chemist or the lecture room of the scientist. How can you protect a man who will go deliberately and eat raw pork, heedless of its condition and in direct opposition to every dictate of reason and every decree of civilization? We claim a superiority over the Fiji islanders, forgetful that we have cannibals in our midst who eat raw pork of every conceivable age and quality, and then express holy horror at the Fiji man eating "raw missionary."

American pork is sound and wholesome and vastly superior to what it was fifty years ago, and yet the number of deaths from eating it during the past half century is not enough to be even remembered by the ordinary run of mankind, and is only made matter of record in some bureau of extraordinary causes of mortality. A mere observance of the most primitive laws of civilized life, which demand that we make a distinction in the matter and manner of taking our food between the cannibal and ourselves, would be the surest safeguard for American or European pork in the provision markets of the world.

I remain, yours, faithfully,

MICHAEL FOSTER.

HOG RAISING, HOG CHOLERA, AND TRICHINA.

Statement by Dr. Ezra Stetson, of Neponset, Ill.

I was educated a physician, but for the last twenty to fifty years have been extensively engaged in farming here. The statistics of the losses among swine show that the dead hogs never found their way to Europe. They imagine in Europe that the dead animals enter into the Chicago slaughter-houses.

I contend that American corn-fed pork is the best pork that is made in the world anywhere. I have been on the other side of the "pond" and have seen their hogs; there can be no better article of pork made than is made from corn, grass, and cold water; it is the most healthy feed in the world. We raise on our farm a great many hogs—from three to five hundred a year. I eat our own pork. I am not afraid of trichina; only barbarians eat raw pork or raw meat of any kind. So far as hog cholera is concerned, where hogs are kept together in large numbers and get infected it is because sanitary regulations are not complied with.

You have heard of men talking of typhus fever—for it is now almost a matter of history. Where men in great numbers have huddled together, on shipboard, in camp, where armies were gathered together, they had the fever—the plague they called it in olden times. It is simply typhus fever. It has the name of hog cholera, and it will go by that name, and all creation can not stop it now. At the beginning of the disease, where old and young are not separated, the weak ones are affected, and the larger the herd or swine, the greater the intensity of the virus or poison. This disease gathers intensity by numbers.

Is the attack sudden?

It becomes so potent that it almost destroys life at once.

Your experience is that the hog affected with it will not make a good meat?

It is impossible to make good meat by any process; that hog is not made into meat; the decomposition sets in before the death of the hog in most all cases.

What is the process of raising hogs; are they allowed to run loose, and how long?

We raise our pigs, and we sell them at any age we think we can make the most money; but our pigs that are dropped in March, April, and May, if not disposed of, are most always kept eighteen or twenty months, sometimes two years, before being disposed of. The sows are fed on corn, grass, and cold water.

Don't you think that many cases of so-called hog cholera are from exposure?

Occasionally. The loss of numbers is the best evidence in the world to show the disease; it has the name of hog cholera; there are very few hogs that are perfect; and they are more likely to die of pneumonia than almost any other disease.

Where the deaths are very sudden the hogs die of paralysis of the heart; it arrests the circulation of the blood. There are probably a thousand hogs raised in this State where one was raised fifty years ago. We convert all our corn into pork to beat the railroads; we can not afford to pay transportation; we must consume our coarse grains on our farms, and our meat is certainly better than could be made in Europe.

The hog is the most prolific animal we have; they have from six or eight to twelve and fifteen at a litter. Of course the mortality among small pigs is large; the young pigs do not enter into the reports; they enter into no sort of calculation whatever. We have lost from six to thirty pigs, but those are never included in the count. The loss during the cold season and inclement weather is much greater than in warm weather.

I have felt that we needed quarantine regulations between the States as well as in the States. For instance: If I have cholera among my hogs, it is against public policy for me to remove them from my place, because I may communicate the disease to my neighbor. If they are diseased hogs, I have no business to ship them. I would have local inspectors in every township, and no man should be allowed to remove his hogs from his own place unless they were in perfect condition. That would be public policy anyway. It would be a matter of economy to do that.

What is your opinion, as a scientist, of trichinæ?

The trichinæ scare is one of the silliest things ever invented, even though there is an occasional case found. I suppose you will eat pork for dinner to-day; we eat it ourselves; we have no scruples of conscience about eating pork when it has been well boiled. Trichinæ is not confined to the hog alone; horses, cows, and rabbits are found with trichinæ; that is the true parasite.

What has been the very worst kind of scarecrows are the scientific theorists; they have been imagining all sorts of things to sustain their theory. Now this man ——— has been exercising a horrible influence in animal products; and he has a sort of quasi authority from our Government as having been appointed by Commissioner Le Duc. I had designed to give Secretary Blaine my views, to show them the pernicious effects an regard to our commerce.

I claim, and I have so written and published for a good many years, that hog cholera is an unnecessary disease; it is produced by bad sanitary arrangements. I would

assist sanitary laws, as men do under like circumstances; I have used carbolic acid for the last fifteen years among my swine. I commenced at first by sprinkling their sides; I have also used crystallized carbolic acid and carbonates of lime; and for the last eight or ten years I have been giving my hogs carbolic acid every time they drink, and if they had the disease it has been in so mild a form and they have been so healthy that I did not know anything about it. My attention was first called to this from a report of the Commissioner of Great Britain investigating pleuro-pneumonia.

Now, some assert that corn fed hogs are fatter, but that there is less substantial meat than on pea-fed hogs; what is your opinion?

Well, if we could raise pease I would feed them mixed feed; pease are nicer feed than corn is, but our climate does not raise pease. You can not develop a hog much better on pease than on corn.

Then the corn-fed hog is a clean good hog?

He is the best hog in the world.

Do you think there is an interest among farmers to keep improving the breed of the hogs?

Some claim that by too much breeding the hog lost vitality, that he had been improved so much that he had lost his vitality. Naturalists tell us that hogs have been derived from the wild boar of Europe and the wild boar of Asia. Now, the hog of India is one that takes on flesh remarkably fast, and these two races have been crossed together. As they approximate the hog of India they are all fat, and as they approximate the wild boar of Europe they are all bone and gristle. The happy medium is in combining the two distinct races of the hog, and that of the Poland-China hog combines more points of profit than any other breed of hogs at the present day.

How are the hogs transported from the farm to the railroad car?

No fault can be found in the way they are transported to the cars. At this day nine-tenths of the hogs are taken to the trains on wagons and sleighs; they are not worried so much as formerly, but are carefully handled. They are carried in double-decked cars, but there is hardly surface room enough.

What do the farmers do with their dead hogs?

The hogs, like a dead man, should be removed as a nuisance; although it is not fashionable, yet all the dead hogs should be cremated, and no owner of the dead hogs should be allowed to sell them. I would prohibit it by statute law, making it a nuisance to traffic in dead or diseased hogs.

Could it not be possible for farmers to turn them into fertilizers? No, sir; we are not suffering for fertilizers; we never bought any; it might be tried out into grease.

As to the necessity of this sanitary regulation, Secretary Blaine will doubtless make a recommendation; * * * it should have been done, now it must be; each State, at any rate, can make its own law. There must be uniformity in the laws; there ought to be a general sanitary law. There should be State supervision, and there should be national supervision. * * *

The water furnished to the hogs is medicated every month, or oftener if necessary, with crude carbolic acid. The object of this medication is to promote the porcine appetite and prevent disease; and that object is achieved. By supplying his swine constantly with fresh water medicated in this manner, and by constructing their pens and lots so that they are never in want of pure air, and by other hygienic instrumentalities, Dr. Stetson effectually prevents hog cholera on his farm. He is never troubled by it, even in the seasons during which it rages most destructively around him. His methods with respect to this matter are the result of his knowledge of comparative physiology and pathology, and are well worth the careful study of hog breeders and raisers through the country.

[Extract from an article prepared for publication by Dr. Stetson.]

Since the foregoing was written some new-fangled notions have come to the surface that demand attention. First comes France, with an edict prohibiting the importation of American pork; their savans had just discovered that there may be trichinæ in American pork, which would render it unfit for human food. Since this edict has been promulgated an attack of trichinous disease has broken out in their own country, and from eating the raw flesh of French fattened swine. The truth of the matter is, that trichinæ are occasionally found in swine and other animals in all parts of the globe. Now the remedy, or specific rather, is well understood by all civilized people. This parasite is effectually destroyed and rendered innocuous by submitting meat containing them to the boiling point of water. This cooks the parasite, and no flesh of any kind is safe to be used as human food until its temperature has thus been raised. Trichinæ have been found in the flesh of the ox, hare, sheep, and particularly in the rabbit, of which the French are noted consumers. Just as soon, and no sooner, as the people practice the cooking of all flesh, and even fish, trichinæ will cease to be a bugbear.

There is no country in the world where government supervision of food and drinks is so strict as in France. While I do not complain of this being an evil in itself, if their supervision was extended to the manner of fattening their domestic animals for the butcher, this supervision would be much more satisfactory. With the exception of their veals all other meats are very mediocre if not execrable. Their beef is scraggy; mutton insipid, and horse-flesh blue—of their pork, bah!

No person after seeing their swine fattened, as I have done, would ever hanker after French pork. A few miles from Havre I had occasion to pass a pit of a few acres in extent where the human excreta of this large city was daily deposited. In this pit, at the time I saw it, were somewhere from 50 to 100 hogs, rooting and smelling for their daily bread. Here were all the parasites of the human system deposited in this cesspool for the hog to eat and grow fat upon, and be eaten in their turn by the very Frenchmen who turn up their noses at American corn-fed pork.

It is a matter of natural history that the ova of the tinea (tape-worm), if eaten by swine, will in them produce a disease called measles. Now, this same measly pork contains the ova of the tape-worm, and will reproduce itself in the human family when swine's flesh not thoroughly cooked is eaten by man.

Next comes Mr. Crump, the British vice-consul at Philadelphia, with his statistics of the mortality of the hog in America. It makes no practical difference whether this man's estimates are too high or too low. The slaughter of the innocents began before Saint Bartholomew's day, and will continue to the end of time. That quite a large percentage of young pigs and a few old hogs die of a disease known as hog cholera all are willing to admit. This loss falls on the producer, and not on the consumer, except in the enhanced price paid for the product. It is simply their depletion. The ranks of the human family are constantly being depleted by contagious disease, but those that escape or survive are in no way injured in their bodily health. Hogs that die of this or any other disease do not find their way to market, and only those that are healthy are used in commerce. Since this disease has been known and recognized no case has ever been reported, or, for that matter, ever can be reported, where swine's flesh has been the cause of human disease.

This sensational story has only been gotten up in the interest of parties who are trying to depress the price of one of the great staples of American produce, and one that the laborers of the Old World can not and will not see destroyed. There is no pork made anywhere in this world that can compare, in cleanliness, healthfulness, and all that goes to make a delicious article of swine's flesh, with our American corn-fed pork. Corn, maize, grass, and cold water are the chief factors in making the American hog. In contradistinction to the slop and garbage-fed animals of Europe, we have a decided advantage in a sanitary point of view. Having eaten pork for very nearly three-score and ten years, a large proportion of the time a practitioner of medicine, I can affirm in all good conscience that I have never seen a case or had reason to suspect a case of trichinous disease. Aside from a few cases reported in the Journal of Medicine and the secular press, cases of trichinæ are more rare in America than the deaths from the bites of mad dogs. I do not believe that a single American citizen ever ate, or contracted this disease from eating, raw meat. It is only barbarians that eat raw flesh of any kind.

ARRIVAL AND HANDLING OF HOGS IN CHICAGO.

Statement by Geo. T. Williams, esq.

UNION STOCK YARD AND TRANSIT COMPANY,
Chicago, April 9, 1881.

DEAR SIR: Your letter of inquiry, respecting the live-hog business of the Northwest, their condition, manner of handling the same, etc., is before me. In reply will say that the principal part of the hogs raised and fatted in the Northwestern States come to this market, both for packing here and shipment east. The receipts of hogs at this point for the year 1880 were 7,059,355; the number of head packed here for the year was 5,664,366; the number shipped alive to Eastern markets were 1,394,990; the number of head packed during the winter packing, from November 1, 1880, to March 1, 1881, was 2,781,064; there are packed during the summer, from March 1, 1879, to November 1, 1880, 2,971,127. The great bulk of hogs that arrive at this market are raised in Illinois, Iowa, Kansas, Missouri, Wisconsin, Ohio, and Indiana, and usually reach this market from five to forty-eight hours from the time they are collected in country. They are generally well fatted, weighing from 150 to 450 pounds per head. Upon arriving at these yards they are placed in covered pens, fed with the best of corn, and good pure water given them. If any are crippled in transit they are sold

to the cheap markets in the city. Dead hogs, if there are any, from being overloaded, are sold to the rendering company, and made into what is called grease. The hogs that are in fine, healthy condition are sold to the packers or Eastern shippers. Those sold to packers go into mess-pork, hams, shoulders, long and short clear sides, short rib and various other cuts, and lard, all of which is nicely handled, passing into cooling rooms before placed in pickle, or dry-salt cure.

As to the health of the hogs arriving here, will say that I have been familiar with this market, and located in the yard business for about twenty-six years, and in all those years I never knew the hogs to be in such an excellent condition, so healthy, as they have been during the past year. There never was a crop packed in Chicago more healthy, and that made so fine hog product, as the past year. I have not heard of a single case of trichinæ pork or an unhealthy condition of hogs or hog meat at any packing house in the city during the past year; and you will find this to be the universal answer, inquire of whom you will, that in no year has the hog and the quality surpassed the year of 1880 and 1881.

Respectfully, yours,

GEO. T. WILLIAMS,
Secretary.

MICHAEL SCANLAN, Esq.,
State Department, Washington, D. C.

AMERICAN HAM-CURING FOR THE HOME AND FOREIGN MARKET.

Statement by William Henry Davis, esq., of the house of S. Davis, jr., & Co.

CINCINNATI, *April* 20, 1881.

DEAR SIR: The founder of the house began business in provisions in this city in 1835. Then the packing of pork and beef was chiefly in the winter months, and the greater portion of it was for account of dealers in the Eastern cities. The transportation of the product of that section of the country was by steam and flat boats to New Orleans, thence by vessels to Eastern ports; this required six to ten weeks' time on way. Later in the season bacon for Philadelphia and Baltimore was taken up the river to Pittsburgh, thence by canal and rail. Now provisions are carried from this city to New York by rail in six and eight days.

Changes as great as this is in matter of transportation can be cited in the curing of hams in the West. In early years many hams were cured in country towns with plain salt; they were long and roughly cut. While the city hams were trimmed better, most of them were cured in bulk with a slight use of saltpeter.

In 1841, the former senior of the house cured a moderate number of what were termed fine hams.

With many people in the West there was quite a prejudice against hams cured other than in a plain way.

Until about 1845 there was but a small fraction of the hams cut from the hogs then put up for the Western and Southern markets, that were cured in pickle.

It had been the custom with Eastern provision dealers to place their hams in pickle and forward them in tierces and hogsheads. But those hams were not equal in quality to the hams prepared to-day by the leading curers of the West, whose markets are now almost all over the world.

Instead of a small portion of the hams prepared in the West being of fine cure, as was the case thirty-five years ago, it can now be stated that quite a small number are plain cured. This change has greatly increased the consumption of hams, for all classes now realize the economy and advantage in many ways of a well-cured ham, *which is well cured and not too salt.* For the trade of our own country short-cut hams are preferred. There is an advantage in a long-cut ham if kept many months; the butt protects and prevents a too rapid drying of the better portion of the ham.

Hams are cut from hogs well cooled, but they are usually spread upon floors or racks with a small quantity of old dry salt* for a day or two. The hams are examined before salting and before being placed in pickle, to see that there are none that show any outward signs of bruises, and very coarse hams are set aside, and often the sizes are assorted. Hams are then placed in large vats or casks and pickle added. In the use of sweets, dry sugar is the best. The hams are changed over from three to four times when in pickle; this is done to give more even cure. The number of times in changing hams varies as the desire of curer may be for more quickly curing, and somewhat depends upon the weather. The time taken to cure rests upon the size of the hams and the weather, the curing process being quicker in mild weather than cold. It

* Salt free from bitter water, not fresh from licks.

may be said that the most successful seasons for curing are when there is steady moderately cold weather. Hams are kept in pickle from six to ten weeks; they are taken out, washed, and drained with the shanks down, then the hams are hung by the leg in smoke-houses, and sometimes left to dry before the smoke is placed upon them.

Afterwards they are taken from smoke-houses and carefully tried; even a ham that may only be considered, by an expert, prospectively bad is set aside. The ham is then branded, papered, and placed in muslin, closely sewed. For the home markets hams are dipped in a wash, labeled, and then hung up in racks in a cool, dry place, ready for packing.

For the foreign markets hams are usually of small or medium sizes. Generally they are hung to dry before canvassing. Of late, the hams after being dried are covered with very light muslin, followed by thin paper, and a heavy muslin is sewed upon them. We do not place wash upon the covers of these, unless it be late in the season, and then it is a white wash.

Winter shipments are sometimes in tierces; as the season advances hams are placed in partially open crates. There are more labor and cost in the preparation of hams for foreign shipment than for the domestic market. The modes referred to are more applicable to shipments to France. The demand from that country for past three years has greatly increased, and the dealers have reported that American hams have been steadily gaining the favor of their customers. Trade now, though, is seriously interrupted, as the inspection of meats in France, with its delays, confiscations, costs, and the order the hams are left in after inspection, deters further orders.

Something may be stated about hams found with bruises inside, without any surface indications or means of detection by curers, and only to be discovered when cut. It seems strange to state, but there are probably more to be found in proportion to the number of hogs packed than was the case thirty years ago. And yet hams are better for consumers now than then. Why? The hogs are of better breeds. Feeders many years ago found market for their hogs chiefly in the winter; this caused hogs to be older when killed than now. With the ice-curing and increased growth of cities the demand is for every month in the year, so that hogs are fattened at an earlier age and quicker; their frames and bones are not as strong as the old-time hog, and slips and bruises in transportation are more likely to affect them in the joints.

More care in driving and transportation should be used. The proposed improved stock-cars will greatly remedy all this. A pattern of the new cars was recently exhibited here, and you probably have drawings of same. This is mentioned to counteract the feeling with many consumers of hams that reddish coloring, and sometimes bruises and breaks in meat at joints (which are more likely to be found in heavy hogs), are often mistaken for bad condition of the animal.

The keeping of hams and their cooking, if well understood, would greatly increase their use. The chief fault is that few persons boil, bake, or roast a ham sufficiently, and, when broiled, know how essential it is to have hot coals to cook with, and serve when hot.

Perhaps these are more details than you may have desired, but we respectfully submit the above for your perusal.

Very respectfully, yours,

WM. HENRY DAVIS.

MICHAEL SCANLAN, Esq.,
Bureau of Statistics, Department of State, Washington, D. C.

HOW TO KEEP AND HOW TO COOK HAMS.

[Inclosure in Mr. Davis's statement.]

SELECTING HAMS.

There is no article of food about which so little is really known as the ham. The consumer is puzzled to pick out a good ham or piece of breakfast bacon, and even subtle judges of hams—ham experts—are unable to tell a good ham from a poor one when they see it; therefore the only safe guide for the general consumer is to trust to some standard brand, which for years has been pronounced excellent in all climates, and at any age—one, two, or even four years.

Hams should be taken out of casks on receipt *and hung up in a cool, dry place.*

When mold appears it should be brushed off.

Hams a year old are often preferable, and the same ham can be kept safely two, three, or four years, each year adding to its richness.

Although the trade demands a short-cut ham the long-cut hams have their advantages. The advantages of this cut are that the center of the ham is protected from the strong acid of the smoke and does not dry as quickly as the short-cut.

TO BOIL HAMS.

If early in the season boil the ham as it is; if later, it should be scraped and washed.

If the ham is six or eight months old it should be *soaked* in cold water twenty four hours, and longer in proportion to its age; then boil it slowly, the water being kept at a quiet, low, scalding heat; it should not boil violently, only simmer.

A ham weighing 13 to 14 pounds should boil slowly or simmer *eight* or *nine* hours. After boiling it may be placed in ice water, to prevent the escape of its natural juices, or it may cool in the same vessel.

An old ham may be boiled with a moderate amount of coarse fresh beef placed in the water; this imparts a delicate freshness to the ham, though when cooked this way it should not be kept too long.

TO ROAST OR BAKE HAMS.

A ham to be baked or roasted should be *first boiled*, but not so long as directed above. After boiling, take off the skin, baste the ham with soft powdered crackers or bread crumbs, and place it in the oven until it changes to a dark yellow color; or before baking it may be dressed with flour and cloves, or with sugar.

One of the simplest ways of cooking is to take a ham and soak it two or three hours, even if of recent cure—much longer if an old ham, or according to age—and place it in the improved roaster and baker, a deep pan for roasting or baking with a cover. A medium-sized ham is cooked in three or four hours, and requires very little attention.

Served hot or cold it will be found richer than when boiled.

The *dry part* of a cooked ham may be trimmed off, chopped fine, and warmed up with butter, eggs, and flour, making a palatable dish, and thus economically consuming the whole ham. I also makes good sandwiches.

BROILING.

A broiling ham should be good-sized. Strip canvas off and keep ham in a large thick muslin sack; tie closely for protection and to prevent drying. Cut thin slices from the butt end with a sharp knife and saw (there is no economy in cutting a ham in the middle, as you leave the two cut sides to dry at once); then place the slices over bright hot coals, turning quickly two or three times until the fat is browned. Eat while hot, or, to be brief: "If 'twere done when 'tis done, then, 'twere well it were done quickly."

Some cooks recommend the separation of the lean from the fat, broiling the former and frying the latter, then serving both together.

Breakfast bacon may be broiled or boiled. If late in the season it should be placed in water a short time and dried before broiling.

ARRIVAL AND HANDLING OF HOGS IN CINCINNATI.

Statement of John H. Porter, esq., secretary and treasurer of the United Railroad Stock-Yards.

UNITED RAILROAD STOCK-YARD COMPANY,
Cincinnati, April 13, 1881.

DEAR SIR: In reply to your inquiry as to the live-hog business of the country supplying Cincinnati, their condition, the manner of handling in transit and after reaching the stock-yards, would say that much of the hogs raised in Kentucky, Ohio, Indiana, and southern Illinois are brought to this market, reaching here in from five to thirty hours of transportation by the several railroads centering here. This stock-yard company, acting as the live-stock agent for those railroad companies, have made all needed preparation for the receiving and shipping and all proper care of all live-stock that may be brought here, having a large number of clean, well-paved pens, mostly roofed over, each provided with troughs for watering, hydrant for each pen supplied with water from city water-works, and a full and large supply of water supplied to the stock while in pen. Feed houses with stock of best corn and other feed on hand to answer all demands of owners of stock for feed. A sufficient force of men on hand to promptly care for all stock in receiving and delivering—of night men that are on duty all night to unload and pen all stock received at night; similar force for

same work during the day. Men and teams for prompt delivery of feed, as ordered, and carts for the daily use of the cleaning force, to clean up pens as stock is taken from them.

The several divisions of the yard are supplied each with a scale-house, with scales to weigh the stock in any number, from three or four head to one and two car-loads at once, each scale permanently under charge of a competent and intelligent weigher, and all needed force for the prompt handling of stock. The stock trains arrive at yards at various hours of night and day, and are at once hauled to the unloading chutes, the hogs driven out of cars into the pens, and from these into the sale pens; in these the hogs and all other stock remain under the care and control of the company until the owners, or those having them for sale, have made sale, when they are driven to the scales, weighed, and then delivered to the purchaser here; they are then driven by purchaser to the packing houses, or to the slaughter houses of the market butchers. If sold to shippers, they are driven to pens in the yard adjacent to the railroad tracks, from thence loaded by the employés of the company on the cars.

From the overloading or crowding too many hogs into a car by the owners at the feeding places in the country, hogs are found dead in the car on arrival at these yards. Such dead stock is at once taken to the platform of the fertilizer company in the yard, are there weighed, receipt for weight and price given to owner of stock and paid for. Any hogs dying in the pens from effects of such overloading, or any other cause, are invariably dealt with in same way. These all are daily taken by the fertilizer company to their works and are rendered into grease, oil, or use for manufacturing purposes. By ordinance the fertilizer company are the only purchasers of such stock. The city, by its board of health, keep at this yard at all times a regular inspector of live-stock, whose duty is to examine daily all hogs and other stock arriving here, and if any diseased animals are found in pens or cars, to notify owners of same of their condition and to see that such stock is not disposed of here in any way by which it can be used as food. It can only be sold to the fertilizer company. The company have always given every facility for full and free exercise of such inspection, believing that it is always the wish as well as to the interest of all shippers and owners of live-stock, and of packers and curers of meat, that any diseased stock brought here should be quickly removed from the vicinity of the healthy stock; our experience is that it is seldom such is sent here. The hogs sold in this market are fed when young on corn and clover and then fattened on corn. This feeding is altogether in the fields, pasture and cornfields, where there is a plentiful supply of fresh water, and to be suitable for packers' and curers' purposes and to be considered merchantable must so be fed; this manner of feeding must make healthful and wholesome meat. Hogs fed on garbage or any foul feed, as may be the case in vicinity of large towns, are unmerchantable and show their condition. These may develop the disease of trichinosis, which is of rare occurrence, and such feeding is quite exceptionable.

The half dozen cases of trichinosis that have occurred in the past twenty-five years in the country from which our hogs come have always been traced to the eating of the uncooked meat from hogs so fed. The country adjacent, which supplies the receipts of live-stock here, has been very free the past year from any kind of disease among hogs. The receipts at the yard show this by the quality of hogs received. The percentage of loss in hogs in shipment from country to this place is less than 1 per cent. in dead hogs.

By a law of the National Government it is unlawful to run a train of live-stock more than twenty-eight hours without unloading for rest, food, and water. In the shipment of hogs in summer it is the habit after loading car to have each car of hogs well drenched with water from the water-plug by hose. Of the hogs sold at these yards from March 1 to November 1, or the summer receipts, those killed here are used for the daily market supply or cured for the domestic trade; the rest sold for shipment to Boston, New York, Philadelphia, Baltimore, and Cleveland, etc. The larger proportion of hogs received here between November 1 and March 1 are slaughtered and cured here, and of this product much is exported.

The receipts of hogs at this yard for the year 1880 were 823,789 head. Number slaughtered for same year, 566,410 head; number shipped to other markets east, 257,379 head. These hogs are generally well fattened, weighing from 150 to 400 pounds and upward.

This statement of the manner of receiving and handling hogs at this point will, I think, plainly show the improbability of diseased hogs in any amount or number getting into the cured hog products of this city.

Very respectfully, yours,

JNO. H. PORTER,
Secretary and Treasurer of United Railroad Stock-Yard Company.

MICHAEL SCANLAN, Esq.,
Chief of Bureau of Statistics, State Department, Washington, D. C.

HOW DEAD ANIMALS ARE DISPOSED OF IN CHICAGO.

1.—*Statement of the foreman of the Union Rendering Company, at Globe Station, near Chicago.*

We receive the animals from the city and stock-yards. We run them inside the building under cover, and make connection with our steam hoisting apparatus. We run the carcasses on a small car up an incline plane on to our floor; we run them up by steam power. We skin the horses and cattle, not the hogs; the dead animals were received last night, and are put in this morning; we have 12 tanks here for receiving and cooking the animals; we chop them through once to have them put into the tank. After the carcasses are cooked in the receiver, we draw off the the grease first, and then we run the meat into large vats of water, straining the water eleven times before the river receives it. We keep back the animal refuse by strainers and press it by high-pressure presses—there are 5 presses—taking the animal stuff off dry. This stuff after being pressed and half dry is then run through drying machines. The dry fertilizer is the result of the animal meat. We have two drying machines, which we can work up every twenty-four hours.

We work up all the stuff from the beginning to the end within twenty-four hours after receiving it, if there is no accident to the machinery.

The grease is then barreled and shipped. There are two qualities of grease, and the best grease is sold and branded as *white grease*, and the poorer brown grease is also sold to soap makers, branded as *brown grease*. Much of the grease is sold to Cincinnatti soap-men. This grease can not be sold as lard in Europe; there is a smell to the grease which renders it impossible to be palmed off as lard; the blood of a dead hog that dies a natural death ferments, and it is impossible to get the blood out of the flesh.

Men at this railroad station eat raw pork, German workingmen; they claim it has more strength than the cooked.

The Union Rendering Company is the only establishment that gets the dead hogs in this county; we get all the dead animals from the stock-yards and city.

Question. Have you more dead hogs in summer than in winter?

Answer. In the real hot weather, or real cold weather, we have more, but at other times the stuff comes regularly. Dead cattle and sheep are rendered together to make tallow; horses separate.

Question. Where do you generally sell this grease?

Answer. All over; it is shipped to the South, shipped East, and some in this State; the most of the fertilizer goes to Baltimore.

Statement of the editor of the Drovers' Journal, Chicago Union Stock Yards.

Dead hogs come in the cars with the live ones, sometimes one, sometimes as many as fifteeen in a car. They are taken from the car, put on a platform, and then taken from the platform by carts or trucks for that purpose, to an establishment at the corner of the yards for receiving such carcasses, and from there they are taken to the rendering establishment some miles out in the country, and in that they are entirely separated from the stock-yards and all the operations here. There is no reputable packer that I have ever heard, would ever have anything to do with them—all being rendered into what is called grease. There are a very considerable number of crippled hogs coming in—that is, partially disabled—that can not travel to the packing houses; there is a class of buyers all the time purchasing them, and they are slaughtered for the city trade and almost exclusively used up in that way. The dead hogs are sent to the rendering establishments. There are occasionally a small lot of crippled hogs here, but the packers won't have anything to do with them; the packers, unless they were imposed upon, would not deal in such hogs; on the contrary, the packers are cautioned about them. They are bought by these city dealers that purchase inferior or refuse hogs, and they are used in the city; they are used for the city trade. It is a notable fact in the hog trade that hogs have never been more healthy than during the past year.

HOW DEAD HOGS ARE DISPOSED OF IN CINCINNATI.

Statement by George Thompson, esq.

CINCINNATI, *April* 16, 1881.

SIR: In reply to your request for information in regard to the manner in which dead and diseased hogs are disposed of in this city, I submit the following statement. I beg to premise this statement by saying that I have had an experience in this connection of twenty-five years in raising and feeding hogs, and for the last fifteen years have occupied my present position as contractor of the city of Cincinnati for the seizure and removal of dead animals and animal matter unfit for human food.

In regard to what is termed "hog cholera," my experience is that hogs attacked thereby invariably die. The class of hogs generally attacked are young—too young for marketing—weighing only from 50 to 100 pounds.

I never heard of any hogs attacked by hog cholera or dying from any disease or accident being used, or attempted to be used, for human food. Even if there were parties mean enough to attempt such a thing, the officers and employés of our board of health would at once have them arrested and punished. So that such a thing as using diseased or dead hogs for human food may be set down as having not the least foundation in fact.

The hogs are all inspected as they are unloaded from the cars, and if there is anything wrong with any of them they are condemned and turned over to the city contractor and sent to the rendering works, where they are converted into grease, which is plainly branded "dead hog grease," the residue being converted into fertilizer

Yours, very respectfully,

GEORGE THOMPSON,
City Contractor for the removal of dead animals and animal matter, etc.

AMERICAN MEATS AND LARD IN EUROPE.

Extracts from a statemeni by J. C. Black, esq., of the house of Armour & Co., Chicago.*

* * * * * * *

SHIPPING.

After the meat is cured, at the proper time the buyer sends his inspector to the packing house to inspect, receive, and pack the meat. The man we sell to has his own expert who tries every piece of meat and sees it weighed. The meat is perfectly sweet, but he is compelled to be there and see to it. A soft hog they throw that out; that is soft, they don't want it. He tries it with his trier and says it is a little sour, he don't want it. He rejects everything that is not proper, and goes off. It is plain to be seen that what is sour in the shoulder, or sour near the shoulder, has not been salted thoroughly. It is easy to be seen, there can not be any deceit about it. This man does nothing but inspect meat and buy hogs; he is an expert in his business. The meats are then packed into boxes, salt being sprinkled upon it. We cure by salt altogether. The box is then put under a screw and screwed tight, nailed and strapped, made as strong as possible, put aboard the cars, and is shipped.

One great trouble with the meats in Europe is that they do not take any care of the meats after they get there. In Havre, for instance, they lie in the rain, no care being taken of them. They are not put into the warehouse; the rain gets in. These boxes are not water-tight.

In Havre there is a proposition to build some warehouses on all the docks where they can handle these meats. They pile it up four or five boxes high. You can not do anything with your own meats. Different cuts of meat go into the home market. I want even more careful handling than at the home market; the American never finds any fault whatever.

LARD.

It is impossible to render a dead hog into lard; decomposition has already set in. We can not get away with the bad smell of lard after decomposition; it can not be done. You can not render it and have it sweet lard; it is an utter impossibility; it is not in

---

[*Those portions of Mr. Black's statement omitted referred wholly to the purchasing, inspection, and killing of the hogs and to curing of the meat, and as those points are fully covered both in the body of my report, as well as in the report of Mr. Foster, it would only be simple repetition to insert them in the above statement.—M. S.]

the possibilities. They do a great many of these things for spite across the water. You will see the impossibility of being cheated; there is no possible object in trying to cheat. The manufacturers' names are on the tierces of lard. The refiner would not receive anything but choice lard. It is called refining; it is a hardening process, the lard being dropped untill it is whitened—it is only handling it—and then they send the lard to Europe. It stands transportation better. You can not sell lard in the raw state; it is first refined. They have extensive refineries in Berlin.

TRICHINÆ.

We examined 5,000 hogs and found no trichinæ; then the health department sent a man; he tried the eyes and sides, and he was unable to find any. We tried the hams and sides. A man came here some time ago, a German who served a long apprenticeship in Europe, and in speaking about the matter said he knew of his own knowledge that their pork was infected more than the American pork. For curiosity we allowed him to spend a week in our yard; he was an expert in his business; he had a microscope; he inspected 5,000 pieces of ham, and then tried 10,000 hogs as they were killed, after they had been fully cut up, and he found nothing.

We had in Europe (at the time this edict was promulgated) 500 boxes of meat and 200 boxes of shoulders; they did not find a single case of trichinæ in the whole lot.

HOG CHOLERA.

Regarding the hog cholera I think it is an entirely mistaken idea about the hog. If a young hog is out exposed to the cold and has taken cold, as we do, it is called hog cholera; a young pig may take cold from being exposed to the rain and storm and die—you know, of course, the sow has nine pigs, and they smother some of them. For that reason I am under the impression myself that we must have more intelligent reports about the disease. The trade which has grown has stumbled along; the Europeans positively wanted our meats, and wanted them to sell.

AMERICAN VS. WESTPHALIAN HAMS.

I went to Hamburgh at one time to get them to take hold of it; their hams were selling for 90 marks a hundred and ours for 50 marks. I went back in less than a month after, and those Westphalian hams were 70 marks and our hams were 60 marks per hundred.

HOG RAISING IN ILLINOIS.

Statement by Charles F. Mills, esq., breeder and importer of Berkshire pigs.

ELMWOOD STOCK FARM,
Springfield, Ill., March 28, 1881.

SIR: In compliance with your request I have the honor to call your attention to the general management of the swine fed in this State for market.

There is such a very limited number of hogs confined in pens and fed slop or swill in this State as to be worthy of no consideration.

The hog product of Illinois is made from hogs of the various improved breeds of swine, mainly high-grade Berkshires and Poland-Chinas.

Pure-bred boars are generally used, and the brood sows are the result of so many crosses by well-bred boars as to readily pass inspection at the hands of the majority of hog breeders and dealers as very nearly pure-bred hogs.

The pigs are farrowed in April and May, and as soon as old enough to get about are allowed to follow corn-fed cattle, with the range of blue-grass pasture during the summer and early fall. When not running after cattle pigs are fed some corn in addition to pasturage until the growth of grass in spring and the age of the pig makes it possible for the animal to subsist and thrive on grass alone.

The range of pasture, pure air, and the healthful exercise necessary for hogs to obtain subsistence develops the growth of muscle and lean meat, and the quality of this meat when finished off on corn in the fall months is not to be compared with the soft, greasy fat meat resulting from feeding slop and swill to swine in small, ill-ventilated pens, as is the general custom abroad.

The "pork products" of Illinois are not approached in excellence by the far-famed "Irish bacon" when firm, well-marbled meat is considered, and it is a well-known

fact that the highest-priced fancy pork products sold in Ireland by Limerick dealers are put up in Chicago, and by special instruction marked with the private brands of Limerick dealers, who have for years past been selling Illinois pork products on the continent as Irish bacon, hams, etc.

The mortality among hogs and pigs in this State, resulting from disease, is comparatively trifling considering the vast number of hogs raised annually and the insignificant value placed on young pigs.

When the neglect of young pigs and indifference manifested by the average hog-breeder as to the number of pigs that survive "pighood" is taken into account, the vitality and power of swine to resist the effects of exposure to the elements and rough treatment is the more remarkable, and is one of the strongest arguments that can be used as to the hardy and vigorous constitution of swine raised in this State.

In early times, when pork would hardly pay the expense of driving the hogs to market, and when hogs were turned out on the open range and expected to hunt their own living, the old maxim of "root, hog, or die" was considered orthodox, and the prevailing sentiment of the present is to the effect that a hog to be worthy of any consideration must be able to "weather the storm," and do well with sufficient corn, grass, and water.

It has been my experience that the mortality among pigs can be reduced one-half by providing shelter and giving reasonable attention to the comfort of the sow and her litter the first month after farrowing.

Absolute neglect and exposure is the cause of the loss by disease of three-fourths of the hogs reported as dying each year in this State from so-called hog cholera, which name is given to all diseases affecting swine.

Yours, very truly,

CHARLES F. MILLS.

MICHAEL SCANLAN, Esq.,
Chief of the Bureau of Statistics,
Department of State, Washington, D. C.

PORK PACKING IN CINCINNATI.

Statement prepared by Messrs. James Morrison & Co.

CINCINNATI, *April* 12, 1881.

DEAR SIR: We have for the past thirty years been actively engaged in the packing and preparation of pork meats for European consumption. In all our experience we can safely say we have never known the hogs of the West to be freer from disease or in a more healthy condition than at present or during the past two or three years. Cholera, or kindred diseases, have always existed among hogs, not only in America, but in Europe, wherever the animal is raised and cultivated. Cholera, as is well known, attacks the young pigs ranging from one to three months in age, the matured and fattened hogs enjoying almost complete immunity from its attacks. In America, the great distances of the feeding fields from the packing centers, and the necessary time consumed in forwarding hogs to the packer, is a thorough and complete protection against any hogs affected with the disease ever reaching the slaughterers' pens. Hogs when attacked with the disease are so prostrated that it would be impossible to move them to market. Three to seven days is invariably required to move hogs from the feeding grounds to the packers' establishments, all of which time the hogs must be active and lively. To pass inspection at the sale pens, all hogs, to be merchantable, must be able to walk on the weighing-scales It will thus be clear to the uninitiated the impossibility of hogs attacked with disease to undergo the days of exhaustion, exposure, and fatigue necessary in forwarding them to market. Again, a diseased hog is easily detected by the discoloration of the meat and skin of the carcass, which the process of curing and all the curers'arts can not restore to the natural color, and would instantly be detected by the inspector or consumer. All meats prepared for foreign shipment undergo a rigid inspection before leaving the packing houses.

Since the introduction of summer or ice curing much meat has been spoiled while in transit. This is the result of too early exposure to the high summer temperature and before the meat has been thoroughly cured, but this is by no means owing to the original quality of the meat. As to the general healthfulness of the products of the hog, the millions of people who are and have been consumers of the meat both in America and Europe and grow healthy and thrive upon it can testify.

As to trichina, we understand not a single case of it has ever been identified in man or woman in Great Britain, the greatest of all pork-eating nations. Isolated cases of it have been reported in America, but we assert the cause can not be traced

to the consumption of fairly cured or cooked pork. That the people of Continental Europe, both at home and in this country, are in the habit of eating uncooked food and sausages concocted of material too vile to be mentioned, and in rare instances suffer unpleasant consequences, should not frighten or deter consumers of regularly-cured and properly-cooked meat of the hog.

Trusting this plain statement of facts as they have come under our observation will be of service to you in your investigations, we remain yours, very truly,

JAMES MORRISON & CO.

MICHAEL SCANLAN, Esq,
Chief of Bureau of Statistics of the Department of State at Washington.

INSPECTION OF HOGS AND HOG-PRODUCT IN CHICAGO.

Statement of Dr. Oscar C. Dewolf, commissioner of health of the city of Chicago.

Under the ordinance we have five meat inspectors on duty; two of them on duty at the stock-yards, and three in the city markets.

Technically, we have no right to exercise police power at the stock-yards; nevertheless the stock-yard proprietors, and commission men dealing in animals, find it to their interest to permit our meat inspectors to exercise their function at the yards, because if we condemn an animal as unfit for food in the yards, they retain the carcass for fertilizing purposes, while if it is put on to the markets outside the yards, we confiscate the carcass when condemned, and make no return to the owner for the material confiscated. I regard that as the sharp and sure method of punishing the dealer. There is a company at the stock-yards, chartered by legislative enactment, known as the "Union Rendering Company." One of the enactments of this charter provides that all dead animals found in the yards, and that implies coming in on the trains dead, or dying after arriving at the yards, as well as animals condemned by our inspectors as unfit for food, shall be turned over to this company for rendering purposes. These dead or diseased animals condemned by our inspectors as unfit for food are turned over to this company for rendering purposes. These dead or diseased animals are removed from the stock-yard inclosure by this Union Rendering Company on their own trains, running to the Indiana line, about 29 miles. There they have extensive facilities for the extraction of grease, and conversion of the residue into commercial fertilizers. During the year 1880, 480,000 pounds of meat found in our city markets by our inspectors, and unfit for use by cause of emaciation of the carcass, bruising of the carcass, or taint after slaughter, had been condemned and thrown into the rendering tanks as above described.

HOGS.

The supply of hogs brought to the yards for the purpose of packing is not critically inspected by our meat inspectors (for reasons above stated) outside our lines, and I am only interested in protecting the citizens of Chicago. I have, however, for scientific purposes and other reasons, kept a very sharp eye upon the condition of the hogs received at the stock-yards since February, 1877. I believe, and indeed I positively know, that the stories and reports current near Chicago, and far from us, touching the disposition of packers to slaughter diseased or emaciated hogs for packing purposes, are maliciously and wickedly false.

The larger packing houses employ buyers for their pens, of great experience, and to whom they pay large sums. Mr. Armour, for example, and the "Anglo American Packing Company," I have understood, employ three men, to each of whom they pay $5,000 a year. The hogs are scrutinized with the greatest care, etc. However, that may be, a hog infected with trichinæ can not be detected by any general appearance of the animal.

I have seen hogs suffering from trichinosis in the most perfect condition of physical health. The only possible means of detecting this condition is by the examination of the carcass with the microscope.

I have been consulted by the packers several times touching the propriety of organizing a corps of scientists, for the purpose of inspecting the carcasses packed at the yards.

The impracticability of any such move will appear to any one who recalls the fact that more than five millions of hogs per annum are slaughtered for packing here. A single individual, no matter how expert, could hardly cover more than ten or twelve carcasses a day.

In September, 1878, I requested two gentlemen, recognized as authority in microscopical work in this city, to undertake an examination of the pork supply which the

packers were using. We have been accredited with a pork supply from 3 to 5 per cent. of which is declared to be infected with trichinæ. It is true that some seasons this per cent. of infection has been discovered, and I am inclined to believe that a similar extent of disease would have been discovered in the domestic supply of France and Germany had the same care been taken in investigation; for example, it was necessary on some occasions to examine fifty specimens from one hog before trichinæ were discovered.

Do you not see how readily such carcasses might be regarded as sound and perfectly free from infection, if you made an examination simply from two or three specimens from the carcass?

In the investigations made by these gentlemen, and by the State microscopical society a few years previous (see report of Chicago health department for 1878, page 21), a number of specimens examined from each carcass showed a thoroughness of work altogether beyond that declared as necessary by foreign examiners.

Our supply of pork this year is more free from trichinæ than for any year, certainly during the last six or eight years previous.

This fact I assert because I have kept for the past month an accomplished microscopist at work in the yards, and he has failed to find a single case of trichinæ.

Another matter of interest in this connection, our mortality in this city for the last four years ranges from 8,000 in 1877 to 10,000 in 1880. Only two cases of trichinæ have been reported in the city of Chicago during that period. This is an important statement, in view of the fact that our markets, without great watchfulness on the part of the health department, are supplied with meat rejected by the packers.

The supply of meat, therefore, distributed to the city has a much greater probability of infection than that used by the packers.

OHIO HOGS AND HOG PRODUCTS.

At a meeting of the pork dealers, raisers, and packers of Cincinnati and vicinity held at the pork room of the Cincinnati chamber of commerce on April 13, 1881, the following information was given concerning American pork products, and the care taken to prevent diseased or unmerchantable pork from entering the trade.

The meeting was called to order by the chairman, Mr. McKeehan, who introduced Mr. Scanlan, Chief of the Bureau of Statistics of the Department of State of the United States, and the Secretary of the Cincinnati chamber of commerce, Colonel Maxwell, read a letter from Secretary Blaine, which also introduced Mr. Scanlan, and stated the object of his visit to Cincinnati.

Mr. Scanlan then said:

There is scarcely any necessity for me to explain the feeling which exists in many countries in Europe in regard to American pork. Rumors of the most derogatory character in this regard have been circulated broadcast in the Old World, as you all know. This erroneous idea about American pork first started in Germany. Some time ago a man in Chicago sent a statement to Germany that all dead hogs, horses, and other animals dying from disease or accident were rendered into lard. To you it would seem impossible that such a statement could receive any public credence, but it has met with sufficient to injure the trade somewhat in Germany. That outrageous statement was taken up in France and then in England, together with the more recent exaggerated reports of this hog cholera. What seems preposterous here seems possible there. Only the other day I read an extract from an English scientific publication in which it was seriously stated that they were not sure what became of the hogs that died of cholera and other diseases in the United States; whether they entered into the trade or not. I, therefore, want to know from you, gentlemen, what sort of hogs you pack, where they come from, how they are received here, what is done with the dead animals, what care is taken to prevent dead animals from entering into the trade, etc., in order that this whole question may be definitely settled.

I would therefore request your chairman to select some of you gentlemen, experienced in this matter, to give me the necessary information in this connection, commencing with hog-raising and following the subject up until the product is ready for export, giving me all the details. Then I want to know what is done with the dead hogs. I will then go to the rendering company's works myself and get a report therefrom.

Mr. LIPPINCOTT. Allow me to remark that the hogs marketed here are marketed under exactly similar circumstances to that in Chicago. We are but a small affair alongside of Chicago, though packers here think, probably, they handle their stuff with more care; but if you have all the statistics with regard to Chicago, I think it will be about the same here.

Mr. SCANLAN. While I am satisfied of that, I would like to have whatever you can give me, and I will lay the matter before Secretary Blaine, and it will form a part of my report, giving these facts from you.

Mr. MICHAEL RYAN. I would like to ask if you want the statement of individuals, or a statement made over the signatures of the officers of this association, this being the pork packer's association?

Mr. SCANLAN. I would like to get a report from some gentlemen to begin with upon hog-raising.

Mr. CUNNINGHAM, of Middleton, Ohio. Mr. Maxwell has a written report from me which he will hand you. [This report will be found annexed hereto.]

Colonel MAXWELL. Do you understand that all the hogs marketed here are corn-fed? I think if Mr. Cunningham would state how hogs are fed it would aid you very materially to understand the quality of our products here.

Mr. CUNNINGHAM, of Middleton. I have fed hogs myself for a number of years, The custom in feeding hogs is to turn them in the field where there is plenty of running water. There is a mistaken idea with some that hogs are not taken care of. They are put where there is plenty of running water and they are fed on the best corn the farmer has. The disease known as cholera first attacks the young pigs. The older hogs are not very often diseased with cholera; it is among the young and delicate pigs chiefly. After the hog matures so that he takes on flesh he is always in a good, healthy condition, and the farmer is just as particular with the hogs as he is with the horse. If a hog is diseased among them the farmer removes him immediately from the rest, and if a hog dies he is buried so that the other hogs won't partake of the disease at all.

Sometimes the disease will be worse in one neighborhood than another. I have fed as high as three or four hundred in one inclosure and never had a hog die. There are no hogs killed in this market at all to my recollection but hogs fed on corn. It is the cheapest and best article the farmer can feed.

Mr. MORRISON. What is your observation as to the disease the last year or two?

Mr. CUNNINGHAM. In our neighborhood it has been less than usual; a great deal less than in former years.

Mr. MORRISON. What is the action of this disease when it first attacks the hogs?

Mr. CUNNINGHAM. The probabilities are that the hog won't feed at all; he will move off from the rest, and the farmer, the moment he sees that hog, gets him out of the way.

Mr. MORRISON. Does it prostrate the hog?

Mr. CUNNINGHAM. Immediately.

Mr. MORRISON. What is the probability of driving the hog one or two hundred miles after he is attacked?

Mr. CUNNINGHAM. It could not be done at all. It have seen them die in two hours; sometimes almost instantaneously.

Mr. MORRISON. Any one familiar with the trade and the manner of feeding hogs knows that almost every hog is three or four day's journey away from the packer's pen. First he must be driven to the receiving pen, and there remains a day to be loaded on the cars; it takes a day or more to bring him to town, and every hog has to walk on to the scale; the rule is that the merchant need not receive him if he can not walk. From the scales he is driven to another pen before being slaughtered, and he afterwards goes through the process of killing and packing, so that it is utterly impossible that a hog attacked with cholera could be driven from the feeding pen and find his way to the slaughtering pens.

Mr. LIPPINCOTT. You will find that nine-tenths of the hogs dying from cholera are young pigs weighing from 60 to 100 pounds. Hogs seem to go through their diseases the same as children with the measles, whooping-cough, &c. The average of the hogs killed here last winter I suppose would be 270 pounds gross, and there is no question but that a fat hog is of necessity a healthy hog; it can't be otherwise. The disease of cholera don't, except on rare occasions, get among hogs ready for market.

Mr. FITZGERALD. How about trichinæ?

Mr. LIPPINCOTT. That is a myth; we don't know of such a thing. There is not a packer in the city of Cincinnati that has had ocular demonstration of that.

Mr. SCANLAN. Have there been any deaths here from trichinosis?

Mr. LIPPINCOTT. Not to my knowledge.

Colonel MAXWELL. There is not a pound of meat packed in Cincinnati that I would be afraid to eat in my own house.

Mr. LIPPINCOTT. The dead hogs that our fertilizing company get are brought in here during the packing season, shipped in perfect condition, understand, but from being crowded in the cars, the cars being overloaded, perhaps, or from being overheated, for the animal heat of a fat pig is intense, and they overlay one another, and occasionally you will find a car with three, four, possibly five or more dead hogs that have been smothered; not dead from disease but from being actually smothered. These comprise the bulk of the receipts of dead hogs by the fertilizing company, and these are rendered up, the bones used for fertilizers and the fatty substance used for grease out of which soap is manufactured, and the idea that any of them get into the trade is preposterous.

Mr. SCANLAN. Would it be possible for a packer to take a dead hog, one that died from disease or accident, and make it into good meat by any means?

Mr. ELMORE CUNNINGHAM. They dare not do it, sir.

Mr. MORRISON. A hog that has died from disease or accident, if you hang him up and attempt to cure him, will betray himself immediately. The discoloration of the flesh and skin is such that no art of the curer can remove. You can detect it in a thousand boxes.

Mr. RYAN. In regard to the hogs bought by the packers at the scales, every hog must be in a merchantable condition. If a man comes here and I ask him his price, and he sells to me, it is understood that the hog must not be slop-fed, but corn-fed; he must be merchantable. If any hog can't walk into the scales from any cause he is not merchantable; so there is no hog purchased here that is not merchantable in every shape, manner, and form. If a hog is not in perfect condition he is rejected by the buyer, and goes to the fertilizing company and is boiled up for grease.

Mr. MORRISON. It has been found by the packers often that the farmers have got out exaggerated reports about the disease to enhance the price of pork. This generally occurs in the fall of the year, just before the packing season opens.

Mr. MCKEEHAN. The farmers will also get out the report that they have lost a great many pigs in the spring of the year in order to influence prices.

Mr. MORRISON. Yes, in the agricultural columns you will find a long string of items that such and such a man's hogs have been affected by cholera, when, if the statistics were presented, they would show a very small percentage; but they have these reports circulated all over the country to show that the crop will be small, and thus affect the price.

Mr. RYAN. There is another rumor gotten up by the farmers and raisers of hogs for the purpose of creating public opinion, giving an idea that the hogs are all dead through the country, thereby framing the opinion that the pork will be very high and scarce. For instance, I met one gentleman about one year ago, and he said: "All the hogs in my part of the country are dead; they all died with the cholera; these are my last lot; I don't think you could get a car-load of hogs in four counties." Two weeks afterwards I met him with two car-loads, and said, "I thought you said the hogs were all dead?" "Well," said he, "these are some I didn't think about!" and, honestly, he came in with forty-seven loads of hogs during the season.

Mr. MORRISON. Just as soon as the farmers find they are injuring themselves these reports will cease. I was raised a farmer, in Europe, and know that the chances of getting diseased hogs into the American markets are as one to a thousand in the old country, for the simple reason that the hogs are all killed at home in Europe, and if they find a hog sick they don't allow him to walk around long, but send for the butcher and have him killed.

There is no more wholesome food in the world than our corn-fed hogs. The European hogs are fed largely from the slops of the kitchen, &c.

Mr. RYAN. We have some slop-fed hogs, however, but they don't enter into the export trade.

Mr. SCANLAN. I suppose it is the same in Cincinnati as Chicago; if there is an inferior hog it is kept for the local market, and the best pork is used for exporting?

Mr. MCKEEHAN. A rejected hog can't be cured here at all, either for the local market or for export.

Mr. SCANLAN. I do not mean rejected hogs or those that are diseased, but such as are not fit for export.

Mr. MORRISON. Our house has been engaged in the foreign trade for twenty years or more, and we pursue the same course as Mr. Scanlan says they do in Chicago, only not quite so much. We select out of the hogs we kill the best and soundest—what we call the smoothest—for the foreign trade. Anything that is the least blemished, as, for instance, a skin bruise, or anything of that kind, is kept for the home market, and I know from my own experience that the choicest meat this country produces goes to Europe. We have an agent in Liverpool who distributes for the three kingdoms, and we have never had a single report of bad consequences from any meat of ours.

Mr. LIPPINCOTT. How about the summer packing of hogs?

Mr. MORRISON. I have written a letter for Mr. Scanlan, in which I touch on that. I say that a large amount of this trouble has occurred since the introduction of summer curing. This arises from the packers shipping before the goods are sufficiently cured, and is bound to make trouble, and the consequence is enormous loss from meat perishing on their hands in Europe. It is not from any original defect in the quality of the meat, but from exposure in warm weather.

Mr. MICHAEL RYAN. I want to say that I was very happy to know that Secretary Blaine has come to our rescue. In three months last winter we packed something over half a million of hogs in this city, and the trimmings, tenderloins, sausage meat, &c., were purchased by all classes of people, and during the whole season I haven't heard a word of one single case of trouble from this cause. We are not afraid to eat

our meat. Every packer in this city has his reputation at stake. We are all engaged in the business, and we are not disposed to risk our reputations for the sake of a few dollars we might make by putting bad meat into a barrel with our brand on it. Packers themselves are interested in seeing that the meat is thoroughly sound and good. We sell a good deal of meat on contracts, and have to hold it for a good while, and we are very scrupulous about seeing that the meat is from good, healthy hogs. Our people have entire confidence in the pork of this city, and there is no man in Cincinnati that is afraid to buy any packer's brand and eat it. I am very glad the Secretary of State has taken this into hand, and hope he will be able to effectually disprove these calumnies.

Mr. SCANLAN. You must make allowances for the Europeans. You have beaten them so badly that they will take advantage of everything and anything to decry American meats.

Mr. MORRISON. I think they should assume a manly manner, however, and put an import duty on our pork if necessary, and not calumniate our products.

Mr. SCANLAN. This thing will all result in raising the value of American pork; it can not be otherwise.

Colonel MAXWELL. You understand that much the larger part of our pork is winter packed, while in Chicago it is not so.

Mr. MORRISON. Summer cure is just as good, however, if properly cured.

Mr. SCANLAN. What are your regulations in regard to your stock-yards; do they all come into one, or have you more?

Mr. MORRISON. There are four in Cincinnati; one principal one, and three others.

Mr. LIPPINCOTT. I would remind Mr. Scanlan that here the Cincinnati Fertilizing Company has a contract with the city, and is the only party that can purchase dead animals where they are found within the city limits. We have an ordinance to that effect.

Mr. SCANLAN. The yards in Chicago are outside the city limits, and therefore are covered and regulated by State law.

Mr. FITZGERALD. Our city law is the same in effect as the State law in Chicago. The very minute a hog becomes diseased the fertilizing company takes possession of that hog.

Mr. LIPPINCOTT. Probably the strongest argument a packer could use is the matter of the safety to his own interests, as that interest is the ruling principle of us all.

Mr. SCANLAN. A great deal of trouble arises from the fact that no care is taken of the meat after it gets to Europe. A Chicago packer had an agent at Havre, to whom he sent a large amount of meat, upon which he fixed a limit in price. The meat was landed on the quays, and the agent not being able to get the limit fixed by the owner, left the meat three or four weeks uncovered on the quays, in the rain and snow.

Mr. LIPPINCOTT. I was told of an instance in which a large Chicago packer sent one thousand boxes of short clear middlings to Havre, fixing a limit on the price, and the commission man not obtaining the price, put that meat in store and waited for the market. He never gave it any attention, and when they came to examine it, it was actually a putrid mass, having perished for the want of being overhauled and resalted. Of course that stuff must find a market for something or other, and people might imagine that was a sample of American hog product.

Mr. MORRISON. There is not much trouble caused by clean pork. The Germans have a method of manufacturing all sorts of garbage into sausage, and that is where the trichinæ is found more than in clean cured pork. I know I have had fellows come to me to buy stuff for sausage, and I have been compelled to notify them that if they did not pay more attention to cleanliness I would report them to the health officer.

Mr. SCANLAN. Is your process of saving any different from that of Chicago?

Mr. MCKEEHAN. No; I think there is no particular difference.

Mr. MORRISON. The people of both Chicago and Cincinnati in a measure sample nearly every carcass, by buying sausage, tenderloin, spare-ribs, etc., so that if there is anything of that kind (trichinæ) they would have it in these cities.

Upon request of Mr. Scanlan, the chairman, Mr. McKeehan, then appointed a committee of three, composed of Messrs. Morrison, Lippincott, and Ryan, to act with Colonel Maxwell, superintendent of the chamber of commerce, to furnish Mr. Scanlan with some official information in addition to the matter given above by the individual members of the Pork Packers' Association; after which the meeting adjourned.

PORK PACKING IN CINCINNATI.

Report of a committee of the Pork Packers' Association.

CINCINNATI, *April* 15, 1881.

JAMES MCKEEHAN, Esq.,
President Pork Packers' Association of Cincinnati:

DEAR SIR: Your committee, to whom was referred the preparation of a report to Michael Scanlan, Esq., Chief of the Bureau of Statistics of the Department of State, U. S. A., on the quality of the hogs packed at Cincinnati, and the liability to bad meats cured therefrom, begs to submit the following:

1st. The hogs packed in this market are all corn-fed hogs, raised mainly in the States of Ohio, Kentucky, Indiana, and Illinois. They are fattened on corn, because it is the most abundant and the cheapest food, and they are usually fed in the fields. They ordinarily have wide range and plenty of water, and are surrounded by entirely healthful circumstances. The rules of the Cincinnati Chamber of Commerce [Rule 23] for the government of the provision trade of this city provide that "all hog product to be 'regular' must be corn-fed slaughtered hogs."

2d. These hogs are mostly driven to the railroads and shipped to some one of the stock-yards of this city, where they are unloaded, placed in clean pens, supplied with water from our city water-works, and fed with good corn.

3d. When purchased by our packers, they are removed to the packing-houses, which are generally located conveniently to the stock-yards, where, by the most approved methods, they are slaughtered, cleaned, and cut in conformity with the rules of the chamber of commerce, and the product cured in apartments constructed and appointed with a view to securing the best possible results.

4th. Skilled inspectors, appointed by the board of officers of the chamber of commerce, under bonds for the faithful performance of their duties, governed by specific regulations, and accountable to the committee on provision inspection, also appointed by the board of officers of the chamber, hold themselves in readiness to inspect all the hog product they may be called upon to inspect, and the rules are so constructed as to offer the largest possible inducements to buyers to have inspected the product they may purchase.

5th. Under the rules for the regulation of the stock-yards, all animals found dead in the cars, which is not an infrequent occurrence, from suffocation by crowding, pass directly to the fertilizer company, under its contract with the city, and are at once removed to its works to be converted into grease, fertilizers, etc., but in no case into any article of food, neither the owners of the stock nor the managers of the yards having any discretion in the matter. It should also be remarked that there are inspectors appointed by the municipality, charged with supervising all stock, so that if there were any inducements to buy any other than sound hogs by the packers, the opportunity would not be afforded.

6th. The best hogs brought to this market are purchased by the packers. Those packed in the past winter averaged 268.37 pounds gross. It will thus be seen that inasmuch as the hogs which are attacked by cholera are generally the young swine averaging less than 100 pounds per head, by the time the hogs attain the size required by the packers they will have passed the ailments to which young animals are generally liable; and, furthermore, that as a sick hog can not be fattened, the liability of a packer here to get a sick animal is very remote. Even if a hog of such weight as is usually bought by our packers should be afflicted with cholera when killed, the meat would be so affected in color as to be at once discoverable, and if put in with sound meat would be liable to impair the quality of the good. Ordinary business prudence would thus prevent any attempt to utilize the product of the sick animal. The hogs freest from bruises, abrasions, etc., are selected for the foreign markets.

7th. As to trichinæ, it is our firm conviction that if any at all exists in hogs packed at Cincinnati it is in such exceptional cases as to reduce the liability to accident from their presence to the infinitesmal. The circumstances under which the hogs marketed here are raised and fed are so unfavorable to the production of this enemy of the hog product under certain conditions as to render its presence the most remote possibility. Doubtless the hogs going into home consumption would, in the very nature of the case, be most likely to be affected, and yet the existence here of a single well-authenticated case of sickness arising from using pork so affected is unknown.

8th. The packers of this city are generally old, reputable houses, who could not afford to risk their good name, nor hazard the reputation of their product, by killing and curing any other than healthy hogs.

9th. From our observation and information the hogs of this locality, and of the entire country, have been, during the past year, unusually exempt from maladies of all kinds.

JAMES B. LIPPINCOTT,
MICHAEL RYAN,
THOMAS MORRISON,
SIDNEY D. MAXWELL, *Secretary*,
Committee.

HOG-RAISING IN OHIO.

Statement by J. H. Cunningham, esq.

MIDDLETOWN, OHIO, *April* 12, 1881.

DEAR SIR: In compliance with your polite request, I beg to say that I reside at Middletown, Butler County, Ohio, and for more than thirty years have been familiar with the business, both in hogs and the meats made therefrom. This locality raises hogs largely, and ships them to foreign countries as well as to various parts of the United States. From my observation I should say that the health of the hogs in this vicinity in the past year has been singularly good, as good as at any time in a period of twenty years.

I might remark as far as hog cholera is concerned, that the disease, when it prevails generally attacks the young swine, while the matured hogs are measurably exempt. Not only so, but you can not get a diseased hog to take on fat. Now, inasmuch as only the well-fatted and grown hogs are used by the packers at Cincinnati, it will be seen that, even in an epidemic, there would be comparatively little danger from bad meat. The hogs of this locality are usually fatted in the fields, away from all unwholesome influences, and since corn is the cheapast article with which to fatten the animal, there is no temptation to use anything else. These hogs generally, after leaving the fields, require three days before reaching the slaughter pens, so that if they were sick before they would reach the slaughterer they would be almost certain to be discovered, and, even if killed, the appearance of the meat would at once condemn it.

I give it as my candid opinion, based on a large observation as a packer and otherwise, that the pork of Cincinnati was never more wholesome than now, and that the danger from disease of all kinds is no greater than from any other kind of food. In my judgment there never has been a time when there was less occasion for alarm.

Yours, very respectfully,

J. H. CUNNINGHAM.

MICHAEL SCANLAN, Esq.,
Chief of the Bureau of Statistics, Department of State, Washington, D. C.

HAMILTON, BUTLER COUNTY, OHIO, *April* 13, 1881.

My opportunities for observation have been similar to Mr. Cunningham's and I fully concur in all that he has said on this subject.

W. SHAFFER.

PORK-PACKING IN CINCINNATI.

Statement prepared by Col. Sidney D. Maxwell, superintendent of the Cincinnati Chamber of Commerce.

WINTER SEASON, NOVEMBER 1, 1880, TO MARCH 1, 1881.

Whole number of hogs packed	head	522,425
Average gross weight	pounds	268.37
Average yield of lard	do	20,617,859
Average yield of lard per head	do	39.46
Aggregate cost		$6,466,288
Average cost per 100 pounds gross		$4.61.19
Total amount of barreled pork produced	barrels	26,596
Amount of lard produced:		
Tierces		61,009
Barrels		100
Kegs		1,083
Buckets		3,435

Production of cut meats (green weights):		
Clear sides	pounds	3,667,127
Clear rib sides	do	30,379,095
Long clear sides	do	2,893,957
All other kinds of sides, including rough sides and bellies	do	3,700,829
Hams	do	15,758,450
Shoulders	do	12,980,389
Total production of cut meats	do	69,379,847

SUMMER SEASON, MARCH 1 TO NOVEMBER 1, 1880.

Whole number of hogs packed	head	110,556
Average gross weight	pounds	252.78
Aggregate yield of lard	do	6,042,121
Average yield of lard per head	do	54.65
Aggregate cost		$1,266,313
Average cost per 100 pounds gross		$4.53.11
Total amount of barreled pork produced	barrels	2,065
Total amount of lard produced	tierces	17,814

THE HOGS AND HOG PRODUCT OF THE UNITED STATES.

Statement presented by the Anglo-American Packing Company, Chicago, Ill.

It is difficult to point out many new or interesting features relative to the trade in general, simply because there are none. The magnitude of the trade, and its value to the commercial interests of the country, are facts quite well established. The Bureau of Statistics at Washington gives the

VALUE OF HOG PRODUCTS EXPORTED

from America for the year 1880, at $100,799,414, against $77,356,947 in 1879. The same authority gives the gross weight of hog product exported for the year 1880 as 1,326,157,330 lbs. against 1,081,892,318 lbs. for the year 1879, an increase of 244,265,012 lbs. Add to this the amounts consumed at home and it is apparent that this is one of the leading industries of the United States. The capital employed in the prosecution of the business, the money paid out for hogs, the immense number of men employed, and it is easily seen that, to the West especially, it is of most formidable necessity. Look beyond this and imagine, if one can, that there is not a farmer in the entire West but looks to the packers to buy his hogs, and it is seen that it is an interest which

PERMEATES THOUSANDS UPON THOUSANDS

of households, for to the packers belongs the credit of having so thoroughly introduced to the Old World the value of the meat of the hog, and having developed an immense demand therefor. Of course they did this more especially for their own profit, but what would the trade have been without their assistance? The business has grown to such immense proportions that it practically controls itself now—has grown to man's estate, and therefore able to take care of itself.

TRICHINÆ.

On the 18th of February, 1881, the French Government passed a law prohibiting the importation of American hog products within her borders. This action was peremptory, the law going into effect at once, no word of warning being given either buyers in France or shippers from America. As a result of this, all the product in transit for that country, as well as considerable for which inland and ocean freight-room had been engaged, was practically without a landing point. The decree was an unjust one; the world does not believe, nor is there any justice, in *ex post facto* law. So far as France is concerned, America could have gotten along without her aid, and found a market for whatever of hog products she had to sell; but the action of the hot-blooded French created distrust, fears being entertained that other countries might take similar action on the impulse of the moment, and this caused a bad break in values at all points. There has been some modification of the law as originally passed, and we predict that the Government of France will yet be glad to rescind her unjustified action. But it cost the provision dealers of America thousands upon thousands of dollars, and worked an injury to the trade which it will take time to eradicate.

In this connection, we submit to the world at large a few simple facts in regard to this matter. America produces annually from 33,000,000 to 35,000,000 head of hogs. Each one of these

HOGS REPRESENTS A MONEY VALUE,

and every hog that dies of disease entails an actual money loss. It is not reasonable to suppose that hog producers want to lose hogs, for the hogs represent money; and besides, for the last three years none of the farm productions have paid a greater per cent. of profit on the investment than that of hog raising. The corn crops for three years have been large ones, and prices for the same, in consequence of large crops, have ruled low. For this reason corn has been fed very freely to hogs, for it brought more in this shape than in the berry. In the light of these facts (and they are facts) is it not reasonable and common sense to suppose that hog raisers would take care of their property, and if there was any diseased stock, take it away from the herd and take care of it? There is no healthier food than

AMERICAN CORN FOR HOGS,

and no better meat food than that which has for its foundation corn. It is the sheerest of nonsense, it is foolish, to claim that American bacon is not, on the whole, extremely healthy. The great trouble with France, and some other countries, lies in the fact that it sells cheaper, and is better than their own productions.

It would be idle to claim that there is never any disease among hogs. The law of nature teaches us better. But a little reasoning on the part of our foreign brethren must convince them of one fact, and that is, that the American people can not afford to allow any disease to gain any hold upon hogs. The interest is too large—there is too much money at stake. The hogs are raised as a matter of business, and strictly for pecuniary gain; the product is made for the same purpose. We do not raise hogs or manufacture bacon for the sake of simply feeding people. Neither the producers nor the manufacturers are foolish enough to work against themselves, and this is just what it would amount to if they should allow any diseased hogs to be sent to market. If the industry was small instead of large, there would not be so great an incentive to be careful as there now is, but where

MILLIONS OF MONEY ARE AT STAKE

the future is not lost sight of. The great trouble is, America's exports exceed her imports; she is growing rich somewhat at the expense of other nations; and, unless we are not mistaken, this disparity in the balance of trade between the Old World and the New has had more to do with raising the cry of trichina than the existence of the parasites themselves.

The system of direct shipments noted for the last two or three years especially, continues an important factor in the provision trade. It is now so complete that through bills of lading are issued to every prominent point in the world, as well as to many minor points. This does away with a great deal of incidental trouble, as well as facilitating the transfer of goods, and assisting in exchanges. All the lines of ocean carriage (or nearly all) have representatives in this city, all of whom are enabled to issue through bills direct. Besides reducing the incidental expenses which would be incurred if product was shipped from here to the sea-board, and reshipped from there, it facilitates a more rapid transfer, and enables shippers to count more readily the number of days required to lay the property down at a given point.

PROSPECTS FOR THE SUMMER SEASON.

The summer season of 1881 promises to be less active than that of 1880 in a manufacturing sense, for the chances are the supply of hogs will be less than then. As there is reason in all things, this is our reason for the assertion: From early in 1879 until late in 1880, a period of at least eighteen months, there was scarcely a day that hogs would not gain flesh by proper feeding, the winter of 1879–'80 being an extremely temperate one, and exceedingly favorable for raising stock. The result was a meager mortality among the pigs, and a resultant large crop of hogs. High prices ruled throughout the summer and the last winter months, and no doubt hogs were marketed much closer than usual on this account. The winter just closed has been an exceedingly severe one for hog raising, and as the old stock was drawn down lower than usual, there are certainly good reasons for stating that the nucleus for a big crop is lacking, a much larger number than usual of young hogs perishing by virtue of the severe winter. There is plenty of good corn in the country, and there will be a good many hogs gotten ready for market, but not nearly so many as last year; while, if the consumption increases in the same ratio as it has in the past, we ought to have a good many more hogs than during the summer of 1880. Ice is plenty and very cheap, and the cost of cure will be reduced in this particular, but it is extremely doubtful if packers will be enabled to secure all the hogs they need, for reasons above noted.

CHICAGO, *March* 18, 1881.

PORK PACKING IN CHICAGO DURING THE YEAR ENDING MARCH 1, 1881.

Statement prepared by Messrs. Davies, Atkinson & Co., packers for the English market.

Packers.	Summer packing, March 1 to November 1.			Winter packing, November 1 to March 1.					Total hogs packed for twelve months.

No. 4.

House Ex. Doc. No. 209, Forty-seventh Congress, first session.

MESSAGE FROM THE PRESIDENT OF THE UNITED STATES, IN RESPONSE TO A RESOLUTION OF THE HOUSE OF REPRESENTATIVES, TRANSMITTING A COMMUNICATION FROM THE SECRETARY OF STATE RELATIVE TO THE RESTRICTIONS IMPOSED BY THE FRENCH GOVERNMENT UPON PORK EXPORTED FROM THE UNITED STATES.

MAY 27, 1882.—Referred to the Committee on Foreign Affairs and ordered to be printed.

To the House of Representatives:

In answer to the resolution of the House of Representatives of the 10th of April, ultimo, calling upon the Secretary of State for information in regard to the restrictions imposed by the French Government upon pork exported from the United States, I transmit herewith a report of that officer and its accompanying papers.

CHESTER A. ARTHUR.

EXECUTIVE MANSION,
Washington, May 26, 1882.

DEPARTMENT OF STATE,
Washington, May 26, 1882.

The Secretary of State had the honor to receive on the 11th ultimo the resolution of the House of Representatives of the 10th April, in the following words:

Whereas our export trade with France in fresh and salt pork has been partially destroyed by rules and regulations prescribed and enforced by the French Government to prevent the introduction into France of pork infected with trichina;

And whereas the danger apprehended from the introduction of pork imported from the United States into France, as an article of food, if it exists at all, is very greatly exaggerated, and does not call for such prohibitory restrictions upon the trade as are now enforced by the Government of France;

And whereas it is thought that such modification of said rules, regulations, and restrictions may be had as will encourage and protect our export trade in said articles of food, and will, at the same time, be mutually advantageous to the people of both countries: Therefore,

Be it resolved, That the Secretary of State be, and he is hereby, requested to inform the House touching the present condition of our export trade with France in fresh and salt meats; what hinderances, if any, to the healthful growth and prosperity of said trade exists; and what steps, if any, have been taken to modify or remove them.

That he report also to this House what, in his judgment, if any, additional legislation is needful to build up and adequately protect said export trade.

Attest:

EWD. MCPHERSON, *Clerk.*

In reply to this resolution the Secretary of State has the honor to lay before the President the papers named in the subjoined list, embracing the full correspondence between the Department of State and the diplomatic and consular officers in France on the subject in question, together with a selection of miscellaneous correspondence showing the effect directly or indirectly caused by the action of the French Government upon other European States, and the efforts of this Department to obtain relief for our exporters.

The Secretary of State does not desire at present to suggest any new regulations in regard to the inspection of pork before shipment, but it may appear in the discretion of Congress that such modification of existing rules might he effected by legislation as will substantially assure the French Government that none but healthy meats will be exported from the United States. From a consideration of the papers presented it is thought that Congress will be enabled to itself judge of the proper course to be pursued.

Respectfully submitted.

FRED'K T. FRELINGHUYSEN.

The PRESIDENT.

LIST OF ACCOMPANYING PAPERS.

A.—FRANCE.

FRANCE.

No. 1.

Mr. Walker to Mr. Hay.

No. 41.] UNITED STATES CONSULATE-GENERAL,
Paris, France, August 30, 1880. (Received September 16.)

SIR: Through the public prints my attention has been called to the fact that the police authorities of Paris are, at the present time, prosecuting a thorough and effective crusade against dealers in articles of food deleterious to health. I have noticed among the articles scheduled as dangerous comestibles and liable to seizure certain American hams, which came under this classification by reason of their being packed in yellow sack-cloth impregnated with chlorate of lead, a method of curing which, while it may serve to preserve the meat from exterior deteriorating influences, is considered by the health authorities as very dangerous.

The trade at Paris in American bacon, hams, preserved meats, vegetables, and fruits has already attained considerable proportions, and has still a large, unoccupied, and promising field for future development; and it behooves our exporters to guard with sedulous care against attempts to place bad wares in a good market. The sanitary police system at Paris and throughout France is so thorough and effective that any enterprise of this character must be fruitless and suicidal.

I therefore most respectfully suggest that the Department take measures to have these facts brought to public notice in the United States.

I am, &c.,

GEORGE WALKER,
Consul-General.

No. 6.

Mr. Hooper to Mr. Hay.

No. 87.] UNITED STATES CONSULATE-GENERAL,
Paris, France, February 21, 1881. (Received March 5.)

SIR: I have the honor to forward you copies of the circular addressed by the minister of agriculture and commerce to the prefets, under date of February 14, 1881, and the report of the same minister to the President of the Republic, and the decrees based thereon, together with the translations of the same.

This report and the decrees forbid the further importation of American pork, owing to the dangers to the public health from the presence of trichinæ.

I am, etc.,

ROBERT M. HOOPER,
Vice-Consul-General.

[Inclosure 1 in No. 87—Translation from the Journal Officiel of February 15, 1881.]

The minister of agriculture and of commerce has addressed the following circular to all the prefets:

PARIS, *February* 14, 1881.

MONSIEUR LE PREFET: I have been informed that trichina has been found in certain salt pork which has been imported from abroad.

The administration has for some time been occupied with this question, and in regard to certain cases of injurious importations which have been called to its attention it has indicated the culinary precautions which are necessary in order to avoid the danger which is run in the consumption of salt pork infested with trichinæ.

With a view to protecting the public health in a more efficient manner, without prohibiting, absolutely, the importation of an important element of food, to which the people have now become accustomed, the Government is studying the organization of a special inspection, which will be established on both our sea and land frontiers, so that only such meats as are known to be healthy will be allowed to enter France.

But outside of these administrative precautions it is necessary that the consumers take measures to protect themselves against the dangers of trichinosis; it is decided, therefore, to remind them that the best precaution against this danger is a thorough cooking of the pork. It is acknowledged that meat infested with trichinæ presents no danger after it has been submitted to a temperature of 100° centigrade.*

I pray you to call these facts to the attention of your constituents by all the means of publicity at your disposal, and especially by posters.

I shall be obliged if you will keep me informed, without delay, of the measures which you have taken in order to insure the execution of the foregoing instructions, the importance of which will not escape you.

Accept, Monsieur le Prefect, the assurance of my high consideration.

P. TIRARD,
Minister of Agriculture and Commerce.

[Inclosure 2 in No. 87.—Translation from the Journal Officiel of February 18, 1881.]

REPORT TO THE PRESIDENT OF THE FRENCH REPUBLIC.

MONSIEUR LE PRESIDENT: My attention has recently been called to the introduction into France of a considerable quantity of salt pork imported from America. These meats are infested with trichinæ, and may place the public health in great danger.

The committee on public hygiene of France, whom I have consulted upon the question, has been unanimous in the decision that trichina, introduced alive into the di-

* Equals 212° Fahrenheit.

gestive organs of man, gives him the malady called trichinosis, the effect of which is, undoubtedly, almost always death. After so absolute an affirmation the Government ought to take, without delay, the proper measures to prevent the dangers to which the people would be exposed from the use of such meat as has already been introduced and delivered to the consumers.

I have therefore addressed to all the prefets a circular prescribing the culinary precautions which must be taken to destroy the injurious effects of trichinæ with which the pork coming from America is infested. The greatest publicity should have been given by the prefets to the circular, which has, on the other hand, been inserted in the Journal Officiel of the Republic.

But the measures indicated, infallible if they are strictly observed, do not seem to sufficiently guaranty the consumers of these meats (who belong in a majority of cases to the poorer classes of the population) from the dangers which they might run through negligence or an ignorance of the prescriptions published. I have considered that it is the principle itself of the bad which should be fought, and I have charged the consultative committee of public hygiene to seek for the practical means of showing the presence of trichinæ in salt pork before delivering it to the consumers.

This verification, to be efficacious, ought to be made by competent men in a restricted number of ports of entry and customs offices on the land frontier, specially designed as ports of entry into France for pork coming from abroad. It has been shown that the introduction into the port of Havre alone, which it is true is much the largest, amounts to no less than 20,000,000 or 30,000,000 kilograms* annually, or, an average of 2,600 tonnes† monthly. The microscopical examination of the meat thus imported demands for each operation a long enough time to prevent the analysis in a serious manner of large enough quantities by any staff that would otherwise be employed in the service. The control therefore could only be partial, and consequently inefficacious, and would give to the people only a deceptive security, which would compromise at the same time the action of the Government. I have been, in consequence, led to renounce entirely all projects of verifying imported pork, at least for the present.

However, it is urgent that an end be put to the real danger which the public health is undoubtedly exposed to by the introduction into France of meat notoriously infested with trichina. As an efficient supervision does not seem to me possible, I consider it as indispensable to forbid, without delay, on all the frontier line of the territory of the Republic the importation of salt pork coming from the United States of America. Such a measure has already been taken by many states in Europe. In Prussia, Italy, Austria, Spain, Portugal, and Greece, pork of this origin is no more admitted.

Nevertheless, considering that pork of American origin forms an important part of the food of the lower classes, I shall continue to study the means of resolving the difficulties which this so important a question presents, at the same time assuring to the consumers of these meats the guaranties which they have a right to expect of a vigilant government.

Accept, Monsieur le President, the homage of my respectful devotion.

P. TIRARD,
Minister of Agriculture and of Commerce.

The President of the French Republic on the report of the minister of agriculture and of commerce.

In view of the advice of the consulative committee of public hygiene of France;

Considering that the introduction into France of salt pork notoriously infested with trichina, presents great dangers to the public health:

Decrees:

ARTICLE 1. In all the territory of the French Republic the importation of salt pork coming from the United States of America is forbidden.

ART. 2. The minister of agriculture and of commerce and the minister of finances are charged, each in that which concerns him, with the execution of the present decree, which will be inserted in the Journal Officiel and published in the Bulletin des Lois.

Done at Paris, February 18, 1881.

JULES GRÉVY.

By the President of the Republic:
P. TIRARD,
Minister of Agriculture and Commerce.
J. MAGNIN,
Minister of Finances.

* Equals 44,000,000 to 66,000,000 pounds.
† The tonne equals 2,204 pounds.

No. 7.

Mr. Walker to Mr. Hay.

No. 90.] UNITED STATES CONSULATE-GENERAL, PARIS,
Marseilles, February 22, 1881. (Received March 10.)

SIR: Just as I was leaving Paris on the 20th instant, upon a tour of inspection of consulates in the south of France, there appeared in the Journal Officiel a decree of the President of France prohibiting the admission of American pork, on the ground that it is so pervaded with trichinæ as to be injurious to the public health.

Deeming the decree of high importance to citizens of the United States, I gave orders to have it and the accompanying report translated and forwarded to the Department of State by the next regular post-bag. These translations accompany this dispatch.*

On my arrival here yesterday I found the matter one of more pressing urgency than I had supposed, and that a committee of merchants interested in the importations of pork had gone to Paris to confer with the minister of the United States and myself in reference to the decree. I also learned that a large quantity of pork is now on its way from the United States to Marseilles, which will be denied admission under the new decree, while I do not know what remedial measure, if any, the committee in question may seek to obtain.

I have felt it to be so important that further shipment from the United States should be arrested that I have decided to send to-morrow a dispatch by cable advising you of the decree. I shall also give instruction to forward from Paris with this dispatch statistics of the importation of American pork into the three principal ports of France—Havre, Marseilles, and Bordeaux. These statistics might be obtained by consulting the last annual reports of the consuls in those cities, but it seems to me more appropriate that they should accompany this report.

I am, etc.,

GEORGE WALKER,
Consul-General.

[Inclosure 1 in No. 90.]

Importations into France of American pork during the years 1878, 1879, 1880.

Whence.	1878.	1879.	1880.
	Cwt.	*Cwt.*	*Cwt.*
From United States	664, 545	744, 586	816, 246
From other countries	89, 646	95, 988	111, 364
Total exportations	754, 191	840, 574	927, 610
Value in dollars	$9, 717, 609. 68	$8, 265, 132. 30	$8, 984, 208. 68

These figures are extracted from the official returns of the French Government; those of the year 1880 are subject to change.

The following letters from the consuls at Marseilles and Bordeaux show the imports at those ports.

---

* For these papers see No. 87, from Mr. Hooper, vice-consul-general at Paris, February 21, 1881.

[Inclosure 2 in No. 90.]

Mr. Gould to Mr. Walker.

UNITED STATES CONSULATE,
Marseilles, February 22, 1881.

DEAR SIR: Agreeably to your request, I have the honor to transmit herewith the total amount of the salt pork imported at Marseilles for the years 1880 and 1879:

Total imports.	Quantities which were paid.	Amount of duties.
	Kilograms.	
1880.		
Total, 42,326.75 kilograms	27,838.13	$110,290.00
From the United States, 390,102.00 kilograms	26,666,682.00	104,827.00
1879.		
Total, 20,526.10 kilograms	14,453.90	595.52
From the United States, 17,984.48 kilograms	13,027.91	525.91

The above statements show at once the progress made by the trade at Marseilles, the importation having doubled from 1879 to 1880, and also that the market is almost exclusively supplied by the United States.

Another fact may be derived from the same figures, viz, that two-thirds of the importations are received for home consumption, and contribute in a fair proportion to the proceeds of customs at this port.

With reference to the new decree, I inclose a scrap from the commercial paper Le Sémaphore, of this place, relating to the difficulty under which ships and consignees come very near being placed.

Another instance of the annoyance involved by the unexpected decree prohibiting the importation of American pork is related to me. A sailing ship arrived from New York with provisions, and had already commenced to discharge her cargo, when the custom-house received official communication of the decree, and the landing was stopped at once. The occurrence took place yesterday afternoon, and I do not know whether the sailing ship will be favored as the steamer was, upon the application of the consignees, but if the goods are landed they will be ordered to the Government warehouse and be kept under strict bond, and it is more than likely that the importers will experience some difficulty is disposing of goods which they undoubtedly exported with the intention of selling them on the market for home consumption.

Although the decree does not concern lard and grease, I thought it well to procure also the figures of importation of such articles. The total imports amounted in 1880 to 13,446,831 kilograms, of which 11,188,190 came from the United States; and in 1879 to 12,480,166 kilograms, 9,332,231 coming from the United States.

This shows that the lard and grease trade at Marseilles is larger than that of salt pork proper, but shows also that the progress was less in proportion for the former than for the latter.

Very respectfully, etc.,

J. B. GOULD,
United States Consul.

[Inclosure in inclosure 2.]

Translation of an item from Le Sémaphore, of Marseilles, of February 22, 1881.

There arrived yesterday at the dock basin at Marseilles the steamer *Vicenz Florio*, with a cago of lard and hams of American production. In consequence of the decree prohibiting the admission at the frontier of the territory of the French Republic of all imported salt provisions, the consignees of the cargo petitioned the minister of commerce to authorize the landing of the cargo, which was granted. After a proper identification on the quays, the merchandise will be transported to a warehouse, where it will be minutely examined by agents of the government in such a manner as to afford every guarantee to consumers.

Mr. Gerrish to Mr. Walker.

UNITED STATES CONSULATE,
Bordeaux, February 24, 1881.

MY DEAR SIR: I received yours from Marseilles the 21st, yesterday, and have obtained from the custom-house the statistics you desire.

During the year 1880 the importations at this port, direct from the United States, of salt pork, bacon, and hams, amounted to 2,543,497 kilograms.

The first of the new line of steamers direct from Bordeaux to New York has just returned laden principally with the above named articles, and this recent decree seemed at first to be the death-blow of the enterprise, but a telegram from Paris this morning permits the cargo to be landed, subject before delivery to the inspection of the authorities.

The rumor that the American Government had prohibited the entry of French wines caused great excitement here yesterday, but all is tranquil to-day.

Yours, very truly,

B. GERRISH.

No. 8.

Mr. Noyes to Mr. Evarts.

[Telegram.]

PARIS, *February* 23, 1881.

EVARTS, *Secretary, Washington:*

I have had protracted interview with minister for foreign affairs and minister of agriculture and commerce. Former conciliatory; latter more reserved, being alone responsible for decree. Promised, however, that all pork shipped before date of decree should be admitted on inspection, diseased only being condemned. The Government is considering expedient to secure public health without maintaining decree. Have great hope it will be revoked after some delay. Am using all possible influences.

French Government issues decree immediately excluding American pork.

WALKER,
Consul-General.

No. 10.

Mr. Noyes to Mr. Evarts.

No. 439.] LEGATION OF THE UNITED STATES,
Paris, February 26, 1881. (Received March 12.)

SIR: Referring to the telegraphic correspondence which has passed between the State Department and this legation upon the subject of a

decree of the French Government prohibiting the importation into France of American pork, I have the honor to inclose herewith—

1. The report of Mr. Tirard, minister of agriculture and commerce, and the decree of the President, *in French*.
2. Translation of the report and decree.
3. Copies of telegrams from and to State Department on the subject.
4. Copies of my dispatches to the minister for foreign affairs of the French Republic.

In addition to the information communicated by these documents I have the honor to report that immediately upon the promulgation of the decree, February 19, 1881, I took measures to acquaint myself with the facts and circumstances which led to this summary action, more fully, if possible, than appeared in the report of Mr. Tirard.

On Sunday morning the 20th instant I received your telegram, and the same day addressed to the minister for foreign affairs the communication expressing, by your authority, the regrets of my Government. On Monday the 21st and Tuesday the 22d I had interviews with Mr. Barthélemy St. Hilaire, and on Wednesday the 23d by appointment, with Mr. Tirard, minister of agriculture and commerce. I was informed by both these ministers that the necessity for the decree was found in the fact that numerous inspections of American pork had recently been made by most competent scientific men; that the meat was taken at random from many different packages or consignments, and that all, or nearly all, was found to be infected with trichinæ; that, in the estimation of the Government of the French Republic, the preservation of life and health was a matter more important and imperative than any considerations of trade and commerce; that the resolution of the Government had only been taken after full investigation, mature reflection, and great pressure of public opinion; that the decree, while it undoubtedly affected injuriously American commerce, was not less severe and appreciable to the French traders and population, as American pork entered largely into the daily consumption of a great number of the poorer classes of Frenchmen; that the maintenance of the decree would depend upon the necessity and that it would be revoked as soon as the occasion for it had disappeared or had become so rare as to warrant its recall.

I assured the ministers referred to that I was incapable of urging or suggesting any action on the part of the French Government which would imperil life or the public health; that I fully appreciated all which had been said upon that subject. But I ventured to suggest that among fifteen millions of my countrymen very little meat was consumed other than American pork; that among that great number of persons this constituted a part of their daily food; that among thirty-five millions more of our population pork was eaten interchangeably with other meats, and that no danger to life or health had resulted from such consumption and use. I also cited England, where a vast amount of American pork is used, and where no disastrous effects have followed. I represented that it was inconceivable to my Government that different and dangerous consequences could follow its consumption in France. I corrected the statement contained in the report of Mr. Tirard as to the prohibition of importation of such meats into Germany, Austria, and Spain, on the authority of our ministers in those countries. I represented the magnitude of the interest involved, the disastrous consequences which would follow the continued operation of the decree, and in the name of my Government asked for its revocation, or suspension until such time as the subject could receive a fuller and more searching investigation.

I inquired if any actual cases of sickness or death resulting from the use of American pork in France had been officially reported. I was answered that while no certain case could be cited, there were numerous cases where it was believed or suspected to have been influential in producing said results. I said that I would venture to affirm that no case could be found, in France or elsewhere, in which death or illness had resulted from the use of American pork *well cooked*, even if infected as claimed. I also said that this disease was not confined to American pork, but was far more common in France and Germany, by reason of the inferior and less healthful substances upon which the hogs of those countries were fed and fattened.

I called attention to the fact that this decree had been published without notice, and that it became immediately operative; that American pork to the value of many millions of francs had arrived in France and was awaiting delivery, or was on the sea *in transitu;* that bills on account of payment for these consignments had been drawn and discounted, and that these drafts would be continually arriving in Paris, would be protested, and would cause financial ruin to many who had acted in good faith, and who had made their shipments without notice of this decree or the facts upon which it purports to be based.

The minister of agriculture and commerce finally assured me that all pork which had been shipped from America prior to the publication of the decree should be admitted into French ports and delivered to consignees, subject only to inspection and the condemnation of such meat as might be found diseased. He also informed me that the Government would diligently seek for expedients in order to be able to abrogate the decree without putting in jeopardy life and health.

In my interviews with both these ministers I found them not unkindly disposed, and their assurances were frank and conciliatory. While no promise was made by either, the impression I gained was that at no distant day the decree would be revoked, and some thorough system of inspection substituted therefor. To this end I have utilized all possible influences, and shall continue to do so. I hope for favorable results.

I have, etc.,

EDWARD F. NOYES.

[Inclosure 3 in No. 439.]

Mr. Noyes to M. Barthélemy St. Hilaire.

LEGATION OF THE UNITED STATES,
Paris, February 20, 1881.

SIR: I am instructed by Mr. Evarts, Secretary of State at Washington, to convey to your excellency an expression of the profound regret entertained by the Government of the United States that your excellency's Government should have deemed it advisable to issue the decree of the 18th instant prohibiting the importation of American pork into France.

I need not remind your excellency that the influence of such a decree is far reaching and most detrimental to the commercial interests of the United States. Speaking in the name of my Government, I beg leave to express the hope that further consideration and a fuller investigation of the facts which led to the decree may result in its revocation.

In the mean time I beg to be informed as to the circumstances which have induced your excellency's Government to adopt the extreme measure set forth in the decree, in order that I may promptly make known the facts to my Government.

I take this opportunity to renew to your excellency the assurance of the distinguished consideration with which I have the honor to be your obedient servant,

EDWARD F. NOYES.

[Inclosure 4 in No. 439.]

Mr. Noyes to M. Barthélemy St. Hilaire.

LEGATION OF THE UNITED STATES,
Paris, February 22, 1881.

SIR: Referring to our conversation of this morning regarding the decree of your excellency's Government prohibiting the importation into France of American pork, I beg leave to submit, for such consideration as your excellency may deem them entitled to, the following observations:

The preparation and sale of pork constitute one of the most important industries of the United States, and a vast amount of capital is invested in the same. The maintenance for any considerable time of the decree in question would result in the financial ruin of thousands of our business men. Pork to the value of many millions of francs is now afloat on its way to France, or has already arrived and is waiting delivery. Bills for payment on account of these consignments have been drawn and discounted, and the drafts will inevitably go to protest in Paris if this decree remains in force. I trust, therefore, that it will not be considered strange that my Government and countrymen entertain a deep feeling on this subject.

The decree was issued without notice, and became immediately operative. Therefore, there was no opportunity afforded to provide against the immediate disastrous effects and loss occasioned thereby.

I appreciate fully the considerations regarding the public health referred to by your excellency in our interview of to-day, and should be loath to urge or suggest any action that would imperil either life or health. But I respectfully suggest that in the United States there are probably 15,000,000 persons who consume daily American pork to the exclusion of all other kinds of meat. Thirty-five million more habitually partake of pork interchangeably with other kinds of meat. No disastrous consequences have followed, and *neither* life *nor* health has been endangered. Under such circumstances, and with such unlimited means of knowledge, it seems to my Government and people inconceivable that the infection or disease complained of, and which purports to form the basis of the decree, can be so general or extensive as to warrant the summary measure adopted by the French Government; and I respectfully suggest that the disease complained of is not confined to American pork, but is quite as common to that of France and other countries. In American pork it is certainly exceptional and comparatively rare, as a long and extensive experience has assured my Government and countrymen.

Considering, therefore, the interests involved, and the facts to which I have alluded, I beg leave to express the hope that the decision arrived at by your excellency's Government may not be considered final and irrevocable, but that the decree may be at least so modified as to admit American pork into French ports subject to rigid inspection and condemnation of such, if any, as may be found diseased.

My Government very respectfully, but most urgently, protests against the decree as now in force, and urges a reconsideration of the subject, with a view to the revocation of the order and the adoption of some other expedient not injurious to American trade and commerce and not incompatible with the welfare of the French people.

I beg to be informed, in as much detail as is convenient, as to the extent of the inspection of American pork upon which the order was based, the relative amount of such meat found to be defective, and as to whether any actual cases of sickness or death in France resulting from the use of American pork have been officially reported.

I avail myself of this occasion to renew the assurances of the distinguished consideration with which I have the honor to be your excellency's most humble and obedient servant,

EDWARD F. NOYES.

Published statements of mortality among swine are false.

EVARTS.

No. 12.

Mr. Gerrish to Mr. Hay.

No. 114.] UNITED STATES CONSULATE,
Bordeaux, March 9, 1881. (Received March 24.)

SIR: I have the honor to forward herewith a communication relative to the recent order of the French Government prohibiting the importation of American pork into the territory of France.

I am, etc.,

B. GERRISH,
United States Consul.

[Inclosure in No. 114.]

THE DECREE PROHIBITING THE ENTRY OF AMERICAN PORK INTO FRENCH PORTS.

The recent decree of the French Government prohibiting the entry of American salted pork, hams, bacon, and lard into any port of France created here, on its promulgation, much excitement, not among importers and retail dealers alone, but among the large class who are the principal consumers.

The terrible trichina had never been observed nor thought of here, and this sudden decree was not only crushing a business that has been developing largely of late, but was depriving a large portion of the population of a cheap and nutritive food.

It appears from official sources that in the last twenty years there has been but one death in France from trichina, and even that has been disputed at the Academy of Medicine lately by one of the most celebrated physicians of France. If, however, in this case trichina was really the cause of the death, it came from eating the pork of a native hog.

Deaths occur every year from hydrophobia and from eating the unripe fruit, and still unmuzzled dogs run the streets and green fruit is sold in the markets without restriction.

The importations at this port directly from the United States of pork, hams, and bacon, for the year 1880, amounted to 5,606,000 pounds. A large quantity in addition came by way of England and Havre. Much of this of course was distributed through neighboring departments, and no one that I can learn has ever had reason to complain of it, except on account of certain hams and pieces of bacon badly cured or enveloped.

I have heretofore believed that there was more reason to fear a loss of this important trade from the latter cause than from trichina. A dishonest shipper in one exportation can destroy a trade worth millions, and if an official inspection were made at the port of shipment, as is made here at the port of debarkation, it would be much to our advantage. Confidence first is wanted, and with that prejudices can be surmounted.

The chamber of commerce, on the reception of the decree of prohibition, forwarded a vigorous protest to the minister of commerce at Paris, a translation of which I give below.

A question of commerce was also at stake. For more than a year past some of the wealthy and leading citizens of Bordeaux have been laboring to establish a direct line of steamers from here to New York. The amount of capital necessary for a com-

mencement was subscribed, and the first steamer left here in December. The freight in return, as was expected and as was calculated upon, largely consisted of pork, hams, etc., but on its arrival the discharging had scarcely commenced when this order prevented any further landing of the cargo.

A rumor that the United States Government had retaliated by a refusal to permit the introduction of French wines there added to the excitement, and demands at the consulate for positive information were many.

A subsequent order of the French Government, but with great restrictions, permitted a discharge, and also the admission of all cargoes now on the way which may have left an American port previous to the first decree.

As will be seen, the return freight upon which the company largely counted is forbidden entry, and it is probable that the direct steam communication between the ports of Bordeaux and New York may have to be suspended. This is to be regretted, as the anticipations of the projectors of this line were to make it a rival of the best lines from Liverpool or Havre. New steamers of greater tonnage were gradually to be added, with the most approved accommodations for passengers.

One steamer of 2,500 tons has just been purchased and will soon be ready for service. The ever-increasing number of Americans desirous of spending the winter in the south of France or in Italy could, in the autumn or spring months, by this line, take a more southerly course in crossing the ocean, thus insuring doubtless a better passage and avoiding the tiresome railway journey from Liverpool or Havre. It is not to be wondered at that the Bordeaux people, whose interests in so many ways are largely compromised, keenly feel the misfortune which this decree of the Government entails, and believing it uncalled for, are so earnest in their solicitations for its revocation.

B. GERRISH.

UNITED STATES CONSULATE,
Bordeaux.

[Translation.]

Letter from the chamber of commerce at Bordeaux to minister of agriculture and commerce at Paris.

Mr. MINISTER: Authorized in this matter by the chamber of commerce of Bordeaux, we take the liberty to submit for your approbation certain observations relative to the severe measures of the decree of the 18th of February, by which salted pork coming from the United States is forbidden to be entered in any port of France.

We owe it to you and we owe it to ourselves, Mr. Minister, to state to you with earnestness that in considering this question we understand that the considerations relative to the hygiene and the public health are above all else, and that if the measure decreed by you is really required, it should be enforced; but if, as we believe, your decision has been the result of inexact information, in any event exaggerated, if the dangers which you apprehend are not real, then we do not hesitate to say that this measure is greatly to be regretted, and it seems to us that it ought to be revoked.

In reality, this measure will have a double and very serious result; the first will be to take from the public food of great importance, and to enhance enormously the price of similar food produced in France.

Would it not be greatly regretted to take from the laboring classes, and the poorest, this resource for food, if not absolutely required?

The second consequence, which certainly is of value, is that it would be a terrible blow to a very important branch of commerce which facilitates our exchanges and gives to our merchant marine a precious value in freight.

Before indicating some of the positive and technical reasons which dictate our opinions, permit us an observation of a general character which appears to meet your attention.

For a long time the solicitude of several governments has been awakened in this great question; scientific researches have been prescribed by them and made with the greatest care. The result has been that they have believed it safe to allow the free entry of these goods for consumption. This has been done in England, Belgium, Holland, Sweden, Norway, Russia, Denmark, Spain, and Germany, which is contradictory to the erroneous information furnished you.

England, which consumes five or six times more of these products than France, is a country, as you know, Mr. Minister, to judge of it by the earnest measures taken concerning the importation of living animals, where the Government guards with the greatest vigilance the introduction of goods which may prove deleterious to the public health, and still England does not hesitate to receive these goods by hundreds of thousands of tons. The English Government has certainly reason for its course, from the fact that no case of trichina has ever been known in England. Therefore, it seems to us a fact of considerable importance in our case.

We understand, however, that the example of other nations does not suffice for our guide, and that if measures adopted by them are wrong we ought to act differently.

But in this case it ought to be demonstrated with certainty that the salted pork coming from America has occasioned maladies, while from French pork no danger to the public health has been apprehended; but this does not appear to be the case, if we can judge from the reports of the session of the Academy of Medicine of the 15th of February, published in the Journal Officiel of the 19th of the same month.

If American pork presents no more dangerous consequences to consumers than French pork, then it seems to us that we ought equally to permit the consumption of American pork or to forbid that of French pork.

We conclude, Mr. Minister, that you desire to make without delay investigations and scientific researches as exact, as complete, and as profound as possible. We demand that a study may be made on salted American pork, on salted and fresh French pork, and also on the living animals crossing our frontiers. We believe that these investigations will demonstrate that American pork presents no more danger as an article of food for the public than pork of any other origin, and if, after careful study, such proves to be the case, we demand that one no more than the other be excluded from consumption. In waiting, however prompt these investigations may be, we believe it our duty to remark, Mr. Minister, with much earnestness, that the decree of the 18th of February has caused great interests to suffer to the extent of millions. We think, then, that temporarily it is desirable that the prohibition be removed, and that the introduction of American meats may be permitted with the necessary precautions of submitting them to a severe inspection which shall put the public beyond all danger.

Up to this time the importation of these meats does not seem to have produced in France the consequences which the Government fears; the neighboring countries do not seem to have suffered more than we.

The transitory measure, then, which we propose, in waiting a definite solution, will give much satisfaction to the great interest, engaged, and will not be of the slightest risk to the public.

A. LALANDE,
President of the Chamber of Commerce, and others.

No. 13.

Mr. Blaine to Mr. Noyes.

No. 342.] DEPARTMENT OF STATE,
Washington, March 15, 1881.

SIR: Your No. 439, relating your action with respect to the late decree of the French Government prohibiting the importation of American pork into France, has been received. I have pleasure in approving your course, and I trust that your discreet and conciliatory efforts towards procuring such modification of the enforcement of the decree as will relieve legitimate commerce from a sudden and disastrous check may be successful.

The publication in the London Times, on the 19th of February ultimo, of a report made in December last by the then acting British consul at Philadelphia, has occasioned wide-spread alarm, and given rise to correspondence with the British legation here and with the boards of trade of the great pork producing and shipping centers. Mr. Crump's report, besides stating that "immense mortality among swine by a disease known as hog cholera" exists (from which disease 700,000 head are stated to have died in Illinois during the past year), proceeds to confound that disease with the entirely distinct disorder of *trichinosis*, of which latter he relates certain horrible examples.

The most searching investigation fails to show the basis of these published statements. While the mortality among very young swine from the so-called hog cholera has been less than for several years past, the health of the full-grown hogs (which are alone packed as pork) has

never been better in the great producing States, and the absence of communicable diseases among them has been most noteworthy.

In view of all the facts accessible to it, this Department can not but reach the conviction that the good faith of the British representative at Philadelphia has been imposed upon by designing speculators, to the great injury of legitimate trade.

My predecessor sent you a telegram on the 7th instant in the following words:

NOYES, *Minister, Paris:*

Published statements of mortality among swine are false.

EVARTS.

Since that date, my correspondence with the British legation here has not elicited any ground for the extraordinary report of Mr. Crump. You may, therefore, unhesitatingly deny it, in view of the mass of direct testimony to the contrary possessed by this Government, in case the French minister should appeal to it as justifying interdiction of, or onerous interference with, the pork trade of this country.

I am, &c.,

JAMES G. BLAINE.

NOYES, *Minister, Paris:*

Communicate to Lowell by mail immediately instruction of even date to you relative to pork product.

BLAINE, *Secretary.*

No. 15.

Mr. Blaine to Mr. Noyes.

[Telegram.]

WASHINGTON, *March* 16, 1881.

NOYES, *Minister, Paris:*

Your course respecting pork decree of French Government approved. Statements of Crump, acting British consul at Philadelphia, have occasioned excitement and wide-spread comment here, leading to correspondence with British legation and boards of trade.

Hog cholera is confounded with trichinosis, which is an entirely distinct disease. But representations regarding hog cholera are very greatly exaggerated. Most searching investigation fails to show the basis for published statements. The mortality among very young swine from cholera has been less this year than for several years past, and the condition of full-grown hogs, which are alone used for packing and export, is this year exceptionally good. British representative at Phil-

adelphia has apparently been misled by designing speculators, to great injury of legitimate trade.

Deny in strongest terms report of British consul, should French ministers appeal to it as justifying them in interdicting or restricting American pork trade.

Instructions follow.

No. 18.

Mr. Noyes to Mr. Blaine.

[Extract.]

No. 449.] LEGATION OF THE UNITED STATES,
Paris, March 24, 1881. (Received April 7.)

SIR: I have the honor to inclose copies of telegrams regarding the decree prohibiting the importation of American pork, sent and received since the date of my dispatch No. 439, of date February 26, 1881.

The French Government has consented to receive, and to deliver to consignees, subject to inspection and condemnation of such as is found to be diseased, all pork which had actually been shipped from its orig-

inal starting point by packers and merchants prior to the date of the decree of prohibition. Positive proof, however, will be required that the meats were actually *in transitu* before the decree was promulgated.

I have sent copies of your telegrams on this subject to Mr. Lowell, United States minister at London, as you directed.

The inspector of American pork here has demonstrated that a considerable percentage, just how large can not be ascertained, as reports are conflicting, is infected with trichinæ, and the prejudice among Frenchmen against it so great that sales by retail dealers are largely suspended. Some dealers inform me that they can not dispose of American pork and hams at any price. But as the price of French pork has greatly advanced since the decree of prohibition was promulgated, it is not likely the present state of things will continue. The French people of the poorer classes must have American pork, and in time the decree will, I am confident, be revoked, but I do not expect it at present.

* * * * * * *

I have, &c.,

EDWARD F. NOYES.

No. 19.

Mr. Noyes to Mr. Blaine.

No. 462.] LEGATION OF THE UNITED STATES,
Paris, April 8, 1881. (Received April 22.)

SIR: Referring to the dispatches which have passed between the State Department and this legation regarding the decree prohibiting the importation of American pork into France, I have the honor to inclose slips from the French newspapers of wide circulation relating to this subject.

The chambers of commerce at Havre, Bordeaux, and Marseilles are moving actively in the matter, and powerful influences are being organized to secure the revocation of the decree.

I have some reason to think that the French Government is more favorably disposed than heretofore toward our application, and I am confident that within two months, perhaps within one month, the order will be annulled, and a system of thorough inspection organized instead. If this proves to be true, I shall use every endeavor to have the inspection attended with as little annoyance, delay, and loss as possible.

I have not troubled the Department with frequent dispatches on this subject, but I have spared no effort and have lost no opportunity to utilize all the influences and aid at my command, in order to modify public opinion and to secure the free admission of American pork.

I am satisfied beyond all doubt that the amount of trichinæ found in our swine product has been greatly exaggerated. My information is that not over one per cent. is infected, and of the first class meats less than one per cent.

Undoubtedly at one time large lots of bad and diseased pork were shipped from the United States to France, for what reason or from what motive the State Department can judge better than I am able to do.

I have, &c.,

EDWARD F. NOYES.

(Inclosures: Extracts from French newspapers, not translated, omitted.)

No. 20.

Mr. Blaine to Mr. Noyes.

No 363.] DEPARTMENT OF STATE,
Washington, April 23, 1881.

SIR: I inclose herewith for your information a copy of a letter to this Department from the firm of S. Davis, jr., & Co., making some statements in regard to the proceedings of the French authorities in reference to certain lots of pork sent to France by them for sale.

In view of the great hardships to which this firm have been exposed by the action of the French Government, based upon false reports as to an extraordinary prevalence of trichinosis among the hogs of this country, I will thank you to bring the complaints of Messrs. S. Davis, jr., & Co., to the attention of the French foreign office with a view of obtaining for them such relief as may be practicable.

I am, &c.,

JAMES G. BLAINE.

[Inclosure in No. 363.]

Messrs. S. Davis, jr., & Co. to Mr. Blaine.

CINCINNATI, *March* 26, 1881. (Received March 13.)

DEAR SIR: It has been suggested to us that we advise you of the course pursued in Paris with our meats, and to offer letters.

We send copy of one entire, with comments below.

In contrast with it, where our hams passed "with honor," another house with hams packed the *same day* here and forwarded by *same steamer* were rejected in Paris and lot sent back to Havre. This, too, after passing inspection at Havre.

[Letter from Havre.]

Lot per "Volner" found sound by the government inspector, and, with authority of consignees, forwarded to Paris. (Second lot.) But they may be rejected at Paris like the first. Here they do not find trichina, but it appears they find some in Paris, and *then immediately destroy the meat.*

Mr. P. returned us here nine crates (from Paris). We will try and sell the hams; *but it is a pity* to see how these hams are *damaged;* the covers are off, and they have holes as big as a thumb.

PARIS, *March* 4, 1881.

S. D., JR., & CO., *Cincinnati:*

Your invoice of January 22 reached me to-day, after passing the ordeal of microscopical examination *with honors.*

The delay and trouble and *consequent expenses are so great that* I can hardly say whether I am glad or sorry that the invoice of January 4 has at last reached Havre. * * * Many persons are, of course, prejudiced against American pork. This was, no doubt, the only object of the recent decree.

I hear that some members of Bordeaux Chamber of Commerce, who were deeply interested in the American pork trade, came here recently, and, choosing some freshly killed French pigs at the abattoir, had them analyzed with the result that several were found to be more or less infected with the newly-invented disease.

That I understood to be with the object of showing that trichina is possible in French pigs, many here contending that, in the way they are fed, they are more liable to have them than ours, as we *have sounder and fresher food.*

S. DAVIS, JR., & CO.

We desire to state that this has been the most favorable season for curing meats that we have had for years, and with consumers here and abroad the cure has been pronounced better than last season.

We take great pains with meats for export, being drier then domestic meats when shipped, and for two years have had double covers.

And one matter, very important—for there have been complaints that meats are sent over not fully cured, and sometimes true, and so ordered by French people—we have *not* this season, or at any time, sent *any hams* but *those fully cured.* We have, by cable and letters, given a portion of this information to Governor Noyes, who has our hams for his own use, and whom the writer well knows.

You can see our *losses* are likely to be *severe,* and portion of meat may be *returned* here, and some destroyed.

Very respectfully, your obedient servants,

S. DAVIS, JR., & CO.

No. 21.

Mr. Blaine to Mr. Noyes.

No. 365.] DEPARTMENT OF STATE,
Washington, April 28, 1881.

SIR: I have to acknowledge the receipt of your dispatch No. 462, of the 8th instant, referring to your personal efforts to obtain a revocation of the decree prohibiting the importation of American pork into France, and informing me that the French Government, at the date of your dispatch, seemed disposed to take favorable action, at an early day, in relation to your application for the annulment of the decree in question.

I heartily approve your prompt and judicious action in reference to this subject, and I am exceedingly gratified to learn that there is a prospect of a speedy revocation of a measure so injurious to important American commercial interests.

I am, &c.,

JAMES G. BLAINE.

No. 22.

Mr. Blaine to Mr. Noyes.

No. 368.] DEPARTMENT OF STATE,
Washington, May 4, 1881.

SIR: I inclose herewith for your information a copy of a letter dated the 21st ultimo, from Messrs. L. Huchberger & Co., Chicago, Ill., in which they inform this Department that on the 4th of February last they contracted to deliver in Havre, France, during the following month, six hundred boxes of bacon; that they forwarded the same from Chicago on the 8th and 9th of February; and that the property left New York on the 23d of the same month for Havre by the steamer Ville de Marseilles. Upon the arrival of the bacon at Havre the French authorities seized twelve boxes of it, on the ground that the meat contained in the boxes seized was infected with trichinæ. Messrs. Huchberger & Co. say that they believe that there is no good ground for this action of the French authorities, and they therefore desire that the bacon which was condemned may be returned to their agents at Havre for reshipment.

In view of the representations which Messrs. Huchberger & Co. have made to the Department on this subject, I have to instruct you to bring the matter to the attention of the French Government, and to ask that, if practicable, the bacon in question may be re-examined with a view to testing the accuracy of the first examination, and determining whether

the circumstances of the case are such as to justify the French authorities in restoring the property to the agents of Messrs. Huchberger & Co. for reshipment.

I am, &c.,

JAMES G. BLAINE.

[Inclosure in No. 368.]

Messrs. L. Huchberger & Co. to Mr. Blaine.

CHICAGO, *April* 21, 1881.

DEAR SIR: The senior member of our firm is a naturalized citizen of the United States, residing in this country since 1850, and in this city since 1854; the junior member is a United States citizen by birth.

We are engaged in exporting provisions, and, having some little trouble with a shipment to France, we are obliged to submit to you the following complaint:

February 4, 1881, we contracted to deliver in Havre, France, during the following month of March, 600 boxes bacon, and, agreeably to our contract, we forwarded the same from here February 8 and 9, as described in copies of the bills of lading, which we hand you herewith.

February 19, ten and eleven days after date of shipment, the French Government issued their decree against the importation of American bacon into France, but the said shipment having advanced on its journey too far we could not stop it, and so were obliged to let it proceed.

The property left New York February 23, per steamer Ville de Marseilles, and arrived at Havre March 11.

We are advised by our correspondents there (MESSRS. J. Barenklau & Co.) that of this shipment of 600 boxes the Government seized twelve boxes, in value of $600, claiming that the meat contained therein was infected with trichinæ. Our correspondents further advised us that it was doubtful if these twelve boxes would be given back.

We believe there is no good ground for such action, and, as we desire to relieve France of the burden of these twelve boxes and wish to send them away from that country, we do not think justice is being done us in withholding them, and hence are obliged to ask your intercession to enable us to recover our property and protect us as United States citizens.

If the French Government had given proper public notice in time that they would prohibit the importation of American bacon after a certain day, then we would have no reason for complaint; but being that they issued their order *peremptorily* without notice while these goods were in transit, if there was any bacon in the lot which they would not receive, we claim that we should have the same back with permission to reship, and hope you will instruct your respresentative at Paris to that effect.

We are, etc.,

L. HUCHBERGER & CO.

Mr. Blaine to Mr. Noyes, May 23, 1881.

(See instruction, Mr. Blaine to Mr. Noyes, No. 371, May 26, 1881.)

No. 25.

Mr. Blaine to Mr. Noyes.

No. 371.] DEPARTMENT OF STATE,
Washington, May 26, 1881.

SIR: On the 23d instant I sent you the following telegram, viz:

NOYES, *Minister, Paris:*

A telegram from Bordeaux to Chicago, 18th instant, says that the deputies from Bordeaux and Havre had an interview with minister of commerce touching American pork exports, and that minister asserted that American papers are full of revelations of extent and intensity of trichina in America. If made, as asserted, statement is based on erroneous impression in minister's mind formed by isolated items maliciously published for speculative purposes. Most rigid examination adds daily to strength of position of this Government in claiming that the hog exports of this country are singularly free from trichina or any communicable disorder. Make dignified protests against minister's statements as prejudiced and inimical rumors, to which the mass of American press lends no credence.

BLAINE, *Secretary.*

I inclose herewith, for your further information, a copy of a letter from Messrs. Armour & Co., of Chicago, communicating to the Department the information upon which the above telegram is founded.

I am, etc.,

JAMES G. BLAINE.

[Inclosure in No. 371.]

Messrs. Armour & Co. to Mr. Blaine.

CHICAGO, *May* 18, 1881. (Received May 21.)

SIR: We beg to call your attention to the inclosed cable dispatch received by us to-day from Messrs. Seignouret Frères, of Bordeaux, by which you will see that the efforts being made by those interested in the importation of American meats into France are being seriously hampered and offset by the circulation of false reports in that country respecting the situation of affairs here.

We have for some time, through our agents in Havre, Marseilles, and Bordeaux, been engaged in some effective work, we think, in bringing about the repeal, or at least the modification of the prohibitory decree of the 18th February last; and as the prompt action taken by yourself in denial of the erroneous statements current about that time were of the utmost value in modifying the original decree, whereby all meats shipped from this country before issuance of the decree were permitted entrance, we now take the liberty to suggest that an official denial be made of the existence of any newspaper articles of the kind mentioned in the inclosed cable dispatch.

Friends of the American meat trade all over France are, we know, meeting with every possible obstacle in their efforts to effect the repeal of this decree, and any official assistance you may see fit to render them by the denial of false rumors will, of course, be of the very greatest value.

Messrs. Seignouret Frères, from whom the inclosed cable dispatch was received by us, are by far the largest dealers in and importers of American meats in France, and have been ever since this prohibitory order was issued unremitting in their exertions toward its repeal.

Confident of your sympathy with the general effort being made to relieve the commercial public, equally with the agricultural interests of this country now suffering from the effects of this prohibitory decree of the French Government, and soliciting your valuable co-operation at this time,

We have, etc.,

ARMOUR & CO.

[Appendix to letter of Messrs. Armour & Co.—Telegram.]

BORDEAUX, *May* 18, 1881.

ARMOUR, *Chicago:*

Bordeaux-Havre deputies had, yesterday, interview with minister commerce, who asserted that American papers are full of revelation on extent and intensity of trichina in America. We advise strong protest from the press, and true reports sent by officials.

No. 26.

Mr. Noyes to Mr. Blaine.

No. 475.] LEGATION OF THE UNITED STATES,
Paris, May 27, 1881. (Received June 10.)

SIR: I have the honor to send you herewith the translation of remarks made in the Chamber of Deputies on the occasion of the interpellation of Mr. Tirard, minister of agriculture and commerce, by the deputy from Havre, on the 24th day of May, 1881. It will be noticed that at the close of the remarks of Mr. Tirard he plainly indicated that as soon as the necessary arrangements could be made for thorough inspection of American meats, he would propose the revocation of the prohibitory decree. I learn also from other sources, unofficial, that this is in contemplation by the French Government.

In answer to your telegram of the 24th instant, referring to certain published statements alleged to have been made by the minister of agriculture and commerce to the deputations from the chambers of commerce at Havre and Bordeaux, I take pleasure in saying that after careful inquiry, I am satisfied that the minister did not make the statements imputed to him. What he did say was in substance the same as what appears in the report of his remarks in the Chamber of Deputies herewith inclosed.

You can rest assured that I have neglected no opportunity to assert and emphasize your views upon this question, and very powerful French influences are operating to secure the revocation of the decree. There is unavoidable delay, but I believe the result will be attained after a time.

I have, &c.,

EDWARD F. NOYES.

[Inclosure in No. 475.]

CHAMBER OF DEPUTIES, SITTING OF MAY 24, 1881.

Mr. PEULEVEY (Havre) asked to put a question to the minister of agriculture and commerce relative to the prohibition of American salted meats. He explained that the maintenance of the decree of prohibition caused a great prejudice to an important branch of French commerce. For more than twenty-five years the laboring population had contracted the habit of finding in these meats a healthful element of alimentation. This situation has been overturned by a decree of prohibition. It was

charged that American salted meats contained live trichinæ; but it is necessary to know whether the fact is such, and, if so, whether it offers a real danger. Only one case of trichinosis has been established in France, and this was twenty-five years ago at Crépy-en-Valois. But in meats salted for two or three months the trichinæ is dead, at any râte cooking at 75° will kill it. American salted meats are therefore without any danger, and there can be no motives to maintain the decree of prohibition.

Mr. LIONVILLE said that live trichinæ were found in salted and smoked meats.

Mr. TIRARD, minister of commerce, replied that numerous complaints had been made against the decree which the Government had been compelled to issue. With a view of giving satisfaction to those who so complained, the Government instituted a bureau of verification, which has been in operation since February. In the beginning, when this service was not as yet well organized, no trichinæ were detected at Havre, but it has happened that the same lots submitted to re-examination in Paris were found to contain trichinæ in great quantity. (Oh! Oh!) Since the Havre service has been re-organized it has detected trichinæ in an important proportion of the meat examined. It is asked if bad results have followed. But the first duty of the Government is to prevent accidents. This is what it has done with all due consideration to freedom of commerce. I can assure you, gentlemen, that the Government is continuing the examination of this matter, not in a scientific point of view, for in this respect my opinion is made. I have read all the discussions which have taken place on this subject in France and abroad, and if Mr. Peulevey had seen all the documents published, not only in Europe, but also in America, where the decree of prohibition has created much excitement, he would have found that the Americans themselves admitted that they had not taken the necessary precautions against dangers which might attend their salted meats.

The minister then quoted as supporting his views the report of British commissioners to the United States, and said that the administration is determined not to allow the free circulation of these dangerous products; that it was trying to establish an effective system of inspection, but that so long as it shall not be possible to organize this system on a large scale it will not take the responsibility of revoking the decree of prohibition.

Mr. PEULEVEY. The minister has said that his opinion was made; this is unquestionable. But upon what facts and documents has he made that opinion? Evidently he must have come to it upon the reports of his inspectors. Now do you know what they have reported? At Bordeaux, of 1,500,000 kilograms of meats, they found only 21 pieces infected, which represents a proportion 0.016 per cent. Why does not the minister adopt the suggestion of creating a commission composed of competent men, to which will be intrusted the duty of determining whether or not the small proportion of trichinæ found in the American porks is dangerous after remaining three months in salt. Under those conditions trichinæ are absolutely inoffensive if slightly cooked. In your answer you have not pointed out one single case of trichinosis; you have only opposed an obstinate resistance to the desire of commerce, and I can add that you have refused to enlighten us by means of a scientific commission.

Mr. TIRARD replied that this scientific commission exists in the committee of hygiene whose members have been appointed by the President; that he can rely also upon the discussions which have taken place at the academy of medicine. Of course there are controversies upon the subject, but the Government can not wait until all the physicians agree in this respect. Mr. Tirard then said that this very morning he had received from Bordeaux the information that the day before a notable quantity of trichinæ had been detected in American meats. He concluded as follows: As for the revoking of the decree, I repeat that when it shall be found practicable to establish, not only at Havre, but at other ports, and on the frontier, a very complete service of inspection, giving all the necessary guarantees, I will be able to propose to the President to revoke that decree which has been issued, I must say again, against my desire, and only to secure public health.

No. 27.

Mr. Ciceron to the Secretary of State.

No. 62.] UNITED STATES CONSULATE,
Martinique, May 27, 1881. (Received June 13.)

SIR: I have the honor to forward herewith for your information a copy of the official newspaper of this colony, containing the promulgation in Martinique of the decree of the French Government of February

18 last, prohibiting the importation into any part of the Territory of the French Republic of salted pork from the United States of America.

I am given to understand that while the prohibition extends to sugar-cured hams, it does not extend to lard. I may mention that, though the home government issued their prohibitive decree in the middle of February last, and it is to be assumed that the alleged facts on which the decree is based must have begun months before, it is only on the 25th instant that the law came into operation here.

In the interval the people of the colony have been consuming large quantities of American pork with no more ill effects than they had experienced during the many preceding years in which they had used this product as a principal article of their daily and principal food.

Waiting for orders from the Department for action on this subject,

I have, etc.,

JOHN T. CICERON,
Vice-Consul.

[Inclosure in No. 62.—Translation.]

[Extract from Les Antilles of May 25, 1881.]

It may be remembered that about the beginning of March we published a decree of the President of the French Republic prohibiting the importation of salt pork from America into any territory of the Republic. A little later we further informed our readers that in consequence of representations from the metropolitan ports the Government appointed a commission for the inspection of pork not infected with trichinæ, in order that it might be admitted, per exception, for consumption; in a word, leave was granted to make selections by means of examinations and analysis.

After a delay of nearly two months the Moniteur de la Martinique has at last published the decree prohibiting the salt meat importation, and as said publication is not followed either by any explanation or by any further administrative decision, we must conclude that the prohibition is absolute, whether the meats are or are not infected with trichinæ. It would seem to us, however, that, as the administration published the decree of February 10 so completely to suit its own convenience, there was ample time to organize a commission similar to that in the metropolis for the inspection of American meats and only to prohibit such as are really dangerous. We hope, however, that this oversight will be speedily corrected; if not, it will most certainly give rise to numerous and pressing demands and objections.

No. 28.

Mr. Blaine to Mr. Noyes.

No. 379.] DEPARTMENT OF STATE,
Washington, June 8, 1881.

SIR: Your late dispatches have amply shown your earnestness in carrying out my instructions in the sense of endeavoring to dispel the strange misapprehensions which seem to have possessed the mind of the French Government respecting the sanitary character of American exportations of cured and packed pork. On the other hand, I have lost no fitting opportunity of fortifying your position by such instructions, by mail and telegraph, as seemed called for by the singular course of French legislation in practically prohibiting imports of this class into France, and by the unfounded and ascertainedly erroneous statements made in high places, even, touching the alleged noxious character of American hog products.

From the outset, all the facts accessible to its closest scrutiny convinced this Government that the action of that of France in this respect was both mistaken and wrongful. But, not satisfied with this patent knowledge, it lost no time in instituting a most searching investigation for the ascertainment of the truth or falsity of the state of things alleged to exist in this country, and upon which the decrees of the French Government restrictive of importations of pork purported to rest. The result of its investigation is now set before you in the accompanying report of the officer detailed by this Department for the purpose.

It is superfluous to add argument to the cogent statement of facts now made. Their presentation in this manner, and supported by strong documentary evidence, satisfies this Department of the entire justice of the ground it has heretofore taken in denying, and causing to be denied, the truth of the malicious rumors to which authoritative currency has been given in foreign countries.

The Government of the United States will yield to none in its earnest desire to accomplish all which legislation or executive action can do to protect the public health. Had the result of its preliminary or later and more searching investigations given even the slightest color to the wild statements that American pork was a means of disseminating disease and death at home and abroad, no admission would have been too frank, and no restrictive measures within the power of this Government too urgent to expose and check the evil. Its duty to foreign countries in matters of sanitary precaution is no less a subject of jealous concern than its corresponding duty to its own citizens. And, on the other hand, it is equally its duty and grave responsibility to watch over the interests of its producers and exporters when their industries are paralyzed by false reports and popular alarm touching the supposed injuriousness of their products to the public health.

This responsibility becomes still more grave when a friendly foreign state, unwittingly or mistakenly, lends its powerful aid to the spreading of a spirit of distrust so directly ande wll-nigh irremediably disastrous in its effects upon legitimate and long-established trade as has been the action of the Government of France.

You will at once communicate copies of the inclosed report to Mr. Barthélemy St. Hilaire, with such observations of your own as may tend in your judgment to emphasize and confirm its full refutation of the injurious statements concerning the existence of communicable disease and parasite germs in American pork, under conditions noxious to public health. You will say that this Government expects from that of France no less careful and earnest disposition to accept the truth of the matter in an impartial spirit than has been shown here; that the evidence so diligently sought and now formally presented is regarded as convincing proof that exaggeration and misstatement, often from interested sources, have been only too successfully combined with popular ignorance and apprehension to the injury of one of the greatest and most wholesome branches of the export trade of this country; and that we deem ourselves rightfully entitled to a prompt and effectual modification of the attitude which the French Government has assumed with respect to this class of exports from the United States. You will advert to the unfortunate effect which the course of the French Government has had in influencing the action of other European Governments; and will intimate our just expectation that the example of France in correcting the error will be no less signal. And you will especially acquaint the minister of foreign affairs of

France with the deep regret which the Government of the United States would feel if its honest and frank remonstrances, backed as they now are by irrefragable facts, should fail to induce the French Government to rescind its prohibitory action, and so constrain a resort to the painful expedient of retaliatory measures on staple exports from France.

You may read this instruction in your discretion to Mr. Barthélemy St. Hilaire, and, should he so desire, you may give him a copy of it.

I am, etc.,

JAMES G. BLAINE.

No. 29.

Mr. Blaine to Mr. Noyes.

No. 380.] DEPARTMENT OF STATE,
Washington, June 8, 1881.

SIR: I transmit with to-day's mail a package containing 100 copies of the Department's report on American pork, referred to in my No. 379, of this date.

You will lose no time in having it translated, with so much of the accompaniments as may seem necessary, and in giving it the widest publicity. You will render a separate account for the expense which may be properly incurred.

I am, etc.,

JAMES G. BLAINE.

No. 30.

Mr. Bridgland to Mr. Hitt.

No. 245.] UNITED STATES CONSULATE,
Havre, June 14, 1881. (Received June 29.)

SIR: When the unwarrantable order of the French secretary of the interior and commerce, prohibiting the further importation of salt American pork into France, was issued on the 18th of last February, regardless of contracts then existing between the merchants of the two countries, I saw at once that the order could not fail as it then stood to create great difficulty with the pork packers, bankers, and in fact every interest in our country connected with that staple, so I at once telegraphed the Department:

> French *Journal Officiel*, this date, publishes decree forbidding at all ports of entry in France the importation of salt pork from the United States, which has caused consternation among dealers in American preduce here.

At the same time I telegraphed General Noyes, our minister at Paris, as follows:

> French decree forbidding the importation of salted pork from the United States is simply monstrous. I beg you let me suggest your immediate protest against this decree.

I also saw some of the leading dealers in hog product, who are members of the merchants' exchange, and urged them to send a committee by order of the board of trade to Paris, for the purpose of meeting the secretary and having the order rescinded. This suggestion of mine was complied with, and Mr. Felix Faure, a merchant of high standing,

and one of the judges of the tribune of commerce of Havre, was made chairman of the delegation. Upon his arrival at Paris with his delegation he sought an interview with the secretary, who refused to see him and his delegates on the ground that the sanitary condition of the people of France was paramount to the commercial interests that he and his delegates represented; which fact was telegraphed to the chamber of commerce here.

I at once took the first train for Paris, and had an interview with General Noyes, who met me in a most energetic and intelligent manner, and at once put himself in communication with the State Department and the French secretary of commerce; he fully agreed with me as to the unwarrantable order, and has, in my opinion, done everything in his power to have it rescinded. I think the energy shown in the matter at that time, say on the 21st day of February, resulted in the rescinding of that part of the order that was without precedent, which was the forbidding of merchants of France complying with their telegraphic and written contracts with merchants of the United States.

I have watched with interest and care the manipulation that has been going on in Havre for the last three months, under an order of inspection with microscopes.

The first order was given to the sous préfet, Mr. Joucla Pelous, to select veterinary surgeons to make inspection, which lasted only about three or four weeks. As these horse-doctors did not report enough trichinæ to satisfy the department at Paris, they were all dismissed by order of the secretary, and a delegation of professional scientists sent here from Paris and placed in the headquarters of the sous préfet, where little slips of hams and shoulders were handled under the microscope to prove that there was the large percentage of 25 or 30 per cent. of American salt meat containing trichinæ. The sous préfet told me in the presence of others that when one ham or shoulder was affected with trichinæ in a case, they condemned the whole case; and, as the cases contained from 300 to 400 pounds, with 25 to 30 pieces, and from hogs perhaps of four or five different States, as the meat was principally from Chicago, and Chicago being the great pork-packing center of the world, I thought this inspection was as unjust as the original order of the secretary of the interior and of commerce. He said: "This meat that has passed this inspection here you complain of, will have to pass an inspection in the interior before it goes into the hands of the consumer." My reply to this was that such treatment of the subject was not even good nonsense; that the original order was much more respectable than the attempted indorsement to be made by this false treatment of the affair.

I called upon the sous préfet last week, and asked him if he was still condemning a whole case, containing 25 to 30 pieces, because one piece contained evidence, as he claimed, of trichinæ. He said, "No"; that he had used his influence with the department, after his interview with me some weeks ago, to inspect every piece in the box; but he further said, with a shrug of the shoulders, "The result is the same; there will be from 25 to 30 per cent. of the meat we have inspected condemned in consequence of trichinæ."

So the Department may be assured that that is the standard to be fixed in the report of the French Government, if not higher, and that there would be no backdown therefrom, unless, indeed, the reduction in the stock of American salt pork, as shown at this port, from 14,000 packages on the 1st of June last year to 2,500 packages on the 1st of June this year (and but for the delay of the delivery of this meat in con-

sequence of this false inspection, there would not be 50 cases of salt meat in this port to-day), should bring about a reconsideration of the subject.

The price has gone up within the last month 60 per cent.; and before the order is rescinded, if ever rescinded, the working people of France outside of the farming interests will rebel, as they are now doing in a quiet way, against prices which are to protect two-sevenths of the population of France, who are engaged in French farming products, when the five-sevenths are to pay for that protection.

Meetings have already begun among consumers, consisting of mechanics and laboring people of France, in protest of the order, and thousands of working people of Havre have signed a petition asking for its rescinding. Beef in the markets here has advanced 25 per cent. in the last six weeks; poultry and other articles of flesh-food proportionately. The sanitary interest manifested by the secretary, in my opinion, has nothing to do with this business, as all intelligent people in and out of the United States should know, for from the landing of the first African slaves in our country they have been fed upon corn bread and salt pork almost to the entire exclusion of other animal food. These poor slaves worked upon this kind of food from ten to twenty hours out of the twenty-four, at the point of an overseer's lash in many instances, and at the same time, as a rule, lived much longer than their masters, who fared sumptuously every day. In fact, there is scarcely a family in the United States to-day that does not eat more or less of the hog product every week, and where can such a race of fifty millions of people be found on the face of the earth outside of our own magnificent country?

If the French people could have been furnished with substantial nutritious meat as our own have been for the last hundred years, it is quite evident that the French Government would not have to reduce its standard every five or ten years in order to get the men to fill up its ranks in the French army. More French people have died in one week for the want of this nutritious food than have ever been made sick by its use in one hundred years, so it is easily seen by any sensible person that the sanitary condition of France had nothing to do with this nonsensical order. As France has more gold than any nation of the world, she proposes to keep it and stop the balance of trade that is now in our favor, and in the next place to gratify the demands of the farming interests by breaking down the competition with their farm products.

It seems to me that our remedy consists in reprisal unless this unreasonable order is rescinded before the sitting of our next Congress. There is not 10 per cent. of wines imported into the United States from France that are really pure wines, as I am informed. There is scarcely a steamer coming from Spain to this port that does not bring a cargo of cheap Spanish wines that are compounded and shipped as genuine French wines. Log-wood is used by the ship-load in the manufacture of *vin ordinaire*. With a severe inspection upon French wines, as the French are making upon our American salt pork, there would not be 10 per cent. of the wines admitted into our ports. Why should we not exclude French silk fabrics as the French exclude our cotton fabrics? They can not exclude our raw cotton without having the grass grow in the streets where the cotton factories are established; there are a hundred other articles that France produces and ships to us, while she excludes a hundred and thirteen articles of our production, and will not even admit them under a tariff; among them, plated silver-ware.

Heavy tonnage dues on French ships would hurt her badly just now, while she is lavishing her money on ship-building and ship-running in

order to build up her mercantile marine, and she could not hurt us much in retaliation, as we have no steamers running to France and but few sailing ships.

I am, etc.,

J. A. BRIDGLAND,
United States Consul.

No. 31.

Mr. Langlois to Mr. Hay.

[Extract.]

UNITED STATES COMMERCIAL AGENCY,
St. Denis, Réunion, June 15, 1881. (Received July 23.)

SIR: * * * * * * *

I have the honor to inclose herewith a printed copy of a decree of the government of this colony, dated May 7th last, and published in the official and all local newspapers, by which the public are warned that the importation into this island of salt pork—being the produce of the United States—is strictly prohibited.

Respectfully referring the said decree,

I have, &c.,

A. LANGLOIS,
United States Commercial Agent.

[Inclosure.—Translation from Le Moniteur de la Réunion.]

Decree of the 7th May, 1881.

We, the governor of Réunion Island,

Considering article 9 of the decree of the Senate of May 3, 1854;

Considering the ordinance of August 21, 1825;

Considering the deliberations of the chamber of commerce in its session of 14th April, 1881;

Considering the notice of the board of hygiene and public health, under date of 27th April, 1881;

Considering that a decree of the President of the Republic, of the 18th February, 1881, has prohibited the introduction into France of food products of American salt pork on account of its being notoriously infected with trichinæ;

Considering that it is necessary to take the same precautions to secure the colony against trichinosis;

Upon the report of the director of the interior.

The privy council, having deliberated, we have decreed and do decree:

ARTICLE 1. The importation into the colony of food products of salt pork coming directly or indirectly from the United States of America, or from places from which importation is not allowed, is prohibited until otherwise ordered.

2. Food products of salt pork already introduced and not yet delivered for consumption shall continue to be allowed the privilege of the town warehouse, but upon condition of re-exportation. Packages containing these meats shall be sealed up with the leaden stamp of the customs.

3. The director of the interior is intrusted with the execution, etc.

No. 32.

Mr. Blaine to Mr. Noyes.

No. 384.] DEPARTMENT OF STATE,
Washington, June 17, 1881.

SIR: I have to acknowledge the receipt of your dispatch No. 475, of the 27th ultimo, in reply to the telegram of the Department of the 24th ultimo, in reference to certain published statements alleged to have been made by the minister of commerce on the subject of trichinæ in America.

In reply, I have to say that the Department learns with satisfaction that Mr. Tirard, the minister of commerce, did not make the statements attributed to him, and that it seems probable that the decree prohibiting the importation of American pork into France may soon be revoked.

I am, etc.,

JAMES G. BLAINE.

No. 33.

Mr. Noyes to Mr. Blaine.

No. 483.] LEGATION OF THE UNITED STATES,
Paris, June 23, 1881. (Received July 6.)

SIR: I have the honor to inform you that your dispatch No. 379, of date June 8, 1881, reached this legation yesterday, the 22d instant, and that I immediately prepared a note to the minister of foreign affairs, of which a copy is herewith inclosed. This note, together with two copies of the report on American pork, sent by you, I forwarded to Mr. B. St. Hilaire, by Mr. Vignaud, secretary of legation, who was instructed to request for me an interview with the minister. Accordingly I called by appointment at the foreign office at one o'clock to-day, and had a full and frank conversation with Mr. St. Hilaire.

I represented to him that my Government was getting impatient at the long delay in revoking the prohibitory decree; that the interests involved were so great, and the injury inflicted by the action of the French Government upon the commerce of the United States was so disastrous and widespread, that the public sentiment of my country demanded such action on the part of the Government at Washington as would effectually protect the interests of the American people. I more than intimated that unless this pork decree was revoked my Government, however reluctantly, might be compelled to resort to retaliatory measures. I said that I only reflected the sentiment of my Government when I assured him I should deeply regret such necessity. I impressed upon Mr. St. Hilaire the desirability of an early response to the demand contained in your dispatch, which was read to him in French, and copies of which, in both French and English, I left with him at his request. Much more was said which it is not necessary here to repeat.

The minister seemed to be profoundly impressed with the gravity of the subject, and said that he fully appreciated the importance and significance of your dispatch. He assured me that copies of the papers and documents presented to him would be sent to the minister of agriculture and commerce this afternoon, and that he would confer with

him in person not later than to-morrow, with a view of finding some satisfactory solution of this troublesome question, which he earnestly hoped to reach; that serious consideration would be given to the demand of my Government, and that I should be informed of the decision reached at the earliest moment possible.

Mr. St. Hilaire asked me if I would like to confer personally with Mr. Tirard, minister of agriculture and commerce, as to the attitude of my Government. I answered that I did not care to do so; that the question had now reached that stage where I preferred to communicate with the minister of foreign affairs only.

The report forwarded by you is being translated, and unless the necessity for such a step shall be removed, I propose to have the report, or the more material points of it, printed in French, and distributed where it may seem most desirable to correct an erroneous public sentiment.

I have, etc.,

EDWARD F. NOYES.

[Inclosure in No. 483.]

Mr. Noyes to Mr. St. Hilaire.

LEGATION OF THE UNITED STATES,
Paris, June 22, 1881.

SIR: I have the honor to inform your excellency that I have this day received an important dispatch from the Hon. James G. Blaine, Secretary of State, at Washington, regarding the matter of decree of your excellency's Government prohibiting the importation into France of American pork.

I am instructed to say that immediately after the publication of the decree in question the Government of the United States took earnest and efficient steps to ascertain faithfully and impartially the truth regarding the condition and character of American pork as an article of food, with a view to adopting such measures as might be deemed necessary to insure life and health, in case the facts were found to be as set forth in the report upon which the prohibitory decree of your excellency's Government professed to be based. It was apparent from the outset that your excellency's Government had been misinformed, and that in consequence its action had been mistaken and wrongful to the Government and people of the United States. Recently, however, a more searching and careful investigation has been made by a most competent officer detailed for this purpose by the State Department, the result of which is set forth in the pamphlet, two copies of which I have the honor to inclose herewith to your excellency.

From what appears in this document, and otherwise, my Government is satisfied of the entire justice of the ground it has heretofore taken in denying the truth of the malicious rumors to which authoritative currency has been given in foreign countries. It considers it absolutely certain that there is no disease or infection pertaining to American pork rendering it dangerous or injurious to life or public health. On the contrary, my Government feels perfectly assured that the pork product of the United States is an innocent and healthful article of diet, in almost universal use, and nowhere with disastrous effects.

The honorable Secretary of State directs me to express the hope and belief of my Government that your excellency's Government will consider the subject with the same desire to know the truth, and to act upon the same when ascertained, that has animated the Government of the United States.

The prohibitory action of the French Government has been adopted in other countries, and it is probable that the limit of disastrous effects has not been reached. The action of your excellency's Government is calculated to and does discredit one of the most important of American industries. The revocation of the decree of the French Government would undoubtedly be followed elsewhere as its unfavorable action has been. A serious blow has been inflicted upon American trade and commerce, and, as my Government believes, without good and sufficient cause, and it is earnestly hoped that, considering the two great Republics of the world, France and America, have so long entertained cordial and intimate relations, your excellency's Government will consider the subject in question in a spirit of friendliness and accommodation.

It is the plain duty of all Governments to guard and protect the interests of their people, while recognizing their obligation to neighboring and friendly nations. My Government is not unmindful of this duty, and in the interest of the American people it protests against a decree which it can not but regard as arbitrary and unjust, although adopted upon information believed at the time to be reliable, but which subsequent information has failed to accredit.

Four months have now passed since the decree was promulgated. The loss already occasioned to American trade is irreparable, but the future is important. I therefore beg your excellency to inform me at the earliest practicable day as to what is the final determination of your excellency's Government in order that the Government and people of the United States may be left no longer in doubt.

The report herewith inclosed will be translated into French at the earliest moment possible, and copies will then be forwarded to your excellency.

I avail myself of this occasion, &c.,

EDWARD F. NOYES.

No. 34.

Mr. Pomeroy to Mr. Blaine.

No. 495.] LEGATION OF THE UNITED STATES,
Paris, July 23, 1881. (Received August 6.)

SIR: Referring to the dispatch No. 483, dated June 23, 1881, addressed by General Noyes to the Department of State, and relating to revoking by the French Government the prohibitory pork decree, I have the honor to transmit herewith a copy of the answer of Mr. B. St. Hilaire, together with a translation.

I have, &c.,

G. P. POMEROY.

[Inclosure in No. 495.—Translation.]

Mr. B. St. Hilaire to Mr. Pomeroy.

PARIS, *July* 19, 1881.

SIR: I had hastened to call the attention of the minister of agriculture and of commerce to the new dispatch which General Noyes did me the honor to address me regarding the measures adopted in France, in order to prohibit the importation of salt pork of American origin.

Mr. Tirard has just intimated to me the observations which this communication has suggested to him.

In the first place, the Government of the United States appears to attribute the measures in question: 1st. Either to incorrect reports or to exaggerated valuations, coming from interested persons. 2d. Or to popular apprehensions. In this respect the minister of commerce recalls to mind that, on the contrary, it is only in consequence of the most serious investigations made by men, neither whose knowledge nor honorable character could be questioned, that the Government of the Republic believed it had to adopt the decree of last February.

It was necessary to take into consideration, at the same time, the requirements of the public health and the legitimate transactions of commerce. The French Government has striven to conciliate as much as possible these two interests by organing at Havre a laboratory for inspection.

The salt meats which were in transit at the time of the signature of the aforesaid decree were received in France on condition they should be previously examined by the microscopists of the laboratory at Havre and acknowledged exempt from trichinæ. Now, microscopic researches made in this laboratory have confirmed the existence of numerous cases of trichinæ in the larger portion of salt meat of American origin which have been submitted to inspection. In the face of these facts, mentioned in official reports, it seems difficult to deny the existence, in a large number of American hogs, of a disease communicable to man, and to dispute, consequently, the fitness of the provisions which were made the subject of the decree of the 18th of February.

The Chamber of Deputies has, besides, given its approval to these provisions, and the Government only has its wishes carried out by maintaining, until further disposi-

tion, the decree of prohibition. It does not the less pursue the study of the means to ameliorate the actual situation by the organization of a service of general inspection, to be applied not only to American salt meats, but to all meats of foreign origin. This service, Mr. Tirard remarks, would have a very appreciable advantage for importers. Indeed, when the local service of inspection which the municipalities have the right to organize in order to secure the healthfulness of the products of consumption, would exercise its control, it would no longer, but by accident and in very rare instances, have the opportunity to seize and destroy, as unhealthy, meat which had already paid the custom dues. If, as that appears probable, one succeeds in finding a satisfactory mode for inspecting meats of every origin, this general service would relieve commerce of certain difficulties.

Finally, it is to its very deep regret that the Government of the Republic has found itself under the necessity, in order to protect the public health, to adopt a measure of prohibition, which, for the moment, caused unavoidable trouble in American meat transactions between France and the United States. But it is confident that the provisions which it has hastened to adopt to modify the rigor of this measure, and those of which it is seeking the realization, must give every satisfaction, as it deeply desires, in the interests of this international commerce. Far from causing an obstacle there, these measures would rather tend to develop it by securing the verification of the good quality of merchandise, and by removing in this way the suspicions of which certain ones of these commodities were the object on the part of consumers.

I beg you, sir, to have the kindness to communicate these diverse considerations to the Government of the United States, which I am pleased to hope will appreciate their value and conciliating character.

Accept, sir, the assurance of the most distinguised consideration with which I have the honor to be,

Your very, &c.,

B. ST. HILAIRE.

No. 35.

Mr. Blaine to Mr. Morton.

No. 12.] DEPARTMENT OF STATE,
Washington, August 9, 1881.

SIR: I have to acknowledge the receipt of Mr. Pomeroy's dispatch No. 495, of the 23d ultimo, transmitting a copy of a note received by him from the minister of foreign affairs of France as to the alleged results of the inspection of American pork by the French authorities and intimating that modifications will be made in the decree issued in February last, in relation to the importation of American pork into France.

I have read with surprise the statement in Mr. St. Hilaire's note to the effect that microscopic researches made in the laboratory at Havre "have confirmed the existence of numerous trichinæ in the larger portion of salt meat of American origin."

This statement is so much at variance with the results of the extended observations on this subject which have been made in this country, that it is believed by this Department that the conclusions arrived at by the French authorities at Havre must be owing to inaccurate inspections, or the result of accidental circumstances. I will therefore thank you to adopt judicious measures to inform yourself as to the accuracy of the inspections made by the French authorities, and at the same time to continue the efforts which your legation has heretofore been instructed to make, with a view to having all unnecessary restrictions upon the importation of American pork into France removed.

I am, &c., JAMES G. BLAINE.

No. 36.

Mr. Blaine to Mr. Morton.

No. 19.] DEPARTMENT OF STATE,
Washington, August 18, 1881.

SIR: At the time of my entrance upon the duties of this Department in March last, the question whether this Government deemed it an opportune moment for a negotiation with a view to modifying the present treaty stipulations regulating commerce between the United States and France, as presented in Mr. Noyes' dispatch, No. 410, was under consideration by my predecessor and it at once engaged my earnest attention.

In the existing system of tariffs imposed upon importations by the United States and France, there are many features which might be modified with mutual advantage. A revision of the tariff of each with reciprocal adjustments of the duties imposed might do much to relieve trade from burdens which are not necessary, facilitate intercourse, and promote friendly feeling between the two nations.

The policy of this Government has, however, been averse to complicating its revenue system by treaty engagements with various powers, establishing separate conventional tariffs applicable only to importations from particular countries.

The legislative power has preferred a uniform tariff, applicable alike to importations of similar articles from all nations. As Congress meets every year, the provisions in detail of our tariff laws can at any time be changed as circumstances prove that alteration is needed; wherea , a conventional or treaty tariff, establishing special rates of duty with a particular country and requiring great nicety of adjustment in reconciling different interests and avoiding unfairness in dealing with all the branches of trade, would not be within the immediate control of Congress nor flexible to the influence of public opinion, representing pubile interest. Imbedded in solemn treaty stipulations which are usually made with a view to long continuance, no change could be effected except by the slow process of diplomatic negotiation.

The advantages that might be secured by changes in the present commercial restrictions, which would place trade between the United States and France upon easier and more satisfactory conditions, are so obvious in certain points of view, that I thought it would be well to enter upon the discussion of the subject with a view to separating those commercial interests which are continuing, and which, being of a permanent nature, are susceptible of comparatively permanent regulation, from those more liable to change, and endeavor to come to an accord in regard to the duties to be imposed by each country in a treaty which would go into effect when a law to carry it into operation should have been passed by Congress, to which body the Constitution of the United States confides "the power to lay and collect duties" and "to regulate commerce with foreign nations."

At that moment, however, arrived the intelligence that the French Government had by decree prohibited the bringing of American pork into France, on the ground that it was affected by trichinæ to such an extent as to be dangerous to the public health. Information was at once collected by this Government, which it is believed proved in the most conclusive manner that the statements circulated in Europe concerning the prevalence of trichinæ in American pork were without foundation, and this information was early brought to the notice of the

French Government. Still that decree during many months has been maintained in force.

It has tended to rapidly contract commerce with the United States, has deranged business, and has led to an impression throughout this country that is not conducive to the formation, and the successful operation by the aid of Congress, of a treaty to liberate and stimulate the trade of the two countries.

I have waited some time to see whether any indication might be found of a different disposition and that would encourage a hope for substantial results from a discussion of this subject. But so much time has passed that I deem it due to the French Government that it should not longer be kept waiting for an answer to the question propounded through you. I have to request you, therefore, to state to Mr. Barthélemy St. Hilaire that the delay in responding to a question which I found pending was, first, that I might give it that careful consideration demanded by its great importance and the high regard entertained for the Government propounding the question, and second, the causes I have set forth above, and that you inform him that while this Government is earnestly desirous of doing everything in its power to promote commerce and friendly intercourse between the two nations, it is constrained to say that it deems the present moment inopportune for the negotiation for a treaty of commerce modifying the present tariffs of the United States and France with a view to substantial changes and permanent results which can only be secured by the co-operation of Congress.

I am, &c.,

JAMES G. BLAINE.

No. 37.

Mr. Morton to Mr. Blaine.

[Extract.]

No. 48.] LEGATION OF THE UNITED STATES.
Paris, October 6, 1881. (Received October 21.)

SIR: I am advised unofficially that the minister of agriculture and commerce has at last determined to establish a certain number of laboratories for the purpose of inspecting pork with the microscope. These laboratories are to be located at certain ports of entry, through which all foreign pork intended for France will have to pass, whether coming from the United States or elsewhere. It is not believed, however, that any of these laboratories can be established before some time, owing to the difficulty of finding a sufficient number of men competent to make an efficient use of the microscope.

From what I understand, this step of Mr. Tirard will not give much satisfaction to the French importers of American pork, and I must say that I cannot see the object of the French minister of commerce in persisting in this unjustifiable war on American pork.

If there is a fact well established now, even in France, it is that trichina, which may be found in American pork, is absolutely inoffensive, the salt killing the animalcule or reducing it to such a state that the slightest cooking achieves its destruction. French scientists of the highest grade and reputation, such as Messrs. Collin, of the great veter-

inary school of Alfort, Rebourgeon, a well-known veterinary surgeon, formerly inspector of the slaughter-houses of Paris, Pouchet, professor of biology at the museum of Paris, Peunetier, professor at the museum of Rouen, Zundel, of Strasburg, Dr. Davaine, of the Academy of Medicine, agree with the statement, which is not contradicted by any one having their scientific training and notoriety. * * *

I have, &c.,

L. P. MORTON.

Mr. Morton to Mr. Blaine.

No. 54.] LEGATION OF THE UNITED STATES,
Paris, October 13, 1881. (Received October 31.)

SIR: Referring to my dispatch No. 48, of date October 6, 1881, I have the honor to report that in an interview which I had yesterday with Mr. B. St. Hilaire, minister of foreign affairs, I called his attention to certain articles which had recently appeared in the French papers with reference to the appointment of inspectors of American pork, and expressed a desire to learn what, if any, action had been taken or decided upon by Mr. Tirard, minister of agriculture and commerce.

I referred to the fact that the decree prohibiting the importation of American pork had now been in force for more than eight months, and stated that the American Government and people were of opinion that such decree had been issued by the French Government under a misapprehension of the facts in the case, as I claimed had been clearly established by the result of your investigations, reports of which had been submitted to him.

I also stated that the method of inspection which it had been reported that the minister of agriculture and commerce had decided to adopt, was not, in my judgment, a feasible one, for the reason that the delay which would necessarily be caused by such proposed examination would almost if not entirely preclude the importation of American pork.

Mr. B. St. Hilaire replied that he was not aware of the present intentions of his colleague, Mr. Tirard, but that he would make it his business to see him at once and discuss the matter, and he would communicate to me the result of his conversation.

I urged him to represent to his colleague that there was but one practical mode of putting an end to this troublesome matter, which was to abrogate the decree of prohibition.

The minister assured me that he had always been in favor of a solution of this difficulty which would give entire satisfaction to the United States Government, but that the question, though political in one respect, had a practical and technical side upon which he was not competent to pass judgment. He admitted, however, that he was favorably impressed by my arguments, and promised that he would ask and strongly recommend the repeal of the decree.

I have, etc.,

L. P. MORTON.

Mr. Blaine to Mr. Morton.

No. 48.] DEPARTMENT OF STATE,
Washington, November 2, 1881.

SIR: I have to acknowledge the receipt of your dispatch No. 54, of the 13th ultimo, in which you give an interesting report of your interview with Mr. St. Hilaire, minister of foreign affairs of France, with reference to the decree prohibiting the importation of American pork into the French Republic.

Your course with reference to this matter meets with my hearty approval,and I hope you will avail yourself of every favorable opportunity to press the subject upon the consideration of the French Government, especially as the very distinct promise of Mr. St. Hilaire to move his colleague, Mr. Tirard, to repeal the objectionable decree affords ground for the hope that a change for the better is taking place in the views of the French authorities in regard to the question.

I am, etc.,

JAMES G. BLAINE.

No. 40.

Mr. Morton to Mr. Blaine.

No. 69.] LEGATION OF THE UNITED STATES,
Paris, November 7, 1881. (Received November 23.)

SIR: Referring to my dispatch No. 54, of date October 13, 1881, stating that I had called on Mr. B. St. Hilaire to ascertain what action Mr. Tirard, minister of agriculture and commerce, had taken in relation to American pork, I have now the honor to transmit a copy and translation of a dispatch of the French minister of foreign affairs giving the information desired. Mr. Tirard says, through his colleague, that his department has prepared a bill to give the authority of law to certain measures which will render possible the revocation of the decree of prohibition.

I have been unable to procure a copy of the bill, but I am informed that it will not tend to facilitate the importation of salted meats from the United States. One of the largest French importers of American meats, who has had the privilege of glancing over the bill, says that the measures proposed are so vexatious that he would prefer the decree of prohibition to the proposed bill.

It will, I fear, be impossible to secure from the present minister of agriculture and commerce the abrogation or any satisfactory modification of the decree of February 18, 1881.

I have, etc.,

L. P. MORTON.

[Inclosure in No. 69.—Translation.]

Mr. B. St. Hilaire to Mr. Morton.

PARIS, *November* 3, 1881.

SIR: You have done me the honor, in a recent interview, to express the desire to know, as soon as possible, the result of the examination of the question of the importation of American salted meats into France by the proper administration.

I have hastened to recommend this matter to the particular attention of the minister of agriculture and commerce. In reply to this communication, Mr. Tirard declares that his department studied the measures destined, whilst protecting the interests of public health, to render possible the revocation of the prohibition pronounced by the decree of the 18th of last February; but it is necessary that these measures be sanctioned by a law, the draft of which will consequently be submitted very shortly to the notification of parliament.

I am pleased, sir, in referring to the letter which I had occasion to address on the same subject to Mr. Pomeroy, the 19th of last July, to renew to you the expression of the ardent desire which the French Government experiences to give, in this circumstance, every satisfaction to the legitimate interests of international commerce. The economic views of the Government of the Republic can only, besides, contribute to favor, between France and the United States, the development of their trade; but he regrets to state that the custom-house legislation of the Union opposes to it very numerous difficulties. He would be happy, I hardly require to say, to meet in the Federal Government a disposition which would permit the amelioration, under this head, of the commercial relations between the two countries, and to place them more completely in harmony with the state of their political relations.

Accept, etc.,

B. ST. HILAIRE.

No. 41.

Mr. Morton to Mr. Blaine.

No. 73.] LEGATION OF THE UNITED STATES,
Paris, November 16, 1881. (Received December 12.)

SIR: Referring to my dispatch No. 69, I have the honor to transmit herewith a copy of the bill introduced by the French Government in the Chamber of Deputies for the purpose of organizing a service of inspection for all pork imported into France.

You will notice the vexatious character of the proposed measures.

If this bill becomes law, pork will only be admitted into France at special ports of entry and be examined piece by piece.

Sausages and all preparations of hashed pork will be prohibited. Lard and grease of all kinds, now admitted free of inspection, will be submitted to the same inspection as pork.

There is every reason to hope, however, that the newly-appointed minister of commerce, M. Rouvier, will withdraw this bill, or at least modify it in a more liberal spirit.

I have, etc.,

L. P. MORTON.

[Inclosure in No. 73.—Translation.]

No. 20.

CHAMBER OF DEPUTIES, THIRD LEGISLATURE, EXTRA SESSION OF 1881.

[Appended to the report of the sitting of the 5th November, 1881.]

Draft of a law for the purpose of establishing a service of inspection of pork products of foreign production, whether salted, smoked, or preserved, by whatever process, presented in the name of Mr. Jules Grévy, President of the French Republic, by Mr. Tirard, minister of agriculture and commerce, and Mr. Magnin, minister of finance.

STATEMENT OF REASONS FOR THE BILL.

GENTLEMEN: The pork products sent into France by foreign countries, especially by the United States of America, are, as experiments have shown, often infested by a peculiar parasite, *trichina spiralis* or *trichina*, which is now very properly occupying the attention of the medical profession.

This parasite taken into the human digestive organs in a living state engenders the disease called trichinosis, the frightful effects of which may result in death.

For several years certain European states, desiring to guard against so grave a danger, have entirely prohibited the introduction of American salted meats into their territories. These countries are Austria, Hungary, Greece, Italy, Spain, Portugal, and, with some exceptions, the German Empire. In this last country, moreover, all pork products, whether native or foreign, are subjected to a rigorous inspection.

The government has hesitated for a long time to take similar measures in France, but this course of action has, however, been repeatedly urged upon it, especially by certain general councils of the provinces.

Towards the end of last year and the beginning of this the special inspectors of the city of Lyons and the city of Paris seized considerable quantities of American salt pork infected with trichinæ in such proportion as to leave no room for the slightest hesitation in regard to the course to be pursued. At whatever price, public health must be protected from the peril to which such a condition of things gave rise, and on the 18th of February, 1881, the President of the Republic, on the statement of the minister of agriculture and commerce, issued a decree forbidding for the whole territory of the French Republic the importation of products of salt pork coming from the United States of America.

Nevertheless, in order to treat with all possible consideration the commercial interests affected in the matter, the government authorized the introduction of these commodities in course of shipment and discharge at the time of promulgation of the decree upon the express condition of a preliminary examination by the government agents. Microscopic inspections were begun at the ports of Havre, Marseilles, and Bordeaux. The port of Havre, which alone receives more than two-thirds of the total quantity of American meats imported annually into France, was provided with a laboratory and a corps of experts.

Microscopic investigations carried on in this laboratory with the most improved instruments and by skillful microscopists confirmed the existence of trichinæ in a certain portion of the pork submitted to inspection. The experiment was decisive, and the Chamber of Deputies, before whom the question was brought, gave its approval to the prohibition declared in the interests of public health.

Nevertheless, the government does not seek to conceal the inconvenience which arises in maintaining an absolute prohibition, and the minister of agriculture and commerce has undertaken to find means of reconciling the most important consideration, that of the public health, with those of almost equal importance, the supply of food and the interests of commerce.

Indeed, the consumption of foreign salted meats is a large element in the support of the laboring classes, and the traffic in these salted meats is, besides, advantageous to our merchant marine. The investigations that have been made have shown the possibility of a complete inspection of all preserved pork meats that are brought into France by means of submitting them piece by piece to a microscopic examination, calculated to assure their harmlessness.

The absolute prohibition shall be maintained only in regard to large and small sausages, and bologna sausages; that is to say, meats minced and cut up. In these meats not only are *trichinæ* found in great numbers, but they are manufactured with such carelessness that substances unfit for food are often found in them, and it is impossible to allow them to be introduced for consumption. Hog intestines, imported to be used as outside coverings for these food preparations, shall also be absolutely prohibited on account of the great number of *trichinæ* they contain, and the consequent certainty of their communicating these parasites to healthy and well-prepared meats.

With the exception of these reservations this proposed law has as its object the establishment and organization of an inspection of foreign pork products. A few short explanations will suffice to show the necessity of its provisions.

By Article I, all pork products salted, pickled, smoked, or preserved in any other manner, are submitted to the formality of inspection at the time of their entrance into France.

This provision applies to meats coming from any foreign country. *Trichinæ* in fact are not confined to American salted meats. Authenticated cases of *trichinosis* in Germany show that the pork of that country is also diseased. Moreover, if the meats of any one country were allowed to be imported without inspection, the importers would arrange to have their pork, which came originally from places under suspicion, come through the free country. The only sure means, then, of preserving the public health

is in inspecting all foreign meats, without making any distinction between the places where produced.

Smoking can not, any more than salting, free pork from the dangers arising from *trichinæ*. It has, therefore, been considered necessary to expressly stipulate that the inspection should apply to smoked meats as well as to salted, and to meats preserved in whatever manner they may be. It is necessary to give the obligation of inspection this extended application in order to guard against other processes of preserving which would doubtless be resorted to to escape inspection.

Article 2 of this draft of a law proposes that the points on the frontier and the coast where preserved pork meats shall be admitted shall be determined by a decree of the President of the Republic, issued in accordance with a report of the minister of agriculture and commerce. This provision is similar to that inserted in the law for the sanitary examination of animals. At the present time the government intends to designate for this purpose, on the coast line, Havre, Bordeaux, and Marseilles; and on the frontier, Avricourt and Givet. If experience shows that these points are insufficient, the government will hasten to increase the number in proportion to the needs of commerce and of consumption.

The organization of these laboratories of inspection, the methods of examination, the formalities to be prescribed for importers, the number, duties, and appointment of employés, are questions of detail that we propose to leave to the minister of agriculture and commerce, who shall decide them by his orders. The Chambers shall, however, act upon requests for funds to provide for the expenses of the employés, and for the fitting out of the laboratories.

You will, without doubt, think, with the government, that these expenses should not be charged to the state. All similar expenses of examination, in the case of weights and measures, drug products, live stock, etc., are recovered by the state by means of a special tax. It appears to us that it should be the same in the case of pork products which are offered for admittance into France.

It is not the intention of the government to make this tax to be levied on importers a source of revenue. The tax should be, as far as possible, the exact equivalent of the expenses borne by the state.

We believe that we are maintaining this principle in proposing to levy the tax conformably with the schedule appended to this statement of reasons. This tax, like those relating to the law for inspection of live stock imported into France, shall be payable to the collector of customs. It is hardly necessary to add that, in case experience shows that this tax exceeds the expense borne by the state, the government will hasten to propose a reduction for your consideration.

Finally, the last article of this proposed law declares the penalties against those persons who shall bring into France the prohibited meats, or meats not submitted to inspection, or meats rejected after inspection. These penalties are, moreover, borrowed from the law for the sanitary inspection of animals.

We do not doubt, gentlemen, that the foregoing provisions will receive your high approbation. The government does not believe it to be its duty to follow in the path of certain foreign powers by decreeing an absolute prohibition, but it is none the less profoundly convinced that it is the duty of the state to take the necessary measures to prevent the possibility of meats of foreign production being, in any case, a cause of real danger to public health.

DRAFT OF A LAW.

The President of the French Republic hereby decrees:

The draft of a law in the following terms shall be presented to the Chamber of Deputies by the minister of agriculture and commerce and the minister of finance, who are directed to explain and discuss the reasons therefor:

ARTICLE I. Pork meats of foreign production salted in brine, smoked, and preserved by all other processes may be admitted upon French territory after they have been submitted to a special examination, and declared to be free from *trichinæ* and all other injurious parasites.

This provision does not apply to minced or cut-up pork meats, to large and small sausages, bologna sausages, etc., nor to hog intestines; the importation of these preparations into France is, and continues, prohibited.

Hogs' fat and lard before being allowed admittance into France shall be submitted to the regulations stipulated by section 1 of this article.

ART. II. The points on the frontier and on the coast where the said commodities may be offered for entry shall be decided by a decree of the President of the Republic, issued at the motion of the minister of agriculture and commerce.

The orders of the same minister shall govern the organization of the laboratories of inspection, the method of examination, the formalities to be accomplished by importers, as well as the number, duties, and appointments of the experts and various persons attached to the inspection service.

ART. III. Importers shall pay as inspection duties the following taxes, which shall be paid in advance at the office of the collector of customs:

	Centimes.
Hams (each)	30
Long and short sides (each)	20
Fat backs (each)	20
Shoulders and breasts (each)	10
Fillets in brine (each)	10
Fats and lard (per 100 kilograms)	30

ART. IV. A punishment of imprisonment from two to six months and a fine of 100 to 500 francs shall be imposed: (1) upon persons who shall bring into France minced or cut-up hogs' meats, large and small sausages, bologna sausages, etc., of foreign production, or intestines of foreign production; (2) upon persons who shall import into France hogs' meats of foreign production which have not been submitted to the inspection established by this law, or which have been rejected after examination.

In the two cases above, in addition, the imported meats shall be seized and destroyed.

Article 463 of the penal code is applicable in the cases provided for in this article.

Done at Paris, November 5, 1881.

The President of the French Republic—

JULES GRÉVY.

By the President of the Republic:

The minister of agriculture and commerce,

P. TIRARD.

The minister of finance,

J. MAGNIN.

APPENDIX.

Statement of taxes to be paid as inspection duties by importers of hogs' meats of foreign production.

	Centimes.
Hams (each)	30
Long and short sides (each)	20
Fat backs (each)	20
Shoulders and breasts (each)	10
Fillets in brine (each)	10
Fats and lard (per 100 kilograms)	30

No. 42.

Mr. Blaine to Mr. Morton.

[Telegram.]

WASHINGTON, *November* 21, 1881.

MORTON, *American Minister, Paris:*

See Mr. Gambetta, minister foreign affairs, and ask immediate earnest attention to the practically prohibitory effect of proposed microscopic inspection in detail of American pork, to its great continuing injury to both American and French interests, to the ample proof that it is unnecessary. Add discreetly that an assurance from French Government that prohibition will be rescinded is just now especially desirable and pressing as Congress is about to assemble, and continuance of prohibition will lead to at least defensive if not retaliatory legislation against importations from France.

BLAINE,
Secretary.

Mr. Morton to Mr. Blaine.

[Telegram.]

PARIS, *November* 23, 1881.

BLAINE, *Secretary, Washington:*

Have seen Mr. Gambetta and urged the abrogation of the pork decree. He says there exists serious public apprehension of danger from consumption American pork, which he personally does not share, but finds necessity of some reason for abrogation of decree which would satisfy public, and wished to know if our Government could not inaugurate public inspection of meats for export; this would greatly facilitate satisfactory settlement. He understood other governments had made similar suggestion. He expressed himself as convinced of exaggerated character of supposed danger and as personally favorable to friendly action, but also as obliged to confront prejudice which could not be overlooked.

No. 45.

Mr. Blaine to Mr. Outrey.

DEPARTMENT OF STATE,
Washington, November 25, 1881.

SIR: Referring to the conversation I had the honor to hold with you on Wednesday last in relation to the decree issued by the French Government on the 18th of February, 1881, prohibiting the importation of American pork into France because of the danger to the public health from trichina with which it was infested, I have the honor to recall to your attention some of the salient facts bearing upon this question of maintaining, modifying, or repealing the decree.

The intelligence that such a decree had been suddenly promulgated was received with surprise and regret everywhere in the United States, as it was manifest that it would paralyze an important branch of commerce between the two countries. The surprise was heightened by learning that this hostility was based upon a declaration that it was so infested with trichina as to be dangerous to the public health.

In order to ascertain in the most precise, full, and authentic manner what were the facts, this Government immediately directed the chief officer of the bureau of statistics of the State Department to proceed to those cities which were the principal centers of the pork trade, Chicago and Cincinnati, and investigate thoroughly this great industry through every step, to examine into the methods of raising and feeding, to visit the principal packing establishments, to confer with the officers of the public health, to exhaust every means of arriving at the exact truth with regard to the character of the pork product of the country.

That examination was faithfully made, and the facts, established by abundant proof, were simple and conclusive. American swine are of the best breeds, are fed upon corn—a more wholesome food than is given them in other countries; they are not more liable to disease here than elsewhere, and the percentage infected with trichina is probably less, on account of this superiority of food and breed, than in any other country; packers and curers exercise care and skill that are nowhere surpassed, and the pork selected for the foreign market is equal to the best sold in the home trade. The officers of the public health report trichinosis one of the rarest diseases known, and no case ever known where the meat was cooked. In Chicago but two cases were known in a record of 40,000 deaths, and in both cases the meat was uncooked; in Cincinnati the health officer reported that he had never known a case in that city, where pork is abundant, cheap, and of universal consumption. As a scientific fact, in certain very rare examples, there is such a disease; as a practical fact, as a danger to the public health, it is unknown in this country—the country where more pork to the inhabitants is eaten than in any other in the world; where, in some form, it is upon the table of almost every family every day in the year.

Turning from this country to Great Britain, where the consumption of American pork is the largest among the nations of Europe, we have not found a single case of trichinosis from American pork. The British national habit of always cooking meat before eating it is an absolute safeguard against the possibility of danger, and that government has made no endeavor to prohibit the pork trade, domestic or foreign, as in any degree dangerous to the health of the people.

The Government of Switzerland, after a thorough investigation of the subject, which was ordered at the time of the uneasiness created in the public mind in Switzerland by the prohibition in France, for the proclaimed reason that American pork was dangerous to the public health, determined that the danger was so remote as to be practically imaginary, and that complete security was afforded by simply cooking the meat.

The Government of Belgium, after like examination, came to the same conclusion as Switzerland. In Germany and Austro-Hungary the existence of trichinosis is reported by the authorities to be of rare occurrence, though it is stated that there have been more condemnations of German and Servian swine on account of the presence of trichina than of American.

The habit of eating pork raw prevails among many Germans, and accounts for the causes of the disease sometimes found.

The prohibition of American pork by Austria-Hungary, which is a pork exporting country, and supplies largely to France, following quickly upon the French decree, was in effect of minor importance, inasmuch as American pork is not sent there in large quantities. No case, however, of trichinosis from American pork can be ascertained

to have occurred there—all those reported having arisen from eating the pork of that country, and in each case, uncooked.

If the search is fruitless in this country or elsewhere for any adequate cause for the announcement by the French Government of the dangers to the public health from American pork, and its consequent exclusion from your ports, inquiry naturally turns to France to discover how extensive had been the mortality there from this cause; but I have yet to learn of a single case in France of death from trichinosis arisen from eating American pork.

The one case of which much was said in the newspapers about the time the decree was issued is reported, on good authority, to have been caused by eating French pork.

It was apparent, therefore, that the alarm which had inspired the decree of February 18, had no sufficient basis. The facts in regard to the character and quality of our pork product, as amply shown in the investigation instituted by this Government, and briefly referred to above, were duly laid before the minister of foreign affairs at Paris as early as last May, and it was confidently hoped that, upon recognizing them, that Government would revoke the decree and put an end to the injury inflicted by it upon the common interests of two friendly nations. Still, the decree has been maintained in force with undiminished rigor through nearly ten months, resulting in the destruction of this immense trade between the two countries, lately so flourishing and amounting to over twenty millions of dollars per annum.

Although it may have inured somewhat to the profit of those engaged in pork raising in France and the adjoining countries by excluding a competitor from the market, it has not only inflicted great individual losses upon French and upon American citizens by putting an end to this enormous trade, and raised the price of food to the people of France, especially the poorer classes, but it has also tended strongly to check the growing commercial intercourse, the general interchange of commodities, and the rapidly increasing trade between the citizens of the two republics—a growth which has so long been going on and which has been viewed with the liveliest satisfaction and fostered with assiduous care by this Government. The disturbance of the complex and closely interwoven interests of commerce has extended far beyond the commodity now under discussion.

It is true that some of the indirect results of the accusation of unhealthfulness have been beneficial to the pork product. Packers have exercised more vigilance than ever. Farmers appreciate more than formerly the value of their choice breeds and superior food. No precaution is neglected in preparing for the foreign market, that the article may be ready for the severest test and most rigid inspection of expert judges and watchful rivals.

But these facts, which are widely discussed by the newspapers and the people, have only tended to make the continuance of the prohibition appear more unnecessary, and there has resulted a disposition in many minds towards defensive, if not retaliatory, legislation.

You will bear me witness that I have spared no effort since the announcement of the decree to avert the present situation of this question, which is in so many points of view to be regretted.

This Government has diligently addressed itself to the enlightened judgment of French statesmen by offering all the information which could be obtained to show the needless character and injurious effect of the decree now so long in force, and which, contrary to what we are sure is the sentiment of the French Government and people, has the

air of being unfriendly. Months have passed without a sign of change, save the possible institution of a system of microscopic examination in detail, which will necessarily be almost, if not quite, as prohibitory by its delays as is the decree itself. That system has been repeatedly tried elsewhere, and to some extent in this country, always to be abandoned. In Chicago, after a fruitless examination of ten thousand slaughtered animals in the search for trichinæ it was deemed better to trust to the general protection to be derived from feeding clean, wholesome food, choosing the best breeds of swine, taking care in the selection of those slaughtered, and skill in the handling and curing, than to endure the destructive delays of a microscopic examination of each piece or each animal, which even then did not reach absolute certainty unless every part of each was subjected to the process.

The Congress of the United States is about to assemble, and this Government must make some answer to the demand which the public mind is already formulating for defense of home interests. Before that time arrives, I seize this occasion to again appeal to the judgment of the French Government, with which we are so closely united by inherited friendship, by similarity of institutions, and by community of interest.

Accept, &c.,

JAMES G. BLAINE.

LEGATION OF THE UNITED STATES,
Paris, December 3, 1881.

BLAINE, *Secretary, Washington:*

French Government is desirous of recalling decree prohibitions, but fears Chambers' investigation. Adverse opinion has been manufactured. If assurances were given that some kind of inspection will be established at home this would relieve government here of much embarrassment and give sufficient grounds to recall decree. Under secretary of commerce, who is a deputy, and who has whole matter in charge, intimated that he wants only from us a pretense to justify and sustain recall. I am confident that some assurance on our part that a system of inspection will be established would secure prompt revocation of decree.

Mr. Morton to Mr. Blaine.

[Telegram.]

LEGATION OF THE UNITED STATES,
Paris, December 4, 1881.

BLAINE, *Secretary, Washington:*

Just had long interview at my house with Mr. Gambetta. He says, although microscopic bill withdrawn, parliamentary commission still exists, and majority of said commission favors retention of decree, but says if United States agree to cause governmental inspection of salted meats for export, with necessary sanitary regulations, and communicate same to him, he has reason to believe it will weaken the present opposition in the Chambers to withdrawal of decree and secure favorable report from parliamentary commission. I believe some such assurance necessary to secure revocation.

Mr. Gifford to Mr. Hitt.

No. 57.] UNITED STATES COMMERCIAL AGENCY,
Nantes, December 9, 1881. (Received January 3, 1882.)

SIR: I have the honor to inclose a letter, which has just been made public, addressed by the chamber of commerce of Nantes to the minister of commerce, urging him not to yield to those who demand the entire abrogation of the existing measures for the prevention of the importation of American pork. As Nantes is the city which has done the most to sustain the agitation which has resulted in the exclusion of American pork, this letter has a certain interest as showing by its frank avowals the real *animus* of the opposition to commerce in American provisions. While the Government bases its measures of exclusion solely on sanitary considerations, the body representing the pork packers of Nantes ingeniously places these considerations in the background, where they belong, and suggests the interests of French pork packers and the vanity of American threats of retaliation as reasons for continuing in some form the present illiberal policy.

I am &c.,

GEORGE GIFFORD.

[Inclosure in No. 57.—Translation.]

Chamber of Commerce to Minister of Commerce.

NANTES, *December* 3, 1881.

SIR: In the course of the session of November 26 the president of the Chamber of Deputies communicated to his colleagues the text of a decree, in accordance with which the bill for the establishment of a service of inspection for pork imported from foreign countries, presented in the Chamber November 5, 1881, by the minister of agriculture and commerce and by the minister of finance, is withdrawn.

The public has regarded this proceeding as a prelude to the abrogation of the decree of February 18, 1881, which prohibited the importation of salt pork from the United States into any part of France. The proposed inspection had a double purpose—that of protecting the public health, and, at the same time, favoring certain private commercial interests which are unfavorably affected by the absolute prohibi-

tion of American meats. We should regret, sir, to see too great consideration accorded to this commercial interest, for, as we shall attempt to show, the decree of February 18 also subserved serious and deserving interests.

Before American salt meats were prohibited by the decree in question they had already been excluded from several European countries, especially from Germany, Italy, Spain, and Turkey. These countries prohibited the introduction not only of American but French pork; not that the latter was considered unwholesome (for it has never been suspected), but because France received similar provisions from America, and a change of barrel and hasty examination would be sufficient to give rise to errors touching the real place of origin of the products presented at the frontier. The states above named prohibited French provisions in order to protect themselves securely against those coming from the United States.

The pork packers of this vicinity have asked us, therefore, to explain to the Government the difficult position in which they are thus placed. Supporting at home the competition of American meats, exempt from custom-house duties—they hardly pay the tax on the salt—and driven from foreign markets by the fear which these very preparations inspire, our countrymen were losing all their markets abroad, while the provisions imported into France from the United States were necessarily to be consumed here, and were breaking down the prices of similar French products. Under such circumstances our packers have been obliged to stop work almost entirely, and the closing of their establishments has caused in this part of the country an embarrassment which has affected several industries as well as our agricultural population. These facts were known and appreciated by your honorable predecessor.

It appears to us desirable that, before complying with the demands made in the interest of the American pork packers and importers, the Government should thoroughly understand the difficulties with which one of our national industries which contributes also to the alimentation of the country is struggling. These difficulties are truly painful. While all French products, and especially alimentary products, are subject to an excessive duty when imported into the United States, is it the proper moment to open wide the French market to similar products coming from that country? The interests of consumers are suggested to justify this anomaly. No one would think of suggesting anything contrary to these interests; but would they, as a matter of fact, be well served by encouragements given to foreign goods which are regarded with distrust by the greater number of European countries, and of which the low price is explained perfectly by their inferior quality?

In such a case it appears to us that the administration can not resign itself to a policy of *laisser faire*, and that it should protect our own citizens by a rigid control against the seductions of low prices which are dangerous to the public health. In the case in question the Government by so acting would no doubt somewhat embarrass the American provision business; but whatever measures it may take can never be tantamount to the extreme protective policy of the Americans, and we have nothing to fear from the retaliatory measures against our commerce which the United States are alleged to have under consideration.

We ask your excellency, then, not to assent to the movement in favor of the abrogation pure and simple of the decree of February 18, 1881. That decree is susceptible of being modified in a liberal sense, and the bill introduced by your honorable predecessor had that purpose in view. Whatever measures are substituted for the provisions of the decree, the Government will take into consideration the various national interests at stake. Those of the public health are here in harmony with those of French business men, of their workingmen, and of the agricultural population. They will certainly not be sacrificed, on the demand of certain importers of American provisions, to the idle fears of retaliation or to the illusory hope of the conclusion of a treaty of commerce with the United States.

Mr. Morton to Mr. Frelinghuysen.

[Telegram.]

LEGATION OF THE UNITED STATES,
Paris, January 17, 1882.

FRELINGHUYSEN, *Secretary, Washington:*

Faure, under secretary commerce, thinks bill introduced in Chamber Saturday will result practically in free admission American salted meats; he had hopes early passage both houses.

MORTON.

No. 51.

Mr. Morton to Mr. Frelinghuysen.

[Extract.]

No. 107.] LEGATION OF THE UNITED STATES,
Paris, January 20, 1882. (Received February 3.)

SIR: I have the honor to inclose herewith a copy and translation of a bill, in relation to American salted meats, which was introduced in the Chamber on 14th instant by Mr. Fauer, deputy and under secretary of commerce.

The bill repeals the decree prohibiting the importation of American pork, and provides for its introduction into France upon certain restrictions, which will, I believe, practically result in its free admission.

The minister in presenting this bill explained the reasons which dictated its action.

At the time the decree was issued, anxiety and alarm existed; microscopic examination could not be resorted to, and prohibition under the circumstances was necessary. But since that time nearly all the chambers of commerce of France have protested against the measure, and the Government has been led to question seriously the propriety of maintaining it.

A careful examination elicited the fact that from 1873 to 1880, 95,000,000 kilograms of American pork were consumed in France without danger, and that Belgium, where the consumption is about six times as large as in France, and England, where it is eight times as large, did not suffer at all from trichinosis.

It was found besides that the cooking of the meat afforded an additional protection against trichinosis to the one already secured by its process of curing.

Upon the evidence of these facts the committee of public hygiene rescinded its former advice, and declared that in its opinion prohibition was unnecessary, provided the meat introduced into France was well cured. The Government therefore proposes the free admission of American pork upon the conditions stated in the bill.

It has taken nearly two years to establish the fact that the remonstrances which our Government made from the beginning to this unjustifiable measure, and which have been constantly pressed upon the French authorities by my predecessor and myself, were just and well-founded in evory respect.

I regret that the bill proposed still maintains the prohibition of sausages and hashed meat, the reasons for which I do not understand.

But as the bill is, if its provisions are applied in a liberal spirit, as I believe they will be, our packers will have no reason to complain.

Mr. Faure expressed to me the opinion that the bill would pass both houses within four or five weeks.

* * * * * * *

I have, etc.,

L. P. MORTON.

[Inclosure in No. 107.—Translation]

Bill on importation of American pork.

The minister of commerce presented yesterday, in the name of the Government, the bill relating to the withdrawal of the decree prohibiting the importation into France of American pork.

This is the text of the document:

ARTICLE 1. The decree of February 18, 1881, prohibiting the importation into France of salt meats of American production, is annulled.

ART. 2. Salted pork of foreign production, accompanied by a certificate testifying that the meat has undergone a perfect preparation, and that it corresponds with the type known in commerce under the name of "fully cured," can be imported into France.

These certificates will be made out in the places of their origin with promptitude, and at the cost of the parties interested, by local experts, whose qualifications will be attested, and the signature authenticated by the consular agents of the Republic.

ART. 3. At the moment of the payment of custom-house dues in France, the importers must prove that the meats which they propose to hand over for consumption are healthy, that they are in a perfect state of preservation, and that the salting is not defective.

This authentication will be made at the expense of the importers by inspectors appointed by the prefects of the frontier departments.

ART. 4. The present arrangements are not applicable to meats hashed and uncooked, such as different kinds of sausage ("saucisses, saucissons, cervelas," etc.), nor to guts ("boyaux") intended for culinary preparations, the importation of which into France is absolutely prohibited.

ART. 5. Will be punished by imprisonment of from two to six months, and by a fine of from 100 to 500 francs—

1. Those who will have brought into France uncooked and hashed pork, such as the various kinds of sausage ("saucisses, saucissons, cervelas," etc.), or guts ("boyaux") intended for culinary preparations.

2. Those who have imported into France pork of foreign production which has not been subjected to the inspection imposed by the present law, or which would have been refused after examination.

In the two above-mentioned cases the imported meats will be in addition seized or destroyed.

The article 463 of the penal code is applicable in the cases provided for in this article (5th).

No. 52.

Mr. Rhodes to Mr. Davis.

No. 16.] UNITED STATES CONSULATE,
Rouen, February 2, 1882. (Received February 27.)

SIR: I transmit herewith a slip from the Nouvelliste de Rouen of to-day (February 2) of a case of litigation in reference to diseased salt pork from the United States. The particulars of the case do not possess an international interest, but the publicity given thereto brings afresh before the public mind of this part of the country the alleged danger resulting from the consumption of American pork. The judicial decision is based on the disease as an accepted fact, and possesses in popular estimation a convincing force which will be difficult to eradicate.

The author of the prohibitory measure of February 18, 1881, against the admission of American meats, Mr. Tirard, having returned to the ministry of commerce, it is possible that the abrogation of the measure in question may be attended with more difficulty than was anticipated under the ministry of his predecessor.

The French Government is nearly as parental under the republic as it was under the empire. Long custom has made this feature a national

characteristic, and the people naturally turn to the government for instruction and guidance as to proper food.

It is not the habit of the press of France to seriously examine subjects beyond national limits, and trichinæ in American meat was taken up and disseminated without proper discussion, and the result is that a general apprehension exists that the consumption of American pork may be attended with fatal consequences.

The exhaustive and convincing pamphlet issued by the Department under the title of "American pork" has served a good purpose in enlightening the agents of the Government and the merchants engaged in the trade of the meat. The French importer of it, however, is as ready and willing to sell it as ever, but the consumer is not as willing to buy, and it now seems desirable to overcome his recently acquired prejudice by the promulgation of a brief, simple presentation of the case adapted to the popular understanding. Thus, while the United States minister is endeavoring to secure the abrogation of the decree of February 18, at the foreign office, the consuls might profitably be employed in disabusing the popular mind and preparing the way for a future demand through the French press and the chambers of commerce.

In venturing to submit this suggestion, I have, &c.,

ALBERT RHODES,
United States Consul.

(It has not been thought necessary to reproduce the inclosure—a newspaper clipping in French.)

No. 53.

Mr. Glover to Mr. Davis.

No. 12.] UNITED STATES CONSULATE,
Havre, February 7, 1882. (Received February 27.)

SIR: Now that Mr. Gambetta has retired from the French cabinet, I fear that the revocation of the edict in regard to American pork has been indefinitely postponed. Mr. Tirard, by whose influence the order was originally issued, has been reinstated to his former position as minister of commerce and agriculture.

That fact has a very depressing effect on the merchants of this city who are interested in the importation of American salt pork. So confident were they that the edict would be revoked that I understand a large quantity of bacon was ordered to this port, several thousand cases of which have already arrived. Although the edict may not be strictly prohibitory in terms, it practically amounts to the same thing. The result is that American merchants are deprived of a market for their meats and the people here of a most excellent article of food.

I hope the Department of State will continue to press the matter on the attention of the French Government until the hog product of the United States shall be admitted into this country on an equal footing with that of any other country.

It is a matter of very vital importance to producers in the United States.

I have, &c.,

JOHN B. GLOVER,
United States Consul.

No. 54.

Mr. Davis to Mr. Morton.

No. 96.] DEPARTMENT OF STATE,
Washington, February 10, 1882.

SIR: I am gratified to learn from your dispatch No. 107, of the 20th ultimo, that it is very probable that the objectionable decree of the French Government against American pork will soon be repealed.

Thanking you for your full and interesting report on the subject,

I am, &c.,

J. C. BANCROFT DAVIS,
Acting Secretary.

No. 55.

Mr. Rhodes to Mr. Davis.

No. 19.] UNITED STATES CONSULATE,
Rouen, February 24, 1882. (Received March 9.)

SIR: I transmit herewith a slip from the Temps of February 23, concerning American pork before the Academy of Medicine, to which body the question was referred by the French Government. As will be seen, no practical solution was reached.

I am, &c.,

ALBERT RHODES.
United States Consul.

[Inclosure in No. 19.—Extract from the Temps, of Paris, of February 24, 1881.—Translation.]

AMERICAN PORK.—Our readers have not forgotten that immediately after a communication of M. Laboulbéne to the academy, reporting a little epidemic of trichinosis caused at Crépyèen-Valois, by a hog of French origin, the public was greatly disturbed. They learned at the same time that trichina had been found by the inspectors of butchery in American lard at Paris, Lyons, Montpellier, &c. The government instantly took a radical measure; there was issued an immediate prohibition of the introduction of American lard into France. They promised to retract the prohibition as soon as they could find a practical means of distinguishing the contaminated meats from those which were not. The academy, on being consulted, had previously given an opinion conformable to the measure taken by the government. However, the discussion had shown that several members of the company were not in favor of the prohibition; some deemed a thorough cooking sufficient to render the trichina lard inoffensive. Others thought that a thorough inspection upon its arrival would give satisfaction to all interested.

Several weeks ago our brother member, M. Decaisne, in the name of the hygiene—better understood, in the name of the laboring classes deprived of cheap and nourishing food, in the name of commerce and of industry sacrificed to chimerical fears—demanded that the prohibitive measures should be reported.

A delegation, composed of MM. Bouley, Chatin, and Proust, was named to examine the resolution of M. Decaisne. The minister of commerce presses the academy to make known to him its sentiments on the questions which M. Decaisne arouses.

M. Chatin, reporter of the delegation, after having brought to mind the actions above mentioned, enumerates, classes, and discusses the arguments of the adversaries of the prohibition. These ultimately affirm; 1st. That they could not, without a grave reason, which would here be faulty, deprive the people of such important and cheap food. 2d. That the salt, carefully prepared, destroys the trichina. 3d. That the

micrcgraphic examination of the imported meats would entail tardiness and innumerable difficulties to commerce, which would be equivalent to the prohibition in a disguised manner.

In the eyes of M. Chatin these arguments are not well founded. "It is to show," says he, "a singular solicitude for the interests of the laboring classes to wish to furnish them with unwholesome food in the pretext that it is cheap." The efficacy of the salt for the destruction of trichina is contested or denied by well-authorized observers, among others M. Colin d'Alfort. It is demonstrated that salt meats for some time past have preserved live trichina. Moreover, the quality of salt varies. They have found live trichina in hams of which the interior temperature had been brought up to 118°. It is not impossible to organize in France a service of micrographic inspection capable of sufficiently examining the imports.

M. Chatin, reasoning on the works and the essays of the delegation who had worked at Havre during several months of the previous year, affirms that he would not be above the means recognized as practical of establishing in this port a service of inspection offering to guaranty all. Havre receives annually 112,000 cases; for three hundred days of work, that gives 373 cases per day to examine; one inspector can visit 10 cases; let us apportion to him only 5. Seventy persons will suffice to do the work well.

The 50,000,000 kilograms of American pork annually imported by us do not intimidate M. Chatin. A hundred micrographs, two hundred at most, will serve to make a proper examination.

In Germany 17,000 persons, they say, are employed in this examination. In that country it is not only against indigenous trichinosis that we must protect oneself.

Conclusion: At present there is but one measure capable of conciliating the interest of the public hygiene and of commerce; it is the micrographic inspection.

It seems that three members of the commission have different opinions on the question.

M. Proust has recommended the examination of suspected meats, but he has not heard of the establishment of a system applicable to the great imports at Havre, however. For the rest, despite the prohibition, for the last four years we have consumed American lard received by the northern frontier, and we still consume as much as ever. Have they found one single case of trichina? No. The accident at Crespy is due to a "compatriot hog" [laughter]. Our culinary customs are efficacious safeguards to us. Let us eat American lard; only do not neglect to cook it a long time.

M. Bouley participates in this view of the subject, and believes that trichinosis causes so many accidents in Germany, only on account of the imperfect cooking of the meat. The inspection would be, without any doubt, a guaranty incomplete withal; it is not necessary.

M. Camille Leblanc, inspector-general of the sanitary services of Paris, attests that the prohibition has been without effect; the American lards were going to take divers forms in England, and come to us by the north. We would require 7,000 or 8,000 inspectors to organize a good service.

M Rochard, who was one of the Havre delegation, has been able to satisfy himself that the inspection was altogether insufficient for the wants of commerce.

M. Legouest admits that prolonged cooking destroys trichina, and believes that (thanks to that cooking) the American lard may be consumed by our troops. Still, he has a scruple; is it certain that the trichina meat, in which they have succeeded in killing the parasite, is as wholesome as the meat without trichina?

M. Bouley would not wish to affirm that the two meats are of equal value; however, it seems established that the albuminous substance of the dead trichina digests itself without inconvenience.

M. Bouchardat is convinced that the immunity of French pork is due to the isolation of the animals raised by the cultivators. In America, where the raising gives place to great enterprises and enormous concentration of animals, the trichina finds these conditions very favorable to its propagation. Better instructed, the Americans would practice the isolated raising. (A sarcastic voice:) Depend upon it!

M. Fauvel proves the absence of MM. Davaine and Colin d'Alfort, whose opinions would be precious on this occasion. Resolved: The report to be printed and the discussion to be adjourned.

Finally, according to the proposition of M. Guerin, considering that the report does not reply in its conclusions to the question of the minister, the academy votes sending back to the delegation. Consequently, the reporter must return with a new work, declaring his views on the subject of what conditions the introduction and the consumption of American pork can be permitted in France without peril to the health of the public.

No. 56.

Mr. Morton to Mr. Frelinghuysen.

No. 130.] LEGATION OF THE UNITED STATES,
Paris, February, 28, 1882. (Received March 19.)

SIR: I have the honor to acknowledge the receipt of your dispatch No. 96, of date February 10, conveying the gratification of the Department for the information that the decree of the French Government prohibiting the importation of American pork would probably soon be repealed.

With the defeat of the Gambetta cabinet, which was pledged to the withdrawal of the decree, and the reinstallation of Mr. Tirard, who originated the measures of prohibition, as minister of commerce, I regret to say that the prospects of an equitable and liberal settlement of this long-pending question are not now as favorable as heretofore.

The bill, which was drawn up by the late minister of commerce, of which I gave you the substance in my No. 107, is still before the Chamber, and will not, I think, be withdrawn. But it is somewhat doubtful whether the committee to which it was referred will now report it favorably.

I must state that the renewal of the objection made to the importation of American pork, is not to be attributed solely to the hostile influence of the minister of commerce and of those who have adverse private interests in the matter, but mainly to the publication in some American papers of supposed fatal cases of trichinosis. These reports, which have been circulated, unfortunately, by the American Correspondence, a New York Franco-American weekly sheet, printed partly in French, are copied by the French papers, and its paragraphs upon American trichinosis have received a rather wide circulation. I inclose herewith, for your information, two of these paragraphs, which appeared in the Correspondence of January 28 and February 11.

Many people have called at the legation to ascertain if there was any foundation for these reports. I have not hesitated to declare that, in my opinion, they were spurious, and that there was nothing like an epidemic of trichinosis existing in the United States. It might, however, be useful if I could speak with official authority from the State Department in the matter.

I have, etc.,

L. P MORTON.

[Inclosure in No. 130.—Extract from the American Correspondence, January 28, 1882.]

TRICHINOSIS IN THE UNITED STATES.—EXPERT INSPECTORS OUT OF THE QUESTION LEGALLY.

Like all Americans, we regret that the Chamber of Deputies did not instruct the Government to allow salt provisions from the United States to be admitted without restrictions, as we were in hopes that they would, and so expressed ourselves in our last number.

We are confident, at any rate, that the French legislators will continue to overlook the publication, in papers opposed to free importation, of numerous cases of trichinosis, more in fact than have really occurred. Reliance can be placed upon our statement that there were only six cases last week, of which four were fatal, and but two this week, which shows conclusively that trichinosis is a scarecrow, which has been made too much of.

We also expressed the apprehension that the Chamber of Deputies at Paris would take offense at being placed by the Government on the same level with American corporations, or even with the petty legislatures of separate States, with which it is

proposed to treat (and not with the American Congress) for licensing as experts those persons in America whose duty it will be to issue certificates of the wholesomeness of such provisions as they may agree to admit into France.

But it would appear, unfortunately, that such appointments as experts are contrary to the laws of the United States, as we are informed by a friend and correspondent, who is a well-known jurist and was, at one time, a United States judge:

"I call your attention to the text of the law as proposed, which will require the exporter to produce an inspection certificate from this side to identify the soundness of the provisions. It will be exceedingly difficult, if not impossible, to comply with such a requirement, for the simple reason that in this State and in Pennsylvania, if not in all the other States of the Union, there are no authorized legal inspectors.

"It is a matter of history that the inspection laws, formerly existing in this country, requiring the inspection of exports and brands of the board, on casks, barrels, or packages, hurt the sale of the article in the foreign market.

"It is unnecessary to detail the reason, but the abuse was so flagrant that in New York the constitution of the State forbids forever the appointment of inspectors or boards of inspection; and so it is in Pennsylvania.

"Whence is the exporter to obtain the inspection certificates demanded by the French law? In this country the purchaser must look out for himself. He has no other protection than the punishment of the person who knowingly sells putrid or unwholesome food.

"It is otherwise in France and other foreign countries, whose governments deem it their duty to add to the common law requirements and *a priori* evidence that the article offered is sound.

"It is supposed that perhaps an inspection in the interior, or the place of manufacture, say at Cincinnati or at Chicago, etc., by private parties would be sufficient.

"This is a delusive idea. The French bill requires the inspection by a competent, impartial, and disinterested expert authorized by the local government; but, whilst there may be voluntary inspectors, they are not the class to which France looks for the protection of the lives and health of its inhabitants.

"In the next place, neither of these centres is the point of export. The shipment to France is made here in vessels loading at this port, but pending the transit from the interior to the shipboard, on which the package will leave this country, there are so many opportunities of fraudulent marks, substitution of packages, and other tricks of trade that the original certificate, if in all respects correct, would not be proof of the identity of the article finally consigned to Havre. Nor will the French consular certificate of authenticity of signature, etc., be of any avail. The French market still regrets with sorrow the certificate of authenticity of the signature to a document, pretending to emanate from authority, that Frémont's notorious Memphis and El Paso Railroad was a duly recognized and salable stock at the regular New York Stock Exchange—a paper by which millions of French money were gathered for an unsafe and judicially fraudulent stock.

"The only remedy for the free export of meat and provisions from here to France is the absolute and unconditional repeal of the existing ordinance. The Chamber will not permit a change which can easily be evaded by illegitimate means. Will it permit a trade in natural course? This is the question."

As we go to press we find the following dispatch published in all the New York papers to-day (January 27), with displayed headings:

FIFTEEN PERSONS POISONED—TRICHINOSIS CAUSED BY EATING RAW HAM—THREE FATAL CASES.

MARSHALL, MINN., *January* 26.

Great excitement has been caused here by trichinæ poisoning from eating raw ham. Fifteen prominent citizens are afflicted, and three have died. An entire family, consisting of Mr. and Mrs. ——— ———, etc., etc.

Names and details are given, all which seems flatly to contradict those sanguine persons who, like ourselves, persistently maintain that the French Government ought to withdraw the prohibitive decree. It shows, at any rate, that the cases of trichinosis mentioned by us in our last number were not all exaggerated. We say again that these are special and particular cases, and that they prove nothing in a general way. It should be noted that in the above instance those who died had eaten raw ham.

In France it is *always eaten cooked.* Hence there is no cause for alarm. No uneasiness need be felt either about the lard in cans, prepared or purchased in quantities by leading speculators, such as Messrs. Armour, Fowler, etc., which they introduce in a roundabout way into France, where it is consumed without apprehension or suspicion of its American origin.

[Extract from the American Correspondence of February 11, 1882.]

SPECULATION AND TRICHINOSIS.

The movement to bring about a withdrawal of the decrees prohibiting the importation of American provisions into Europe, and particularly into France, continues to be carried on under unfavorable circumstances. As the American Correspondence has been predicting for a year past, the results have hitherto been negative. Matters are even worse at present, because speculation has thrust itself so deeply into this question, which Mr. Levi P. Morton, the American minister, is trying so strenuously to settle, because he knows what privations the laboring classes in Europe and what losses the American cattle-raisers are suffering by reason of the prohibitive decrees. But the large speculators do not care much for that. Operators for a rise have published in certain papers that the decrees had been abrogated in France by the Chamber, simply because a bill has been introduced by the Government, which will soon be buried out of sight, if people believe in France the exaggerated accounts of trichinosis published in certain other papers, under sensational headings, like the following:

THE POISONED FAMILY—THE AGONY ENDURED BY THE JAEGERS AT FORT WAYNE, IND

[Official dispatch to the Evening Telegam.]

FORT WAYNE, *February* 9.

The News says, with reference to the Jaeger family, five in number, who are suffering from trichinæ poisoning:

"They suffer intensely. No immediate danger is anticipated, but their ultimate recovery is doubtful. The girl, aged fifteen, and her sister, aged five, are in a very bad condition. No hopes are entertained of their recovery. The balance may survive. The oldest child was working in the country and came home to wait on the family, and ate once of the diseased meat. She has a very mild form of trichinosis."

It will be observed that this does not refer to the same case as that of which we deemed it our duty to publish the true particulars, because they had been too much magnified by some papers. These exaggerations originate with the bear speculators, who are well aware that if they should only hear in France of any new cases of trichinosis in this country, they would never venture to withdraw the prohibitive decrees. For this reason we desire to caution the French public and Government once more not to attach any credit to exaggerated accounts like the above.

No. 57.

Mr. Morton to Mr. Frelinghuysen.

No. 138.] LEGATION OF THE UNITED STATES,
Paris, March 17, 1882. (Received March 30.)

SIR: I have the honor to inform you that the committee to which the bill providing for the free introduction into France of foreign pork had been referred, has made a favorable report, and that the question will come up in the Chamber on the 23d instant. All indications now point to the passage of the bill.

The Academy of Medicine, to which the Government had submitted the matter, has pronounced itself against the measures resorted to or contemplated for obstructing the importation of pork. I annex herewith a copy of the report of the academy, which has been kindly furnished by Dr. Wm. E. Johnson.

The Academy of Medicine of France is an official body, authorized to answer the questions on sanitary measures propounded to it by the Government, and its decisions, when uttered in a clear and decided manner, as in the present case, have great influence with the executive and legislative departments of the Government.

I have, etc.,

L. P. MORTON.

[Inclosure in No. 138.]

Dr. Johnston to Mr. Morton.

PARIS, *March* 16, 1882.

DEAR SIR: I have the honor and the pleasure to inform you that after a full discussion of the question of trichinæ in connection with American pork at the National Academy of Medicine of Paris, a discussion which ran through several sittings, that body has come to a decision which fully justifies the views your legation has maintained on this question.

The Academy of Medicine of France is an official body authorized to answer in an official manner the questions on sanitary measures propounded to it by the Government; and its decisions, when uttered in a clear and decided manner, as in the present case, always meet with the deference on the part of the Government to which they are entitled.

I subjoin the declaration voted by the academy.

I have, etc.,

W. E. JOHNSTON, *M. D.*

Report at the National Academy of Medicine of France on the question, propounded by the Government, of the necessity of an inspection of foreign pork.

[Read by Dr. Bouley, professor at Alfort, reporter of the special committee, February 28, 1882.]

The academy taking into consideration:

1st. That for a great many years American and German pork has been freely admitted into France, without having been submitted to any kind of inspection as regards trichinæ;

2d. That notwithstanding the very extended use which has been made of this kind of meat, especially in the army and the large manufacturing and industrial districts, the disease called trichinosis, with the exception of a single case, which was produced by indigenous pork, has not been observed in any part of France, although at the same time the attention of physicians has been frequently called to that disease in Germany.

3d. That this immunity enjoyed by the people of France in regard to trichinosis, is due without any doubt to their culinary habits, pork being never eaten in France without having been submitted to such a temperature in cooking as is incompatible with the life of trichinæ.

4th. That an efficacious microscopic inspection would be with difficulty applied to the enormous mass of ninety millions of pounds of pork, which is the annual amount of importation, and that, in any case, the inspection would not prove to be a certain guaranty of the innocuity of the pork as regards trichinæ, since the irregularity of the dissemination of trichinæ does not permit the conclusion that because they do not exist in one part they may not exist in another, is of the opinion that it is not necessary to submit imported pork to a microscopic inspection, in order to prevent trichinosic infection, the culinary habits of the people of France being such as to demonstrate thus far that the precautions used in cooking are sufficient to preserve them from the infection; and that it suffices to put them on their guard against the possible dangers of the use of raw or incompletely cooked pork, topoint out to them by a special printed instruction these dangers, and to distribute these instructions through the aid of the government agents to every part of France.

A minority report on an unimportant point was read by a member of the committee and was rejected by the academy.

[Telegram.]

WASHINGTON, *March* 22, 1882.

MORTON, *Minister, Paris:*

Health officer of Cincinnati certifies that records of that city, the center of pork trade, do not show a single case of trichinosis. Dr. Rauch, secretary health board of Illinois, reports only eleven deaths from trichinosis in whole State in sixteen years, traced in each case to eating raw pork. City physician of Chicago states records show only two cases there in four years, also due to eating raw pork. The places mentioned are the great pork producing and consuming districts of the United States, while the whole country consumes more pork per capita than any other country.

LEGATION OF THE UNITED STATES,
Paris, March 29, 1882.

FRELINGHUYSEN, *Secretary, Washington:*

The pork bill passed yesterday provides for inspection in France by experts appointed by minister of commerce, who shall have the right to prescribe mode of examination. This last clause, which was introduced by amendment, has in view the re-establishment of microscopic examination.

Our friends and former minister of commerce opposed it.

MORTON.

No. 62.

Mr. Morton to Mr. Frelinghuysen.

No. 146.] LEGATION OF THE UNITED STATES,
Paris, March 31, 1882. (Received April 13.)

SIR: I had the honor to inform you on the 28th and 29th instant by cable that the pork bill had passed the Chamber with an amendment aiming at the re-establishment of microscopic examination. I transmit herewith copies of my telegrams and a translation of the text of the bill as it passed the Chamber.

The amendment introduced by the opponents of the free admission into France of our pork is contained in the three last paragraphs of article 2. It does not provide in terms for microscopic examination, but the debates show that it is intended to secure that result. The minister of commerce, Mr. Tirard, who agreed to it, and has secured its passage, is well known to be in favor of this mode of inspection, and to hold that it is the only one by which any effective guaranty can be given. In a conversation which I had with him the day before the debate he expressed this opinion, and remarked that there was a strong prejudice in France against American pork; that it would find no sale, although it might be perfectly sound, unless some kind of inspection was required which would satisfy the public. He discussed the question in a friendly manner, and intimated that the inspection, if required by the new law, could be made easy, and would become more and more so, if all meats were found to be in a sound condition.

Mr. Archard, of Bordeaux, the chairman of the committee who reported the bill, during the debate read your telegram, copy of which I had furnished him, denying the existence of trichinosis in the United States, and made an able argument in favor of his bill, claiming that the prohibition was unjustifiable, that our pork was pertectly healthy, and that, even should it be unhealthy, no inspection or examination of such quantities could be in any way effective. His speech is too long to be translated, but by referring to the Journal Officiel of the 28th and 29th, which goes regularly to the Department, you will find it in full, with the whole proceedings.

It is believed that the Senate will pass the bill without change.

I have, etc.,

LEVI P. MORTON.

[Inclosure in No. 146.]

Translation of a bill passed by the Chamber.

ARTICLE 1. Salted pork meats of foreign production, which correspond to the type known in commerce under the name of "fully cured," can be imported into France through places on the frontier of land and sea which will be designated by decree.

ART. 2. At the moment of landing the importers must prove that the meats which they intend to hand over for consumption correspond to the aforesaid type; that they are wholesome; that they are in a perfect state of preservation; and that the salting of them is complete. This authentication will be executed by special experts.

These experts will be appointed by the minister of commerce, who will possess the right to direct such manner of examination as will appear to him necessary.

The cost of the service of inspection will be paid by the importers under conditions to be established by rules of the public administration.

The custom-house service will only allow the removal of the meats on the certificate of these experts establishing that they consider the condition required in the first paragraph of the present article.

ART. 3. The present arrangements are not applicable to uncooked chopped meats, such as small and large sausages, Bologna sausage, etc, nor to guts intended for culinary preparations, the introduction of which into France is absolutely prohibited.

ART. 4. Will be punished by imprisonment of from two to six months, and by a fine of from 100 to 500 francs—

(1) Those who have introduced into France uncooked chopped pork, such as large and small sausages, Bologna sausage, etc., or guts intended for culinary preparations.

(2) Those who have introduced or attempted to introduce into France, without submitting them to the verification prescribed by the present law, of pork of foreign production.

In the two above-mentioned cases, the imported meats will be, moreover, seized and destroyed.

Article 463 of the Penal Code is applicable in the cases foreseen in this article.

ART. 5. The decree of February 18, 1881, which prohibits the importation into France of salted pork of American origin is repealed.

MISCELLANEOUS.

AUSTRIA.

Mr. Evarts to Mr. Kasson.

[Telegram.]

WASHINGTON, *February* 24, 1881.

KASSON, *Minister, Vienna:*

See minister foreign affairs and protest firmly against proposed decree. Certainly, it should not operate except after a due interval of notice, and should not condemn except for actual disease. Without these qualifications the measure would be regarded as oppressive and intolerable.

EVARTS,
Secretary.

No. 64.

Mr. Kasson to Mr. Evarts.

N. 434.] LEGATION OF THE UNITED STATES.
Vienna, March 12, 1881. (Received March 26.)

SIR: Recurring to the subject of my dispatches Nos. 428 and 430, I have now to add that on the 8th instant I received very opportunely your telegram.

I made it the occasion of a further communication to the minister fo foreign affairs, as follows:

UNITED STATES LEGATION,
Vienna, March 8, 1881.

DEAR BARON HAYMERLE: Referring to my conversation with you of the 28th ultimo, and my note of the 1st instant, inclosing "memorandum," I beg to call your attention to a telegram received to-day from the Secretary of State, at Washington, which denies the reports, put in circulation by interested parties, respecting the prevalence of disease among American swine.

In this connection, I beg that the attention of the proper authority in Austria and in Hungary may be called to the fact, as reported to this legation, that examinations have shown more condemnations of German and Servian swine meat, on account of the presence of trichinæ, than of American. A quantity of Westphalian hams are reported to have been recently confiscated in this city on that account. It is believed that when the reports made are duly considered by the respective governments, it will appear to them necessary to make one rule equally applicable to the importations from all countries.

Believe me, dear Baron Haymerle, your most obedient servant,

JOHN A. KASSON.

(Copy of telegram inclosed.)

On the evening of the same day, meeting me in society, he said that he had received this note, and had already ordered its transmission to the Austrian and Hungarian Governments. Your telegram was opportune, especially because there had at the time appeared in the journals a statement that the municipality of Pesth had just addressed to the government there a petition for the prohibition of the importation of lard, of pork, and of fat coming from America. By my advice, the consul at Pesth was instructed to remonstrate with the local authorities for reasons given, and his action thereon he afterwards reported to the consul-general.

I have now exhausted all the preventive means which occur to me as being in my power to reverse or modify the intended action of the two Governments. It has also been the subject of conversation between two of the ambassadors and myself, in which I thought to dissipate the groundless alarm, and indicated what is generally believed to be at the bottom of the difficulty, namely, the wish to obstruct and even abolish American competition in the home markets of Europe.

There remains, however, the question whether the United States Government has done all in its power to obviate every just cause of complaint. It appears to me the answer must be in the negative: 1st. So far as I can ascertain, the causes, and the effect upon the animal fiber, of hog cholera have not been officially investigated and stated. 2d. No system of official inspection in respect to trichinæ has been established, either at slaughter-houses, at depots, or at ports of exportation. 3d. No official investigation and determination has been made whether salting, smoking, "trying" the fat or other curative process, has the effect of destroying the dangerous animalcule. I venture to suggest that until some official action in these directions has been duly taken we are not without fault for the alarm existing on the subject in Europe.

In connection with these suggestions, I take the liberty to say further: We are so far removed from the countries of interior Europe that their governments are not so careful in treating economic questions involving our interests alone as they are in dealing with like questions affecting their immediate neighbors. Their sense of international justice is also largely influenced by the wide-spread fears among their people of the effect of the recent development of the products and of the industry of the United States, and of the resulting competition in European markets.

These fears particularly apply to the agriculture of America. The taxation of real estate here is very burdensome; in America it is light. Rents must here in large regions be paid to landlords; in America the farmer is usually free from rent charges. Here lands have been highly paid for; there they were bought comparatively cheap. These considerations are pressed upon the governments. It is more than possible that they will lead to palpable injustice and inequality towards the United States in the near future. Hence the question, whether

Congress ought not to arm the Executive with the power to impose temporarily a percentage of discriminating duties on the products of the soil and of the industry of those nations which apply discriminating duties or regulations against the products of the soil or industry of the United States.

Some two years ago I had the honor to advise you that the condition of public sentiment in this country, and on this continent generally, gave serious cause for alarm to American interests. I beg now, in view of the partial realization of those fears, to renew that declaration, and to direct attention to remedial and precautionary measures.

I have, etc.,

JOHN A. KASSON.

No. 65.

Mr. Weaver to Mr. Hay.

No. 119.] UNITED STATES CONSULATE-GENERAL,
Vienna, March 16, 1881. (Received April 1.)

SIR: The Reichsgesetzblatt of Vienna publishes to-day the following decree, signed by the ministers of the interior, of commerce, and of finance for Austria, dated March 10, 1881, prohibiting the importation of swine products from the United States to this empire, as follows:

In agreement with the Royal Hungarian Government, the importation of swine, of pork of all kinds, of lard, and of sausages of every description, from the United States into the Austro-Hungarian Monarchy is prohibited.

This prohibition goes into force from the date of its publication.

I am also informed by Consul Sterne that a similar decree was published at Pesth on the 11th instant, by the ministers of commerce and of the interior for the Hungarian Monarchy, so that the prohibition for the entire Austro-Hungarian Empire is now perfected.

There is no doubt in my mind but that the actuating cause of this prohibition may be attributed to the bitter opposition of pork producers in this country, as they have suffered greatly from American competition, but probably the immediate cause was the recent similar prohibition on the part of the French Government.

Aware of the feelings of the producing classes in this empire, I was fully prepared for a vigorous attack upon American swine products as soon as France had led the way. Consequently, on the 2d instant an article appeared in the morning journals here, to the effect that the burgomaster of Buda-Pesth had declared before a commercial society that it had been satisfactorily proven that American meats were deleterious to the public health by reason of the trichinæ they contained, and that such representations would be laid before the Government as would lead to a prohibition of their importation.

The article was sent to Consul Sterne at once, with instructions to call upon the burgomaster, and ascertain the grounds upon which he made such statements, and if it were found that on the plea of sanitary measures any unjust discriminations were likely to be made against American products, he should protest in strong terms against such a procedure, and lay before the proper authorities such a statement of our appreciation of the situation as might prevent hasty action injurious to our trade. To this end it was claimed that the American hog products were equally as free from trichinæ as the European products, and that this could be

proven by reliable microscopical examination, and that the cases of trichinosis in Europe were shown to have resulted from eating of native pork, and that consequently it was unjust to condemn an article of any one nation and not subject the same article, similarly conditioned, to like prohibition or restriction.

On the 6th instant Mr. Stone replied in effect, that he had communicated with the burgomaster, who promised to give his statements due consideration; that action had been taken in consequence of an inquiry made by the ministry as to what effect the examining station recently established at Trieste had produced; that he had no official statistics concerning the introduction of American pork, but that he had heard of diseased stock being discovered and condemned at Steinbruck, but in these cases the hogs had come from Servia and the Lower Danube.

It was supposed, however, that Sanitätsrath Gröss would furnish the proofs sustaining any proposition made to the ministry, who in turn would most likely appoint a commission of investigation, on whose report action would be taken.

On the receipt of this communication I placed the same before Mr. Kasson, who informed me that he had already sent to the foreign office the strongest possible representations on the subject, and was likewise in direct telegraphic communication with the Department on the subject, so that possibly nothing further could be done.

On the 13th instant, however, I received a letter from Mr. Sterne, inclosing the ministerial decree, which he justly characterised as a "foregone conclusion" pronounced by a Government that had made up its mind to act at once upon *ex parte* evidence. In order to show the animus pervading the minds of those in positions of influence, in respect to American swine products, I inclose herewith a copy of a newspaper article emanating from Dr. Ludwig von Gröss, one of the medical advisers of the city of Buda-Pesth, from which it would appear that a bitter crusade against our swine products may be expected all over the continent of Europe. The question must therefore occur to the minds of legislators, whether this unjust discrimination against our products should not be met by a similar prohibition of the importation into the United States of the special products of the offending nations, or by applying to their imports a special discriminating duty. *Lextalionis* might have at present a more beneficial influence on European nations than commercial reciprocity.

But while it is believed that France and Austria have acted recently in the matter under consideration with great precipitation and injustice, yet it can not be doubted that the result has been partly owing to causes for which our own merchants are responsible, viz, in that the shipment of large quantities of insufficiently cured or spoiled meat prejudice foreign markets against our products; and the telegraphed or published statements of great mortality among the swine in America, probably originated or aggravated by speculators in the trade in order to subserve selfish ends, give to those who are seeking it the occasion for making those frightful representations concerning American meats that consumers are deterred from using them, and officials induced to combine with the native producers in order to prohibit their importation. It would appear, therefore, that the question is so hopelessly involved and obscured by personal interests that the public welfare is lost sight of.

I am, etc.,

JAMES RILEY WEAVER,
Consul-General.

[Inclosure.]

Translation of an article published in a leading journal at Buda-Pesth by Sanitätsraih, Ludwig von Gröss, on trichinæ in American swine products.

At the International Congress held in 1879, in Amsterdam, I have called attention to the dangers arising from the consumption of lard and pork imported from America. After an investigating debate, in which several American hygienists took part, it recommended to the governments of the several European states in general to prohibit the importation of American pork in all the ports and countries of Europe. Minute examinations made since then in Stockholm and Barcelona have shown that the American hams contain in great part the dangerous trichinæ, and scientific investigations have proven that dyphtheritis owes its cause to the consumption of American lard made of swine that were infected with trichinæ. The breaking out of the hog-cholera in the forests of the American northern states during the last year has made the importation of these products very suspicious. I have published several articles in this paper which were copied by other journals, among others by the Journal Hygiene of Paris, which considered these labors of great moment. To my great satisfaction the government of the French Republic has prohibited the importation of American pork in all its territories, and I regret to find that we are here still negotiating, for it is high time that our government, animated by the best intention, should act. The next consequence will be that other states will issue similar laws, prohibiting the importation of American pork, for the reason that the home products can not always, or at least only with difficulty, be distinguished from the imported article, and the course pursued by Italy, which refuses admission to our products for sanitary and similar reasons, is in favor of my argument. Can it be that our government should desire to establish slaughter-houses for hogs, in order to examine the animal while still alive, and permit the importation of the dead and questionable products? This can not be, for sanitary as well as financial reasons, for if we restrict our own industry within proper confines, we can not allow the Americans to endanger our markets with their diseased wares. The honest producer can not enter into competition with him who offers damaged goods. The twelfth hour has strnck; we should no longer tarry with the command if we don't want to expose our health or the interests of our home industry.

DR. LUDWIG V. GRÖSS,
Medical Adviser.

No. 66.

Mr. Kasson to Mr. Blaine.

No. 488.] LEGATION OF THE UNITED STATES,
Vienna, March 19, 1881. (Received April 2.)

SIR: The interests at work to obstruct the competition of American swine-meat, and swine product, in the markets of this monarchy have finally succeeded in their purpose. On the 16th instant appeared here in the official journal—the Wiener Zeitung—an ordinance, of which I inclose a translation. A copy of the original publication is inclosed herewith. I had previously private information that the two governments had resolved to effect their purpose in some form, notwithstanding the official representations had made of the absence of just sanitary grounds on which to base such an ordinance. If my remonstrances had any effect, it was only to induce them to abstain from alleging disease in the articles prohibited. The order is a simple, naked prohibition, without alleged sanitary causes, or other reasons. It might equally apply to American flour. But this form leaves it a patent and bare violation of the fifth article of our treaty of commerce of 1829. This appeared to me to more than justify a formal protest on my part against it, even had this not been required by the instructions of the telegram addressed to me by Mr. Evarts, under date of the 25th of February. A copy of my protesting communication to Baron Haymerle is

inclosed herewith, and I hope it may be approved by my government, as within my instructions, and as proper in form. I could not permit to pass without protest an order so plainly ignoring the obligation of a treaty.

If they should seek to justify the order by hereafter alleging disease in the American swine product, still there remains the need of proof, and, even if proved, the inequality of national treatment against which the treaty stipulates. Their own official records show the presence of the disease in the like products of neighboring countries which are not included in the prohibition. The Secretary will observe that in my two previous notes to the foreign office, I carefully kept in view the two claims of my government—actual disease to be shown, and one rule to be applied to all nations, without discrimination against the United States.

The injustice and inequality of the order are evident. Its folly will be apparent from the fact that it will lead to the illicit introduction of American swine-meat under the disguises of other nations.

I have, etc.,

JOHN A. KASSON.

[Inclosure 1 in No. 438.—Translation.]

Ordinance of the ministries of the interior, of commerce, and of finance of the 10th March, 1880, relating to the prohibition of the importation of hogs, swine-meat, lard, and sausages from the United States of North America.

In agreement with the royal Hungarian Government the importation of hogs, of swine-meat of every kind, of lard, of sausages of every sort, from the United States of North America into the Austro-Hungarian monarchy is prohibited.

This prohibition will go into force with the day of its publication.

TAAFFE, M. P.
DUNAJEWSKI, M. P.
PINO, M. P.

[Inclosure 2 in No. 438.]

Mr. Kasson to Baron Haymerle.

The undersigned, envoy extraordinary and minister plenipotentiary of the United States of America, begs to call the particular attention of his excellency Baron Haymerle, imperial royal minister for foreign affairs, to the following observations:

In the Wiener Zeitung of the 16th instant appears the following official publication:

An order issued by the ministry of the interior and by the ministry of commerce and finance under date of March 10, 1881, in relation to the prohibition of the importation of swine, pork, bacon, and sausages from the United States of America:

The importation of swine, and of pork, bacon, and sausage of all kinds, from the United States of North America into the Austro-Hungarian monarchy is hereby forbidden.

This prohibition shall take effect on the day of its promulgation.

TAAFFE, M. P.
DUNAJEWSKI, M. P.
PINO, M. P.

From this it appears that, alike in Hungary and in Austria, without previous notice to or understanding with the Government of the United States, an unconditional prohibition has been imposed on the importation of an important article of commerce, the produce of the United States. This prohibition seems to be exceptionally applied to the produce of the United States, and not to extend to other nations.

The treaty of commerce and navigation concluded between the two nations on the 27th of August, 1829, adopted a system of "perfect reciprocity, based upon principles

of equity equally beneficial to both countries." Article V of that treaty, in conformity with that system, provided for mutual and exact equality of treatment, so that no other or higher duties should be imposed on the produce or manufactures of either than those imposed upon the like article the produce or manufacture of any other country. It is further, in the same article, expressly agreed as follows:

"*Nor shall any prohibition be imposed on the importation or exportation of any article the produce or manufacture of the United States* or of the dominions of Austria, to or from the ports of the United States, or to or from the ports of the dominions of Austria, *which shall not equally extend to all other nations.*"

The Government of the United States is unable to reconcile the official order above quoted with the provisions of the treaty, and the obligations imposed alike on both Governments.

The undersigned must therefore protest, in the name of his Government, against the said order and its enforcement, and reserves all rights of reclamation, both for his Government and for its citizens, on account of the injury and damage which may result therefrom.

The undersigned begs his excellency Baron Haymerle to accept herewith the very cordial assurances of his distinguished consideration.

JOHN A. KASSON.

UNITED STATES LEGATION,
Vienna, March 18, 1881.

No. 67.

Mr. Sterne to Mr. Hay.

[Extract.]

No. 12.] UNITED STATES CONSULATE,
Buda-Pesth, March 24, 1881. (Received April 14.)

SIR: On March 10 of this year the Hungarian Government, in connection with the Austrian, issued a decree "prohibiting the importation of any American products of swine into any of its territories."

No doubt this fact has ere this been officially brought to your notice by our representative at Vienna, and I only venture to repeat it because I believe my position here at the commercial center of the State enables me to lay a few additional items on the subject before you; items the knowing of which may be of value to our Government in connection with how it may consequently shape its course in reciprocity.

I suppose every nation has the right to adopt measures which are intended to protect the sanitary condition of its people, without regard as to the effect of such measures upon the commercial interests of another nation. It is my opinion, though, that in this instance the above is only the nominal motive, and that there were other causes at work to bring about the action; I have therefore taken pains to investigate into the real nature of these motives, and consider it my duty to submit the results for your consideration, of course speaking only of facts relating to Hungary.

In former years this State was not only the "granary of Europe," but it also supplied the Continent and England with a great part of their needs in the products of swine; the natural resources of the country are well adapted for the production of such and in larger quantities than home consumption requires, and this surplus, with what is brought in from Servia, Roumania, and the Lower Danube (for the products of which countries this is the natural gateway on their way to the west of Europe) has furnished Hungary the means for quite an extensive and profitable export trade.

I have stated in a former report how the cheaper American grain and flour has affected a similar industry in this country, and now my observations tell me that also its trade in swine and their products has, if possible, suffered even to a greater degree, for instead of, as formerly, supplying the Continent and England with its surplus, this state is now troubled to hold its own in territories which are naturally tributary to it.

I have been aiming to supply you with exact figures to prove what I say, but it is impossible to gather reliable statistics on the subject, and I shall therefore report only in a general way what I have deduced from those reports, etc., which have been accessible to me. From all these I have discovered that the Hungarian trade in this branch has gradually receded in the same proportion as that of America has expanded; that it has not only decreased in quantity, but also become more and more unprofitable.

I will here quote by translation part of a report on the subject by the Handels and Gewerbe Kammer (chamber of trade and commerce) of Buda-Pesth, for 1879, which speaks more to the point than any figures I could give. It says:

> *Also*, in 1879, our export trade did not go beyond the narrow limits (borders) which the powerful American competition has drawn (set) for it, and to-day (at present) the export suffers frequent interruptions, also towards the *Austrian* provinces, because we can not compete with the extraordinary low American prices even in the closest vicinity.

I have italicised the word *also* because it refers to a similar condition in former years, and *Austrian*, as it shows that it is specially a Hungarian interest which suffers.

As a further instance I will say that in conversation with a leading merchant here he admitted to me that while he was formerly able to export largely and profitably in this branch, the trade has now become reduced to nothing but a small retail business, comparatively.

Hungary proper never imported much, if any, American pork, for it easily produces all it needs for home use, therefore the danger from the claimed trichinæ in American pork has never been serious; but, on the other hand, it admits large quantities of swine from the "Lower Danube," countries which admittedly contain trichinæ, and are frequently otherwise diseased Of course, there are quarantine stations established in that direction, but these can not be considered as complete safeguards against the final introduction of diseased stock; but the handling of these furnishes quite a profitable trade to the country, while the American article has a murderous effect on the same trade on account of its "terrible" low prices. Nor have I been able to discover cases of trichinosis wherein the cause could be traced to the use of American pork, and, in truth, any observer of the wan faces of the many poor people can see that the excessive *non*-use of American pork kills more people than the use of it.

Therefore it is my opinion that the action of Hungary was taken more for the purpose of its moral effect upon the rest of Europe than anything else, for by the gradual exclusion of American pork from Europe this state will be more benefited than any other, as it will thereby recover a formerly extensive and profitable trade.

* * * * * * *

I remain, &c.,

HENRY STERNE,
United States Consul.

No. 68.

Mr. Weaver to Mr. Hay.

No. 122.] UNITED STATES CONSULATE-GENERAL,
Vienna, March 26, 1881. (Received April 14.)

SIR: In view of the recent action of the Government of Austria-Hungary in prohibiting the importation of American swine and swine products into this Empire, as reported in my dispatch No. 119, I beg to submit herewith certain statistical data collected from the latest official reports at my command, which may be of some utility in the discussion and comprehension of the question.

The importation of swine into Austria-Hungary for 1879 amounted to 438,734 head, of which 259,175 came from Servia, 126,815 from Roumania, 21,311 from Bosnia, and 18,781 from Russia; while the exportation amounted to 262,006, of which 250,529 went into Germany, whereas during the first eleven months of 1880 the number imported fell off to 187,318 in place of 420,410 for the same period of 1879, and the number exported fell from 241,302 to 210,876 during the same periods of 1879 and 1881. However, the decrease in the importation of swine is still more striking when compared with 1876 and 1877, for which years there were imported, respectively, 759,048 and 524,562 head, and exported 457,206 and 403,015 head. Since January 1, 1879, the entry duty on hogs has been 2 florins per head.

It will thus be seen that the decrease in the importation during the last five years has been enormous, amounting in 1880 to only about one quarter of what it was in 1876, while the exportation fell off to about one-half, so that the exports now slightly surpass the imports. It is no secret that the regulation of this traffic between this country and Servia, and likewise with Germany, has been hitherto and yet remains one of the most difficult points to be settled previous to concluding the commercial treaties at present under consideration.

In order of importance, the category comprising rendered hogs' lard (schweinefett) and unrendered fat (speck) form the largest article of swine imports into this country, but as in all official reports goose-grease is included in this category, the data can only be taken as approximations for our present purpose; but they may be considered as sufficiently accurate, as the goose-grease forms but a very small quantity relatively.

Therefore the importation of these three articles, schweinefett, goose, grease, and speck, for 1879, amounted to 934 tons of 1,000 kilograms-valued at 467,000 florins. Of the total, 601 tons entered by Trieste, and 249 tons by the German frontier, which would indicate that a large proportion of the same was doubtless American lard. But as the decree prohibiting the importation of American hogs or pork of all kinds specifies speck and omits schweinefett from the list, it may be concluded that the purfied or rendered lard proper of the American markets is *not* prohibited, but only the unrendered lard or fat, which is the speck.

The exportation of the foregoing category for 1879 amounted to 130 tons, of which 53 tons went to Bosnia and 49 to Germany. The imports and exports for the first eleven months of 1880 were, respectively, 5,635 and 89 tons, against 999 tons imports and 113 tons exports during same period of 1879, manifesting an enormous increase of the imports and a slight decrease in the exports.

For the years 1876 and 1877, the goose-grease included in the above category was omitted, and the importation of schweinefett and speck

for those years are given at, respectively, 1,056 tons and 1,879 tons, and the exports at 285 tons for 1876, and 113 for 1877. The increase of imports from 1,056 tons in 1876 to 5,635 tons in the first eleven months of 1880, is certainly very extraordinary and worthy of note, particularly as the exports fell from 285 tons in 1876 to 130 tons in the first eleven months of 1880. As about two-thirds importations of those articles came in by Trieste, and as nearly 900 tons of lard, meat, and butter arrived there direct from the United States in 1879, it may be concluded that quite the major part of all the imports of lard and speck to this empire are of American origin; but as the decree does not affect the lard, as above explained, the injury to our commerce may not prove as serious in this direction as was feared. The entry duty on the foregoing category is eight florins per 100 kilograms.

Of meats proper there are two categories, viz, fresh meat and meats salted, dried, smoked, or pickled; consequently we may omit the former and accept the latter as giving approximately the importation and exportation of pork into and from this Empire.

For 1879, the importation of prepared meats, as explained above, amounted to 103 tons, of which 68 tons came through or from Germany and 18 tons entered at the port of Trieste, while the exports amounted to 347 tons, of which 128 crossed the German frontier, 160 tons went out via Trieste, 39 tons via Fiume, and 16 tons crossed the Italy frontier. For the first eleven months the imports were 123 tons and the exports 299 tons, while for 1876 and 1877 the imports were, respectively, 77 and 87 tons, and the exports 266 and 339 tons, respectively, manifesting during the last five years an increase of imports from 77 tons in 1876, to 123 tons in the first eleven months of 1880, while the exports show but little change, viz, 266 tons in 1876, and 299 tons in first eleven months of 1880. The entry duty on prepared meats is three florins per 100 kilograms, the same as that on fresh meats, of which in 1879 were imported 257 tons and exported 1,387 tons.

In sausages, omitting that by virtue of treaty stipulations, the movement is very insignificant, probably owing to the high tariff of twenty florins per 100 kilograms. The total amount imported in 1879, including pork, blood, and liver sausages, and omitting the 75 tons entered by virtue of the special commercial conventions with Italy and Germany, from whence came 23 and 49 tons, respectively, at an entry duty of 16 florins per 100 kilograms, was only *four tons*, three tons of which entered by the German and one by the Italian frontier. The total exports of all kinds of sausages for 1879 was 191 tons across the frontiers and by the ports, as follows: German, 43 tons; Servian, 36 tons; Italian, 7 tons; Roumanian, 5 tons; Trieste, 76 tons, and Fiume, 12 tons.

Comparing the imports for the first eleven months of 1880 with those of like periods of 1879, viz, 76 and 64 tons, a considerable increase is observed, while on the contrary the exports for the same periods, viz, 129 and 183 tons, respectively, manifests a material falling off.

The value of the imports and duty paid thereon during the year 1879 were given as follows:

Description.	Value.	Duty.
	Florins.	*Florins.*
Hogs	11, 407, 084	877, 464
Lard and fat	467, 000	74, 720
Prepared meat	98, 325	3, 105
Sausages	94, 560	12, 768
Total	12, 066, 969	968, 057

In order to present the matter in the most succinct and comprehensive manner possible, I inclose herewith a tabulated statement of the imports and exports of swine and swine products to and from the Empire of Austria-Hungary during the period of time indicated.

From the accompanying table it will be seen, first, that both the importations and exportations of hogs during the past five years manifest constant and enormous decrease; secondly, that the importation of swine products indicate material development, and the increase of lard and speck during 1880 is over sixfold; and thirdly, that on the contrary the exportation of these products manifest generally a considerable decrease, from which it may be justly concluded that the swine industry of the Austrio-Hungarian Empire is not in a flourishing or satisfactory condition, which may in part account for the zeal manifested by certain parties in inducing the Government to prohibit the importation of American hog products, which have doubtless been the main cause of the present languishing condition of the trade.

It should furthermore be remarked that on account of the relatively small quantities of these American products that have been heretofore imported into this country, and are now prohibited, probably not over 25 or 30 tons of bacon and hams, the injury to our trade is reduced to a minimum; but doubtless the main object of discriminating against American pork was intended to influence other nations, whose large trade in these American meats so affected prices and supplies generally that there is at present no active demand as formerly for Austrian meats; hence a depression that threatens to destroy her domestic swine products, which must be counteracted in some way.

I have, etc.,

JAMES RILEY WEAVER,
Consul-General.

No. 69.

Mr. Delaplaine to Mr. Blaine.

No. 453.] LEGATION OF THE UNITED STATES,
Vienna, April 1, 1881. (Received April 20.)

SIR: Referring to dispatch No. 438, I herewith inclose a copy of the reply (received to-day) of the imperial royal minister for foreign affairs to Mr. Kasson's note of March 18, 1881, the latter containing a formal protest against the official order of prohibition of the importation of swine-meat and swine products from the United States into Austria-Hungary.

I have, &c.,

J. F. DELAPLAINE.

[Inclosure in No. 453.—Translation.]

Under Secretary of Foreign Affairs to Mr. Delaplaine.

VIENNA, *March* 29, 1881.

The undersigned has had the honor to receive the esteemed note of the 18th instant, wherein the envoy, Mr. John A. Kasson, saw fit to protest in the name of his Government against the ordinance issued by the governments of both portions of the Austro-Hungarian monarchy under date of the 10th instant in respect to the prohibition of the import of hogs, swine-meat, lard, and sausages from the United States of America.

So far as this protest is based on Article V of the treaty of commerce and navigation of August 27, 1829, the undersigned begs respectfully to remark that consideration for the preservation of the public health is the exclusive cause of said prohibition.

An appeal to Article V of the treaty referred to does not appear here to be pertinent, because the renunciation therein contained upon the issue of prohibitions of import which are not of general nature can not prejudice a prohibition which is issued from sanitary considerations.

The whole practice under the treaty confirms this comprehension, and is precisely the same which has been already once used towards the United States of America, when Austria-Hungary was obliged, for the purpose of preventing the introduction of the Colorado beetle, to prohibit the import of potatoes from America. That government then raised no objection.

In fact it is impossible that the intent of the enactments of Article V can go so far as to interdict the parties which have concluded the treaty from adopting such protective measures as circumstances may offer for preserving their sanitary interests. Let it be assumed, for example, that a pestilence should break out in one or the other of the two countries, then no cause of complaint for violation of treaty would exist against the country free from pestilence in case a prohibition should be decreed upon such of the articles of export of the other as are of immediate danger to health.

Similarly in the present case it affects products of the United States of America, the consumption of which, according to the judgment expressed by professional authorities, must be regarded as unquestionably dangerous to health.

Thus the sanitary congress, in particular, which was held at Amsterdam in the year 1879, declared unanimously that the import to Europe of American swine-meat and other products of swine should be prohibited. In fact, trichinæ were found on repeated occasions in the examination of hams and shoulder-pieces coming from North America, in different places of the monarchy, as well as since the year 1879 in Trieste.

The precautionary measures which were taken at that time against the introduction of trichinæ, whereby a strict scrutiny and examination of the imported kinds of swine-meat from North America was ordered, could not calm the apprehensions of the population of the Austro-Hungarian monarchy.

The issue of a prohibition of the import of swine and the products of the same from the United States of America was therefore constantly and pressingly demanded. Moreover, similar prohibition of import exists in Italy, Germany, and France.

As regards the omission of a previous announcement to the Government of the United States of America of the introduction of the prohibition in question, the undersigned begs respectfully to remark that ordinances of a sanitary nature, and pertain-

ing to the police department in Austro-Hungary, always go into operation on the day of their publication; therefore a previous notification of the measure adopted to the country thereby affected, or to its government, can not take place.

The undersigned avails himself of this occasion to renew to the chargé d'affaires the expression of his very distinguished consideration.

For the minister of foreign affairs.

KALLAY.

Mr. JOHN F. DELAPLAINE,
Chargé d'Affaires of the United States of America.

No. 70.

Mr. Blaine to Mr. Phelps.

No. 2.] DEPARTMENT OF STATE,
Washington, June 9, 1881.

SIR: I transmit herewith copies of an exhaustive report,* prepared by the officer of this Department who was recently detailed to make a searching and impartial investigation concerning the truth or untruth of the alarming rumors which have prevailed of late as to the alleged unhealthfulness of the pork products shipped to foreign countries from the United States.

This investigation was forced upon this Government by the disastrous effects produced abroad by those rumors, and by the action of several European governments in stringently restricting or prohibiting the importation of the swine products of this country.

It was undertaken in the most impartial spirit, and with full recognition of the weighty responsibility which would rest upon this Government should the prevalent rumors be substantiated. Had it been found that this great American industry was the means of disseminating disease and death abroad, no admission could have been too frank or prompt, and no repressive measures too urgent to vindicate our national good faith. As it is, the result goes beyond our most sanguine expectations in disproving the statements which have unhappily wrought such injury upon one of our most general and valuable branches of foreign commerce.

The files of your legation will show you the earnest efforts made by your predecessor to arrest these injurious rumors and prevent restrictive action on the subject by the Austro-Hungarian authorities. It is now desired that you should, after acquainting yourself with the facts shown in this report, bring it earnestly to the attention of the Austro-Hungarian Government, adding thereto such representations as, in your own good judgment, may induce an abandonment or very material modification of the oppressive measures which have been adopted in Austria-Hungary with regard to the American pork trade. You may say that the entire good faith with which this investigation has been here conducted warrants us in expecting that the Government of His Imperial and Royal Majesty will accept and act upon the result in equal good faith. You may also profitably advert to the singularly gratifying action of the Belgian Government, which, disregarding popular clamor and unscientific prejudice, and examining the question fairly upon its merits, reached some time since the conclusion to which this Government is irresistibly led, that of the widely spread food-staples of the

---

*This report is printed entire at the end of this document.

world's commerce, none is grown, packed, and exported under conditions more calculated to assure safety and wholesomeness than the pork product of America.

You will give to this report the widest possible publicity. A number of copies will be sent to you, for this purpose, under separate cover.

I am, etc.,

JAMES G. BLAINE.

No. 71.

Mr. Phelps to Mr. Blaine.

No. 6.] LEGATION OF THE UNITED STATES,
Vienna, July 2, 1881. (Received July 16.)

SIR: I have the honor to acknowledge the receipt of your dispatch No. 2, and of the accompanying report, embodying the results of an examination had as to the truth or untruth of the stories that American pork was largely tainted with disease. Other copies, under separate cover, have since been received. In accordance with the wishes of the Department, I have taken immediate action to give the gratifying results of this examination the widest circulation. I sent to the minister of foreign affairs a communication, in which I stated the results of the Department's investigation, and made an earnest request for an abandonment or very material modification of the oppressive measures which have been adopted in Austria-Hungary with regard to the American pork trade.

I transmit herewith a full copy of this communication and beg leave to call the Secretary's attention to a few considerations which influenced me in drafting it.

I deemed it wise to recall the history of my predecessor's efforts to anticipate and prevent any action by His Majesty's Government. This recapitulation seemed valuable, as bringing into a single paper, for the convenience of all, the whole case as it stands to-day, and still more valuable as forcing the attention of the minister to the fact that the results of the examination strangely confirmed all the representations Mr. Kasson had made of his individual knowledge and belief.

I thought this history would also show with what zeal we had labored to escape from threatened injustice, and with what patience, under confidence of final redress, we bore the injustice when inflicted. Attention was also called to the spirit, the methods, and the results of the investigation, seriatim—the value of the conclusions depending so much upon the impartial and thorough search for the facts from which they are logically deduced.

The declarations of the Department as to the spirit of fairness and impartiality in which the investigation was inaugurated, were so frank and bold that I had no hesitation in repeating this assurance in the strongest terms; and the processes of the examination were so wise, comprehensive, and searching, that it was a pleasure to call them to attention. The results I endeavored to sum briefly and clearly, and, in sending them copies of the report, challenged them to find these results other than those properly deduced from the evidence accompanying them. Nor did I neglect to call attention to the gratifying action of the Belgian and Swiss Governments—taking care, as I was without official information, to qualify the assurance in the case of Switzerland.

In conclusion, I called attention again to the patience we had shown in bearing an unnecessary restriction to our trade, to the quiet energy and transparent good faith in which the investigation was conducted, and to our exhibition of entire confidence in His Majesty's Government's readiness to undo the wrong, as soon as convinced that its view of the facts was incorrect, by refusing, except by allusion as a necessary pleading to save future rights, to urge the unpleasant charge that the restriction complained of was a gross violation of the fifth article of our treaty of commerce of 1829.

I hope the honorable Secretary will not be displeased with the position I have taken and the manner in which I have stated it; and if he shall find that any expressions in the communication to His Majesty's minister exhibit less than diplomatic indifference, that he will consider how inadequately they represent the impatience with which one bears restrictions upon trade so harmful and yet so needless.

I have, etc.,

WILLIAM WALTER PHELPS.

[Inclosure in No. 6.]

Mr. Phelps to Minister for Foreign Affairs.

LEGATION OF THE UNITED STATES,
Vienna, July 2, 1881.

The undersigned, envoy extraordinary and minister plenipotentiary of the United States, as preliminary to certain requests he has been instructed earnestly to address to the Imperial and Royal Government of Austria and Hungary, begs leave to recall to the recollection of his excellency, the minister of foreign affairs, certain past facts and circumstances connected with the subject, and to present certain new ones.

On the 28th day of February last, Mr. Kasson, then the representative of the United States at this court, solicited and obtained the honor of a personal interview with the imperial and royal minister of foreign affairs. He sought this interview in a laudable desire to prevent, if possible, any governmental action which should restrict or prohibit the trade in American swine-meat. There were rumors that such action was thought of, and confident, from his own knowledge of the subject, that it was unnecessary and would work injustice, he hoped, by a frank communication of his views, to bring the Austro-Hungarian Government to the same conclusion. It was important to anticipate and prevent action, for if once taken, though it were immediately revoked, it could not fail to excite suspicion and fear in the minds of ignorant consumers, and so injure the trade.

He made a memorandum of some of the points which he urged in this interview, and, by request, transmitted it to the ministry of foreign affairs.

A glance at that memorandum, doubtless still on its files, will show that, on personal knowledge and belief, Mr. Kasson urged that the popular outcry against American pork was the work of speculators on the two continents, who had skillfully manipulated the press for that purpose.

That for their selfish purposes, false news, even when of a kind which would be easily and directly contradicted, was of value; and cited the familiar fact that the price of American pork, which fell when the newspapers reported a French family as ill from eating American pork, remained low and did not rise upon announcement, after official examination, that the pork was not American after all, but French; that it was in Germany that Americans first heard of trichinosis; that animal and unclean food was a necessary condition of the disease, and yet in America, and in America only, was the food of the swine confined to Indian corn, the cleanest of vegetable products.

These considerations were urged by Mr. Kasson, it will be remembered, on his own knowledge and belief. On the next day his convictions were strengthened by the receipt of a telegraphic dispatch from the Secretary of State telling him that he was authorized by his Government to deny the reports of disease among American hogs. This telegram—under the promptings of the zeal he had already displayed to save His Majesty's Government from what seemed to him a needless and unjust act—he communicated immediately to the minister of foreign affairs, and included in the

same communication, from information otherwise obtained, the fact that more German and Servian pork had been condemned for trichinæ than American, and that in Vienna itself hams from Westphalia had been examined and condemned for this disease.

Mr. Kasson's hopes and efforts to avert what seemed to him an error and a wrong were in vain.

On the 10th of March the joint ministries of the interior, of commerce, and of finance, signed, and on the 16th of the same month published, an ordinance which, immediately and without notice, prohibited the importation of the American hog in any form in the Austro-Hungarian monarchy. The prohibition was simple and direct. It gave no reason, and it included in the proscription the hog product of no other country.

Mr. Kasson immediately, on the 8th of March, forwarded to His Majesty's minister of foreign affairs a courteous but firm protest against this action as unnecessary, invidious, and in violation of treaty obligations; *unnecessary*, because the cause, if as conjectured it was disease, had not been shown to exist in American pork, or, if shown, not shown to exist in greater degree in American than in other pork; *invidious*, because the ordinance, notwithstanding, excluded none other than American pork, and a violation of the obligations of the treaty of 1829, which demand that there "shall be no prohibition on imports from the United States which shall not equally extend to all other nations."

To this protest His Majesty's minister of foreign affairs made, on the 29th day of March, courteous reply, informing Mr. Kasson that the prohibition was on sanitary grounds, and giving reasons why, in the judgment of his excellency, it was not considered by His Majesty's Government any infraction of the treaty.

To the American Government this reply was unsatisfactory, as it assumed the fact of disease in American pork, which the American Government did not believe to be a fact; ignored the fact, which seemed to be fairly proven, that the disease did exist in other pork, and offered as reasons why the exclusive prohibition of American pork was not in contravention of the treaty, only considerations grounded on these disputed facts as premises.

And yet the Government of the United States submitted in silence, and since the ordinance, the protest, and the reply, neither Mr. Kasson nor his successors in this legation have, by oral or written applications, vexed His Majesty's Government with applications for reconsideration and redress.

To save annoyance to His Majesty's Government, and in reliance on its good faith and its cordial desire to do no harm to a friendly country, the American legation preferred to await the result of an investigation which the Department of State had ordered to be made concerning the truth or untruth of the alarming rumors which have prevailed of late as to the alleged unwholesomeness of the pork products shipped to foreign countries from the United States.

This investigation is now finished, and the results of it have been sent to this legation. The results so fully confirm all that Mr. Kasson claimed in the premises, that the undersigned deems it his duty to lay them immediately before his excellency, and to ask for them that prompt consideration their importance demands.

It may be proper, before submitting these results, to call your excellency's attention to the *spirit* in which the investigation was inaugurated and the *method and processes* of its conduct.

The officer in charge was instructed "to make a searching and impartial investigation," and the Secretary of State affirms "that the investigation was undertaken in the most impartial spirit, and in full recognition of the weighty responsibility which rested upon the Government." Could more be said for the *spirit* in which the work was begun?

The *methods* adopted to complete it were such as were best calculated to obtain the sole object of the examination—discovery of the truth.

The examination was in public, in a country where the newspapers report everything and everybody reads the newspapers, and the subject of examination was a branch of trade so general and important as to attract the attention of all.

The examination was comprehensive, not restricted or local. It did not confine itself to a single city nor to the witnesses that could be brought to a single hall. It went forth and sought its witnesses everywhere that no restrictions of person or place might narrow and color its discoveries. It sought those engaged in the different branches of trade and so conspicuous in it, that they knew their words would be read by hundreds of rivals and thousands of employés whose personal knowledge would, on the spot, convict them of any attempt at concealment, prevarication, or falsehood. But not to those who raised swine, to those who slaughtered them, to those who packed them, to those who forwarded them was the examination confined. It was not limited to those of whom it could be said "They are in the trade and sordidly interested." Guardians of the public health, officers in chambers of commerce and boards of trade, high officials in railway management, economists, and scientists of

high reputation voluntarily, or by request, contributed their knowledge and experience to this exhaustive investigation.

In considering the conditions under which it was held your excellency can not attach too much importance to this consideration. The market value of the staple must rise or fall with the nature of the evidence given. Many of those who gave the evidence were in a position where some would gain by a rise and some by a fall in the price, and yet, in the bright light of the publicity, where workmen, clerks, partners, and rivals were to hear each word, none dared to tell anything except the truth, and the truth all pointed to the same conclusion—the strange exemption of the American full-grown and marketable hog from disease.

Having called his excellency's attention to the methods of the investigation, the undersigned begs briefly to sum the *results*.

The swine in America is fed on Indian corn or maize, the cleanest of vegetable products.

American swine are not more liable to disease than European.

That diseased hogs can not pass the inspection preliminary to slaughter, or if this is possible, hog-meat can not pass even the most careless inspection.

That merchantable lard can not be produced from diseased animals.

That Chicago and Cincinnati—the great pork-consuming centers—are free from trichinosis.

That in all reported cases of human suffering it has been found that the pork was eaten uncooked.

That the hogs selected for the foreign market are equal to those selected for the home market.

That the rumors of great disease in American swine came from the confused use of the words "hog" and "pig." A hog is a grown swine ready for market. A pig is a young, ungrown swine, not of age for the market. And it is among young swine, that is, among pigs, that the larger proportion of deaths by disease occur.

As the investigation was public, so are the facts elicited by it and the conclusions derived from them public for the purpose of challenging the widest criticism. The American Government has published them in pamphlet form and desires to secure for them a large circulation. The undersigned has the honor to transmit herewith four copies of this pamphlet, and begs your excellency's careful attention to the contents. He would be gratified if he might trouble his excellency to make such disposition of the extra copies as will the more speedily bring them to the attention of those officers or ministers peculiarly interested in the subject.

Before addressing the request, which would naturally follow this presentation of the subject, the undersigned has the honor to suggest that if any doubt remain as to the value and truth of the results obtained by this investigation, it should not be forgotten that they are confirmed by the action of the Belgian Government. This Government, disregarding popular clamor and unscientific prejudice, examined the question fairly upon its merits and reached the conclusions to which the American Government was irresistibly led, that of the widely-spread food staples of the world's commerce none is grown, packed, and exported under conditions better calculated to assure safety and wholesomeness than the pork product of America.

Nor will his excellency have failed to notice that Viennese journals report that the Swiss Government has followed the example of Belgium in removing all restrictions upon the importation of American pork.

In conclusion, the undersigned hopes his excellency will find ample apology for the length of this communication in the importance of the subject, one that concerns an important branch of American trade, and a restriction which his Government believes to be unjust, invidious, and in violation of the treaty of commerce so long existing between the two nations; and he begs leave to inform his excellency that he is instructed by his Government to bring these facts earnestly to the attention of the Austro-Hungarian Government, and to ask, in view of them, an abandonment or very material modification of the oppressive measures which have been adopted by His Majesty's government in regard to the American pork trade. He is further instructed by the honorable Secretary of State to say that the entire good faith with which this investigation has been conducted warrants the American Government in expecting that the Government of His Imperial and Royal Majesty will accept and act upon the results in equal good faith.

The undersigned ventures to hope that in the consideration of this request your excellency will have in mind the patience with which a restriction seeming to the American Government so unnecessary and unjust has been borne; the promptitude, thoroughness, and good faith in which it put itself to the task of gathering arguments which should convince others of a needlessness and injustice so patent to itself, and that in reliance upon the disposition of His Majesty's government to instantly remove a restriction which seemed unfriendly and harsh, so soon as convinced that it was unnecessary, it has avoided any allusion, except in the protest (where mention was made of it, that the right to plead it might not be lost). to the view the American Govern-

ment believes it might take a restriction which singles out an important product which America shall not import into Austria-Hungary, but all other countries may, as a plain and palpable violation of the treaty of 1829, and bearing these evidences of American patience, faith, and good-will in mind, that your excellency will be pleased to give this matter prompt attention.

The undersigned takes this opportunity to express to his excellency the imperial and royal minister of foreign affairs his most distinguished consideration.

WILLIAM WALTER PHELPS.

No. 72.

Mr. Blaine to Mr. Phelps.

No. 8.] DEPARTMENT OF STATE,
Washington, July 27, 1881.

SIR. I have read with pleasure your No. 6, of the 2d instant, relative to the restrictions upon the importation of American pork into Austria-Hungary. Your representations thereon appear to have been energetic and discreet, and are approved, as reflecting the views of this Department.

I am, etc.,

JAMES G. BLAINE.

No. 73.

Mr. Sterne to Mr. Hitt.

No. 24.] UNITED STATES CONSULATE,
Budapesth, October 19, 1881. (Received November 10.)

SIR. I transmit herewith two clippings of the Pester Lloyd newspaper (in duplicate), both being on the subject of the pork question.

The first one, of October 13, contains, in short, that—

> The mixed commission which has been appointed upon representations by the United States Government, aiming at the repeal of the act of prohibition against American pork, has concluded that no cause exists to rescind the act of prohibition which has been passed in the interest of public health.

It seems that the present action was specially based upon "important explanations by Mr. Mihalovics." I have taken steps to discover in what these "explanations" consist, and will inform the Department thereon as soon as I gain the information. The second clipping, of October 18, I transmit because it not only shows that the agitation against American pork is continued, but also because it contains words which may be called "skirmishers" against American meats in tin cases. I translate that part of this clipping which speaks of this canned meat:

> Pork is also shipped in tin cases, against which mode of putting up warnings have already been published, from the fact that *beef* packed in cans has frequently been proven dangerous to health. It is therefore important to repeatedly warn the public against the use of canned meats in general.

In treating this question in general, I hope the Department will not lose sight of the fact that Hungary imports very little, if any, meat of and kind, and that though it claims "sanitary" motives for its actions, the real motives are more likely to be found in "political economy."

I am, &c.,

HENRY STERNE,
United States Consul.

[Inclosure 1 in No. 24.—Clipping from Pester Lloyd, of October 13, 1881.—Translation.]

ON THE PROHIBITION OF THE IMPORTATION OF AMERICAN PORK.

To-day the deliberations of the mixed ministerial commission were directed to the representations of the American Government, designed to secure the abrogation of the prohibition of American hog products. The commission assembled under the presidency of Hon. George von Lukacs, the acting secretary of state. The members present were Leopold Gross, section councilor; Ludwig von Gross-Csatari, of the sanitary council; Director von Tormay, ministerial; Secretary von Mihalovics, and Secretary Dr. Lorinczy. Mr. Gross-Csatari, of the sanitary council, stated the causes of the prohibition and the present aspect of the question in a long speech, and impressively depicted the danger which might follow the abrogation of the prohibition. Leopold Gross and Director Tormay expressed the same opinions, and finally Hon. von Mihalovics gave important explanations on the subject. The ministerial commission then adjourned, with the resolution that no grounds existed for abolishing the prohibition issued in the interest of the public health.

[Inclosure 2 in No. 24.—Clipping from Pester Lloyd, of October 18, 1881.—Translation.]

AMERICAN PORK—(PACKED IN BOXES).

The "Fundgrube" was the first journal in Germany to warn the public against the use of pork and lard imported from America. This warning was published on reliable data from the United States, that careful examination of these articles showed conclusively the presence of trichinæ therein, and further, because many weighty reasons strengthened the suspicion entertained that both the meat and lard of animals diseased during a wide-spread epidemic were used and exported to Europe by unconscionable speculators. Our publication on this matter aroused at that time, even in America, the greatest excitement, and efforts were made from both private and official sources to refute the statements. Indeed, one American consul in Germany went so far in the excess of his zeal as to threaten a paper which had copied the article from the Fundgrube with a judicial suit. Since then, however, even American papers have published declarations proving that our information in regard to the export of meat and lard of diseased animals was only too well founded. Further, in relation to trichinæ in American pork, the truth is known in spite of all to the contrary from America, and attempts at palliation can no longer avail. Not only have numerous inquiries in Germany and France proved that American pork is infested with trichinæ, but even in America lately, through competent judges, it was discovered that nearly 5 per cent. of hogs there are trichinated. Therefore, the standing prohibition in many of the European states against the importation of infected meat is completely vindicated. As, however, these meats are sent in tin cases, which on examination have repeatedly been proved to be injurious to health, it will not be out of place again to give general warning against the use of American meats packed in boxes.

BELGIUM.

No. 74.

Mr. Steuart to Mr. Hay.

No. 58.] CONSULATE UNITED STATES OF AMERICA,
Antwerp, February 24, 1881. (Received March 10.)

SIR: The recent arbitrary decree of the French Government forbidding the importation of salted pork from the United States into France has called forth the following declaration from the minister of the interior of Belgium, in response to an inquiry from a member of the Legislative Chambers, and it is gratifying to know that there is one port and one people not yet ready, through ignorance, prejudice, or jealousy,

to drive away from their doors an article of food that has become a necessity, and a business that has grown to the dimensions of the pork trade.

A member, alluding to the decree as one that would be likely to create trouble in the country, said that although he was sure from all the information he could gather that there was not a single case of trichina in Belgium, yet it would be very satisfactory to hear officially from the minister of the interior that no danger existed.

The minister of the interior replied that he could not occupy himself with the measure that had been taken in France, but was able to inform the honorable member in all things concerning trichina in Belgium. For a long time past the Government has had under consideration the danger arising from the consumption of salted and pickled pork meat. For twenty years the academy and the hygienic society have examined the question, *but never a single case of trichina has been discovered.* It is established that the cooking renders the meat harmless, and there is very little raw meat consumed in Belgium. *No case of trichina has been brought to my notice, and the Government does not intend to take any preventive measures.* It will limit itself to such recommendations as it may deem necessary.

The member declared himself satisfied, and said he had only made the inquiry to give assurance to the country.

A member for Antwerp thanked the minister for his declaration, as the business done in this city in salted pork is very large, and the bourse had been somewhat affected by the French decree.

I am, &c.,

JOHN H. STEUART,
United States Consul.

No. 75.

Mr. Putnam to Mr. Erarts.

No. 54.] LEGATION OF THE UNITED STATES,
Brussels, February 25, 1881. (Received March 10.)

SIR: I have the honor to state that an incident in the debates of the House of Deputies of Belgium, on the 22d instant, was the following brief discussion upon the question of diseased American pork.

Mr. WILLEQUET. A decree of the French Government has prohibited the introduction of American salt-pork provisions. This measure has produced some disquiet in our country. I rise to ask if there are any dangers arising from their use in Belgium.

Mr. ROLIN-JACQUEMYNS, minister of the interior. No case of trichinosis has been discovered in our country. Some cases of it have been found in pork destined for foreign countries, which were in transit through Belgium. Moreover, all danger disappears when the meat is sufficiently cooked.

Mr. DE DECKER. Salt-pork provisions constitute one of the important branches of the commerce of Antwerp. I believe there is no real danger, and I hopo the Belgian Government will not follow the example of France.

I regard the statement of Mr. Rolin-Jacquemyns, the secretary of the interior, indicative of the friendly policy of the Belgian Government toward our salt-meat provisions entering the port of Antwerp.

I have, etc.,

JAMES O. PUTNAM.

No. 76.

Mr. Putnam to Mr. Blaine.

No. 59.] LEGATION OF THE UNITED STATES,
Brussels, March 9, 1881. (Received March 26.)

SIR: I have the honor to state that finding in the London morning papers of the 6th instant a telegram from the United States embodying the substance of the resolutions of the Cincinnati Chamber of Commerce, and the Indianapolis Board of Trade, relating to the alleged diseased condition of American pork exported to Europe, also the substance of a communication of the English consul at Indianapolis to the English consul at Philadelphia, certifying the generally healthy character of that branch of our commerce, I inclosed it to-day with a note to the minister of foreign affairs, calling his attention to the statements. I handed it to Baron Lambremont, the chief secretary, and had some conversation with him on the general subject.

He stated that the action of the French Government in relation to American meats had made a "panic" in Belgium, particularly among the peasantry, with whom our hams and lard are a large element of subsistence. The lard is used in place of butter. That it was the purpose of the Belgian Government to thoroughly examine the questions involved, which were, first, are American salt provisions diseased, as alleged? Second, if so, is the difficulty overcome by proper care in their cooking? That it was a very important matter, both to the United States and to Belgium, and the Government wished to learn the exact facts.

He spoke with all due reserve, but it is my opinion that the Belgian Government will take no prejudicial action in the matter except upon positive proof that sanitary considerations demand it. I believe the feeling here is most friendly to that branch of our commerce on general principles. How little the Goverment is disposed to yield to any panicky feeling I think I revealed by my dispatch No. 54.

I have, etc.,

JAMES O. PUTNAM.

No. 77.

Mr. Blaine to Mr. Putnam.

No. 37.] DEPARTMENT OF STATE,
Washington, March 11, 1881.

SIR: Your No. 54, of the 25th ultimo, giving the outline of a recent interpellation in the House of Deputies touching the importation into Belgium of American salt pork provisions, has been received. It is gratifying to perceive that the Belgian cabinet is disposed to look at the question fairly and practically, and without heeding the adverse clamor against American pork which is now prevalent in certain quarters of Europe, and which the earnest inquiries of this Government fail to trace to any other source than nefarious speculation to the injury of legitimate trade.

I have telegraphed to our legations in London, Paris, and Vienna emphatic denial of the alleged alarming mortality among American hogs.

The concurrent testimony of the great packing centers of the West is that the swine of that region have never before been so free from contagious disease or mortality.

I am, etc.,

JAMES G. BLAINE.

No. 78.

Mr. Putnam to Mr. Blaine.

No. 67.] LEGATION OF THE UNITED STATES,
Brussels, April 30, 1881. (Received May 16.)

SIR: Referring to my dispatches, Nos. 54 and 59, relating to the favorable expressions of the Belgian Government regarding American pork, I have the honor to inclose herewith a circular letter from the minister of the interior on the same subject, published this morning in the official journal. The subject-matter, after the prohibitory action of the French Government, was referred to the official council of public health, and the minister of the interior states that he has adopted the conclusions of the council in their fullest extent.

The substance of their report, made after careful examination, is as follows:

1st. That disease generated by trichinose is unknown in countries where, as in Belgium, pork is sufficiently cooked; that it has been demonstrated by many experiments that the trichinose can not resist a temperature of 56° Centigrade, and that they are invariably killed at a temperature of 75° to 100° C.

It is important [continues the report] to make known the fact that pork well cooked, whatever trichinose it may contain, is entirely inoffensive, and that consequently no one need suffer from this cause unless he wishes to, and nothing is necessary except scrupulous persistence in use of needful precautions of the kitchen.

It concludes with a few details of the proper method of cooking pork, and the circular letter of the minister of the interior closes as follows:

These simple and easy precautions are dictated by experience and recommended by those most competent to judge. I pray you, governor, cause them to be published in the official journal, to the end that the commmnal administrations may bring them to the knowledge of all citizens, and that they may receive the widest publicity.

This final action of the Belgian Government, from considerations so broad and just, is in accord with its original determination to make no change in its friendly policy toward that branch of our commerce, except upon good and sufficient reasons.

The action of the French Government naturally created a distrust among the peasantry of Belgium. That distrust, amounting to a panic, has been met by the Belgian Government in the just and enlightened manner I have herein indicated.

I have assured the Government of Belgium that the Government of the United States will learn with great satisfaction of this, its action, based upon a careful and scientific examination of the whole question.

I have, etc.,

JAMES O. PUTNAM.

No. 79.

Mr. Steuart to Mr. Hitt.

No. 66.] CONSULATE UNITED STATES OF AMERICA,
Antwerp, May 6, 1881. (Received May 21.)

SIR: In the unjust war now being waged in Europe against American pork, under the thin pretense of protecting the sanitary condition of the people, Belgium has maintained an honorable and consistent position, positively refusing to prohibit importation, or to advise or adopt any measure calculated to injure the large business done here in that article.

As Antwerp is one of the largest markets for the salted meat exported from America, every action of this Government is of importance and interest. I have, therefore, pleasure in handing herewith a translation of a circular letter recently issued by the minister of the interior to the governors of the different provinces, and also a report of the superior council of public health, both relating to the present agitation of the trichina question, and as they are liberal, sensible, and strongly in contrast to the hasty action taken by other governments, I have thought best to hand them to you for your consideration and use.

I have, etc.,

JOHN H. STEUART,
United States Consul.

[Inclosure 1 in No. 66.]

Translation of the circular from the minister of the interior to the governors of the provinces of Belgium concerning trichina.

BRUSSELS, *April* 28, 1881.

The attention of the Government has lately been called in a special manner to the danger threatening the public health from the consumption of pork meat imported from America and suspected to contain trichina.

No case of trichina has yet been reported as having been discovered in our country, but it is claimed that the American salted provisions, which so abundantly reach our markets, are often infected with trichina. Some persons consider it a necessity to warn the country against the dangers which may arise from this state of things with measures similar to those taken by other countries, and particularly by France. In fact, the President of the French Republic, by decree of 18th of February last, prohibited the importation into any port of France of pork meat coming from the United States of America.

Would the prohibition of American meat into Belgium, which would be a radical measure and one of very serious importance, be sufficiently justified by the actual circumstances?

Could it be possible to organize, at least at the landing ports and in the principal centers of population, a special service of microscopic inspection sufficient to guaranty to every one the harmlessness of the imported meat?

Interrogated by the House of Representatives and by the Senate at the time of the discussion of the budget of the Department of the Interior, I thought I could answer both questions negatively. The reasons which decide me not to take the prohibitory or controlling measures are perfectly set forth in the report of the superior council of public health which follows this circular—a report the conclusions of which I have fully adopted.

To recommend to the people to consume the pork meat only after a sufficient cooking is the only practical manner in which the administrative authorities ought to answer the fears which are manifested, and to satisfy, in a just and reasonable measure, the mission of supervision which they have to exercise over the public health.

The search which has been pursued since the first discovery of trichina affecting persons has shown, says the superior council of public health, that this parasite disease is unknown in the countries, like Belgium, where pork meat is submitted to complete cooking.

On the other part, numerous experiments have proved that trichina do not even resist the temperature of 56° Ct., and that they are infallibly killed in the meat of which the cooking has attained from 75° to 100° Ct. It is, then, important to make known that the pork meat well cooked, although trichina may be present, is completely harmless, and consequently "those only have the disease who wish to have it," by not following the cooking customs of the country, and if they have been put aside to return to them and observe them more and more scrupulously. Then, giving a practical form to these conclusions, the superior council of public health ends it report by the following recommendations:

1. The duration of the boiling of pork meat, previously cut, must be prolonged for a calculated time, say of one hour per kilogram, considering also that the addition of a small quantity of vinegar to the cooking water renders it more promptly efficient.

2. The action of fire upon the meat, grilled or roasted, should be continued until from the thickest part of the piece there does not flow any pink juice.

3. There shall not be used any raw meat in any preparations where it does not undergo the above-mentioned degree of heat in cooking. These simple and easy precautions are dictated by the experience and recommended by the most competent men. I therefore beg you, Mr. Governor, to have them inserted in the administrative memorial, so that the communal administrations may make them known to all the inhabitants, and that they should have the largest possible publicity.

The minister of the interior:

G. ROLIN JACQUEMYNS.

[Inclosure 2 in No. 66.]

Translation of the report of the superior council of public health upon trichina.

ANTWERP, *May* 6.

GENTLEMEN: For some time past public attention has been directed to the danger to which the public health is exposed by the importation into Europe of large cargoes of pork meats coming from the United States of America, which are more or less suspected of trichinous infection.

Last November the meat inspector of Lyons discovered a great number of trichina in leaf lard coming from New York. On fifty samples, three were infected.

This fact having been published, and Dr. Laboulbène having reported to the Academy of Medicine of Paris, in its meeting of February 15, last, that a small epidemic from trichina had prevailed a few years ago at Crepy en Valois, caused, strange to say, by native pork, a regular panic was produced in France, to which the Government thought proper to apply a prompt and radical remedy; and by decree of the 18th of the same month the President of the French Republic prohibited on all the territory of the country the importation of all salted pork meat coming from the United States of America.

This grave measure, taken from the unanimous advice of the consulting committee of health of France, produced a deep and very legitimate excitement, as much for the political economy as for the public health.

This excitement was deeply felt in Belgium, and the attention of the Government was called to it by Mr. Willequet, member of the House of Representatives, in the sitting of the 22d of February. Answering the interrogatory of the honorable member, the minister of the interior stated that during the fifteen or twenty years that this question has been raised the Government has never ceased to consider it.

In 1865 Mr. Gluge, one of the members of the Royal Academy of Medicine, called attention to this matter on the occasion of the discovery of some trichina epidemics in Germany, and demanded information upon the means to be taken to prevent its invasion into Belgium, and also requested the academy to spread abroad, for that purpose, instructions destined to warn consumers. The superior council of health was also consulted, and at that time, as in 1873, considering that no case of trichina had as yet been discovered in this country, they formally declined to advise the prohibition of the importation of foreign pork meat.

The situation having remained the same, the minister has expressed the opinion that it was not necessary to have recourse to such a measure; that besides it was perfectly established that trichinated meat does not present any danger when sufficiently cooked, and that this fact was well ascertained and made popular by numerous publications.

The Government shall continue, he said, to keep posted as to the sanitary condition in this matter; he shall have the imported meats examined as often as possible, and shall soon again recommend the precautions to be taken for the consumption of these meats.

For this purpose the minister of the interior, per dispatch dated March 5, has recalled the attention of the superior council of health to the documents relating to the trichina, which he had already submitted, and invited them to submit the question for examination.

The documents emanating from the medical commission of the province of Antwerp, from Mr. Vele, veterinary surgeon of the government in that city, etc., have chiefly for their object the preventive measures which could be made useful in the occurrence, in the interest of the public health. The commission which has been charged with the new study of the question has studied it thoroughly, and has confided to us the care to give account of its deliberations.

It seemed important first to restrain the danger to its just proportions, and to ascertain if the danger is really worthy of the excitement which it had caused; and from the examination made it results that it is, to say the least, very much exaggerated. In fact, in the large quantities of suspected meat imported since a long time from America and other countries into Belgium no case of trichina has ever been know.

The parasitism which constitutes the element of this disease seems not to have produced itself in a manner to be reached, which can be explained on the one part by the custom of submitting the meat to complete cooking, and on the other by the fact that the salting as it is practiced for export kills the trichina, and therefore renders it entirely harmless. This is proved from numerous experiments by Messrs. Kirchenmeister, Haubner, Leisering, Colon (of the school of Alfort), and more particularly by those, very conclusive, with which this last has recently entertained the Academy of Medicine of Paris.

In the American salt provisions the trichinas are, then, generally dead, at least in the superficial coating, but in the deeper parts, of the hams for instance, they may have escaped the action of the salt.

As the danger exists by reason of this well-known fact, it is proper to advise and warn the people against these more or less serious consequences.

Three means have been put in practice or recommended to that effect:

1. Prohibiting the importation of pork meats from America.

2. The inspection of these meats in the ports of arrival and in the large centers of population, such as the city of Antwerp, where this article of food occupies such an important place in its commercial transactions.

3. An instruction to spread amongst the people so as to advise them of the necessity to submit to complete cooking pork meat of every kind.

I. The prohibition of salted pork meat coming from America is not to be recommended. Such a measure would greatly injure the trade, and would be prejudicial to the interests of the working class, who would find themselves obliged to dispense with an article of food which they now obtain at low prices.

On the other hand, it would be illusory as to the public health. It would imply that the danger of trichina infection existed exclusively in foreign pork meat, and that the native pork might be eaten raw with impunity. Then if (which is not known and seems doubtful) the native pork was formerly free from trichina infection, is it still so? Is there no reason to believe that it may be more or less infected with the said intestinal worms by the importation of meat infected with trichina, say by the wastes of bacon and hams which contain them, or by the digestions of persons who have consumed the meat, and who, by reason of the small quantity of trichina existing, or by the destruction of the greater part by cooking, have not been seriously affected?

The affirmative, demonstrated for France by the case of the pork which caused the small epidemic in Crepy le Veloise, seems equally probable for Belgium. Besides, the prohibition could become injurious to the health as well as to commerce. This measure, so hurtful to commercial transactions, and that could even injure the public health, is, then, not to be advised.

II. And now comes the question if there should not be organized an inspection of the said meats at the ports of arrivals. At first sight the thing seems desirable; but outside of the impossibility to procure the number of special inspectors, well accustomed to the use of the microscope, which this organization would need, there could still result a dangerous illusion. It would not be possible, however numerous and skillful these inspectors might be, to submit to a complete examination all the pieces contained in the large boxes which would be presented to them, nor even a small number of these pieces, and then, among the meat which could not be examined, or imperfectly examined, there might be some pieces infected. Again, the inspection which would be made, without finding the worms, would seem to be a guarantee for the consumers, who would then, in all confidence, use the meat sold under the official stamp, and could be thus all the more exposed to the trichinous infection.

This service of inspection would be of no utility, and could even be hurtful; therefore it is not to be recommended. As to the rest, the medical commissions which occupy themselves with all that interests the public health could be invited to bring their attention upon the possible growth of trichina.

We shall not insist any longer on the useless measures which we have just examined.

III. As to the instruction to be spread among the people to enlighten and warn them as to the precautions to be taken against the danger of trichinous infection we attach great importance. The investigation which has been pursued since the first discovery of trichina affecting persons has shown that this parasite disease is unknown in countries like Belgium, where pork meat is submitted to complete cooking.

On the other part, numerous experiments have proved that trichinæ do not even resist the temperature of 56° Cent., and that they are infallibly killed in the meat of which the cooking has attained from 75° to 100° Cent. It is, then, important to make it known that the pork meat well cooked, although trichina may be present in it, is completely harmless, and, consequently, "*those only have the disease who wish to have it,*" and that to prevent it it is sufficient to follow the cooking customs of the country, or, if they have been put aside, to return to them and be more and more scrupulous in their observance.

We are, then, brought to the following conclusions:

1st. That the prohibition of foreign pork meat is not to be advised, this measure being of a nature not only to damage commerce without producing any kind of advantage, but also to work an injury, by inspiring the people with a too absolute confidence in favor of the pork meat native to the country, and would make them deprive themselves of a desirable article of food by reason of the high prices which would result from the prohibition of the importation of foreign meats.

2d. That the organization of a service of inspection of these meats, let it be at the landing ports or in their own country, at the pork-packer's, notwithstanding the insuperable difficulties which would arise, would be of a nature to place the consumers in a false security, and to expose them thereby to a danger from which they ought to be guaranteed.

3d. To attain this, and it is sufficient to make it generally known by all possible means that pork meat eaten raw or not completely cooked may cause a disease serious and even fatal, and that it is important to observe carefully and attend to this simple precaution.

a. The duration of the boiling of pork meat, previously cut, ought to be prolonged for a calculated time, say of one hour per kilogram, considering also that the addition of a small quantity of vinegar to the cooking water renders it more promptly efficient.

b. The action of the fire upon the meat roasted or grilled should be continued until from the thickest part of the piece there does not flow any pink juice.

c. There shall not be used raw meat in any culinary preparations where it does not undergo the above-mentioned degree of heat in cooking.

In strictly observing these precautions, they may be sure to continue to enjoy perfect freedom from any danger from trichina.

The members of the commission.

THIERNESSE, *Reporter.*

No. 80.

Mr. Wilson to Mr. Hitt.

[Extract.]

No. 42.] CONSULATE OF THE UNITED STATES,
Brussels, May 23, 1881. (Received June 4.)

SIR: I have the honor to inform you that in a local paper of this morning I find a report that a veterinary officer at Charleroi, in this kingdom, claims to have discovered trichinæ in pork recently arrived from America in that place. As this report is calculated to spread alarm among the pork consumers of this country, who are generally of the poorer and more superstitious class, I shall proceed at once to Charleroi and personally investigate the matter. From my knowledge of these officers and of their general lack of scientific training and ca-

pacity I entertain the hope that I may find their trichinæ diagnosis unfounded; but whatever the result may be, on my return I shall hasten to communicate it to the Department.

* * * * * * *

Very respectfully, &c.,

JOHN WILSON.

No 81.

Mr. Blaine to Mr. Putnam.

No. 45.] DEPARTMENT OF STATE,
Washington, May 26, 1881.

SIR: I have to acknowledge the receipt of your No. 67, "relating to the circular of the minister of the interior concerning the harmless character of American pork," and to say in reply that the President is much gratified by the exhibition of this candid spirit on the part of His Majesty's minister.

You will please avail yourself of an early occasion to make known to His Majesty's government the satisfactiou which has attended the receipt of the intelligence conveyed in your very welcome dispatch of the 30th ultimo (No. 67).

I am, &c.,

JAMES G. BLAINE.

No. 82.

Mr. Wilson to Mr. Hitt.

No. 143.] CONSULATE OF THE UNITED STATES,
Brussels, June 14, 1881. (Received June 30.)

SIR: In my dispatch No. 142, and dated the 23d May last, I informed the Department of a reported discovery of trichinæ in American pork at Charleroi, and of my intention to personally investigate the matter.

Having made this investigation, I have now the honor to report its results:

On arriving at Charleroi, I went at once to the "abattoir," where all the fresh and salted meats used in the town are reputed to pass an examination, and on making my mission known to the director of this establishment, he very politely informed me that he had found trichinæ in American pork recently arrived there, and invited me to his examining room to witness for myself, through his microscope, the presence of the parasite.

On examining the meat submitted to me I found, sure enough, large numbers of encysted trichinæ in it, but when I asked him if he could positively certify that it had indeed come from America he frankly confessed he could not positively assert that it had, as the records of his office grouped together in one column all foreign salted meats; but that he thought he could identify the meat by the mark upon the cases in which it arrived. I replied to him that whilst this would not still be positive evidence, I would be glad to have it, as well as the quantity of meat thus affected, for I was about to make a report of this case, and unless I received from him this information, well authenticated, I should

report his uncertainty of the origin of the pork. This, he said, he could not just then do, but promised that it should be furnished with the least possible delay. I have now waited for the report sixteen days, but have not yet received it, and am therefore led to believe that, whilst it is not improbable that the pork came from America, the gentleman has been unable to verify that fact, and that, consequently, an injustice has been done our exporters by the publication of his article without the most positive evidence of the origin of the meat.

I brought with me back to Brussels a portion of a salted shoulder, which I was assured contained trichinæ, but, on examining it with a powerful microscope which I possess, was unable to discover trichinæ in it.

On my return to Brussels the next morning I found another report of trichinæ in American pork in this city, and immediately went to inquire into the particulars of this case. I was again conducted into the room for the microscopic examination, but although the gentleman in charge kindly offered me every facility for examination, neither he nor I could discover this parasite in the specimen examined. Failing to discover trichinæ in this case, I again made the request that all the information possible relating to the origin of the reported trichinosed pork and the quantity affected should be furnished me with the least possible delay. This was again kindly promised, but up to the present no such informatinn has been received.

Is is but justice to both these gentlemen to state that they seemed kindly disposed to give the desired information, and my only explanation of their failure to furnish it is that they have no certain means of ascertaining exactly the origin of salted meat presented for their inspection; for, on a personal examination of the printed forms for the record of meat received for inspection at Charleroi, I found one column devoted to "*Viande salée indigène*," or salted meat of Belgian origin, and another for "*Viande salée exotic*," or salted meat of foreign origin, but nothing whatever to indicate the country whence the exotic products come.

From this, and the almost impossibility of tracing to its origin every piece of meat brought to them for inspection, I conclude that with the most sincere desire to be truthful in their reports these gentlemen have great difficulty in always determining the origin of salted meats presented for inspection; but I nevertheless think it an injustice to our exporters to publish in a public journal such reports as those to which I have referred without the most conclusive proof of every statement therein made.

As an evidence that such reports are not likely to induce the Belgian Government to depart from its wise and sensible policy with regard to the admission of not only our pork, but all our other food produce, I here quote the translation of a speech made in the chamber of representatives, on the 23d May last, by the minister of finance, in reply to the advocates of protection to Belgian agriculture. On that occasion the minister said as follows:

> If the importation of grain and salted meats from America have not bettered the condition of our agriculturists, they have at least created a situation against which the Government is powerless to act. If these importations damage the interests of a certain class, they benefit and indeed are indispensable to the masses of our people. Whether it be that our population has outgrown the agricultural resources of the country, or that the people are not contented to live in the frugal manner of former years, it is a fact that Belgium can not now produce enough of food to feed her own people.
>
> The number of live cattle imported from America into Belgium is insignificant, but

of wheat and salted meats there is a great quantity, and it is only by the aid of America that we can now properly nourish our industrial and agricultural classes. These classes now consume the wheat of the United States instead of rye, which in former years constituted the base of their diet; and the pork of Chicago enters to-day into habitations where twenty years ago the only nourishment of the people was this rye bread.

To stop these importations would be to devote the working classes to misery, if not to death; to obstruct their entry by means of customs duties would be to impose on the masses prices which would not only benefit the land owners and enable them to keep their rents at the present high rates, and that would necessarily tend to augment the price of labor, for if the price of food produce increases the wages of the laboring classes must increase also, and costly production would render it impossible for our manufacturers successfully to contend with foreign competitors, seeing that our exportation depends as much upon the cheapness of our products as their good quality. It is thus that some amongst us, in order to protect the agricultural interests of the country, and prevent the owners of agricultural lands from suffering that reduction of their rents which the common and universal law of supply and demand imposes, would have us, by stopping these importations, make a compact with famine, and deliver our industrial and laboring classes to misery, decline, and ruin!

But notwithstanding this very sensible speech of Monsieur Graux, the minister of finance, I would remark that the free admission of our pork into Belgium, and the removal of all official interdiction of its entry into other countries, will serve us but little if the people continue to be frightened from its use by the idea that death may be lurking, for all they know, in every case of hams or bacon that comes from our shores, and this fright, I fear, will continue to exist, to the great injury of this branch of our commerce, so long as trichinæ and trichanic diseases are so imperfectly understood, and the people of Europe are taught to believe that American pork only is dangerous.

Having given this subject a very considerable personal investigation, and feeling that I might contribute in some small degree, at least, to allay what I can not but regard as an almost groundless apprehension of danger from eating American or any other pork, I have ventured upon a brief historical sketch of trichinæ and trichinic disease, with a statement of the conclusions to which most honest and scientific investigators have arrived as to the danger involved in the use of what is now admitted to be the only available cheap animal food for the poor and laboring classes of Europe; and I herewith forward this paper as a separate inclosure for your consideration.

I am, etc., JNO. WILSON.

[Inclosure in No. 143.]

TRICHINÆ AND TRICHINOSIS.

Whether the interdiction of swine's flesh as an article of diet by the law given to Moses, or the prohibition of its use to the followers of Mohammed in the Koran, was founded upon any conceived dangerous quality of its flesh we will probably never know, nor are we ever likely to ascertain whether the worms that devoured Pharoah, King of Egypt, were trichinæ or not; but that this parasite has existed in animal tissues from time immemorial is, we are inclined to think, more than probable. It is, however, only within comparatively modern years that the peculiar character of this parasite and its relation to the sanitary sciences have been investigated and made known to the public by competent authority.

In a curious work, published at Halle as far back as 1537, and entitled "Ein Schriftlich Regiment oder der Gesundheit Vorwarung vor Krankheiten," we find the following passage: "Nicht rechtschoffen gesundt Schweinefleisch zehe feuchtung macht, davon dau leichtlich in Addern und Ghedermas vorstopfung erfolget," which indicates clearly that at that date maladies were attributed to the eating of unsound pork.

Whatever may have been the character of the unsoundness here referred to, we have no direct allusion to trichina as a parasite of animal tissue until 1822, when Liedman claimed to have discovered them in the flesh of the hog. Dr. Hilton, of Guy's Hospital, London, mentions the finding of them in the flesh of a human subject in 1830, and this is probably the first account we have of their discovery in the human organism.

In 1835, Owen published a minute description of this parasite, but between that date and 1859, although other observers had not unfrequently found it both in the human cadaver and the flesh of the rat, rabbit, hog, and other animals, no great importance was attached to the discovery. In 1860, however, a vague and undefined malady made its appearance almost simultaneously in several different parts of Germany, and the fact that almost invariably the persons attacked were in the habit of eating raw or uncooked pork, and that many of them fell ill shortly after eating it, aroused a suspicion that this illness was caused by the presence of trichinæ communicated by eating pork containing this parasite. During that and two or three succeeding years, quite a number of distinguished microscopists, among whom may be mentioned Zenker, of Leipsic; Henricus, of Bra; Friedrich, of Heidelburg; Sandler, of Magdeberg; and Virchow, of Berlin, commenced an investigation of the subject, and the result of their labors proved beyond a doubt that the muscular tissues of the hog were not only occasionally the habitat of this parasite, but that bacon so affected, eaten raw, or partially cooked, was not unfrequently the means of introducing it into the human subject, and that a disease sometimes resulting in death did then exist in different parts of Germany as a result of this cause.

The publicity given to this new malady by the reports of investigations made by so many distinguished men created an inevitable panic throughout Germany, and, as is always the case in panics resulting from a threatened yet incomprehensible danger, the number of reported cases of this disease rapidly grew into fabulous proportions, and the number of deaths resulting from it were doubtless greatly exaggerated. Plauen, Heidelberg, Magdeberg, Halle, Leipsic, Posen, Weimar, Zena, Hattstadt, Lubeck, Berlin, Hedersleben, and a host of other towns furnished their contingents of cases of the new disease, and accompanied them with alarming and often purely imaginary incidents connected with the eating of the flesh of the now dreaded pig that had so long previously nourished and sustained their people. This trichinomania in north Germany became so general that it is now extremely doubtful whether the deaths among the poorer classes resulting directly and indirectly from the privation of this their accustomed animal food did not greatly exceed the total number of deaths from the disease they so much dreaded. It can scarcely be doubted that under such a panic almost every obscure indisposition experienced by the credulous classes of Germany was attributed to the dreaded trichinæ, and that, consequently, the true cases of illness and death resulting from the ravages of this parasite were greatly overestimated.

But notwithstanding this wide-spread trichinomania of 1861–'62–'63, and the general awakening of both the medical profession and the people of Germany, and almost all other countries, to what they considered a new and dangerous malady lurking in an important article of diet for the people, it soon died out, and from that date until a very recent period not only have the Germans eaten their pork and sausages in peace and tranquillity, but the lovers of ham and bacon of other countries have also continued to enjoy these favorite dishes without a thought of being consumed by an invisible destroyer.

I shall not here attempt any account of this parasitic disease as it has fallen under the observation and been described by Drs. Dalton, Schetter, Vost, Kromboin, Dingler, Lothrop, and other medical gentlemen of the United States. The facts relating to it, as revealed through the microscope, differ but little among all observers; but the deductions from these facts, so far as they attempt to establish the true character of the parasite, as well as the direct cause, nature, and duration of the disease produced by it, are by no means uniform, and are yet, I fear, more or less erroneous and fruitful of much needless alarm.

According to my own observations, the fully developed trichina, when taken from the muscles, stomach, or intestinal canal of a living animal, is a white or partially rose-colored worm, about $\frac{1}{30}$ of an inch long by $\frac{1}{600}$ thick, which, though it is occasionally found in a free state in muscular tissues, has received the denomination of *trichina spiralis*, from the fact that it is most frequently observed in muscular tissues, coiled in a special manner within a lemon-shaped cyst or sack containing granular matter upon which it is supposed to feed during the remainder of its quiescent life, for all observers admit that after it has once become thus encysted, its migratory motion forever ceases, unless, with the muscular tissue in which it rests, it is in some manner conveyed to the stomach of another animal and there set free from its prison cell by the action of the gastric juice, to commence again the function of reproduction. After it has once quitted the stomach and intestinal canal it ceases to propagate, but while within these viscerae it is certainly endowed with wonderful fecundity, the product of a single female being variously calculated at from 400 to 1,000. The accepted opinion now is that within a few days after the birth of the young trichinæ they penetrate the walls of the stomach and intestinal canal and commence their voyage through the muscular system; but if so, this must be performed quite rapidly, for they have been found in the muscles of the extremities within a few days after being taken into the stomach by eating affected flesh.

The duration of the cell or cyst life of this parasite has not yet, I believe, been satis-

factorily ascertained, yet upon this depends much of its pernicious influence on the human subject. So far as my personal observations have served me, I have never been able to detect the slightest movement or other sign of life in the little animal while thus imprisoned in salted meat, nor do I believe it does long survive in well-salted pork. Notwithstanding the fact that Virchow, the distinguished histological microscopist, records the discovery of living encysted trichinæ in a patient who had suffered from trichinosis for twenty-four years, I can not but think that this great authority either made a mistake in his premise or conclusion in this case, and that this stage of trichinic life is comparatively short, and accounts in a great degree for the small number of real cases of trichinosis, even among the north Germans, who so frequently indulge in raw or partially cooked pork.

Both encysted and free trichinæ have been found in almost every part of the muscular system, but in their encysted state they are much more frequently discovered in the denser portions of the voluntary muscles near their tendinous, attachments, and in the muscles of the eye, diaphragm, larynx, and other similar structures, which would seem to indicate that the voyaging life of the animal, when it has once reached the muscular system, continues until it encounters in the tissue subject to brusque motion a barrier against its further progress, and that there it gathers around it its winding sheet and prepares to die. Whether this be a correct theory or not, the fact that the capsular envelope of this parasite, after a certain time, begins to show signs of a calcareous degeneration, often observable to the naked eye, does seem to indicate that this is indeed the mausoleum of the animal.

From this brief summary of the history and habits of this parasite, I pass to the consideration of the danger to health and life involved in eating the different forms of fresh and salted pork, which now constitute so large an article of commerce both in Europe and America; and on this subject I would remark that trichinosis is a malady as yet but vaguely defined by the best authorities, some of whom refer its pathognomic symptoms to the abdominal viscera, while others diagnosticate it by a series of symptoms affecting the general system extending through months and even years.

The former of this class of observers mention their cases of death as having resulted within a few days, or, at most, weeks, after the introduction of the parasite into the abdominal viscera, and as being attended by acute and violent functional disturbance of these organs; while the latter attribute the death to the slow but general prostration of the vital force through muscular absorption and degeneration induced by its presence in this portion of the organic tissue. In justice to both these classes of observers it should be remarked that they regard both the immediate and remote condition here mentioned as characteristic of this disease, but it is unfortunate that a series of acute and violent local symptoms, often producing death within a few days, should have to be associated with a general chronic indisposition vaguely defined and extending through months, if not years, in order to determine what is claimed to be a new disease found lurking in not only a popular but an almost indispensable article of diet for the poor. And it is equally to be regretted that both the acute and chronic symptoms, usually considered as distinguishing this disease, differ so little from such as are produced by a vast number of other causes, and that consequently, without the greatest possible care, the gravest mistakes may be made in attributing either suffering or death to the presence of this parasite. Even the microscope in the most skillful hands can only supply presumptive evidence of this, for it is an admitted fact, by almost all observers, that trichinæ are often found in great numbers in the flesh of hogs that have given no evidence of disease whatever; and it is equally well known that they have been found connected with cancerous tumors, tuberculous matter, and in other both morbid and healthy tissues of the human subject, where no previous symptoms had excited a suspicion of their presence Although abundant testimony to this fact might be cited, I will here only mention that out of 136 persons who had died from other diseases, Professor Zenker, on examining their bodies, found trichinæ in 34. Indeed, as already stated, until about 1860, although trichinæ had often been previously found in the human subject, their presence was not regarded as incompatible with perfect health.

We have already shown how widespread throughout northern Germany the dread of this parasite became about this time, and also how rapidly it again died out, notwithstanding the resumption of pork-eating by the people. But we are now again, after the lapse of twenty years, confronted with a revival of this terror, accompanied by the official exclusion of the hams and bacon of the United States from many of the markets of Europe under the ostensible plea that there is danger of communicating trichinic disease to the people by eating these articles of our merchandise. That this hasty and, as I think, unjustifiable interdiction of American pork by so many of the governments of Europe has been instigated by other motives than a regard for the public health there can be but little doubt, and it is equally true that it has created among the poor and laboring classes of Europe a widespread distrust of this article of our export that has already seriously affected its sale. The unjustifiable character of this interdiction may be seen in the fact that while American hams and bacon have

been excluded from entry into France, Austria, Italy, and Spain, all kinds of salted pork from Germany and Hungary—the admitted home and habitat of trichinæ—have been freely admitted by them without question, and, so far as France is especially concerned, it may be further seen in the fact that the recent commission appointed by the Government to inquire into the soundness of American hams has reported that out of 2,000,000 kilograms examined trichinæ were only found in 300, an exemption from this parasite that could scarcely be equaled in the same weight of hams taken at random from any country of the world.

But the evil done to our commerce is by no means the most important evil resulting from these prospective decrees. It is a well-known fact that never before in the history of Europe have the laboring classes so required cheap animal food as at present; for in order to manufacture cheaply, the owners and proprietors of all large industrial establishments of the continent are compelled to wring from their employés the greatest possible amount of labor for the least possible pay, and it is generally admitted that the cheap pork of the United States is now really the only available animal food within the means of the laboring classes to sustain them under the strong demand made upon their vital force. But this great, and to them vital subject, is now, in many instances, committed by their Government into the hands of a special set of officers, who, provided with microscopes, the use of which is comparatively new to many of them, are expected to make a critical and scientific examination of American pork, and if, as in the case of the French commission, they find trichinæ in 300 kilograms out of 2,000,000, they may pronounce death in the pot, and forthwith, upon the truthfulness of this report, American pork is at once interdicted, or invested with such horror as compels the laboring man to purchase, at prices he can not well afford, the home pork products or that of other countries, or, what is still more probable, desist from the use of this diet altogether, under the terror inspired by these official reports, and the uncertainty of knowing whether, after all, he may not be offered the death-producing American pork under another name.

To allay unnecessary apprehension of this dreaded disease, thus engendered by official authority and entertained by ignorant or unscientific persons, I now propose finally to give what may be regarded as the concurrent conclusions to which most scientific investigators of this whole subject have arrived, and they may be thus summarily stated:

1st. That among the swine of all countries there is probably not more than one in 2,000 affected with trichinæ, and that the parasite is usually introduced into the flesh of this animal by his eating dead rats, mice, and other offal and garbage.

2d. That it is in most cases impossible to diagnosticate the presence of this parasite in the living hog, as they have been found in great numbers in the flesh of animals which before being slaughtered were not only fat and in good condition, but manifested no signs of disease whatever.

3d. That in every case thorough cooking, or, in other words, a subjection of the meat to be eaten to a heat equal to 70° centigrade, will secure entire immunity from danger in whatever numbers trichinæ may be present.

4th. That it is possible for this parasite to exist in the muscular tissues of both man and many of the lower animals without creating any appreciable disease.

5th. That notwithstanding the general and unrestrained use of swine's flesh among most civilized nations, genuine trichinic disease in man, as tested by the microscope and intelligently distinguished from other obscure maladies, is of very rare occurrence, and that the deaths resulting from it are probably less than the mortality resulting from the injudicious eating of some of the most wholesome articles of food.

As a just inference from these opinions of scientific investigators, I would remark that as trichinæ are now generally admitted by them to be introduced into the flesh of the hog by his eating dead rats, mice, and other garbage, and as the hogs fattened for the shambles in the United States are almost invariably fed in great numbers together upon good sound corn or the rich residuum of this grain after distillation, in large, clean, and well-kept buildings, where this food is constantly in great abundance before them, they have neither the temptation nor the opportunity to feed upon the dangerous garbage which the hogs of Germany, France, or any other continental country are allowed to eat, and that, consequently, they are in proportion to their numbers infinitely less affected with trichinæ than the hogs of any other country.

In concluding this paper I would add but one other remark, and that is, that I do not believe that the pork of any country is now more affected with this parasite than in the days of Moses, and that consequently the present panic among the people will pass away as did that of 1860. Nor do I believe that any European state will venture long to exclude from the working classes this indispensable article of their food, which the United States alone is now able to cheaply furnish them.

JOHN WILSON, *Consul.*

UNITED STATES CONSULATE,
Brussels, June 14, 1881.

GERMANY.

No. 83.

Mr. White to Mr. Evarts.

No. 136.] LEGATION OF THE UNITED STATES,
Berlin, June 29, 1880. (Received July 19.)

SIR: The "Reichs-Gesetzblatt" of yesterday, of which I inclose a copy and translation, publishes an imperial decree, countersigned by the chancellor, prohibiting the importation of certain products from America.

I have just called upon the head of the imperial chancelry—Minister of State von Hoffman—regarding the matter. He informs me that the prohibition is based entirely upon sanitary considerations; that, while it has not been found difficult to detect trichinæ in ham and bacon, it has been found exceedingly difficult, almost impossible, in sausages and preparations of chopped pork. I was very glad to receive this assurance, for my first fear was that this was but a new development of the chancellor's policy of protection to agricultural interests.

I have sent you a telegram as follows:

Importation of all preparations of pork from America, except hams and bacon, prohibited by imperial decree. Government assures me that it is simply a sanitary measure. Dispatch follows.

I have, etc.

AND. D. WHITE

[Inclosure in No. 136.—Translation.]

No. 1388. *Decree regarding the prohibition of the importation of pork and sausages from America, of June* 25, 1880.

We, William, by the grace of God Emperor of Germany and King of Prussia, etc., decree in the name of the Empire—the consent of the Federal Council having been obtained—as follows:

§ 1.

The importation of chopped or in a similar manner divided or otherwise prepared pork and of sausages of all kinds from America is prohibited until further notice. This prohibition does not include the importation of hams and bacon.

§ 2

The imperial chancellor is authorized to make exceptions to this prohibition, and to adopt the measures necessary for this purpose.

§ 3

This decree takes effect on the day of its publication.

Witnessed under our high signature and the affixed imperial seal.
Given, Bad Ems, the 25th day of June, 1880.

[L. S.] WILLIAM.
[L. S.] PRINCE v. BISMARCK.

[Extract.]

No. 33.] UNITED STATES COMMERCIAL AGENCY,
Geestemunde, September 30, 1880. (Received October 21.)

SIR: * * * Inclosed you will please find a special report on the importation of live hogs into Germany from the United States.

I am, etc.,

WOLFGANG SCHOENLE,
United States Commercial Agent.

[Inclosure in No. 33.]

IMPORTATION OF LIVE HOGS FROM THE UNITED STATES INTO GERMANY.

GEESTEMUNDE-BREMERHAVEN,
September 30, 1880.

I have the honor to acknowledge the receipt of the Department circular, dated July 1, 1880, and, complying with its instructions, I beg to submit a report, in a condensed form, on the importation of live hogs into Germany from the United States.

In the early spring season of this year the arrival of a smaller lot of American live hogs on board of one of the steam-boats of the North German Lloyd created a good deal of sensation at this port, the appearance of these grunters from the other side of the ocean being quite a novel feature. They were, in the average, in an excellent condition, and were immediately transported by rail to traders at Hanover, where they were offered for sale to butchers at Hanover, Brunswick, Magdeburg, Cassel, and other places in Northern Germany, and found at once willing buyers. At short intervals other shipments of American live hogs made their appearance at this port, and were taken charge of by the same parties from Hanover. The butchers in the above-named cities were eager to avail themselves of purchasing these well-fed and comparatively cheap American hogs. The parties that started the experiment of importing American live hogs into Germany calculated on a loss of 5 per cent. on the voyage. Of the last shipment of 900 hogs forty died during the voyage, being less than 5 per cent., while of the former shipments the loss was considerably smaller, so that the average loss of all the shipments amounted to but 2½ per cent., which is considered trifling, and fell far below the calculation of the interested parties. The enterprise having proved to be successful and profitable beyond expectation, there will be further shipments made to this port, and on a much larger scale. There is already a movement going on amongst the principal pork merchants of Bremerhaven and the neighboring towns to found a stock company for the purpose of enlarging the importations of American live hogs. In a few months this company will have some extensive stalls built at Bremerhaven for the temporary stabling of the hogs after their arrival. It is the intention of the company to establish the main depot and principal market for American hogs at Bremerhaven, where they shall be weighed and then shipped to the different butchers into the interior of the country. It is believed that butchers at Berlin will make great purchases of American hogs, as several of them have already addressed frequent letters to hog traders at this place in which they expressed great anxiety to be supplied with that article at the earliest opportunity.

A large amount of capital will undoubtedly be invested in the importation of American hogs into Germany by German pork merchants, and from a venture it may grow in a few years to be a very prominent and profitable feature of our American export trade, and may, in course of time, develop into almost unlimited expansion. One thing, however, should not be overlooked by American dealers, that they should export corn-fed hogs only, as the slop-fed ones are more apt to die during the voyage, and as their yield is necessarily smaller than those of the corn-fed ones. American hog dealers ought to send the best quality of hogs to Germany, in order to gain a sure foothold and to encourage their importation. This importation of American live hogs into Germany will have the tendency to offset to some extent the imperial decree of last June, whereby the importation of American chopped pork and sausages into Germany is prohibited, so that if the Germans are not allowed to utilize the small

pieces of the American hogs, then the "whole hog" is to be shipped to them. The American hog having more fat substance and less meat than the German, the suggestion of experienced pork merchants in Germany has been thrown out that it would be a profitable experiment to import a lot of German male hogs into the United States for breeding purposes, in order to produce a mixed breed, which would have a little more meat and less fat—a stock of hogs most desirable in Germany and more salable in German markets. This experiment has been made in Hungary in the last few years, and resulted in a stock of hogs which are now preferred to the long-headed and coarse-boned German hog. The Hungarian mixed breeds always command a somewhat higher price than the common German hog. The suggestion appears to be very sensible and plausible, and, at any rate, would be worth trying. The import duty on live hogs is sixty cents per head.

WOLFGANG SCHOENLE,
United States Commercial Agent.

No. 85.

Mr. Smith to Mr. Hay.

No. 122.] UNITED STATES CONSULATE,
Mannheim, January 20, 1881. (Received February 12.)

SIR: In my report of May 3, 1879, I stated that very strong prejudice existed among the people, and especially among the meat-sellers, against American meat. I am now pleased to say that I find in this district and throughout Germany this difficulty in the selling of American meat is disappearing, and were it not for the present high prices of meat in the United States the sales would largely increase.

The importation of American meat to England has increased rapidly, from 1,000,000 pounds in 1875 to 2,000,000 pounds in the first quarter of 1880. Its effect is now being felt on the Continent, and soon a large continental demand will exist, more especially for the cheaper portions, such as are needed by the poorer classes—a class that are absolutely in need of more generous food than that which is now provided for them. The organ of the butchers, the Deutsche Fleischer Zeitung, published in Berlin, has numerous articles on this subject, and accepts it as inevitable, and welcomes cheap meat to Germany. It urges the Government to construct refrigerator railway wagons in order that fresh meat may be sent from the sea-board inland, not only for the needs of the poor people, but for the use of the army, remarking that while the taste of American meat is not so good as that of German meat, yet it contains all the elements of good sound food, and that in a short time the German taste will accommodate itself to it. The paper calls attention to the large and increasing consumption in Germany of American lard, stating that the supply is hardly equal to the demand, as an evidence of the breaking down of prejudiced taste, American lard having what the Germans call a "wild taste," quite different from that of German lard.

It is thought that meat and lard contract a smell and taste from the unclean condition of the ships in which they are exported; that a ship which has been used for the transportation of grain must have an odor which the meat will absorb, and that when ships are constructed for and only used for this transportation, then the meat and lard will be sweeter and better preserved. Shipments have sometimes been made by parties unacquainted with the trade and its difficulties. The sudden rise of the demand and the rapid extension of the market have led to careless shipments, both regarding careful preparation of the meat and an intelligent knowledge of the market.

Regarding the prices of meat, a good criterion for the exporter is the price of meat in 1879, for although the duty on all meats was increased in 1880 from 3 to 12 pfennigs a kilogram, making the present duty 12 marks a 100 gross kilograms, with a deduction for tare of 16 per cent., yet there would be a paying profit.

The increased price of meat in the United States in 1880, it being 40 per cent. higher than 1879, reduced the profit to a minimum price and in some places prevented sales.

Large stocks of old pork and hams are reported in Liverpool, supposed to be the result of over speculation and high prices. The firm of Bender & Co., Mannheim, imported in 1879 90,000 kilograms of meat for the poorer classes, in 1880 30,000 kilograms, the falling off being the result of the increased price in the United States.

Shoulders, sides, and bellies used by the poorer classes sold in 1879 at 32 pfennigs per kilogram; in 1880, at 48 pfennigs per kilogram; sugar-cured hams, used by the better classes as a delicacy, sold in 1879 at 62 pfennigs per kilogram; in 1880, at 75 pfennigs per kilogram.

The exporter of hams to Germany should observe especially the entire absence, as far as possible, of trichinæ. While my experience teaches that German and English meat contains as much if not more trichinæ than American, yet the importation and criticism of the American is much more close and severe. Each ham or piece of meat is inspected by the government inspector, and if a trace of trichinæ is found the meat is condemned and destroyed.

On the 18th of October, 91 hogs exported from America to Dresden were examined under the misroscope; 14 contained trichinæ and were condemned. This will be quoted in many German papers and thus continue prejudice.

I would again make the recommendation contained in my report of May 3, 1879, in which I wrote at length concerning trichinæ that boards of trade and the Government make stringent laws of inspection of each hog with reference to trichinæ before permitting sales; only in this way can producers of pork in the United States command the markets of the world. In every country laws are being introduced regarding the purity of food from poisonous substances, and nothing is to be more dreaded or is more disastrous in its final effects than trichinæ.

The exporters should also study the adaptations of the meats sent to any particular market. Among the Germans it is very difficult to overcome their fixed tastes and habits, and the importer will do better by adapting his importations to the market, rather than endeavoring to create a reformation.

In South Germany very little fat meat is used and will not sell well, while in North Germany the meat can not be too fat. Regard should be paid to the manner in which the meat and hams are cut. In this district hams too salt will not sell. It would be better to send pork that had been salted only three or four weeks—that is, transporting it with as little salt as possible, and not smoked—leaving the smoking to be done here.

Hams exported are apt, through the length of the voyage and the sea air, to arrive moldy and dirty, looking comparatively colorless when placed with domestic German hams, which are made to present a lively brown color, which, in addition to their perfect cutting, gives them a very attractive appearance. If smoked hams are sent, each one should be put in a well-covered, painted canvas sack, so as to keep out all vermin. Hams of any kind, especially mild-cured hams, should not be imported in warm weather; they are apt to mold and sweat under the cloth, and

unless they are in perfect condition must be re-dressed and re-covered after their arrival; also, unless they are perfectly cured they are apt to breed maggots inside the flesh near the bone, rendering them unsalable. In this district sugar-cured hams are not relished by the better or the lower classes, except when they are eaten uncooked.

The preference of South Germans is for mild, salt-cured hams; consequently the sale of sugar-cured hams is limited. Cheap salted shoulders and sides can be sold to the laboring classes. They sold in 1879 for 32 pfennigs per kilogram; in 1880, from 45 to 48 pfennigs. Heads and feet contain too much bone to make a profitable export, the duty on all meats being paid by gross weight. A case containing 260 kilograms pays 12 marks per 100 kilograms, less 16 per cent., tare.

American bacon is well relished and will be much used in Germany. Sausages were exported from the United States with profit, but by an extra law regarding trichinæ they are now literally prohibited.

American fresh beef is not brought to Mannheim, and, I am informed, not yet to Rotterdam. Live sheep and lambs are exported from Germany to England.

In my report regarding American exportation, dated June 5, 1878, I stated "that either an established depot, from which experienced salesmen, who knew the habits of the German people, could be sent out to establish trade, or salesmen sent by the manufacturer or the producer, are needed to make a successful trade in Germany." I am now inclined to think that for this district and South Germany, depots established in Frankfort on-the-Main, with commercial travelers selected from the Germans, will give greater success than any other method.

Large and heavy articles can be stored at the sea-ports and drawn from as sales require. Samples and small goods could be in depot at Frankfort-on-the-Main. Coarse meat of all kinds can at present be better sold by the exporter at the sea-port where it arrives.

I remain, &c.,

EDWARD M. SMITH,
United States Consul.

No. 86.

Mr. Griggs to Mr. Hay.

No, 95.] UNITED STATES CONSULATE,
Chemnitz, January 24, 1881. (Received February 12.)

SIR: I have the honor to transmit herewith a report relative to the importation of American pork into Germany.

I am, &c.,

N. K. GRIGGS, *Consul.*

[Inclosure No. 95.]

Report relative to the importation of American pork into Germany.

"*Americanische schinken, trichina frei*" is the way that "sugar-cured" hams from our country are announced for sale in Saxony. As no such an advertisement is ever made in regard to hams of German production, the announcement alluded to seems an invidious distinction almost amounting to a declaration that those from our country are usually infected with the dreaded parasites. Indeed so general is the belief here that they are infected that the dealers find it very difficult to sell them at 20 cents or even less per pound—whereas German hams sell from 24 to 38 cents—and this, not-

withstanding each ham from our country is accompanied by a certificate that it has been examined and found to be free of trichina.

When it is considered that the American hams are, *at least*, as good as even the best of the celebrated "Westphalian," and that they are warranted "trichina frei," it seems very singular that the people of this country are so slow to buy them. The only explanation for this is that they have been led to believe that to eat American pork is to brave if not to court disease. They evidently do not know that American hogs are fattened upon the best corn the world produces, and American pork cured in the best manner now known, and that, therefore, our "sugar-cured" hams can not possibly be of inferior quality; nor do they seem to be aware of the fact that not only are our people the greatest producers but also the greatest consumers of pork in the world, and that, notwihtstanding this latter fact, there are fewer cases of trichina sickness in the United States than in Germany. Since June 25 last no pork has been allowed to be imported from our country into this, except entire pieces—such as whole hams, etc.—and these, as I have before stated, are never offered for sale except they have been examined and certified to be free of trichina.

To the United States, therefore, can not be charged the many cases of sickness occurring in Germany from the eating of infected pork. Indeed, during my more than four years' residence in this country I do not remember of having heard of a single case of such sickness attributed to American meat. On the other hand, in the past few weeks I have observed in the papers notices of no less than *fifty-six* persons in Germany being made ill by eating German-produced, trichina-infected pork. The almost entire exemption of our people from trichina-sickness is doubtless largely owing to the fact that in our country meat is seldom eaten raw, which is not the case here; still, when the great number of hogs slaughtered and large amount of pork eaten by our people is considered, it seems utterly improbable that a larger per cent of the hogs we kill are infected with the parasites than of those killed here.

Waiving any further discussion as to the relative merits of the pork cured in the two countries, I would beg to suggest—

First. That some organized effort should be made by those of our exporters most directly interested to impress upon the German public, through the medium of the German press, the fact that the pork sent from our country is not only much cheaper than that produced here, but is also as good and as free from disease; and

Second. That all American hams should be examined and known to be absolutely pure before they are exported to Germany. This seems to me quite important, for should even two or three cases of trichina sickness here be traced to meat from our country such fact would be at once telegraphed throughout Germany, and our pork trade with this country would then be ruined. Indeed it is quite probable that the German Government would prohibit any further importation of pork from our country whatever. There is another reason why American pork should be examined at home, and that is that to have it tested in Hamburg or Bremen—where it is now usually examined—increases its cost five pfennige (about 1¼ cents) per pound. This examination could surely be made in the United States at a much less expense, and then the hams from our country would not be saddled with this additional burden or disadvantage of nearly 7 per cent. in their competition with those of Germany.

In conclusion I would say that there can scarcely be any doubt but that the export trade of our country with this, in our "sugar-cured" hams, could be increased to many fold its present dimensions, without great difficulty, to the benefit of the consumers no less than that of the producers.

N. K. GRIGGS, *Consul.*

No. 87.

Mr. Wilson to Mr. Hay.

No. 12.] UNITED STATES CONSULATE,
Hamburg, February 11, 1881. (Received February 28.)

SIR: I have the honor to hand you herewith an extract (with translation) from the Fremdenblatt, a prominent newspaper of this city, of even date, wherein is contained a certain quotation from an American newspaper, with editorial comments of the Fremdenblatt upon the same, respecting the very important staple of American lard, which, as you are well aware, is a leading and constantly increasing article of exportation from our country to this market.

Since all adverse interests are sure to see not only that these reports are copied into the press of Germany generally, but grossly magnified, I deem it a matter of very great importance that the attention of the Department of State be called to the same at the earliest possible moment.

I am, etc.,

JAMES M. WILSON,
United States Consul.

[Inclosure in No. 12. Translation from The Hamburg Fremdenblatt, No. 35, of February 11, 1881.]

The following item, taken from an American newspaper, has created considerable sensation among the importers of American lard:

"A 'neat' business, writes the Herald, of Milwaukee, is the manufacturing of lard from hogs killed by the hog cholera. This business is, however, neither done at Chicago, nor Milwaukee, nor at any of the larger cities, which might thereby ruin their reputation in the provision market, for it shuns the light. But the farmers are not inclined to treat the hundreds of thousands of hogs which die every year of cholera as a clear loss, and therefore sell the carcasses willingly and cheap if they can only find buyers for the same."

Now, the Davenport Daily Gazette contains the following notice:

"A firm in one of our country towns has within the last three months bought and shipped about 200 cwts. lard, produced from the carcasses of expired 'crepirt' hogs, for which it paid about $1,500 (which is not the tenth part of the real market value of good lard), and we are informed that also another firm is doing a large business in the same article.

"It is therefore no immodest query, but a very urgent one, to ask what becomes of the carcasses of diseased hogs.

"This question is in reality a most important one for our entire commerce, for even the suspicion that lard obtained from diseased hogs is sold may prompt the European states to prohibit the importation of American lard and thus ruin one of our most important branches of business.

"The outrage perpetrated in the above-mentioned manner, by greedy, unprincipled speculators, is of so atrocious a nature that no punishment could be hard enough therefor."

The chambers of commerce of Chicago and Milwaukee ought to investigate this affair thoroughly and demand from the Davenport Daily Gazette the publication of the intimated firms or a statement of the source whence such information is obtained.

No. 88.

Mr. Smith to Mr. Hay.

No. 125.] UNITED STATES CONSULATE,
Manheim, February 14, 1881. (Received March 10.)

SIR: I have the honor to report the following translated extracts taken from German newspapers. In this connection I would again urge the necessity of some action by the Government, or boards of trade, whereby each hog shall undergo microscopic examination before it is allowed to be placed upon the market. I am convinced that unless this is done very soon all American pork, ham, and lard will be prohibited from the markets of Germany and probably other European states.

[Extract from the Weinheim Anzeiger.]

Dr. Gross, of Pest, counselor of the board of health, impressively warns the public against the use of American pork and lard, and desires government action prohibiting the import of the same. The dangers, he says, have lately essentially increased. In the board of health of the State of Michigan, Dr. H. W. Baker has furnished an ample report of a largely extended epidemic disease among swine, called "hog chol-

era," from which 26,000 hogs have died in the southwestern forests of this State. This disease is contagious to the highest degree, and also, in the opinion of Dr. Baker, transferable to men. All who have used the meat or lard of such diseased animals have fallen dangerously sick; one of them died soon after.

At Chicago, where millions of hams, smoked hams, and lard are packed, and from where whole cargoes are shipped to Europe, they do not inquire the origin of the dead animals, and without doubt the Yankees will not hesitate, on the occasion of such an extended swine disease, to cover their losses through the shipment of the dead hogs to Europe.

Serious measures were also taken in England against the import of pork products from the United States of America.

[Report from Chicago.]

I think I may assume it not to be well known to you that in the stinking factories at Station "Globe," by Chicago, immense quantities of lard from dead animals are produced, a great deal of which is shipped to England and Germany. They say that it is only used for greasing purposes; but who can control its use?

The lard looks white, like snow, and is scentless; thousands of the poorer classes may use it, not anticipating this kind of manufacture. Two daily railway trains of ten to twenty cars are loaded with all dead animals gathered in the city; horses, oxen, cows, hogs, and dogs. The extracted lard is again cleaned by steam. The residuum of the meat is in the neighboring manufactories prepared as guano, and mixed with feathers of chickens, bought of the hotels, so as to give it an appearance of genuine guano. The offensive smell spread over the country from these manufactories is a frightful one. The environs of Chicago are nothing but stinking places.

[Extract from the Berlin Tribune.]

A "clean" business is reported from the Herald at Milwaukee: The manufacture of lard from hogs dying from "hog cholera." This business is neither carried on at Chicago nor at Milwaukee, nor at any larger city doing business in hog products and risking their reputation. Yet the farmers are not inclined to regard as a full loss the hundred thousands of swine dying every year of cholera; they sell the carcasses willingly and cheaply to any buyer.

The Davenport Daily Gazette reports as follows:

"One firm residing in one of our country cities bought and shipped during the last three months about two hundred-weight of lard gained from the carcasses of dead swine. They paid for it about $1,500 (not a tenth of the market value of good quality). We are also informed that another firm has done considerable business in this article. Now, it is a question, not a modest but an urgent one, "What do they make of the carcasses of dead swine?"

This question is a very important one for our commerce; as only the suspicion that lard gained from dead swine is sold could induce the European governments to prohibit imports and ruin in such a manner one of our most important export businesses.

The mischief thus committed by unscrupulous jobbers is so most atrocious that no punishment would be too much for it. The chambers of commerce of Chicago and Milwaukee should carefully investigate the matter, and claim from the Davenport Daily Gazette the name of the foregoing mentioned firms or the source from which this notice was drawn.

[Extract from the Düsseldorf Gazette, January 20, 1881.]

A fatal accident that will no doubt induce our board of health to prohibit import, if not examined, of American meat has caused a great excitement in this city. A citizen bought of a grocer a ham, and by eating the same the whole family was confined to bed. On examination of the rest of this ham it was found full of trichinæ. Father and mother have already died of this frightful sickness, while the children sickened so dangerously that their recovery is doubtful.

DÜSSELDORF, *February* 3, 1881.

On Tuesday afternoon the third person, viz, the mother of the upholsterer Hermann Thelew, deceased, died of trichinosis.

These statements are evidently exaggerated, yet the fact that there is any basis for such reports should lead exporters to either remove the cause, or, if the statements are false, deny them. This can be done through the foreign newspapers by consuls if they are furnished with authentic statements from well-credited parties.

I remain, etc.,

EDWARD M. SMITH,
United States Consul.

No. 89.

Mr. Stanton to Mr. Hay.

No. 199.] UNITED STATES CONSULATE,
Barmen, February 25, 1881. (Received March 17.)

SIR: The inclosed article, which appeared in the London Times of the 19th instant, taken in connection with the constantly recurring articles of similar import in the German newspapers, induces me to address a few words to you on the subject of the American pork trade, notwithstanding that many of my colleagues have so repeatedly treated of the matter.

In Germany, and, I think, in all other European countries, native dealers in and producers of pork, bacon, hams, etc., are leagued against us, and leave no stone unturned to create in the public mind a distrust of American wares.

Every discovery of *trichina spiralis* in American bacon is trumpeted through the land, the facts being not unfrequently grossly exaggerated and distorted; while similar discoveries in German bacon are either unnoticed or so published as to be lost in a corner of some provincial journal.

This underhanded warfare against American products is not confined to the pork trade alone, but every comestible issuing from the United States is subject to continual attacks in the German journals.

At one time it is *trichina spiralis*, at another a case of lead poisoning, and again unscrupulous adulteration.

Whether these accusations be based on fact or fancy, it is evident that they are sure to exercise a prejudicial influence in the end, unless our manufacturers and exporters take decided measures for protecting their reputation and guaranteeing the character of their goods.

Reports, such as the accompanying inclosure, have a great effect on the public, and tend to do our export trade immense injury. They are greedily copied into all German newspapers, and the public will be warned against purchasing any edibles issuing from the United States. Such warnings are numberless, and can be found almost daily in some one of the German journals.

From their cheapness, American lard and bacon will always command a market among the poorer classes; but the mere possibility that the assertions of Mr. Crump* may be true will turn from American wares all those who can afford to purchase the higher-priced German wares.

Believing that American hams and bacon are just as carefully prepared as those of Germany, and considering the great importance of the pork trade, I deem it my duty to urge upon our pork-packers the necessity of guaranteeing the character of their goods.

I earnestly recommend my countrymen to ship no side of bacon which has not been inspected; to send abroad no lard or butter which is not free from every adulteration, and to instruct their agents to publish by every possible means the fact that American bacon is carefully inspected, that American lard and butter are unadulterated, and that no use is made of diseased swine or the products thereof.

In building up and in maintaining an export trade, particularly in a country like Germany, where so many are desirous of bringing such a

---

*Acting British consul at Philadelphia.

trade into discredit, too much attention to the character of the goods exported can not be paid; and an honest and upright policy is one which is sure to pay in the long run.

I am, etc.,

EDGAR STANTON,
United States Consul.

[Inclosure in No. 199.—Extract from the London Times of February 19, 1881.]

HOG CHOLERA IN THE UNITED STATES.

The following is an extract from a letter from Mr. George Crump, acting British consul at Philadelphia, to Earl Granville, dated December 21, 1880, and published in some further correspondence just issued by the foreign office, as to the diseases of animals in the United States of America:

"From a sanitary point of view it may not be impertinent to call your lordship's attention to the immense mortality among swine by a disease known as "hog cholera," in which about 700,000 head have died this year in Illinois. Immense quantities of pork are annually shipped to the United Kingdom, and as the disease *trichina spiralis* seems to be on the increase in this country, the subject is not unworthy of attention. Two persons recently died in Milwaukee, and one in Chicago. In the latter city several people are ill with it at the present time, and one entire family attacked about a month ago are not yet out of danger. A case just reported from Kansas describes the symptoms of the disease when it attacks the human family. In this case the victim is a farmer. He had been ill for some time, and became much reduced in flesh. Upon consulting a physician trichnæ were found; worms were in his flesh by the million, being scraped and squeezed from the pores of the skin. They are felt creeping through his flesh, and are literally eating up his substance. The disease is thought to have been contracted by eating sausages. *Trichina spiralis* may be conveyed to human beings, it is thought, by the gross adulterations used in the manufacture of butter and cheese, of which there is some exportation to England. The former is adulterated with lard and grease, which in many cases are taken from the places where hogs die of diseases, and are then rendered into grease, glue, etc., and the latter by a commodity called 'anti-huff.'"

This is the letter referred to by Mr. Paget in the question put by him to the president of the board of trade in the House of Commons on Thursday.

No. 90.

Mr. Potter to Mr. Hay.

No. 27.] CONSULATE OF THE UNITED STATES,
Crefeld, February 26, 1881. (Received March 17.)

SIR: I have deemed it of importance to call the attention of the Department to the items which are daily appearing in the public journals in this part of Germany concerning American meats, and which are calculated to seriously diminish the exportation to the continent of Europe of American hams, bacon, and pork. Judging from the present state of public feeling here, it is perhaps safe to express the opinion that this important branch of the export trade of the United States will be wholly destroyed, unless prompt and efficient measures are adopted which will insure the purchasers of American meats of this discription against the presence therein of the dangerous *trichina spiralis*.

As an illustration of the different paragraphs at present circulating through the public press, I give the following, with translations:

A Cologne paper, under date of February 19, 1881, says:

Here, also, trichinosis has made its appearance, though only in one family, who had eaten of a raw ham obtained from Gütersloh, in Westphalia, Germany. The lady of the house was first affected with sudden and severe pains in the stomach, vomiting, and diarrhea, accompanied with pains in the region of the lower vertebræ and in the eye-holes; the eye-lids and the face began to swell very much, as in the case of erysipelas of the face; so that the physician, in considering all these symptoms, was not in any doubt about the nature of the disease. With one child swelling of the joints was observed, as may happen in a case of rheumatism. A microscopical examination of the ham eaten showed that it was full of trichinæ, and, as soon as discovered, was seized by the police. May this sad case serve as a warning not to eat raw pork which has not previously been examined by a sworn examiner of meat. Particularly suspicious are *American hams* and *bacon*, in which a large trade is done, and which in many cases, are sold as Westphalian or German hams and bacon. These facts would seem to make it necessary to put dealers of imported meat, hams, and bacon under severe control in towns where the examination of meat is obligatory.

A newspaper printed in the city of Düsseldorf, dated January 26, 1881, says:

Our town has been put into a state of great excitement by a sad event, which will cause our sanitary board to take energetic steps against the *importation of American pork*, which has not been previously examined. A citizen of this town obtained a ham from a dealer here, the eating of which brought the whole family to the sick bed.

The examination of a portion of this ham that was left proved it to be full of trichinæ. Father and mother have already succumbed to the dreadful disease, and the state of the children is such that grave doubts are entertained as to their recovery.

The latter case at Düsseldorf has had a greater influence in exciting prejudice against American meats than any other that has occurred. At my request, Consular Agent H. Lewis has thoroughly investigated the facts connected therewith, and communicates the following information:

On the 25th of December, 1880, an upholsterer, by the name of Hermann Thelen, purchased in Düsseldorf a ham from a grocer by the name of Joseph Brors. The flesh of this ham (which had been smoked, and was known as "sugar-cured") was eaten, uncooked, by the members of Thelen's family, and by others living in his house, and also by relatives who called upon him on Christmas day. In all eighteen persons partook of the meat, and were all soon after taken ill; some the day after eating the ham, and others from five to ten days later, but all with unmistakable symptoms of trichinosis. Of these eighteen persons five have already died, and seven are still very ill, with little hopes of their recovery, and six are considered out of danger.

Joseph Brors, the person from whom the ham was bought, stated that he dealt *only* in American hams, and that he purchased the lot from which this was taken of Messrs. Isenbart & Co., American provision merchants, in Antwerp, and with whom he has long dealt, and who are known as selling only first-class goods. The barrels in which the hams were packed were examined, and on one appeared the name of Jones & Stiles, Chicago. There were 19 hams in this barrel, weighing together 300 pounds, and of these he sold several; one he sent to his parents as a present, and some were cut up and retailed in his shop. Of these, himself and wife partook repeatedly without any ill effects, and with the exception of the one sold to Thelen, he has not heard of any complaints.

As soon as the case of the Thelens became known, all the hams then in his possession, nine in number, were seized by the police, besides a number of others in the hands of a dealer by the name of Mauser, which were bought at the same time from the same house in Antwer, and all were submitted to a strict examination, but without finding the slightest trace of trichina. So it was proved that only the ham sold to Thelen was in any way effected, and this, Thelen declares in his evidence before the police, was sold to him as a *Holstein* (German) ham.

From a portion of this last, which, fortunately, was found, Dr. Zimmermann, the city medical inspector, found trichina in great numbers.

A letter was addressed to Messrs. Isenbart & Co., at Antwerp, requesting them to state whether or not they sold to Joseph Brors, of Düsseldorf, on the 18th or 20th of December last, a lot of hams, weighing about 12 pounds each, and at the same time a lot to a Mr. Mauser, of the same city. To this request they replied as follows:

"In answer to your letter of the 19th we reply to you that we deal only in American meats, hams, and bacon. That on the 10th of December, 1880, we sent to Joseph Brors

and to Wilh. Mauser, of Düsseldorf, two barrels of pickled pork. The barrels contained, one of them 18 pieces of ham, and the other 19 pieces.

"We bought both barrels *indirect*, and they had the mark or brand of Jones & Stiles, packers, Chicago. Whether there were any hams of the weight of 12 pounds among these we can not say, as we sold them as we received them, and only the weight of the whole and the number of hams in each was known to us. The usual weight of American hams is about 15 pounds. We have no law here for the compulsory examination of hams or bacon, as is the case in Germany, for trichina, or this sad accident would, perhaps, not have occurred; but it is probable these numerous accounts, daily received, of deaths from this cause, will move the Government to take some steps in this direction.

"We remain, etc."

Mr. Lewis adds:

I called yesterday on Mr. Thelen, the poor man who lost his son and wife by this disaster, and learned from him that his son purchased the ham from Joseph Brors, with the direct *understanding* that it was *Holstein* (*German*) ham. If Brors had told him it was American he should not, he said, have bought it; he wished particularly on this occasion (he was giving a sort of Christmas feast to his friends) to have a German ham. I saw one of the children of the old Mr. Thelen who had been attacked, but who is now able to go out, but the three children of his son are still in the hospital in a dangerous state. He says there were eighteen persons who partook of this ham, all of whom were more or less affected.

In conclusion, he said he intended to bring an action against the man Brors for damages, the result of which I shall carefully watch.

It does not, therefore, seem to be proved that this particular ham nor that all of those received from Antwerp were, beyond all doubt, American. As they were bought *indirect* we can not yet know *positively* if the former owner had not opened the barrels and mixed them with other hams not American.

Brors still insists that he only dealt in American bacon, but the trial, when it takes place, will no doubt bring out the facts, and show whether it was a Holstein (German) or American ham.

It will be observed that it is not proved to a certainty that the ham which produced the said disaster was from the United States. The dealer who sold the ham in question is very soon to undergo trial before the courts. If the facts then developed shall show that the ham referred to was *not* from America, I shall lose no time in making the German public familiar with the fact.

It appears, from investigation, that pork raised in Germany is quite as liable to be infected with *trichina* and other diseases as the American article. A report which appears in the Cologne Gazette, of February 16, 1881, says:

> Last year 3,709 pigs were examined at Mülheim, on the Rhine. Among these, two were found containing trichina, and eight as being affected with "*Finnig.*" Among the sides of bacon (number not stated) imported from America thirty-seven contained trichina.

But at the present date the current of public prejudice is turned against pork imported from the United States, and the feeling is so strong at this moment that the public will not purchase in the markets meat of this description, unless it contains the mark of a public inspector as being healthy and safe.

As further illustrations of the feelings and demands of the public upon this subject, I append the following notice, which appears daily in the public journals of this city:

> The undersigned butchers hereby give notice that they have engaged the well-known and first-class veterinary surgeon, Dr. Henry Feger, to examine all their pigs for trichina, before their meat is offered for sale.
>
> CREFELD, *February* 22, 1881.

This notice is signed by 26 butchers and dealers.

If all pork, bacon, and hams leaving the United States for Europe should be carefully inspected by thoroughly qualified officials appointed

by the Government, and the barrels and canvas covering the hams should be stamped with the official seal and the personal signature of the inspector, I have reason to believe the public here would regard such marks as a sufficient guarantee of safety, and trade in this important article of American exports would soon assume and possibly enlarge its former proportions.

If a law authorizing the appointment of inspectors for such a purpose should be passed, it should contain enactments holding such inspectors to a strict accountability for any error they might make.

The strong prejudice now existing and being created in Europe against American meats would, in my judgment, speedily vanish, as soon as it should be announced that such a law had been passed and would be rigidly enforced.

A fee large enough to cover fair compensation for inspection, and to be paid by the packer or shipper, might be provided for, so that no expense for such service would fall upon the Government, while at the same time it would make it for the interest of the shipper to be vigilant and careful as to the quality and healthfulness of the meat which he would select for exportation.

I am, etc.,

J. S. POTTER,
United States Consul.

No. 91.

Mr. Grinnell to the Assistant Secretary of State.

[Extract.]

No. 55.] UNITED STATES CONSULATE,
Bremen, March 24, 1881. (Received April 14.)

SIR: The false reports set on foot by the English vice-consul at Philadelphia concerning the condition of our hogs, which has had, temporarily, such a bad effect in England and France, has been received with apathy, not to say contempt, here. The Bremen merchants are too shrewd and too intelligent to throw away their merchandise because of a false report spread abroad by speculators of a disease among hogs, which, even if it had proved true, would not have injured shipments, the disease—hog cholera—being quite distinct from trichina.

During the panic in England and France, Bremen merchants have been steadily importing our bacon, so that to-day the quantity already received during the five first months of the bacon year, November to November, is equal to the receipts of the whole year previous.

There are few complaints as to the quality or packing of our bacon; indeed, the quality is declared excellent; the boxes only are too frail to sustain the great weight—about 500 pounds—but in this I notice an improvement, notably in the packing of Henry Ames & Co., of St. Louis, and one or two Milwaukee packers, who cleat their boxes.

The article is examined only when the retail pork butcher exposes it for sale. The German Government appoint and maintain an army of argus-eyed examiners who are faithful and active Two per cent. of American bacon is said to contain trichina.

* * * * * * *

I am, etc.,

WILLIAM F. GRINNELL,
United States Consul.

No. 92.

Mr. Lee to Mr. Hay.

No. 271.] UNITED STATES CONSULATE GENERAL,
Frankfort-on-the-Main, March 31, 1881. (Received April 15.)

SIR: The outcry which has lately been raised all over the European continent with respect to American pork, on the ground of its alleged infection with trichina, makes it seem to me proper to devote a little attention to the quality, in respect to trichina, of the pork produced in this part of the world.

The methods of feeding and growing swine here and in the United States are essentially different, and this difference is, in my opinion, of a nature to produce a fair presumption in favor of the superior quality of American pork. In this part of Germany, and in most sections of this Empire, the practice prevails of keeping swine, as well as cattle and all other live-stock, constantly confined in pens and stables. The animals are rarely permitted to ramble in the fields and forests, and never in the streets. Swine are, therefore, fed mostly on slops and offal, not unfrequently containing elements not encouraging to the idea of healthy nutrition. Grass, mast, and Indian corn constitute a very inconsiderable portion of the materials upon which hogs are raised and fattened.

The continual confinement to which the animals are subjected seems also contrary to the conditions of healthy growth. Exercise, open air, and natural food are alike, by such confinement, denied them.

American swine, on the other hand, are grown mostly out of doors, where they obtain healthy food, and are less likely to consume the vermin which are popularly supposed to be one source of trichina infection. They are generally fattened on Indian corn, rather than on slops and offals.

I know of no statistics from which an accurate conclusion can be derived as to whether European or American swine are the healthier; but in the absence of such statistics the facts above stated seem to raise a strong presumption in favor of the latter. This presumption is fortified by some facts that have come to my knowledge. The instances in which trichinæ are found in German pork are quite sufficient to justify alarm as to the consumption of that article, especially in a raw state. For example, the following notices of such discoveries have appeared in the newspapers of this city during and since the year 1879:

[From the Frankfurter Intelligenz Blatt of April 27, 1879.]

In the shop of a master butcher of this city a 113-pound hog was yesterday found to be infected with trichina, and was therefore seized.

[From the same paper of September 16, 1879.]

Among the butchered hogs examined yesterday in Sachsenhausen one was found to contain trichina. The butcher was forbidden to sell the hog for other than technical purposes.

[From the Frankfurter Zeitung of September 21, 1879.]

A hog examined this morning by Mr. Magnus, of Bockenheim, was found to contain trichina. It was given over to the wasenmeister. It belonged to a butcher in the Saalgasse.

[From the Frankfurter Stadt Anzeiger of April 24, 1880.]

A 250-pound sow, from Freungesheim, was yesterday found by Mr. Inspector J. May, in Bockenheim, to be impregnated with trichina through and through.

[From the Frankfurter Zeitung of June 23, 1880.]

A hog strongly impregnated with trichina was found by the veterinary surgeon, Herr Wagner, in the shop of Butcher Smith, in Sachsenhausen yesterday, and was given over to the wasenmeister.

[From the Frankfurter Zeitung of March 22, 1881.]

The report has reached us that a hog strongly impregnated with trichina has been found in the shop of one of our city butchers.

[From the Frankfurter Stadt Anzeiger of March 24, 1881.]

A butcher at the market slaughtered a hog of 300 pounds, which, upon examination, was found to be impregnated with trichina through and through.

[From the Frankfurter General Anzeiger of March 26, 1881.]

Of 190,288 hogs which were examined in the district of Cassel during the year 1880, 66 were found to contain trichina.

It is possible that the detection of trichina in Germany may be more frequent than it is in the United States, owing to the more rigid inspection which prevails in this country, but at the same time it should be said that during the period within which the foregoing discoveries were made, no case of the finding of trichina in American pork has happened, although that article, which is imported and consumed here in large quantities, has been subjected to the same inspection as the German. It may be further stated that, up to the present time, no trichinated American pork has, so far as known, ever been offered in this market.

As to the system of inspection which now prevails here, it may be remarked that propositions are now pending for its reorganization on a basis of a greater thoroughness. In some of the German cities the butchers have themselves taken the lead in this matter, and have not only provided for a careful examination of all the pork slaughtered, but have organized insurance companies by means of which they indemnify one another for the loss of confiscated swine in which trichina are found. Provision is also made for reducing this loss to the lowest point, by the adoption of processes by means of which the fatty parts of trichinated swine are separated and purified, and the remainder of the carcass is reduced to compost for fertilizing purposes. These arrangements seem to have practical value, and may be worthy the consideration of American butchers and packers.

I am, &c.,

ALFRED E. LEE,
Consul-General.

No. 93.

Mr. Potter to Mr. Hay.

[Extract.]

No. 30.] CONSULATE OF THE UNITED STATES,
Crefeld, April 5, 1881. (Received May 6.)

SIR: The unusual state of manufactures and trade in this consular district at this date * * * seemed to make it desirable that upon

these subjects I should make a brief report, which is herewith transmitted, together with some further information concerning trichinæ in American pork. * * *

I have, &c.,

J. H. POTTER,
United States Consul.

[Inclosure in No. 30.]

Report.

* * * * * * *

There still continues to be felt among dealers in and consumers of American pork, hams, and bacon, in this part of Germany, much anxiety and alarm growing out of rumors which have recently been circulated through the public press regarding the presence of trichinæ in such articles of food.

With a view of ascertaining to what extent the trade in American meats has been injured by such rumors I addressed inquiries to some of the principal dealers on the continent, and they have promptly furnished the desired information. In some localities an extensive falling off in the demand has occurred, and in others—notably in Belgium—the trade does not appear to have been much affected. All, however, agree that under a system of proper inspection the demand for American meats of this description would soon attain proportions larger than have heretofore been known.

The following letters received from two prominent firms dealing in American meats express the average sentiments prevailing among dealers regarding the effects of the recent rumors above referred to:

Messrs. Isenbart & Co. to Mr. Potter.

ANTWERP, *March* 15, 1881.

SIR: In reply to your inquiries of the 14th instant we beg to say that our business in salted American bacon has not suffered in a direct way through the unfavorable reports which have been of late circulating regarding trichina. Indirectly, we have felt the effects of the order prohibiting the importation of these articles into France. The transactions in bacon were, for a time, particularly disturbed everywhere, and this could not have been otherwise under the circumstances.

As far as we know uneasiness on account of trichina has not been felt of late years; and the prohibition order of the French Government, according to explanations given by the minister of the interior, in the corps legislatif, is a temporary measure only. It seems that, even in France, the public does not approve of this prohibitory order of the Government, and the people do not appear to be frightened on account of the rumors concerning trichina. It is to be hoped that this measure will soon be revoked.

If the Government would issue a decree requiring butchers and dealers to have their hog products microscopically examined by public sworn examiners, it would do all that is necessary to avert dangers arising from trichinosis.

During the last eight years we have almost daily sent American bacon to Germany, France, and Holland, as well as to various places in Belgium; and during all this time we have heard of only one case (Düsseldorf) where trichina had been discovered in American hams sold by us.

Here in Belgium no one thinks of trichina. No law exists to enforce microscopical examinations, and yet not a case of trichinosis has occurred. Bacon and hams in this country are eaten only after being thoroughly cooked, and this precaution ought to be taken everywhere, and then danger is not to be apprehended.

Believe me, sir, yours respectfully,

ISENBART & CO.

Messrs. Brand & Co. to Mr. Potter.

ANTWERP, *March* 16, 1881.

DEAR SIR: We have received your favor of the 14th instant. Since the French Government has prohibited the import into France of American hog products our market has been unsettled in the anticipation that other governments would take similar action, and consequently very little business has been done since with America. The demand for the articles in question up to the time of the publication of the French

law was very fair, and we might say larger than in former years for the same time Since then, or rather since the commencement of Lent, naturally the consumption of these goods has fallen off considerably. However, this is nothing unusual. All have every reason to believe that this ridiculous French decree will be repealed within a few weeks, and that a thorough inspection of American meats by order of the Government will be instituted. It is too early to draw any conclusions concerning the recent bad reports of trichina. Our personal belief is, however, that things will go on as before; for the examination of American pork, for instance, in Germany, has so far proven that the occurrence of trichina has been most rare.

The alarming and false report of the British consul in Philadelphia, stating that large numbers of hogs in America are affected by "hog cholera," will tend to injure the trade more than the trichina scare, as the consumers of American meats in Europe are liable to believe such stories, not knowing, as we do, that those reports are started by speculators to manipulate the markets. We are pleased to learn that the United States Government has taken up the matter and that the false statements of the British consul will be contradicted.

We are glad to say that *generally* the American meats imported this year have been of excellent quality. Hams and shoulders are, however, frequently, during the warm season, spoiled in transit, and it is of the greatest importance that the American shippers of such goods should use the utmost care in exporting only *thoroughly cured meats* of the best quality, and *well packed*. Often during the summer, and till late in the fall, there have been large quantities of bad hams—almost unfit to use—which are sold at very low prices, and pass into consumption. Such goods, we fear, may have been the principal moving cause of the French Government in prohibiting the importation and sale of American pork.

Yours very respectfully,

BRAND & CO.

* * * * * * *

All of which is respectfully submitted.

J. S. POTTER,
Consul.

No. 94.

Mr. Kreismann to the Assistant Secretary of State.

No. 552.] UNITED STATES CONSULATE-GENERAL,
Berlin, April 28, 1881. (Received May 12.)

SIR: The following data, showing the results of the inspection for trichinæ at Hamburg, have just been made public in the German Imperial Advertiser, viz:

Of 55,008 American hams examined in 1880, 566 were found to contain trichinæ; of 23,589 shoulders and sides of bacon, 270 were found infected with trichinæ.

In the year 1879, of 79,864 hams, 1,087, and of 22,749 sides and shoulders of bacon, 196 had been found infected with trichinæ. In 1878, of 35,510 hams, in 297, and of 14,003 sides and shoulders of bacon in 85 trichinæ had been discovered.

The percentage during the years mentioned of American pork infected with trinchinæ has therefore been as follows: 1878, 0.79; 1879, 1.11; 1880, 1.05 per cent.

As regards European pork, it is stated that in 1880, of 39,843 hams, 14 shoulders and sides of bacon, 9,913 hogs, 146 sausages, and 24 miscellaneous pieces of pork, none were found with trichinæ. In 1879, of 28,710 hams, 739 shoulders and sides of bacon, 16,204 hogs, 15,045 sausages, and 49 miscellaneous pieces of pork, 2 hams and 1 hog were found with trichinæ. While in 1878, of 17,113 hams, 222 shoulders and sides of bacon, and 10,838 hogs, in 3 hams were trichinæ discovered.

For the home articles, therefore, the percentage of the prevalence of trichinæ is made to appear as follows: 1878, 0.01; 1879, 0.006; 1880, 0.00 per cent.

Respectfully reporting in this connection receipt of the circular, with inclosure bearing date of the 23d March last, and of the instructions, Nos. 222 and 223, dated the 5th and 13th instant, respectively,

I am, &c.,

H. KREISMANN,
Consul-General.

No. 95.

Mr. Fox to Mr. Hay.

No. 144.] UNITED STATES CONSULATE,
Brunswick, June 7, 1881. (Received June 27.)

SIR: I have the honor to transmit herewith an advertisement with translation which appeared in the "*Braunschweiger Tageblatt*" a few days since. The advertisement explains itself, for in his effort at *réclame* for his own wares the advertiser has seen fit to attack and disparage those of American manufacture. The reference to American production shows how much competition from the United States is feared, and I am sure that such an advertisement as this is much more detrimental to our export trade than an editorial or local notice would be. The average German reading it will say to himself, "This must be true to a great extent, as no one would dare to make such statements unless there be a semblance of truth therein." This, added to the fact that the hue and cry has been general against American edibles, will cause thousands to abstain from their consumption rather than run any risk.

It is naturally a cause for inquiry why the German consumers are so bitter in their denunciation of American pork, for a healthy competition must naturally tend to their advantage. I attribute it to the fact that Germans of all classes will eat *rohen schinken* (raw ham) and *schmalzbrot* (lard spread on black bread) as delicacies. This is one of the main reasons why the inspection of swine is so rigid in this country. In asking the opinions of several physicians about raw ham, I found the medical fraternity does not agree. One physician maintained that it was delicious, digestible, and especially good for weak stomachs. Another declares that the practice of eating raw ham or raw meat of any kind is detestable, but the majority of Germans incline to the former view of the matter. It is therefore not to be wondered at that they are averse to American hams, taking into consideration that they have been heralded from one end of Europe to the other as totally unfit for consumption.

I earnestly join in the suggestion of my several colleagues and urge the necessity of thorough inspection of edibles before shipment. In a late conversation with a German merchant of recognized broad commercial views, and a thorough business man, I complained of the harshness with which our merchants were treated by those of his country. This gentleman replied "We need you; we must eat your pork, bacon, and canned meats, but we want to know what we are eating. Why does not your Government give us an official guarantee that the goods are pure?" I think this states the matter in a nut-shell. Inspectors of provisions should be appointed whose sole business would be to inspect provisions for export. These should be *United States officers*: this latter I merely make as a suggestion, for discussion and interchange of opinions may show such procedure to be incompatible with our business

system. The necessity for immediate action is, however, clear. We can trade successfully with Germany, who needs us, but we must have the good-will of the people, and in order to have that our merchants must maintain their reputation for integrity and fair dealing.

I am, etc.,

WILLIAMS C. FOX, *Consul.*

[Inclosure in No. 144.]

Translation of the advertisement referred to by Consul Fox.

MARGARINE OR SPAR BUTTER.—The results of the research, and the opinion of the city *control und Auskunfts station* of the agricultural institute of the Kiel University, and also of the chemist, Dr. Uler, in Hamburg, show that the above-mentioned spar-butter, as manufactured by me, contains a larger proportion of fat and is more durable than *good* butter, with the same appearance and taste, and can therefore be used as a perfect substitute, and is at all events much better than the poorer qualities of natural butter. Every chemist examining the same must obtain a like result. My margarine butter contains 85 to 90 per cent. clear butter fat, and is *better flavored, more nutritious, and healthier* than the American or so-called "Hamburg" lard. Owing to the fact that it is customary in America to feed corn, the lard contains a large quantity of oil, and is perfectly fluid in summer. Before it is sent to market, as the season may be hot or cold, from 10 to 20 per cent. of stearine is added in order to give it consistency. The stearine is indigestible, and hence the many stomach complaints caused by cooking with American "Hamburg City lard," causing belching, etc.

The process of manufacture of my margarine butter consists mainly in using fresh, clean-washed suet, which is placed under a cold pressure of 400 centners. The soft parts of the fat (margarine) are pressed out and then churned with milk and cream. The milk and cream give the aroma and flavor of fresh natural butter. In the manufacture of American lard, stearine is *added;* in my margarine the stearine is *abstracted.* My article is therefore healthier and more nutritious than American lard.

I am, etc.,

T. CANISIUS,
United States Consul.

No. 97.

Mr. Fox to Mr. Hay.

No. 146.] UNITED STATES CONSULATE,
Brunswick, June 13, 1881. (Received July 6.)

SIR: I have the honor to send you inclosed an article with translation from the Pesther Lloyd, and published in the Braunschweiger Tageblatt of yesterday. From this it appears that American lard is also to suffer banishment. With the exception of an advertisement referred to in a previous dispatch, this is the first intimation I have that any objections had been raised to this article. American lard has long been a standard article here, and it is to the interest of our refiners to give this matter attention. I trust the Government will take decisive action toward refuting the manifold charges against our productions; otherwise it may be regarded as certain that sooner or later the portals of Germany will be closed against them.

I am, etc.,

WILLIAMS C. FOX, *Consul.*

[Inclosure in No. 146.—Translation of extract from Braunschweiger Tageblatt of June 12, 1881.]

The questions propounded to the Hungarian National Sanitary Council by the ministry of finance, viz: Whether lard imported from America was to be considered injurious to health, and whether it should be considered necessary to prohibit its importation?

These questions were discussed in session of June 2. The report of the referee, Dr. Ludwig v. Gross, was accepted and the following resolutions adopted:

Sanitary demands in relation to animal food are only fully complied with when a thorough knowledge can be obtained of the animal's origin and the mode of feeding, and it is further absolutely necessary to know that the animals are in healthy condition, and to exercise a control in this particular. Our laws and statutes provide and give sufficient guaranty against the sale of lard from diseased swine. It is, however, practically impossible to exercise this control over lard imported from America; and whereas it is shown by reliable reports that whole shiploads of salted and smoked meat of animals infected with disease during an epidemic were shipped to Europe, and that the consumption of the same caused sickness in Barcelona and Stockholm, it is correct to presume that the fat of those animals, of whose origin we know nothing, has been shipped to European markets and will prove injurious to health. This danger is greater from the fact that lard in America, especially Chicago, put up for export, is pressed out by machinery and not, as with us, by melting. The relative certainty that the *trichinæ spiralis* is destroyed, as is the case where intense heat is employed, therefore disappears. Therefore, whereas the fat of the diseased swine is injurious to health, and as the rules and regulations in force for the control of inland products must be equally applicable to products imported from America, and as any control as to the origin of American pork is impracticable, the Hungarian National Sanitary Council holds the opinion that lard imported from America is dangerous to health, and that its importation into the Hungarian dominions should be prohibited for the same reasons which cause the prohibition of pork and bacon.

No. 98.

Mr. Fox to Mr. Hay.

No. 147.] UNITED STATES CONSULATE,
Brunswick, June 17, 1881. (Received July 14.)

SIR: I have the honor to inclose an extract from the Braunschweiger Tageblatt of June 15, with translation, the same being the synopsis of a lecture delivered before the General Health Society in Berlin in relation to American meats.

In reference to the attack on canned corned beef, I can only say that I have eaten the Chicago and Saint Louis brands ever since I have been here, and have never noticed the slightest defect; neither has any been brought to my notice. As many of my acquaintances partake of this meat daily, I am sure that I would have heard it if there were any complaints to be made. As Geheimer Rath Roloff asserts, it is probable that the meat is eaten in fourth-class restaurants; it does not, however, alter the fact that it finds its way to the first tables of the land.

I often hear the cry, "You are killing us by *competition*," but never the complaint of *poison*.

I have, &c.,

WILLIAMS C. FOX, *Consul*.

[Inclosure in No. 147.—Translation of article from the Braunschweiger-Tageblatt, June 15, 1881.]

THE SANITARY DANGER OF IMPORTING AMERICAN MEATS.

In a late sitting of the German Society for the Maintenance of Public Health, Privy Counsellor Roloff discussed the sanitary risk in importing American meats.

We commend to the earnest thought of our readers the following communications, coming as they do from such recognized authority. Beginning, Herr Roloff laid great stress upon the necessity for rules to prevent the consumption of the flesh of diseased animals. He said, in course of time we have become acquainted with various diseases in animals which render their meat unfit to be eaten, while formerly such animals were slaughtered and no further notice taken.

The best possible guaranty is given by the institution of public slaughter-houses, and in order that inspection previous to as well as after death is possible, slaughtering there should be made compulsory. It is possible that certain stages of disease could be discovered in living animals with certainty, whereas after death the traces would disappear or the existence could not be established. Such diseases as tinnen, lungencirrhosis, and trichinæ can be easily detected after the slaughtering; the inspection is, however, uncertain if the meat has been cut up, or that of several animals has been mixed together. The inspection for trichinæ is easy, from the fact that we know the parts where they exist; these parts are removed, and if they are found to be free the swine can be pronounced clean. If the flesh of a swine has been mixed, and especially if that of several swine has been brought together, the inspection is then difficult, as the infected parts cannot be reached. Similarly difficult is the inspection of beef (*rindfleisch*), known to the trade as American corned beef. The American statistics show that from July 1, 1876, to June 30, 1877, 23,750,000 pounds (English) of bacon and hams, and from July 1, 1876, to June 30, 1878, 28,000,000 pounds, equal to 25,000,000 German pounds, of meats, sausage, especially canned meats (of which there were 5,000,000 pounds), were imported.

It is well known that trichinæ is of frequent occurrence in America; therefore sausage, bacon, and hams produced there must be considered very dangerous.

Inspections at different points show that from 1 to 4 per cent. of these preserves contain trichinæ. As may be easily foreseen, trichinæ will increase in America unless steps are taken to prevent it. In latter years another disease among the swine has prevailed in America, a malignant epidemic, which, as a rule, is deathly. For instance, in the previous year 1,390,000 swine died of this disease in the State of Illinois. Experiments in feeding the carcasses of these swine to others brought on the same disease with deathly results. Experiments by vaccinating herbivorous and carnivorous animals with dried parts of swine affected with this disease shows that the same is transferable, though in a milder form than by swine. Merely drying and smoking the meat does not banish the contagious matter; that a human being has become sick from eating such meat has not been proven, though it is not at all improbable.

As to the fact that these swine are slaughtered in America there is not the slightest doubt. An Englishman, who has lived there a long time, says in an English periodical that after what he has experienced and seen himself, that large quantities of these animals are used on this side of the ocean in one or another form as edible he would, under no consideration eat pork that he knew came from America. Furthermore, animals are slaughtered in which the disease is in a state of incubation.

Just as little as the inspection of sausage (*wurst*) can be depended upon, so it is with corned beef. In the preparation of this corned meat the flesh of many animals is mixed together. The upper layer can be healthy, while the disease is in the lower one. Many instances of sickness caused by the eating corned beef are on record, and in America attention has been called to the danger again and again. If it has not been thoroughly established that these sicknesses have connection with the eating of the meat, the suspicien is nevertheless very strong that such is the case.

In Holland, as much as 99 milligrams of lead was found in many of the cans, a predominance of solder that can be rendered harmless by properly examining the upper layers.

There exists also a cattle disease in America, a so-called Texas fever. This disease was formerly thought to be rinderpest, and as a rule resulted in death in about six or seven days after the outbreak. In later years this epidemic has made great strides throughout the land, and has not thoroughly disappeared. Animals affected with this disease can not be slaughtered, because the disease remains latent for some time, and whereas an inspection does not take place in America, preventive measures can only be brought to bear in the fewest instances.

It is an error to suppose that diseased animals are slaughtered because they are of little value. Notwithstanding that the amount of cattle has doubled in later years, the epidemic has been so great that the price has continually risen.

There is also a difference between cattle raising and cattle mesting. A lean ox costs in Chicago £7, and after mesting much more. In New York £16 to £17 is paid for an ox ready for slaughtering; therefore it is not to be supposed that the dealer will set aside oxen even when he notices that the same shows symptoms of disease.

In the communications of the health office (*Gesundheits-Amt*) of late date, there is a report that in one place a business is made of using diseased meat in preparing the canned beef. It is stated that a doctor of medicine, who inspected a certain factory, found 13,000 pounds of diseased horse flesh and mutton; further, 200 pounds sausage (*wurst*), colored with ocher in order to cover up its bad appearance. He says that he never saw such a nauseating mixture of meat in his life.

We have further authority that the flesh of diseased animals is used for preserves. The art of preparing the meat for canning gives no security that all infectious and contagious matter is destroyed.

We can not admit that American sausage and canned meat are so necessary to our existence that we can pass over their little defects. The 5,000,000 pounds of canned meat and sausage which were imported into Germany in 1876 may be calculated to have been produced from 16,000 half-fat oxen, one-fifth part of the oxen consumed in Berlin. The abandonment of this importation would be much easier from the fact that the price, 1,757 marks, is not reasonable, because the cans are filled with worthless meats, which are rich in sinews, &c. Deducting these, a can contains scarcely 700 grams of meat. When we pay 2 marks per kilogram (2 pounds) for tolerable meat, we buy much cheaper than we buy canned meat. In England it is eaten more especially by working people and in fourth-class restaurants.

It must be expected that with our large slaughter-houses the industry of preserving meat will also be started, and then we shall have healthy canned meats at perhaps less prices.

During the discussion Herr Mehlhausen stated that he had used American meat sin his family, but had abandoned them as impracticable.

Herr Eulenberg pointed out that in all cases of sickness, produced by eating canned beef, the symptoms were the same as result from eating rotten meat.

Herr Weise believed that many cans contained pork as well as beef.

[Extract.]

No. 12.]

UNITED STATES CONSULATE.

Geestemunde-Bremerhaven, July 12, 1880.

SIR: * * * I recently published the official report from the State Department relative to the disease of American hogs. I see now in the German papers that a certain Dr. Roloff, of Berlin, attempted to make the public believe that our corned beef as well as canned meats, found

in nearly all the large European markets, is unhealthy, asserting that diseased cattle were slaughtered for the purpose, and the meat put up with healthy beef. This willful misrepresentation was enunciated in public lectures, and was circulated everywhere through the German press. If the State Department would authorize an investigation as to the truth of this assertion, the German public, I am certain, would rather believe the State Department's official report than Dr. Roloff's affirmations.

I am, &c.,

WOLFGANG SCHOENLE,
United States Consul.

[Inclosure in No. 14.]

AMERICAN CANNED MEATS AND THE GERMAN TARIFF.

There is much ingenuity in the persistent warfare waged in most of the European countries against American provisions, especially salted pork, lard, and canned meats, and these attacks still continue as bitter and persistent as ever. The contest is at intervals taken up and fiercely carried on under the pretense of protecting the sanitary condition of the people, and while the masses have been systematically frightened into the trichina scare, another method has been resorted to in Germany for the purpose of hampering the importation of canned meats, if not putting a regular embargo on them. The reckless reports circulated lately in several German prints, that the canned meats are prepared in the United States from the flesh of diseased animals' together with other vindictive diatribes, setting forth the danger of using these preserved provisions, did not cause any great falling off in the consumption of the same. Their superiority over other conserved meats has been recognized and appreciated, and they have grown so rapidly in popular favor that they are now sold in almost every retail grocery in the principal German cities. In order, however, to drive these articles of food out of market and render their importation impossible, recourse has been had in Germany to an extraordinary custom-contrivance, which has hardly a parallel in the history of tariff laws.

Since the adoption of the new German tariff, about two years ago, canned beef, tongues, meats, soups, and mince meats have been classified under the head of "slaughtered and prepared meats," and are subject to a duty of 12 marks ($2.86) per 100 kilograms (220 pounds avoirdupois), a duty which represents about 15 per cent. of the value of the merchandise.

One day, however, a custom-house official in Flensburg made a startling discovery. He found that labels were affixed to these tin boxes, and consequently the cases are technically in connection and coherence with another material. Inasmuch, according to instructions, as the packing thus classified is liable to the duties on the whole object, such goods, according to the official register, came under another heading in the tariff, and we find corned beef and similar articles classified by this custom-house wiseacre under the head of *iron wares*, such as knives, scissors, hair-pins, etc., and subjected to a duty of 24 marks ($5.72) per 100 kilograms, just doubling the amount

to be paid. The custom-house director for Schleswig-Holstein, to whom the interested party applied for redress, confirmed the decision of the subordinate officer, and the minister of finance at Berlin sustained it, and issued instructions (June 30, 1881) to all the head custom-houses to be guided by said decision, so that henceforth duties on corned beef, etc., in labeled boxes, are to be collected "under the classifications of knives, scissors, hair-pins," etc. Thus the contents of the boxes are not treated as dutiable, but simply the labeled boxes themselves. And some dealers in imported meats at Hamburg and Leipsic, who were not able to comprehend the profundity of this ingenious interpretation of the tariff laws, submitted a memorandum in reference to the case to the Bundesrath, the last resort and final arbiter in custom affairs. But this august body has not yet rendered decision on the subject, and the imperial chief custom-house, without waiting for such decision, has made arrangements to proceed to the collection of the after-payment of duties on the articles above referred to, so that by this operation the retail dealers are simply the losers of this additional duty of 15 per cent., as the contents of these boxes had been eaten up long ago. It is obvious that this arbitrary and unjustifiable increase of import duties on canned meats must work as a prohibitive clause, and such an interpretation of the tariff laws is in direct violation of international comity, and unjust in its application. As a result of such proceedings, the question may probably arise for consideration and legislation of the American Government, whether it be not time to devise retaliatory measures against any oppressive and unfair ruling, prejudicial to the interests of American commerce with Germany.

WOLFGANG SCHOENLE,
Consul.

Washington, February 8, 1882.

SIR: I inclose herewith for your information a copy of a letter from Messrs. William Archdeacon & Co., of Indianapolis, Ind., stating that they have been advised that the German authorities have prohibited the importation of one hundred barrels of pigs' tongues shipped by them

to Altona, Germany, and also that a general prohibition has been issued by the Government of Germany against American pork.

I will thank you to lose no time in calling the attention of the German foreign office to the case of William Archdeacon & Co., with a view to securing for them such relief as the facts may be found to make necessary.

I have furthermore to instruct you to report to this Department at your earliest convenience all the information you may be able to obtain as to any recent action by the German Government in reference to the importation of American pork into Germany; and all the facts which may tend to throw any light upon the subject.

I am, etc.,

J. C. BANCROFT DAVIS,
Acting Secretary.

[Inclosure in No. 301.]

Messrs. William Archdeacon & Co. to Mr. Frelinghuysen.

INDIANAPOLIS, *February* 5, 1882.

DEAR SIR: We received an order early in December from Altono, Germany, for 100 barrels of pigs' tongues, and shipped same early in January. We are now in receipt of a letter from the bank in Hamburg saying "that American pork has been prohibited in Germany," and our goods will not be allowed to land there.

The shippers and shipping agents from whom we have sought information deny that such is the case, and our goods in the meantime lie there.

If you can give us any information on the subject you will confer a favor on

Yours, respectfully,

WM. ARCHDEACON & CO.

No. 103.

Mr. Everett to Mr. Frelinghuysen.

No. 295.] LEGATION OF THE UNITED STATES,
Berlin, February 11, 1882. (Received March 2.)

SIR: In accordance with your instruction, No. 298, of the 26th ultimo, received yesterday, I have the honor to state that, on inquiry of leading importers here, I find that the special custom-house regulation, or rather the construction of it therein mentioned, classifying American canned beef as iron ware, has within the last ten days been suspended. There is always, however, the possibility of its being again applied, which greatly interferes with making contracts, besides the additional grievance, which is perhaps more objected to by importers than the duties themselves, that all tariff laws are retrospective, and thus every new regulation, especially if it increases the existing duty, may be applied to all goods of the same class imported during the previous twelve months, whether sold or not. Nor are goods allowed to be exported out of bond before paying duties, as in England and America. Whether such retrospective application occurs when duties are diminished or taken off, I have not yet succeeded in positively ascertaining.

The withdrawal of the special decision in question is probably mainly due to the fact that it is successfully evaded by the importation of the beef in cans without labels, which latter are sent separately by post and affixed subsequently to the payment of the duties; and also to the proposed stamping of the cans as is done in the case of French canned peas.

A more onerous duty has, however, been under the same regulation put on American shredded codfish, which last year came in thin wooden boxes, such as Swedish matches are packed in. The duty on wood being higher than that on fish, this article of food was then taken as "wooden ware" in the same defiance of natural history as when beef was classed as iron ware. This, however, has been evaded by packing the fish in pasteboard boxes. Sugar-cured hams, being covered with linen cloth, are by the same rule classed as "fine linen," and subjected to a much heavier duty than pork, etc.

English emery powder, which is one of the very cheapest articles of commerce, is, if it comes in tin canisters, as it usually does, taxed as iron ware, which effectually stops any extensive sale of it. A peculiar kind of liqueur from Russia in bottles, which are partly protected with a silken cover, is classed as "silk goods" which are taxed higher than spirits.

Where the case containing the food does not give a sufficiently high duty, the expedient is resorted to of classifying the goods "as fine table delicacies," which bear a very high duty. This is the case with our tinned tomatoes and potted meats, which are thereby restricted to a very small sale as a pure luxury, and yield little or no profit to the importers. A special instance of the consequences of this interpretation of the tariff laws deserves mention. An order was given by the army commissariat department to an American importer for a peculiar preparation of beef and vegetables mixed and packed in tin cases, of such a form that the contents could on the march be quickly heated and eaten from the cans as dishes, the latter being then thrown away. The order was satisfactorily filled, but as the custom-house officials insisted upon classing the article as "table delicacies," though knowing it was for the army, the importer was unable to make any profit on his contract, which was based on the price of "beef," and declined to furnish any more. A similar proposal to furnish the German fortresses with canned food, to be stored away in case of siege, was abandoned for the same reason.

Every kind of representation and appeal has been made by importers to the treasury department here, but without avail; the reply being that domestic manufacturers must be protected, and that American tariffs are equally oppressive. In spite of it, however, the German enterprise does not appear to supply the demand.

The obnoxious regulation is based on the idea expressed in the American tariff where articles consisting in part of steel, silk, or spirits are taxed at the same rate as these latter; but the difference lies in the fact that in the present case the materials regulating the duty can not by the most liberal construction be taken to form a part of the food products imported; nor is this claimed by the German Government. The unreasonableness of the regulation is shown by its not being applicable when the tin cases have no labels on them. Bar-iron might just as well be admitted duty free because it has not fancy-colored labels; and its unjustness is evident from the fact that as all duties are here levied according to the weight of the goods, the tins are falsely taxed as so much iron, for the principal part of the weight is in the contents. Were the beef and the tin cans taxed on different scales there might be some appropriateness in the law.

I shall, in accordance with your instructions, keep myself informed in regard to these tariff regulations, and should I find that there is any probable advantage to be gained by an official appeal to the Government I shall at once make it and report the result to the Department.

I herewith inclose the ministerial decree in regard to canned beef, by which it will be seen that only such coverings as are intended to be permanent are to be considered as dutiable, and that in these cases the material, whether of the case or its contents, which bears the highest value, is to be taxed. It remains to be seen how this will be interpreted.

I have, etc.,

H. SIDNEY EVERETT.

[Inclosure in No. 295.—Translation.]

Decree of the royal finance ministry concerning meat put up in white iron boxes with paper labels.

BERLIN, *January* 23, 1882.

In response to your report of the 11th instant, I declare myself in accord with you in the view you express therein, that upon meat imported from abroad in white iron boxes with paper labels as sole covering, in accordance with the provision in the first subdivision of instruction, Item IV of the official tariff, the rate of 12 marks per 100 kilos is to be applied pursuant to No. 25 g 1 of the tariff, and that therefore the covering referred to is not to affect the duty rate.

Where, in the official list of articles, in the note to "etuis" it is prescribed as to tare in accordance with the provisions of § 4 that etuis, cases and *other coverings*, which are intended to serve further as receptacles for the wares they contain, shall be subject to duty as a whole, taken together with the wares according to the rate of tariff due upon the higher taxed article, be it the etuis taken alone or its contents considered separately from the etuis, it is to be understood that under the *other coverings* only such coverings are intended as are according to their character and purpose to be reckoned as equivalent to etuis.

The MINISTER OF FINANCE.

The Royal Provincial Tax Director,
Mr. KRÜGER,
Altona.

No. 104.

Mr. Everett to Mr. Frelinghuysen.

No. 298.] LEGATION OF THE UNITED STATES,
Berlin, February 23, 1882. (Received March 18.)

SIR: I have the honor to acknowledge your instruction No. 301, of the 8th instant, received this day, inclosing a complaint of Messrs. William Archdeacon & Co. to the Department of State, that the importation of American pork has been prohibited in Germany, and that they are thus prevented from bringing into Germany 100 barrels of pigs' tongues which they have shipped to Altona, and directing me to call the attention of the foreign office to the matter.

In reply, I have the honor to state that this prohibition of the importation of pork is not new, but dates back to June, 1880. On the 29th of June, 1880, Mr. White informed the Department by telegram, as also in dispatch No. 136, of the prohibition by imperial decree of the 25th June, 1880, of the admission of all kinds of pork except hams and sides of bacon, and inclosing a copy with translation of the decree. Mr. White, at the same time, stated that in an interview with Mr. von Hoffmann he had ascertained that the reason of the prohibition was that trichina could not be easily detected except in these two forms of pork.

From the special mention of hams and bacon in the decree, I have no doubt that tongues are included in the category of forbidden forms of

pigs' flesh, but I will, in accordance with your instructions, address the foreign office on the subject and ascertain whether there is any special exemption for pigs' tongues, and, in case there is not, whether it would be possible to pass this one shipment of Messrs. Archdeacon & Co., after a rigid inspection, to insure the pigs' tongues being in a fit condition for food.

I would also state in this connection that in December, 1880, Messrs. Armour & Co., of Chicago, the largest pork-packers in the world, addressed a similar complaint to this legation, that they were debarred by the above-mentioned decree from exporting their canned brawn to Germany, and they claimed that this particular preparation of pork was safe from danger of trichina, as it had been subjected to a temperature of 250° Fahrenheit, a certificate of which could be sent with each shipment. They were advised, in reply, to lay their case before the Department of State, which would then instruct the legation to intervene in the matter, if it should be thought best. I trust that I shall not be exceeding my instructions if I include Messrs. Armour & Co.'s grievances with those of Messrs. Archdeacon & Co. in my note to the foreign office.

I have, etc.,

H. SIDNEY EVERETT.

No 105.

Mr. Everett to Mr. Frelinghuysen.

No. 308.] LEGATION OF THE UNITTED STATES,
Berlin, March 27, 1882. (Received April 13.)

SIR: Referring to your instruction No. 301, of the 8th ultimo, and my reply to the same of the 23d ultimo, I have the honor now to inclose the correspondence between this legation and the foreign office on the subject of the importation of pork products, by which it will be seen that the German Government refuses to modify its prohibitive decree of the 25th June, 1880, so as to allow the consignment of pigs' tongues from William Archdeacon & Co. and the brawn of Messrs. Armor & Co., of Chicago, to enter Germany.

I have, etc.,

H. SIDNEY EVERETT.

[Inclosure in No. 308.]

Mr. Everett to Count Hatzfeldt.

LEGATION OF THE UNITED STATES,
Berlin, February 25, 1882.

The undersigned, chargé d'affaires *ad interim* of the United States of America, has the honor, by direction of his Government, to call the attention of his excellency Count Hatzfeldt, provisional secretary of state for foreign affairs to the subject of customs duties on articles of food from the United States coming into Germany.

The undersigned would respectfully represent to his excellency that the American Government is informed by the reports of its consuls, as well as by the complaints of individual exporters, that articles of food, such as beef in cans, hams in cloth covers, and salt fish in wooden boxes, are not allowed by Germany to pay duties, as in other countries, under the class of imports to which they belong, but are taxed by weight under the class of material in which the boxes in which they are packed are made. For instance, canned beef, instead of paying a duty of 12 marks per 100 K. according to No. 25, g. 1, of the official tariff of July 15, 1879, is taxed at 24 marks per 100 K.

as iron-ware, under No. 6, c, 3, B, because it is packed in tinned-iron cans, and iron bears a higher rate of duty than beef. Likewise, dried salt fish, instead of coming in as fish, because it is packed in wooden boxes like Swedish matches pays as *wood* a much higher duty. It further appears that if the cans have no labels, the lower duty on beef is charged.

The undersigned, after a careful study of the tariff laws, fails to understand such an interpretation of them by the officers of customs, especially as by a treasury order of the 23rd January, 1882, Mr. Krüger, the collector at Altona, is informed that the nature of the covering is not to affect the duty rate of goods. Notwithstanding this order the legation is informed that at Hamburg American beef is still taxed as iron-ware, because the iron cans are packed, simply for the purpose of transportation, in large wooden cases. It is surely superfluous, however, to remark that the beef is the only really dutiable article in this instance, as it is shipped as beef in invoices and bills of lading, and sold as beef, both wholesale and retail, sometimes even without the cans, by the slice.

The undersigned trusts that the imperial finance ministry will, when their attention is called to it, see the injustice of taxing these nourishing and cheap articles of food under the class of material which does not in any way enter into their composition, and only serves to protect them during transportation, just as the ship protects them on the sea, or the railway wagon on land. It would also appear to be an error to tax them as so much *weight* of iron or wood, as the principal weight is not in the iron cases, but in the beef. Therefore, if the iron or wood must be taxed it would seem to be more correct to tax them by their own weight separate from the beef or fish, and in addition to the tax on the beef or fish taken by themselves, which latter could even be increased if necessary.

The undersigned, in the hope that his excellency will give this matter his early attention, and endeavor to meet the apparently reasonable complaint of the importers, avails himself of this occasion, etc.

H. SIDNEY EVERETT.

[Inclosure 2 in No. 308.—Translation.]

Count Busch to Mr. Everett.

FOREIGN OFFICE,
Berlin, March 22, 1882.

The undersigned has the honor to inform Mr. H. Sidney Everett, chargé d'affaires of the United States of America, in reply to the esteemed note of the 24th ultimo, concerning a consignment of American pork which has been detained at Altona, that the prohibition of June 25, 1880, is still in force, and is especially applicable to prepared pigs' tongues.

After a careful examination in the proper quarter of the facts in the case, it has not been considered feasible to make an exception to the existing prohibition in favor of the large consignment of pigs' tongues, and the preparation known as "brawn," referred to in the esteemed note.

The undersigned avails, etc.

BUSCH.

No. 106.

Mr. Schoenle to Mr. Frelinghuysen.

No. 21.] UNITED STATES CONSULATE,
Barmen, March 30, 1882. (Received April 19.)

SIR: I have the honor to transmit herewith a special report on the latest tariff discrimination practiced by German customs officials against American hams, and I trust the statements will be of some interest to the Department and the American meat exporters.

I am, etc.,

WOLFGANG SCHOENLE,
United States Consul.

[Inclosure 1 in No. 21.]

Tariff discriminations in Germany against American hams.

There seems to be a determined and increasing effort on the part of the German customs officials to greatly impede, and even absolutely prevent, the future importation of certain American products, especially provisions, by forced constructions of the tariff regulations. These tariff anomalies are lately repeated so continually and systematically, that a preconcerted action of the ruling customs authorities can hardly be questioned. While they have not long ago contrived to double the duty on canned meats by taxing the labels on the tin boxes, they have recently hit upon the idea to subject to a duty of 80 marks ($19.04) per 100 kilograms all hams wrapped up in canvas; thus classifying hams under the head of "cotton goods."

By assuming the cotton tissue an essential part of the ham, and thus taxing the wrapper instead of the ham, the duty has been nearly septripled, having been raised from 12 marks ($2.86) per 100 kilograms to 80 marks ($19.04) per 100 kilograms.

This invidious tariff discrimination against American hams (for only American hams are inclosed in a cotton tissue) has been enforced first at the custom-house in Bremen, about the beginning of February last, and since that time has been put in operation at several other custom-houses in the German Empire. A case of that kind occurred only about a week ago at the custom-house in Hanover, where American hams, consigned to an importing house in Barmen, have been subjected to the above-mentioned exorbitant duty. The party interested has paid the duty under protest, and is about to seek redress with the minister of finance in Berlin. Similar protests have already been entered against the capricious interpretation of a clause in the tariff by several importers in American meats. That such an oppressive and unfair ruling is almost equivalent to a formal interdiction of the importation of American hams in Germany is obvious. In submitting this last tariff curiosity without any further comments, I can, however, not help making one more observation, namely, that the more they increase taxation on American food product *in* Germany the more they increase emigration *from* Germany.

WOLFGANG SCHOENLE,
Consul.

UNITED STATES CONSULATE,
Barmen, March 30, 1882.

GREAT BRITAIN.

No. 107.

Mr. Livermore to Mr. Hay.

No. 87.] CONSULATE OF THE UNITED STATES,
Londonderry, October 23, 1880. (Received November 9.)

SIR: In conformity with instructions contained in the circular of the Secretary of State, dated on the 1st day of July, 1880, requiring the consuls "to prepare and forward to the Department reports upon all subjects which may be calculated to advance the commercial and industrial interests of the United States," "and to give such information as may aid manufacturers, agriculturists, and others to understand the particular wants and requirements of the several markets," I think it is proper that I submit a statement of a few facts, together with some suggestions relating to the trade in bacon and hams.

During the year ending on the 31st of August last there arrived at this port 3,636 boxes American hams, valued at $176,709, and 8,962 boxes of American bacon, worth $348,342; in all, $525,051, and probably more, yet still a small amount in comparison with the entire sum of those commodities produced in the United States and exported thence.

The fact that seems to demand attention is that they are retailed here at from one-half to three-fourths the price that is paid for English and Irish bacon and hams, and that a corresponding difference prevails in the wholesale trade by reason of the generally recognized inferiority of the American product. True it is that to some, and to a growing, extent selections are made from the latter, which, after washing and drying,

are put upon the market without being distinguished as inferior articles, and perhaps eventually cease to be recognized as American. This is not due to any improper act or concealment on the part of the dealers successively handling the goods, but to the fact that no small quantity of the American is quite as good as the domestic product. Of course the care and skill with which the selection is made are rewarded with a good profit to those who make it.

Still there remains a large proportion of the American bacon and hams of undoubted inferiority to the rival article, and a prestige is thus created injurious to those who have succeeded in producing an article that, but for the presence of the bad company in which it is found, would enter upon the competition without fear. The Irish peasant now sells his hog and with the proceeds buys American bacon.

For this inferiority of our goods one cause assigned is want of skill or fidelity in the process of curing, by reason of which the American meats can not be kept so long as the British, and the best lots do not yield nearly so large a proportion for special selection as do the rival lots.

Another cause is said to be the American fashion of feeding the animal on Indian corn exclusively, the consequence of which is said to be that their hams and bacons, in the process of cooking, melt or dry out largely, so as to leave a very small and worthless residuum, resembling what is known as scraps. This theory seems sufficiently plausible to demand the attention of those who are engaged in fattening this animal. He is well known, when at liberty, to be choice and dainty beyond most domestic animals in the selection of his food, but easily induced when in confinement to consume largely of almost anything thromn to him. But this indiscriminating absorption and assimilation may not of necessity be a healthy function, and it may be worth the experiment to learn whether some variety in the feed, by being more in consonance with the instincts of the animal, may not be attended with desirable results in the particular mentioned.

Climate has been named as another possible cause of the mischief; and in the extreme heat of an American summer it may be important to provide some protection for the prisoner, perhaps uncomfortable from overfeeding. But the hog is found to thrive in nearly every climate in which men are found, and the probability is that the impediments to the successful feeding and curing of pork are quite surmountable, if pains be taken to ascertain and surmount them.

It is certainly an important thing that American productions of various descriptions are introduced into foreign markets at prices that insure a ready sale for them. Yet it is a subject for regret and mortification if, through any preventable causes, they appear there only as second-rate goods.

Your obedient servant,

ARTHUR LIVERMORE.

No. 108.

Mr. Evarts to Sir Edward Thornton.

DEPARTMENT OF STATE,
Washington, March 7, 1881.

SIR: I have the honor to call your attention to the report which reaches this Department, that the consul of Her Majesty at Philadelphia has recently cabled to his government that excessive mortality has

prevailed among western swine during the past season, and that over 700,000 had died of hog cholera in Ohio alone.

The injurious effects which such a statement could not fail to cause to a large and profitable branch of American industry, if substantiated, has led this government to take the most active measures to investigate the truth of the rumor. The concurrent testimony of the authorities, both Federal and State, of the Western States, covering all the districts where swine are raised for a market, leads this Department to regard the rumor as not only without good basis, but as absolutely false. Neither infectious disease or unusual mortality from epidemic causes are known to have prevailed during the past two years; on the contrary, I received the most positive assurance from all sources that the condition of the hogs in the West was never more healthy than during that period.

In view of the natural alarm caused by the unverified statements of the consul at Philadelphia, and the irreparable damage which may ensue to wide-spread interests, without its immediate and positive contradiction, I hasten to bring the matter urgently to your attention, to the end that the denial of this hasty assertion may be so prompt and authoritative as to undo the harm already done.

I have, etc.,

WM. M. EVARTS.

No. 109.

Sir Edward Thornton to Mr. Evarts.

WASHINGTON, *March* 7, 1881. (Received March 7.)

SIR: With reference to your note of to-day's date, I have the honor to inform you that the statement to which you refer, concerning the mortality among swine, must have arisen from a report which was made on the 21st of December last by Mr. Crump, then acting consul at Philadelphia, copy of and extract from which is inclosed, and which was published at London in the Times of the 19th ultimo.

You will perceive that it refers to Illinois and not to Ohio. I have already made inquiry upon the subject, by telegraph, of Her Majesty's consul at Philadelphia, who has informed me by the same means that the statement was made upon good authority; but I expect to receive a further report from him to-morrow.

I have, etc.,

EDW'D THORNTON.

[Inclosure.]

Extract from Mr. Crump's report on swine disease, December 21, 1880.

From a sanitary view it may not be impertinent to call your lordship's attention to the immense mortality among swine by disease known as "hog cholera," of which about 700,000 head have died this year in Illinois. Immense quantities of pork are annually shipped to the United Kingdom, and as the disease *trichina spiralis* seems to be on the increase, the subject is not unworthy of attention. Two persons recently died in Milwaukee and one in Chicago. In the latter city several persons are ill with it at the present time, and one entire family attacked about a month ago are not yet out of danger. A case just reported from Kansas describes the symptoms of the disease when it attacks the human family. In this case the victim is a farmer. He had been ill for some time and became much reduced in flesh. Upon consulting a physician, trichinæ were found, worms were in his flesh by the million, being scraped and squeezed from the pores of the skin. They are felt creeping through his flesh,

and are literally eating up his substance. The disease is thought to have been contracted by eating sausages.

Trichina spiralis may be conveyed to human beings, it is thought, by gross adulterations used in the manufacture of butter and cheese, of which there is some exportation to England. The former is adulterated with lard and grease, which, in many cases, are taken from the places where hogs die of disease and then rendered into grease, glue, etc., and the latter by a commodity called "antihuff."

No. 110.

Mr. Lowell to Mr. Evarts.

No. 139.] LEGATION OF THE UNITED STATES,
London, March 9, 1881. (Received March 25.)

SIR: Something like a panic has lately been produced in the pork trade between the United States and this country, by means of reports sedulously put in circulation, as I have little doubt, by speculators aiming at a great and sudden fall in prices. The importance of the trade may be judged by the fact that 350,000 tons of pork, or products of the pig in various forms, were imported into England from America last year, if I am correctly informed.

For some time the newspapers have been full of reports of the abundant presence of trichinæ in American swine, and of the consequent danger of eating their flesh in any of its forms. These were followed by stories of great mortality by cholera of hogs in the Western States. Before long, deaths were reported at Nottingham and Dublin, in consequence of eating American ham, and were attributed to trichinosis. Inquiry showed that there was not a particle of proof either that those persons had eaten of such ham or had died of the alleged disease.

The alarm produced by so much persistent fabrication and assertion led to a question being asked in parliament (on the 1st March) and very satisfactorily answered on behalf of the privy council by Mr. Mundella, who treated the reports as unfounded, and the cases of death as in no sense traceable to American pork. Mr. Mundella is fully aware of the great importance of the trade in cheapening food to the poorer classes in England, and entirely disposed to prevent any unnecessary restrictions upon it.

I should be glad to know whether any system of inspection of pork exists in the United States; whether it is under the sanction of national authority or not; and whether it is so applied as to be efficacious. Considering the very great interests involved, it might be thought that those engaged in the trade at home would, for their own protection, insist on the very strictest supervision by competent officials.

I have kept Mr. Mundella supplied with whatever information I had on the subject, and this morning communicated officially to the Times a copy of your last telegram.

I have, &c.,

J. R. LOWELL.

No. 111.

Mr. Blaine to Sir Edward Thornton.

DEPARTMENT OF STATE,
Washington, March 9, 1881.

SIR: I have the honor to acknowledge the receipt of your note of the 7th instant, addressed to my predecessor, in response to his note of the

same day to you on the subject of the alleged prevalence of hog-cholera in the Western States.

While most fully appreciating your promptness and courtesy in taking such energetic steps to investigate the authority for the strange announcement made by Mr. Crump, late acting consul of Her Majesty at Philadelphia, I regret that the further report on the subject looked for by you from the consul at Philadelphia should not have yet been communicated to this Department, in view of the urgency of the matter.

Confirming the statement in Mr. Evarts' note of the 7th that all means of information at the command of the Department concurred in showing the late published report as wholly without foundation, I hasten to transmit copies of resolutions of the Merchants' Exchange of Saint Louis, and of the Chamber of Commerce of Cincinnati. The latter explicit denial, as you will perceive, covers the State of Ohio to which, as you remark, Mr. Crump's statement refers, and not to the State of Illinois.

I am also, to-day, in receipt of a communication from my colleague, the Secretary of the Treasury, conveying explicit denial of the report published in the Times, and asking that the character and source of the information on which Mr. Crump's dispatch was based be ascertained. It may be that, as stated in the telegram you have received from the consulate at Philadelphia, credence has been given to what appeared to be "good authority;" but all that this Government can learn, after searching inquiry, leads irresistibly to the conclusion that the good faith of Her Majesty's representative at Philadelphia has been imposed upon by designing speculators, in their own selfish interests, and to the incalculable injury of legitimate commerce.

Should this be so, I trust you will concur with me that no steps can be too urgent or imperative to overtake and contradict this false statement, and that this Government can not too confidently look to Her Majesty's legation for an authoritative denial thereof.

I have, etc.,

JAMES G. BLAINE.

[Inclosure 1.—Telegram.]

SAINT LOUIS, *March* 7, 1881.

Hon. JAMES G. BLAINE:

The board of directors of the Merchants' Exchange of Saint Louis to-day adopted the following:

"Whereas a report has been made public to the effect that a disease of malignant character is prevalent among the swine of this country, tending to intimidate foreign and local buyers of the product; and

"Whereas all experience and knowledge of this year's packing warrant the opinion that never before, in the annals of the pork-packing trade, was there comparatively less disease among swine or less cause for apprehension on the part of the consumer than at present: Therefore,

Resolved, That in the opinion of the directors of the Merchants' Exchange of Saint Louis the alarm caused by said reports is entirely without foundation, and the assurance is given that the hog product of this season is more free from disease and more healthful generally than ever before."

MICHAEL MCENNIS,
President.

[Inclosure 2.—Telegram.]

CINCINNATI, OHIO, *March* 5, 1881.

Whereas it is currently reported that the British consul at Philadelphia has sent a dispatch to England, completely false in character, to the effect that seven hundred thousand hogs have died from cholera: Therefore,

Resolved, That the Cincinnati Chamber of Commerce hereby gives, to the official representatives of Great Britain in this country, its most positive assurance that the hogs of the State of Ohio and of the whole West have been during the past year singularly free from disease of all kinds, and respectfully ask the members of the legation to take such action as would immediately correct the effects of the reports, which are calculated to inflict great damage on the provision trade of both the United States and Great Britain, and which doubtless have had their sole origin in mercenary motives.

HENRY C. URNER,
President.
JOS. H. FOOTE,
Secretary.
SIDNEY D. MAXWELL,
Superintendent.

No. 112.

Mr. Smith to Mr. Hay.

No. 87.] UNITED STATES COMMERCIAL AGENCY,
Nottingham, March 9, 1881. (Received March 25.)

SIR: The sale of American hams and bacon in Europe having become a very important business, everything calculated to interfere with it must be interesting to a large class of persons in the United States. I therefore beg leave to report some facts which have excited much attention in this community within the last few months.

In June last there was an extensive sale of timber and machinery on the estate of the Duke of Rutland, at Welbeck, Nottinghamshire. The sale lasted five days. A large number of persons were present during the several days; estimated from 1,500 to 2,000. For the accommodation of the visitors refreshments were provided on the spot, each day, by the proprietress of a hotel with a large trade at Mansfield, and many persons partook of them. Of those who thus partook a large number residing over a very wide area were subsequently taken ill, some slightly and some severely, and two of those attacked died from their illness. Some fragments of the food supplied at the sale were moreover taken away and distributed to five poor families. Members of those families (who had not been at the sale) were similarly attacked with illness, and two of these persons died.

The refreshments provided consisted of cold boiled hams, cold baked or roasted beef, cold beefsteak pie, mustard and salt, bread and cheese, pickles and chutney sauce. The drinkables were bottled and draught beer, spirits, ginger beer, lemonade, and water.

The hams were what are known as "American hams." Seven hams were sent to Welbeck; six were purchased of a tradesman at Mansfield and cooked in the hotel kitchen; one was purchased, ready cooked, from a coffee tavern in Mansfield. The seventh ham was cured and dried in America. The six purchased from the first-mentioned tradesman had been made on his business out of six legs of salted American pork which had been purchased of a merchant at Hull.

The beef sent from the hotel was all supplied by one butcher in Mansfield, who kills his own meat. The bread, cheese, pickles, and condi-

ments were such as were in habitual use at the hotel. Ample evidence, derived from considerations of distribution, soon disproved any causative relation of the water and other drinkables with the occurrence of disease.

The food cooked at the hotel was stored in a pantry that was not in a satisfactory sanitary condition, there being an opening into a sewer which caused offensive smells, and under a cupboard in the pantry was found a vessel containing several pieces of ham and pork in a moldy and maggoty condition.

The refreshment rooms at Welbeck seem to have been in themselves cleanly, but they also had an opening into a sewer, which was the general sewer for that part of the estate, and received sewage from water-closets of residences, from stables, cow-sheds, etc., and were not provided with any means of ventilation, the only ventilation being into the building containing the refreshment rooms. The unconsumed provisions were each night stored in this building for future use.

With regard to the persons who partook of refreshments at Welbeck and were subsequently taken ill, Dr. Edward Ballard, from whose exhaustive report it got the facts stated herein, says:

Of these I have more or less complete record of the illness of seventy-two, and I had given me assurances of a similar illness having occurred in a considerable number of other persons who had attended and taken refreshments at the sale, so that it is certain that those seventy-two were by no means all that suffered. On the other hand, I myself inquired personally into twenty-two instances of individuals who had partaken of the same kind of refreshments as those who had suffered and yet escaped illness altogether. Probably there were very many more escapes than those, since it was far more likely that I should hear of the sufferers than those who did not suffer. In fact in the course of my inquiry I heard casually of several more of that class. We may take it, I think, that at least one-half, probably more than one-half, of those who partook of certain solid refreshments ate them without injury.

Dr. Ballard gives particulars of the cases of persons who were taken ill and of those who died, which I do not think it necessary to repeat. The cases of death included both persons who had and others who had not been at Welbeck.

It appears that part of the food was taken back to the hotel from Welbeck and eaten there without any ill effects.

Dr. Ballard gives the characteristics of the disease under the general description of "diarrheal illness." I do not think it necessary to go into the details of the several cases. He says:

The mildest cases were characterized usually by little remarkable beyond the following symtoms, viz: abdominal pains, vomiting, diarrhea, thirst, headache and muscular weakness, any one or two of which might be absent.

He also gives the results of some post-mortem examinations, the details of which you will see in his report sent herewith.

As to the cause of the disease, Dr. Ballard says:

Keeping in view the series of cases at Mansfield, where persons of different families who had not been at Welbeck were, nevertheless, ill after eating what was brought from thence, no hypothesis as to the cause which does not refer to the meat dispensed there or to the mustard laid upon it within the sandwiches can be entertained. The mustard was Coleman's mustard, part of a keg of mustard in habitual use at the hotel, and, therefore free from suspicion. Obviously it was either the ham or the beef, or both, which had done the mischief.

He then says that some of the people complained of the taste of the ham, etc. He proceeds:

Some of the medical men who attended the sick professionally suspected that the hams were trichinosed and that they might have been treating cases of trichina disease. But although I felt bound to respect this suspicion I did not at any time seriously entertain it myself.

I myself, thought it more probable that the meat, exposed to the influence of sewer air, might, after night, in the lower refreshment room, have, perhaps, undergone some chemical change short of actual putrefaction which had rendered it unwholesome. On the whole I felt much in the dark, and with a view of obtaining light on the subject, and to tell so far as was practicable the correctness of the above notion, I set on foot the experiments which I am about to detail. The result has been not only the refutation of both the above notions, but of detecting in the hams the presence of a morbific element which, so far as I know, is now for the first time demonstrated.

For the experiments I refer you to Dr. Ballard's report inclosed. The results which are claimed to have been attained by those experiments, and which are most important, were:

1st. The absence of trichina in the ham was established. 2d. The presence in all three portions of ham, raw ham and the cooked ham, both that which had been and that which had not been exposed to sewer air, of a species of bacillus, with sporules of the same, was demonstrated. The bacilli threads and sporules were in connection with the muscular fiber and in the intermuscular tissue. * * * 5th. In the kidney of W. W. there were discovered evidences of parenchymatous inflammation, and the apparent articles and capillaries of the Malpighian corpuscules were plugged with emboli formed of masses of bacilli.

In these observations and experiments we have a clew to the solution of the difficulty which the ordinary methods failed to furnish. In two hams, taken indiscriminately out of the same consignment, there was found a *living parasitic thing*, capable of spreading by its growth and reproduction through the material in which it was found, and *capable of producing disease in animals into whose systems it was introduced, capable also of growth and reproduction within the system of these animals.* Taking into consideration the fact that a number of persons who ate of ham of the same consignment suffered from disease induced by such eating, and the further fact that in the kidney of one of them large numbers of bacilli (similar to those found in the hams experimented with) were found, it appears reasonable to infer that some of the hams of that consignment were similarly affected with the parasite, and that *either the parasite itself or some virus essentially associated with it was the active agent in the production of the diseased condition* observed in the human subjects of the epidemic.

A few days ago a case of supposed pork poisoning occurred in this town. In this case the pork used was said to have been from pigs brought from Ireland. In this case one man had died and his wife had suffered, but recovered. Their children, who did not eat of the pork, escaped. It is also said that 14 other persons suffered more or less after eating of the same lot of pork.

These cases were examined by Dr. Seaton, medical officer of health, of this place. There was a post-mortem examination in the presence of Dr. Ballard, and parts of the body and blood of the victim were taken to London for examination by Dr. Klein. The results seem to be that about the same conditions were found as in the Welbeck cases. The same bacilli were found as in those cases.

Only yesterday I saw in the newspapers mention of a case of pork poisoning in the neighboring county of Derby.

Upon the two last cases I may write you again.

I am, etc.,

JASPER SMITH,
United States Consular Agent.

[Inclosure in No. 87.—From the British Medical Journal.]

Pork poisoning at Welbeck.—Description of a new infective organism in hams.

An official report by Dr. Ballard, medical inspector of the local government board, on the remarkable outbreak of diarrhœal illness that occurred among the persons attending the sale at Welbeck Abbey, in June of last year, has just been issued by the local government board. It proves to be a document of singular interest and importance, full of suggestions for future observers It may be remembered that, at the death of the late Duke of Portland, there was an extensive sale of timber and ma-

chinery on his Welbeck estate. Partly for business, and partly to see a remarkable place, people from all parts of Nottinghamshire, and from Yorkshire, Lincolnshire, and Derbyshire, as well as from Bedfordshire, and probably even more distant localities, flocked to Welbeck in such numbers that, on two days, it was estimated that from fifteen hundred to two thousand persons were present. For the accommodation of the visitors, refreshments were provided on the spot, and many persons partook of them. Of these who thus partook, a large number, residing over a very wide area, were subsequently taken ill, some slightly and some severely, and two of those attacked died. Some fragments of the food supplied at the sale were, moreover, taken away and distributed to five poor families; and members of these who had not been at the sale were similarly attacked by illness, and two of them died. This in itself was tolerably strong proof that the outbreak was due to some article of food; and Dr. Ballard, by an exhaustive process of exclusion of other things reduces this proof to a logical certainty, and shows that the disease must have been caused, in some way or other, by the ham consumed at the sale.

The number of persons attacked was ascertained to have been at least seventy-two, and there were assurances of similar illnesses having occurred in a considerable number of other persons who had taken refreshments at the sale—so that it is certain that these seventy-two were by no means all that suffered. Only seven of this number were females; the explanation being that the women who journeyed to the sale went for pleasure (usually in parties of several together), and in many instances took their own refreshments with them. The solid refreshments sold at Welbeck were mostly eaten by the men. All the seventy-two persons had partaken either of a meat luncheon or of sandwiches; forty-two of them had eaten luncheon, and thirty had eaten sandwiches—mostly only one sandwich. Of twenty-two persons who had not suffered after the refreshments, eleven had eaten luncheon and eleven only sandwiches. From these circumstances, especially taken in conjunction with the fact that, on the whole, the number of persons who merely took a sandwich was far larger than the number who took lunch, the inference may be drawn that a larger (probably much larger) proportion of those who ate largely of the provisions suffered subsequently than of those who ate sparingly.

The symptoms of the illness were sufficiently remarkable to merit particular notice. Dr. Ballard speaks of the attacks under the name of "diarrhœal illness," because diarrhœa was the most constant of all the symptoms observed, and the other symptoms were in some respects so peculiar that he was indisposed to give to the disease any name otherwise generally recognized. As might have been anticipated, there were varieties in severalty among the cases investigated; and symptoms strongly marked in some were slightly marked or altogether wanting in others. A period of incubation, usually from twelve to thirty-six hours, preceded the illness. In many cases the first definite symptoms occurred suddenly and unexpectedly; but, in some cases, there were observed during the incubation more or less feeling of languor and ill health, loss of appetite, nausea, or fugitive griping pains in the belly. However the attack might have commenced, it was usually not long before pain in the abdomen, diarrhœa, and vomiting came on, diarrhœa being of more certain occurrence than vomiting. The pain was usually very severe, quickly producing prostration or faintness, with cold sweats. The diarrhœal discharges were, in some cases, quite unrestrainable, and were said to have been exceedingly offensive, and usually of a dark color. Muscular weakness was an early and very remarkable symptom in nearly all cases. Headache, sometimes severe, was a common and early symptom; and in most cases there was thirst, often intense and most distressing. The tongue was described usually as thickly coated with a brown velvety fur, but red at the tip and edges. In the early stage the skin was often cold to the touch; but afterwards some fever set in, the temperature rising in some cases to 101°, 103°, and 104°. The pulse in the height of the illness became quick, counting in some cases 100 to 128. In fatal cases, death was preceded by a collapse like that of cholera, and the debility of convalescence was, in nearly all cases, protracted to several weeks.

The facts adduced by the inquiry all tended to show that it was the ham consumed at the sale that had caused the mischief. Both the appearance and the flavor of the ham were a good deal complained of by those who partook of it. But as to the exact manner of its becoming invested with injurious qualities, no direct evidence was procurable. Dr. Ballard, therefore, set about a number of experiments, which had a very remarkable and unlooked-for result. He obtained the residue of a ham that had been used at the sale, and suspended half of this in the partially open manhole of a sewer on the Welbeck premises, that had been suspected of causing the mischief. This, with the other half and part of an uncooked ham from the same consignment, a piece of the kidney of one of the fatal cases, and some other matters, were sent to Dr. Klein for microscopical examination and experiment. The results of these investigations were to establish the absence of trichinæ in the ham, which had been suspected by some of the medical attendants of the cases; but to demonstrate the presence in all three portions of ham—the raw ham and the cooked ham, both that which had been

and that which had not been exposed to sewer air—of a species of bacillus, with sporules of the same; the bacillus-threads and sporules being in connection with the muscular fiber and in the intermuscular tissue. Bacillus material from the raw ham and from that portion of the cooked ham which had not been exposed to the sewer air was successfully cultivated in the incubator. Experiments upon animals, by feeding or inoculation, were made both with material from the hams and with the cultivated material. Those made with the portion of ham exposed to the sewer air produced only negative results; but those made with the raw ham, and with the portion of cooked ham not so exposed, produced in all but a few instances positive and remarkable results, viz., disease in the animals experimented on. The morbid condition produced in the animals, and found on *post-mortem* examination, was most uniformly pneumonia (in one instance, with pleuritis) or pulmonary hyperæmia. In the case of two dogs fed and inoculated with the cooked ham, and killed on the eighth day, evidence was found after death of severe desquamative hyperæmia or inflammation of the stomach and intestines, the contents of which contained bacilli and a few pus-corpuscles. In the kidney of one of the persons who had died of the disease were discovered evidences of parenchymatous inflammation; and the afferent arterioles and capillaries of the Malpighian corpuscles were found plugged with emboli formed of masses of bacilli.

In these observations and experiments Dr. Ballard finds a clew to the origin of the outbreak, which the ordinary methods of inquiry failed to furnish. In two hams taken indiscriminately out of the same consignment, there was found a living parasitic body, capable of spreading by its growth and reproduction through the material in which it was found, and capable of producing disease in animals into whose system it was introduced; capable also of growth and reproduction within the system of these animals. Taking into consideration the fact that a number of persons who ate of ham of the same consignment suffered from disease induced by such eating, and the further fact that in the kidney of one of them large numbers of bacilli (similar to those found in the hams experimented with) were found, it appears reasonable to infer that some of the hams of that consignment were similarly affected with the parasite; and that either the parasite itself, or some virus essentially associated with it, was the active agent in the production of the diseased condition observed in the human subjects of the epidemic, and in the animals which were experimented on by Dr. Klein. Dr. Ballard accounts for the powerlessness of the ham exposed to sewer air to produce specific injury to animals by the hypothesis of Dr. Klein (which is in harmony with the view that assigns to the bacilli an essential share in the production of the disease), that the progress of common decomposition may have destroyed the specifically harmful quality of the meat, without altering the microscopic characters of the bacilli. These questions of re-infection and of ultimate destruction of infection during one and another stage of decomposition are, as Dr. Ballard correctly observes, of the greatest interest in zymotic pathology; and the occurrences at Welbeck, as interpreted in his report, shed a flood of new and important light upon a subject as to which there is evidently very much more to be learned.

No. 113.

Sir Edward Thornton to Mr. Blaine.

WASHINGTON, *March* 10, 1881. (Received March 10.)

SIR: I have the honor to acknowledge the receipt of your note of yesterday's date upon the subject of the report made by the acting British consul at Philadelphia concerning hog cholera. As there still seems to be a misunderstanding, I am obliged to repeat that the report in question referred to Illinois and not Ohio.

As soon as I heard of the alleged incorrectness of the statement made by Mr. Crump, I directed Her Majesty's consul at Philadelphia to inquire into the matter and to inform me upon what authority the assertion was made that 700,000 hogs had died in Illinois during the year 1880.

Captain Clipperton replied, first by telegraph and then by post, that the report was made on good authority from Chicago. I was not satisfied with this explanation, and called for further details. I have now the honor to inclose copy of a letter which I have just received from Captain Clipperton.

In the mean time I have had access to a pamphlet entitled "Illinois crops for 1880," published by the Illinois department of agriculture, from which it appears that the loss of hogs by disease in Illinois during 1880 was 227,259. It is evident, therefore, that Mr. Crump's report of the loss was greatly exaggerated, though, in view of the loss above mentioned, it can hardly be said that it is wholly without foundation.

I received on Saturday night the resolution of the Cincinnati Chamber of Commerce, of which a copy was inclosed in your note of yesterday. On Sunday morning I dispatched a telegram to Earl Granville, informing him that the Cincinnati Chamber of Commerce had denied Mr. Crump's report of December last, and declared that the hogs of the whole West have been, during last year, singularly free from disease of all kinds.

I have, etc.,

EDW'D THORNTON.

[Inclosure.]

Mr. Clipperton to Sir Edward Thornton.

BRITISH CONSULATE,
Philadelphia, March 9, 1881.

SIR: I have the honor to acknowledge the receipt of your dispatch No. 7, of the 8th instant, and with reference to your dispatch No. 6, of the 6th instant, relating to Mr. Crump's sanitary report to Her Majesty's principal secretary of state for foreign affairs for the month of December last, and in reply to inform you that the report of about 700,000 hogs having died in the State of Illinois in the year 1880 was sent to him by the vice-consul stationed at Chicago.

Upon further inquiry upon this subject, I learn that the reports furnished the public are more or less of an estimated character, and should be accepted in that light.

The report of the agricultural department of the State of Illinois for 1878, vol. 16, pp. 377 and 378, under the head of "hog cholera," the number of hogs in the State is assessed at 3,334,920, and the losses by diseases at 474,758 head, or 14 per cent. of the whole stock, and the pecuniary loss laid down at $1,438,589. Vol. 17, p. 383, of the same publication, quotes the number of hogs and pigs which died of cholera from May 1, 1878, to May 1, 1879, to have amounted to the enormous figure of 1,391,422. In one county alone (Warren) 59,544 head died. At pp. 544, 545, the mortality to the 1st of May, 1880, is placed at 182,577. There appears to be no later published reports, at least I have not been able to procure any.

When it is taken into consideration that hundreds of thousands of young pigs are littered after the taking of the census in April, amongst which there must necessarily be more or less mortality from swine disease, and that the figures are so very large (1,391,422 for the previous year), it is not improbable that the number quoted for 1880, viz, 700,000, is very little, if any, in excess of the actual mortality.

I beg to call your attention to the remarks of the Commissioner of Agriculture in his report for 1878 (p. 24), which are as follows:

"For less than half the territory of the United States, they show annual losses amounting to $10,091,483 in swine.

"These figures indicate that the loss of farm animals throughout the United States annually aggregate the sum of $30,000,000 or more. As at least two-thirds of this amount seem to be sustained in the loss of the swine from affections which appear to be but little understood by the farmer and stock-raiser, I regarded the subject of sufficient importance to call for an appropriation," etc. "In addition to the saving of so vast an amount of property, the health of our people demands the completion of this work, as it is a noteworthy but lamentable fact that many herds of hogs are shipped to the nearest market, or are slaughtered by the owners for marketable purposes, as soon as the disease makes its appearance among them."

I have, etc.,

R. C. CLIPPERTON.

No. 114.

Mr. Canisius to Mr. Hay.

[Extract.]

No. 61.] CONSULATE OF THE UNITED STATES,
Bristol, March 14, 1881. (Received March 26.)

SIR: * * * The British public are already sufficiently acquainted with the mistaken report of their vice-consul at Philadelphia regarding hog cholera in America, and as the matter has also been up in Parliament, they understand very well that the bacon shipped from America to this country is as sound as their own. The steps taken by the Secretary of State to counteract the erroneous report of the British consul have been published in all the English papers, so that no falling off in the export of pork to Great Britain need be feared.

* * * * * * *

I am, etc.,

T. CANISIUS,
United States Consul.

No. 115.

Mr. Blaine to Mr. Lowell.

[Telegram.]

LOWELL, *Minister, London.*

WASHINGTON, *March* 16, 1881.

Have just sent full dispatch to Noyes respecting unfounded and injurious rumors touching our pork product. Noyes will send copy to you. Make most diligent effort to contradict rumors, and counteract evil effect.

BLAINE.

No. 116.

Mr. Blaine to Mr. Lowell.

No. 130.] DEPARTMENT OF STATE,
Washington, March 17, 1881.

SIR: On the 7th instant, my predecessor sent you a telegram as follows:

LOWELL, *Minister, London:*

Published statements of mortality among swine are false.

EVARTS.

The occasion of this denial was the publication, in the London Times of the 19th ultimo, of an extract from a report made on the 21st of December last, by Mr. Crump, then acting British consul at Philadelphia. In this report, after stating that "immense mortality" prevailed among swine by a disease known as "hog cholera," of which about 700,000

head had died this year (1880) in Illinois, Mr. Crump proceeded to refer to the alleged occurrence of several cases of trichinosis, as though the two disorders were correlated, and narrated certain horrible instances of the latter, ending by announcing the possibility of communicating trichinæ to the human body by adulterations of butter and cheese, with fatty products supposed "to be taken from places where hogs die of diseases."

It is not surprising that such extraordinary statements, directed *en bloc* against these great classes of American exports, should have occasioned wide-spread alarm among consumers in Great Britain and seriously deranged trade therein. So sudden and disastrous, in fact, was the check given to this great and steadily increasing commerce that, as a matter of national importance, this Government was moved to a searching investigation of the grounds on which the publication was based, and correspondence has been accordingly had with the British legation in Washington, and with the boards of trade of the pork producing, packing, and shipping centers.

The most positive official assurances reach this Department from all quarters, comprising the extensive swine growing regions of the West—Illinois, Ohio, and Indiana—that the mortality, even among very young pigs, has been less in 1879 and 1880 than for preceding years, and that the health of full-grown hogs (which are alone packed as pork) has never been better than during the past year. The British minister frankly admits that the statements of Mr. Crump, the acting consul, are exaggerated. The wide publicity given here by the press to all these denials has tended to allay the domestic excitement.

It is, however, to be feared that Mr. Crump's report may have taken such hold on popular prejudice abroad as to make it difficult to neutralize its bad effects; merely general denial, or counterstatement of facts, rarely suffices to undo a false statement.

In view of all the facts accessible to it, this Department can but reach the conviction that the good faith of Mr. Crump has been imposed upon, and that he has been unwittingly made the tool of designing speculators, to the great injury of legitimate trade. This conviction is strengthened by an analysis of his statements, as well as by a published report of an interview had on the 7th instant by a committee of the New York Produce Exchange with the British consul and vice-consul at Philadelphia, a copy of which report is inclosed herewith for your information. The admissions made by Mr. Crump that he was aware when he wrote his report that the mortality among swine in 1880 was not greater than in 1879, and the singular phraseology of his statements by which the general reader would be led to infer that the so-called "hog cholera" is communicable to human beings as trichinosis by eating the products of diseased animals, are points worthy of notice. No scientist need be informed that "hog cholera" or "hog fever," as the disease is indifferently styled, is a contagious catarrhal pneumonia, analogous to pleuro-pneumonia among neat-cattle, and entirely distinct from trichinosis, which is due to the development in the muscular tissue of minute parasites, but to the popular mind the distinction is far from evident. Had it been Mr. Crump's specific purpose to cause a panic among the British consumers by misrepresenting and associating isolated statements he could hardly have framed his report more appropriately. And when to all this is added the consideration that the report does not come from the pork raising and packing centers, where it is the facile duty of the British consular officers to acquaint themselves with all the facts bear-

ing on this great branch of international commerce, but from a sea-port through which but a small part of the packed product passes, the *ex parte* and untrustworthy (if not designedly interested) character of Mr. Crump's representation becomes the more apparent.

To illustrate a point, this Government would hardly look to its consular officers at Southampton or Cardiff for data respecting commercial transactions at Sheffield or Birmingham, or to its consul at Havre for knowledge of wine adulterations in the wine districts of Bordeaux or Burgundy, and, if received, such reports would most probably be made the occasion of investigation in the competent quarters rather than be given to the public without verification.

It does not appear that any attempt was made by Her Majesty's Government to ascertain the trustworthiness of Mr. Crump's report before publishing it in the Blue Book, from which the extract in the Times is taken. Had the consular officers in the hog-raising districts of the West been appealed to, it is entirely improbable that they would have indorsed the prejudiced, incoherent, and sensational declarations of their seaboard associate.

The correspondence had with the British minister here, of which copies are inclosed,* shows how confidently this Government has looked to him for denial of the injurious rumor, and his frank response justifies that confidence. In like manner we look confidently to Her Majesty's Government to aid in establishing the truth of the matter.

This instruction is sent to you to furnish you with material for an intelligent discussion of the subject with Earl Granville, in case the persistence of popular clamor and general distrust in England by reason of Mr. Crump's ill-judged report, notwithstanding Sir Edward Thornton's admission of its exaggeration, should make it necessary to look to Her Majesty's Government to give to the denial publicity and equal authority with the publication itself. The injury having been done, no steps should be omitted to undo it. Nor is the harm which has been wrought confined to Great Britain. The report has doubtless spread to the continent, and added to the prejudice already created there probably by the same agencies which inspired Mr. Crump's announcement. The action of the British Government in condemnation of it will influence the feeling in Europe. To this end the contradiction can not be too positive.

The extent to which you will make use of this instruction is necessarily left largely to your judgment, although it is not thought needful to communicate it in copy. I have not thought it desirable to acquaint you with the many statements in the American press, apparently trustworthy and well informed, which have lately appeared in contradiction of the report, such as the assertion that the Philadelphia consulate has for months past been deluged with anonymous communications injurious to pork-packing interests; and that the British consuls in the Western cities have telegraphed to the legation here and to the Philadelphia consulate correcting Mr. Crump's misstatements. The American journals are accessible to you, and you can draw your own inferences therefrom. The positive information I possess is sufficient for the purposes of this instruction, and due remonstrance and denial on your part. You are conceived to be in a position to aid in exposing the untrustworthiness and seeming malevolence of the report of which Mr. Crump has unhappily been the medium.

In view of the prohibitory action of the French Government toward

---

* For inclosures see correspondence with the British legation.

importations of American produce, I have suitably instructed Mr. Noyes, to whom you may directly communicate any pertinent facts coming to your knowledge.

I am, &c.,

JAMES G. BLAINE.

No. 117.

Mr. Jones to Mr. Hay.

[Extract.]

No. 283.] UNITED STATES CONSULATE,

Newcastle-upon-Tyne, March 18, 1881. (Received April 1.)

SIR: I have to state that the American bacon trade has been much injured in this district by the circulation of reports that parasites were discovered in the meat on the continent, and the French ports were closed against it.

* * * * * * *

I have, &c.,

EVAN B. JONES, *Consul.*

No. 118.

Sir Edward Thornton to Mr. Blaine.

WASHINGTON, *March* 21, 1881. (Received March 21.)

SIR: With reference to my note of the 10th instant, relating to the report made by the acting British consul at Philadelphia, in December last, I have the honor to inform you that as the statement that 700,000 head of swine had died in Illinois of cholera during the year 1880 had been transmitted by the British vice-consul at Chicago, I instructed Her Majesty's consul at Philadelphia to request that vice-consul to furnish the data and authority upon which he had founded the statement in question.

I have now the honor to transmit herewith copy of a letter and an accompanying memorandum sent by Mr. Warrack to Captain Clipperton showing upon what authority the former made the statement which has given rise to so much bitter and even unjust comment.

You are doubtless aware that Her Majesty's consular officers are in possession of peremptory instructions from Her Majesty's Government to make periodical reports of the sanitary condition of the domestic animals in this country, so many of which are now contributing towards the supply of food to the inhabitants of Her Majesty's dominions. In performing this duty they naturally endeavor to obtain the most correct data, and I know not where they are so much justified in looking for them as in the statistics collected by the authorities, whether of individual States or of the United States. In this instance Mr. Warrack appeals to statistics collected and furnished to the agricultural department of Illinois by the assessors of that State, and he shows that the statement, which has been the subject of so much complaint, is borne out by the figures given by the assessors. It is admitted by the agricultural department of Illinois that the loss of hogs by disease in that

State was greater in 1880 than in 1879. The assessors declare that the number of pigs and hogs which died of cholera in 1879 was 676,738. It is therefore probable that Mr. Warrack, in stating that 700,000 had died in 1880, was rather under than over the mark.

It may be that the returns made by the assessors were incorrect, and they are certainly not in accord with those published by the agricultural department of Illinois; but no blame can certainly attach to Mr. Warrack for giving credit to the statements of such officials as the assessors of Illinois.

I have at the same time the honor to invite your attention to the Report of the United States Commissioner of Agriculture for 1879, page 24, where, in speaking of hog cholera, it is stated that—

> Careful returns from correspondents of the department show those losses to be at present from $15,000,000 to $20,000,000 annually.

It is added that it is not unusual to receive intelligence from some of the large hog-growing localities in the West that the losses in single counties will reach the large sum of $50,000 to $80,000, and in some instances as high as $150,000, in one season, through the devastating operations of this disease.

I have, etc.,

EDW'D THORNTON.

No. 119.

Mr. Lowell to Mr. Blaine.

No. 163.] LEGATION OF THE UNITED STATES,
London, April 13, 1881. (Received April 26.)

SIR: Referring to your instruction No. 130, of the 17th ultimo, in relation to the report made by Mr. Crump, acting British consul in Philadelphia, concerning swine disease in the United States, and to my dispatch No. 161, of the 9th instant, I have now the honor to inclose herewith a copy of a note just received from Lord Granville, in reply to mine of the 1st instant. It will be seen from Lord Granville's note that the British Government, while expressing a readiness to receive any trustworthy evidence of the non-existence of hog disease in pork exported from the United States, consider the statements of Mr. Crump to have been justified. Lord Granville incloses a copy of a memorandum furnished to the British minister at Washington by Mr. Warrack, the British vice-consul at Chicago, showing the official sources from which he derived the statistical information which he supplied to Mr. Crump. I inclose also a copy of this memorandum.

I have, etc.,

J. R. LOWELL.

[Inclosure 1 in No. 163.]

Lord Granville to Mr. Lowell.

FOREIGN OFFICE, *April* 8, 1881.

SIR: I have the honor to acknowledge the receipt of your note dated the 1st instant, containing representations on the part of the United States Government in regard to the reports which have reached Her Majesty's Government, through the British consul at Philadelphia, respecting the alleged prevalence of disease in swine, the meat of which is, in various forms, largely exported from America to Europe, and

especially, as it is understood, to this country. It is needless for me, sir, to assure you that Her Majesty's Government will be happy to receive any trustworthy evidence of the non-existence of hog cholera or trichinosis in the pork exported from the United States, seeing that the stoppage of such an important article of consumption can not fail to occasion much inconvenience in this country.

With respect, however, to the strictures which appear to be conveyed in your note regarding the trustworthy character of the information on this subject supplied to Her Majesty's Government, I would beg to draw attention to the inclosed copy of a memorandum which has been furnished to Her Majesty's minister at Washington by Mr. Warrack, the British vice-consul at Chicago, showing the official sources from which he derived the statistical information furnished by him to Mr. Acting Consul Crump, the accuracy of whose reports on swine disease is now called in question. I feel bound, on behalf of Her Majesty's Government, to observe that they are not as yet in possession of any intelligence calculated to throw a doubt on the prevalence of these diseases in the United States. They, moreover, can not but think that a reference to the official statistics above alluded to will tend to disabuse the mind of the United States Government of the idea that Mr. Crump has been imposed upon by designing speculators, and will place them in a position to withdraw the very serious insinuation contained in your note against the good faith of that gentleman, a charge the grounds for which Her Majesty's Government must confess they are at a loss to understand.

Her Majesty's Government, however, can only wish to arrive at the true facts of the case, and to find that the public confidence in the wholesomeness of American pork may be safely re-established; and I accordingly beg to inform you that they will take an early opportunity of laying before Parliament the correspondence on the subject, in which they will be happy to include any authentic information with which the United States Government may favor them.

I have the honor to be, &c.,

GRANVILLE.

[Inclosure 2 in No. 163.]

(MEMORANDUM.)

Illinois agricultural department's circular 70, dated August 20, 1880, and the latest available at the date of my letter of December 18, 1880, states the number of hogs and pigs which died of cholera as follows: 1877, 1,445,268; 1878, 1,391,422; 1879, 676,738.

These are the "figures" returned by "assessors." Years 1878 and 1879 are verified by showing in detail the loss in each county. *Vide* for 1878, page 383 of the seventeenth volume Transactions of Department of Agriculture, Illinois; and for 1879 see page 107 of circular 70. For the year 1878 thirteen counties do not appear to have reported, and there are three missing in 1879. The number of hogs assessed per reports of assessors (see page 50 of circular 70) are, in 1879, 2,799,051; 1880, 3,133,557.

At this date, August 20, 1880, the percentage of deaths of the assessed hogs in 1880 had not been ascertained, but in circular 72, of December 31, 1880, it is given 6 per cent. in 1879, 7 per cent. in 1880, and on page 80 of circular 72 the following figures appear:

Year.	Number of hogs assessed.	Per cent. died.	Number died.	Average weight.	Value.
				Pounds.	
1877	2,961,366	12	358,844	104	$1,853,415
1878	3,334,920	4	474,758	108	1,438,589
1879	2,799,051	6	182,577	98	588,487
1880	3,133,557	7	227,259	104	937,293

This shows an increase of 12 per cent., in the number of assessed hogs, and a further increase, viz, 1 per cent., in the rate per cent. of those which died.

That there were more swine in Illinois in 1880 than in 1879 is corroborated by the following statistics taken for the regular "Board of Trade" circular, issued daily, from the best and most trustworthy sources accessible to the publishers:

	1880.	1879.
Receipt of hogs at Chicago for ten months to November 1*	5,222,495	4,888,309
Shipments same period	1,285,993	1,509,840
Number packed, including city consumption, from January 1 to November 1, 1880	3,936,502	3,278,469
Number packed from November 1, 1880, to December 17, 1880, the date of my advice being December 18	1,505,050	1,300,000
Total	5,441,502	4,578,469

* These are not all Illinois swine, but come also from adjoining States.

Increase of hogs killed in Chicago from January 1 to December 17, 1880, 863,033, or 19 per cent.

The increase in number assessed, as reported by the State assessors, being the difference between 2,799,051 for 1879, and 3,133,557, is 334,506, or 12 per cent.

It will be observed that the figures dealt with by the parties interested in attacking the accuracy of Mr. Crump's report are the deaths of the *assessed* hogs, and they do not appear in any of the numerous published communications to refer to the figures as given by the only authorized State assessors of Illinois and published in the Illinois report of the deaths of the total so-called "hog crop" of the State.

Something has been said by the parties who ignore the *total* deaths to show that the light weights of the *assessed* hogs, say an average of 108 pounds in 1878, 98 pounds in 1879, and 104 pounds in 1880, prove these to have been among young "shoats" and pigs, but turning to the reports of the assessors as detailed on page 81 of circular No. 70, dated August 20, 1880, we find that the gross weights of the "hogs and pigs which died of cholera," and the number in the following years, are as follows:

	1877.	1878.	1879.
Number of hogs and pigs died of cholera	1,445,268	1,391,422	676,738
"Total gross weight of swine died of cholera"....pounds..	106,949,832	139,853,508	49,326,591
These give average weights in these years of.....do....	74	100	73

as against 108 pounds and 98 pounds, already quoted as the average weight of the swine which died in these years (1878 and 1879) out of the assessed numbers.

The figure—700,000—given by me was purposely put low, and was based mainly on the statistics as published, and also on the general information one gathers from dealers and farmers. Had the circular of December 31, 1880, been available at the time I reported, or rather, had I reported after its issue instead of before, I would have made the loss at least 750,000, perhaps 800,000. For if a loss of 182,577 accrues in 1879 from a 6 per cent. rate on 2,799,051 assessed swine, and the total loss in the same year is 676,738, then it is clear that if the death-rate in 1880 is 7 per cent., and the deaths of assessed hogs 227,259 out of 3,133,557, the total deaths for 1880 of all the swine raised in the State will be about 842,000.

J. WARRACK.

CHICAGO, *March* 16, 1881.

No. 120.

Mr. Blaine to Mr. Lowell.

No. 180.] DEPARTMENT OF STATE,
Washington, June 10, 1881.

SIR: I have postponed a reply to your dispatch No. 163, of the 13th of April last, on the subject of the reported prevalence of swine disease in the United States, until the result of the searching investigation

which was instituted upon the publication of the statements made by Mr. Crump, acting British consul at Philadelphia, should place me in a position to either accept those statements as correct and well founded, or to supply that authentic information in controversion thereof which Earl Granville's note of the 8th of April intimates a disposition to receive.

I transmit herewith copies of the exhaustive report made by the officer of this Department who was ordered to visit the great swine producing and packing centers of the West for that purpose. It does not seem possible to add by mere argument any weight to this cogent exposition of the facts in relation to the pork exports of the United States. This report is confidently laid before Her Majesty's Government as affording convincing proof that the rumors which have obtained such wide credence in Great Britain and on the Continent with regard to this great branch of the foreign trade of the United States were exaggerated and misleading.

I regret to observe that Earl Granville, in his note to you of the 8th of April, treats the representations which my No. 130 of March 17th had directed you to make touching the published statements of Mr. Crump as a "very serious insinuation against the good faith of that gentleman."

I beg that you will endeavor to dispel this unpleasant impression from his lordship's mind. Had this Government seriously doubted the personal good faith of Mr. Crump in the premises, it would have lost no time in protecting itself, in accordance with the usages of international intercourse, by the suspension or revocation of its recognition of Mr. Crump's official character as an authorized subordinate consular officer of Her Majesty's service.

It believed then, and still believes, that the insidious operations of designing men, through the widely-spread channels of anonymous communications, marked newspaper extracts, and other means of facile application, which for a time deluged the executive departments of this Government, had produced their natural effect on Mr. Crump's mind, and that his statement unconsciously reflected these misleading reports rather than the official data within his reach. My impression in this regard is fortified by the circumstance that neither in the memorandum of Mr. Warrack, the British vice-consul at Chicago, to which his lordship refers in justification of the accuracy of Mr. Crump's statement, nor in the numerous publications of an authoritative character made by the National and State officers and then accessible to him, is there the slightest warrant for the alarming association which Mr. Crump made between the alleged mortality from the so-called "hog cholera" and the dissemination of the dreaded *trichina spiralis*. It was this startling and unscientific connection of totally different premises which made Mr. Crump's report so productive of injury, as my instructions of March 17 to you endeavored to show. As it is, however, I am prepared to cheerfully admit that the very wildness and lack of scientific knowledge shown in this correlation of isolated data is in itself presumptive proof of the honesty and good faith of Mr. Crump. On the other hand, it must be admitted that there is ample room to doubt the good faith of the sources of information on which he seems to have relied.

I have given to this branch of the subject more attention than it would otherwise have had, in view of the prominence which Earl Granville assigns to the question of Mr. Crump's good fath as bearing on the merits of the case, and I trust that the frankness of my statements will commend them to his lordship's judgment as counteracting the impres-

sion he seems to have formed. This Government has no disposition to meet a great international question, involving vast material interests, and affecting the natural course of trade between the two nations, by impugning the personal character for veracity of an officer who has enjoyed since 1864, and still so signally enjoys, the confidence of Her Majesty's Government.

The question lies much deeper. International good faith throws upon governments the gravest responsibility in all that affects public health. Had the result of this candid and searching investigation been such as to show that one of our great national industries was the means of disseminating disease and horrible death abroad, as well as at home, no admission could have been too prompt, and no repressive measures too imperative, to undo and check the evil. And to the same international good faith we now appeal in submitting to Her Majesty's Government the proofs set forth in the accompanying report, assured that the matter will be dealt with in that wise and just spirit so confidently to be expected from the British Government.

Your own good judgment will counsel you as to the proper manner of bringing to Earl Granville's knowledge the views herein expressed, and of giving proper publicity to the inclosed report in Great Britain.

I am, etc.,

JAMES G. BLAINE.

NETHERLANDS.

No. 121.

Mr. Eckstein to Mr. Hay.

No. 140.] UNITED STATES CONSULATE,
Amsterdam, March 21, 1881. (Received April 2.)

SIR: I have the honor to state that I have recently read correspondence and editorials in some of the principal newspapers of this city and Rotterdam upon the subject of certain reports relating to excessive and wide-spread disease of hogs in Illinois, and of the action of the French Government in prohibiting the importation of pork from the United States.

The purport and tenor of these newspaper publications had a strong tendency to alarm the public and create a bias against the use of American pork and the hog product generally.

I have also read in the London Times a number of telegrams, on same subject, coming from New York and Philadelphia, showing that there exists in the United States considerable excitement and indignation in consequence of what are considered and claimed to be very greatly exaggerated and unjustifiable reports which have been sent abroad concerning the sanitary condition of the swine in Illinois and other Western States during the year 1880 and at present.

The telegrams referred to also speak of action taken by chambers of commerce in different cities, and by the Department of State, for the purpose of proving that the facts in the case in no way warrant the reports, and which already have greatly injured an important American interest and threaten still further to do so.

Under these circumstances I felt called upon and deemed it proper to make an effort to counteract, as far as in my power and within my limited sphere, the threatened harmful effects upon the imports of and

trade in the article here likely to be caused by the too free circulation of the reports in question.

To this end I availed myself of the opportunity offered me to confer verbally with the proper city and port authorities, and succeeded in accomplishing all I could desire or expect. They expressed themselves to me as greatly appreciating my coming to them to discuss the subject; and gave me the assurance that any and all reports concerning the same of a doubtful character will, so far as they were concerned, be subjected to scrupulous and close investigation; that no such reports will be allowed to exert upon them any undue influence, and that they will do all they can consistently do to prevent the public here from being prejudiced and the trade in the article from being injured.

I have also had an interview with the editors of the principal newspaper here, the Handelsblad, and after discussing the subject with them obtained their promise that they will hereafter frequently publish in their paper the American version, or any authentic accounts on the subject which may reach them, either in the form of telegrams to the London press or otherwise.

My object in doing this was to bring, if possible, a knowledge of the actual state of facts in the matter to those classes of the community which are the principal consumers of American pork, bacon, ham, etc., and which, as a rule, read only the Dutch papers.

My action in this matter, in the absence of any special instructions from the Department asking or authorizing it, will, I trust, be appreciated and approved.

I am, etc.,

D. ECKSTEIN,
United States Consul.

No. 122.

Mr. Eckstein to Mr. Hitt.

No. 163.] UNITED STATES CONSULATE,
Amsterdam, September 6, 1881. (Received September 22.)

SIR: I have the honor herewith to transmit a translated copy of the memorial and petition of J. B. Dievelaar & Co., of Amsterdam, to the common council of Amsterdam, relating to certain proceedings of the burgomaster and magistrates of this city consequent upon and in connection with the discovery of trichina in American pork imported by the firm above named.

The matter appeared to me of sufficient importance to deserve being promptly brought to the notice of the Department for its consideration. Dievelaar & Co., have applied to me for any such assistance as I might be able to extend to them, and to the trade here in American pork, &c., generally which they claim is being greatly injured by the late action of the burgomaster and magistrates.

I found myself, however, at a loss to see how I could assist them, but have sent several copies of the pamphlet entitled "American Pork" to the burgomaster and to the chamber of commerce, such copies having been previously sent by me to the city inspectors of meats, &c.

Should the Department deem it required to give me any instructions on the subject, they shall be promptly and vigorously carried out.

I am, &c.,

D. ECKSTEIN,
United States Consul.

[Inclosure in No. 163.—Translation.]

MEMORIAL OF MESSRS. DIEVELAAR & CO. TO THE COMMON COUNCIL OF THE CITY OF AMSTERDAM.

Willem Huender, sole member of the firm of J. B. Dievelaar & Co., of this city, with all due respect, begs to state:

That the burgomaster and magistrates have caused the following notice to be published in the *Amsterdamsche Courant* (Amsterdam Gazette) of the 7th August last, which notice has also been posted in various places in this city:

"*Trichinæ in American Pork.*—The burgomaster and magistrates of Amsterdam bring to the notice of the public in general that, according to information received by them from the inspectors for the survey of articles of food, trichinæ have been discovered in flitches of American bacon kept in store by the firm of J. B. Dievelaar & Co., of 77 Warmoesstraat.

"They consequently warn the public most urgently to observe all due caution before purchasing, offering for sale, or consuming any part of said flitches of bacon.

"The burgomaster and magistrates aforesaid:

"DE KONING, *Magistrate.*

"DE NEUFVILLE, *Secretary.*

"AMSTERDAM, *August* 6, 1881."

That the memorialist assumes that the burgomaster and magistrates had no right to address the said notice to the public; and if they had, that then the ordinance from which they derive such power requires urgently to be amended.

That the memorialist was acting in perfect good faith, and his acts by no means necessitated the issue of the said notice.

That on the 4th of August, 1881, he, the said memorialist, caused 100 boxes of American bacon, each containing on an average 8 flitches, and purchased on a certificate of good quality from one of the principal and most responsible firms in America, to be warehoused in his store.

That when, on the 5th of August, 1881, a surveyor demanded admittance to the memorialist's store in order to examine the said bacon, he was at once admitted; that the box the bacon was taken from was sealed up by said surveyor, and that on the following day, the 6th of August, the flitch in which trichinæ had been found was removed by the surveyors and debarred from being sold.

That there were, therefore, really no grounds for issuing the said notice, which, moreover, contained an erroneous statement, trichinæ having been found in only *one* flitch on the 6th August; and that the burgomaster and magistrates have thereby quite unnecessarily done great injury to the honor and good repute of the memorialist, and directly as well as indirectly caused him to sustain considerable loss, for that the entire lot of 100 boxes, as well as the other bacon on hand in the store of the memorialist, have lost considerably in value.

That, moreover, the memorialist may well be permitted to remark that since 1871 he has imported very great quantities of American bacon into this country without its ever having appeared that the same was not of good quality; that he invariably purchases from first-class American firms, and always on certificates of good quality.

That in the case of the memorialist the burgomaster and magistrates have gone much too far, and that an honest merchant of irreproachable name and repute ought not to be exposed in such a way, or to be injured and hampered in his business in such a manner, by the burgomaster and magistrates.

That the memorialist begs at the same time to call the attention of your assembly to the mode of conducting the examination itself. That the said examination was begun on the 5th August, and that on the 30th August the board of surveyors had as yet examined only 16 boxes, or 128 flitches, in 5 of which trichinæ were found. That at this rate it will take more than *five* months to submit the memorialist's 100 boxes to an examination. That under such a system the trade in American bacon at this city is rendered impracticable. That the memorialist is prevented from carrying out the sales effected by him of the brand in question, without being exonerated from his obligation to deliver the same to the purchasers, and without being enabled to profit by a rising market. That in the course of the said four months both home-cured and new American winter bacon will be brought to market, causing a reduction in the value of consignments of an earlier date. That in this case only 100 boxes are concerned, but that American bacon, of which the memorialist is one of the greatest importers, is brought to this port by thousands of boxes.

That in the interest of trade the present system of survey, therefore, requires to be amended, as it can not be your intention to render the trade in American bacon, an article which supplies a want that is generally felt, an absolute impossibility.

That these are the reasons which induce the memorialist to apply to you, and to request that it may please your board to call upon the burgomaster and magistrates in the future—

1st. Only to warn the public when bacon infested with trichinæ is actually sold, or in the case of a refusal to withdraw such bacon from the trade, or, in the alternative, to amend the ordinance relating thereto in so far as may be necessary.

2d. To supplement the ordinance for inspectors and surveyors of articles of food in such manner that the time for the survey of a certain quantity be limited, so that a merchant may not be unnecessarily subjected to loss and hampered in his business.

W. HUENDER,
Firm of J. B. Dievelaar & Co.

AMSTERDAM, *September* 2, 1881.

No. 123.

Mr. Eckstein to Mr. Hitt.

No. 167.] UNITED STATES CONSULATE,
Amsterdam, September 24, 1881. (Received October 8.)

SIR: I have the honor to refer to my dispatch No. 163, of the 6th instant, and especially to the inclosure therewith transmitted, while forwarding herewith two more, viz:

1. Translated copies of memorials directed to the common council of this city by parties here interested in the import and wholesale trade of American bacon and ham, and in the carrying business.

It does not appear to me to be required that I enlarge upon the subject at this time, as the inclosure herewith, if read and considered together with the one above referred to, will fully explain it.

I am, &c.,

D. ECKSTEIN,
United States Consul.

[Inclosure in No. 167.—Translation.]

MEMORIALS OF MERCHANTS OF AMSTERDAM TO THE COMMON COUNCIL OF THAT CITY.

To the common council of the city of Amsterdam:

The undersigned, all of whom are interested in the trade with America, beg, with due respect, to state that they have taken note with great interest of the memorial addressed to your board on the 2d September, 1881, by the firm of J. B. Dievelaar & Co.

That, in the interest of commerce, they deem it their duty to express their concurrence with the observations contained in the said memorial in regard to the waste of time in the inspection of bacon, for by such means the trade in bacon, which has developed into important dimensions, will be lost, not only for this port, but also for other commercial cities, where fewer obstacles are thrown in the way of merchants, and will expel Amsterdam traders from the provinces to which the greater part of the imported American bacon is conveyed. That therefore an alteration in the mode of inspection is urgently required, and all the more so as all bacon, whether home-cured or otherwise, will for the future, in the interest of health, have to be submitted to a close inspection.

That the memorialists will not take upon themselves to decide as to how far the burgomaster and magistrates were justified in publishing the notice appearing in the Amsterdam Gazette of the 7th and 8th August last, but that in connection therewith they do not wish to withhold their declaration to the effect that the firm of J. B. Dievelaar & Co. is known to be one of the leading houses in the import and trade in bacon, and is in general esteemed for the liberal and upright way in which its business is conducted.

Holding such views, they respectfully request your board to take the memorial of the firm of J. B. Dievelaar & Co. into serious consideration, and to decide thereon in a favorable manner.

(Signed by J. T. Jansen & Zoon, P. Hegener & Toon, Bd. Essink, W. Cohen, A. J. Daniels, W. J. Gerritsz, F. C. Jaski, J. H. Grein, Plate & Boissewain, Broekman & Henny, Alborda & Plate, H. E. Serinige, H. Tenzler Herold, A. Von Gebauer, Van Breusekour & Brandts, F. A. Jacobs, K. H. Veldhüyzen, Jacob A. Abraham.)

AMSTERDAM, *September*, 1881.

To the common council of Amsterdam:

The undersigned, with due respect, beg to state that they have taken note of a memorial addressed to your board on the 2d September last by W. Huender for his firm of J. B. Dievelaar & Co., respecting the inspection of bacon.

Your memorialists are convinced that the grievances set forth in the foregoing document constitute grave difficulties in the way of the importation of bacon into this city.

That they consider it desirable that the said difficulties be removed and the existing regulations amended, the more so, as such imports will otherwise be conveyed to competing ports, and this to the detriment and loss of the trade and navigation of this city.

That they therefore join in the request of Mr. Huender, whose firm is known to be of good repute and standing, and trust that your board will remove the existing difficulties by instituting good regulations, whereby injurious merchandise may be intercepted without otherwise throwing impediments in the way of trade.

(Signed by the board of directors of the Royal Netherlands Steam Navigation Company, N. J. den Tex, W. Ramann, Schener Brothers, agents for the Hull steamers; p. p. Van Es & Van Ommeren, A. J. Boode, D. & P. Kievits, Urbel & Holtzapffel, F. van Zwieten, Gemmening & Penning, agents for the Hull, Leith, Glasgow, Bristol, and other lines of steamers; De Vries & Co., Olaardt & Breuinier.)

AMSTERDAM, *September*, 1881.

No. 124.

Mr. Eckstein to Mr. Hitt.

No. 170.] UNITED STATES CONSULATE,
Amsterdam, October 4, 1881. (Received October 19.)

SIR: Referring to my dispatches Nos. 163 and 167, the former of the 6th and the latter of the 24th ultimo, and, particularly, to the inclosures therewith transmitted, I have the honor herewith to forward the report of the burgomaster and magistrates of Amsterdam to the common council of the city, and consisting of two exact printed copies of the original, in the Dutch language, with a correct English translation annexed to them, all as one inclosure. The matter is now entirely in the hands of the common council, and it rests with them either to sustain the burgomaster and magistrates or to afford the relief prayed for by the petitioners; but there are indications, I regret to say, that in the main the former is more likely to occur.

The action of the common council will not be delayed many days, and whatever it will be shall be promptly reported.

I do not deem it necessary to further enlarge upon this subject at this time, feeling persuaded it will be fully understood from the inclosure herewith and from the inclosures above referred to.

I can not, however, forbear again to observe that the matter appears of considerable importance, and would seem to deserve the Department's attention and consideration, as, to a great extent, it involves an American interest, injury to which is impending. The imports of American bacon alone at Amsterdam in 1880 amounted to about 8,000 cases, of about 450 pounds each, or 3,600,000 pounds—at least so I am informed.

I am, etc.,

D. ECKSTEIN,
United States Consul.

[Inclosure in No. 170.—Translation.]

Report of the burgomaster and magistrates of Amsterdam to the common council of the city, dated September 21, 1881.

AMSTERDAM, *September* 21, 1881.

To the Common Council:

By a resolution of your meeting of the 6th instant, a memorial, dated the 2d September, 1881, by W. Huender, of the firm of J. B. Dievelaar & Co., complaining in the first place of the manner in which we, on receiving notice from the inspectors for the examination of articles of food, that trichina had been found in bacon at the memorialist's stores, gave publicity thereto, and secondly of the mode in which the examination of articles of food is effected in this city, was put into our hands for the purpose of pre-advising your meeting thereon. The said complaint was supported by a memorial dated the 13th September last, and addressed to your meeting by J. F. Jansen & Zoon and others.

Acting thereon, and laying before your meeting a report on said subject submitted by the inspectors for the examination of articles of food, we have the honor to make the following observations:

When we receive a communication from the said inspectors that, in some article of food at the stores of a merchant in this city, component parts have been found that render the consumption of such article of food dangerous in the highest degree, we can not rest satisfied with waiting until some portion of that article of food has been sold, but deem ourselves bound, in the interest of the public, to warn them forthwith by pointing to the danger they would incur in purchasing of *that* lot from *that* specially indicated merchant.

This was the course adopted in the present case, and we consider that it is only by this mode of proceeding that the examination can answer its purpose and justify the considerable expense to which the commune is put on its account.

The warning notice appeared in this case to be the more necessary, as the reason why the surveyors on the 5th of August last proceeded to Messrs. Dievelaar & Co.'s stores for the purpose of instituting an examination was the fact that American bacon, which proved to have been part of parcels thereof supplied by the firm of Dievelaar & Co., and which parcels had, according to their statement on said 5th of August, been then entirely sold, had already previously been retailed by other traders and found infested with trichinæ. Besides which the said notice was published after the inspectors for the examination of articles of food had applied to the burgomaster for assistance, as the memorialist had refused to give up a flitch of bacon in a sample of which trichinæ had been discovered.

Now, as regards the mode of examination, also therein the interest of the public, the interest of the consumers of articles of food is in the first place considered, although in so far as practicable with all due regard to the special interest of the dealer.

That in the present case the examination of a considerable parcel of American bacon imported by the memorialist is not effected more expeditiously is accounted for by the nature of the investigation. The search for trichinæ requires particular care, and can be intrusted only to persons practiced in microscopic investigations, and not for longer than one hour at a time, without over-fatiguing the organs of sight of the examiner. For this reason alone it would already be impossible to limit a time within which the examination should be effected.

But besides, and this in particular must not be lost sight of, it is not generally the task of the surveyors to submit *all* the articles of food that the dealers have in store to an examination, and thereby as it were to grant a certificate of good quality stamped by the local authorities. They exercise merely a police control, and ascertain whether dealers in articles of food are acting at variance with the regulations. The dealers must on their part have a care that their goods are in a sound and unhurtful condition. If they wish to have a guarantee, they are at liberty at their own expense to commit the examination of the articles of food they have in store to experts of their own, but on no pretense whatever can they claim that such examination be effected on the part of the local authorities and within a limited time.

We are very willing to believe that the memorialist, who, as he states, has bought this bacon "from one of the greatest and most responsible firms in America on a certificate of good quality," is suffering great loss, but this may not prevent us—watchful for the welfare of the public in general—from continuing to act as we have hitherto done in regard to the examination of articles of food. After what we have communicated it requires no demonstration to show that the public, however, will only then be fully guaranteed when they themselves also attend to their interests. The danger of trichinæ, particularly in the consumption of American bacon, will, even under the control of the local authorities, continue to exist, and can for the greater part be avoided only by not partaking of this article of food unless it has been well boiled or roasted.

We suggest that you inform the memorialist that his two-fold request is not of a nature that it can be granted.

The burgomaster and magistrates of Amsterdam:

VAN TIENHOVEN.

The Secretary:
DE NEUFVILLE.

ITALY.

No. 125.

Mr. Marsh to Mr. Evarts.

No. 941.] LEGATION OF THE UNITED STATES,
Rome, March 14, 1881. (Received April 2.)

SIR: I have the honor to inclose to you herewith copies of the correspondence between this legation and the consulate of the United States at Genoa, and between the legation and the ministry of foreign affairs, relating to the importation into Italy of pork from America. Having no instructions or other precise information on the subject, I have not replied to the minister's note.

I am, etc.,

GEO. P. MARSH.

[Inclosure 1 in No. 941.]

Mr. Hazelton to Mr. Marsh.

CONSULATE OF THE UNITED STATES,
Genoa, February 5, 1881.

SIR: I have the honor to forward a letter from Messrs. Granet Brown & Co., of this city, asking your influence with the Italian Government in obtaining the repeal of the law prohibiting the importation of pork into Italy. This house carries on a large trade with the United States in petroleum, and is one of the most reliable business houses in Genoa.

I think that the statements containnd in the inclosed letter are substantially correct, and that if the aforesaid law is repealed an important trade in hams and bacon will be the result. The price of meat in Genoa is very high, the common people being enable to enjoy it except on rare occasions, perhaps four or five times a year. If it can be imported without an excessive duty, it will result in a substantial benefit to the consumer as well as to the dealer.

I am, etc.,

J. F. HAZELTON, *Consul.*

[Inclosure 2 in No. 941.]

Granet Brown & Co. to Mr. Marsh.

GENOA, *February* 3, 1881.

SIR: At the request of many commercial houses in this city and in the United States of America, who, like ourselves, are interested in the trade in American bacon and hog products, we beg to submit the following facts to your notice.

About a year ago the Italian Government, on the assumption that the importation of bacon, hams, and other raw American meat was injurious to the public health, absolutely prohibited the importation of the same into this country. The consequence of this prohibition, promoted as it probably was by a few parties interested in excluding the competition of imported provisions with native produce, is, that an active and daily increasing trade with the United States has been arbitrarily suppressed without adequate grounds. to the manifest detriment of trade, to the receipts of the Italian customs, and especially to the interests of the generally consuming public.

It is unnecessary for us here to draw your excellency's attention to the character of the pleas upon which the suppression of this trade is based, confuted as they are by the statistics of the very large and in every sense healthy trade existing in American hog produce with all other European countries, nor need we appeal to the principles of fairness and reciprocal advantage to trade which we judge to be violated by this legislation. We beg, however, to inclose a memorandum, containing some statistics with reference to the matter which was distributed last year in Genoa.

Finally, we beg leave to appeal to your excellency to beg that your influence may be used to have our case presented in the proper quarter to the Italian Government in Rome, in the interest of your American compatriots, and with a view to obtaining the prompt repeal of the prohibition to trade in the said important produce of the United States

With which request we have the honor to remain, your excellency's, etc.,

GRANET BROWN & CO.

[Inclosure 3 in No. 941.]

Mr. Marsh to Señor Cairoli.

LEGATION OF THE UNITED STATES,
Rome, February 21, 1881.

YOUR EXCELLENCY: Through the consulate of the United States at Genoa I have received communications from persons at that port interested in American trade complaining of certain recent alleged custom-house or governmental regulations as greatly restricting, if not entirely abolishing, the liberty of importation of salted, smoked, or otherwise preserved pork from the United States, which has become an important branch of trade between America and the European ports.

This legation has never been officially notified of any obstruction or impediment, local or general, to this trade, and I respectfully ask, for information of my Government and of American shippers, when and by what authority, superior or administrative, the decrees in question, if such exist, were issued, whether they are absolute or conditional, whether they are limited as to time or place, or are permanent and general in their application; and whether it is thought to have been established by official investigation that any prejudicial consequences to the public health have resulted from the importation and consumption of such meats?

I avail myself of this occasion to renew to your excellency the assurance of my high consideration.

GEORGE P. MARSH.

[Inclosure 4 in No. 941.—Translation.]

The minister of foreign affairs to Mr. Marsh.

ROME, *February* 28, 1881.

Mr. MINISTER: In reply to your note of the 21st instant, I hasten to inform you that since the beginning of the year 1879, it having been ascertained that pork affected by trichina had arrived in the kingdom coming from Cincinnati and other parts of the American Union where that disease was proved to exist, the ministry of the interior prohibited, by a sanitary order dated February 20 of the same year, No. 5, the importation of swine, as well as of their flesh or any parts of their body, in whatever manner prepared or preserved, exported from the United States of America.

On finding afterwards that pork was brought into the kingdom by way of land, coming from places where trichina existed, the probibition by a succeeding order, dated May 6, 1879, No. 13, was extended to foreign pork coming from any place whatever, even by way of land.

Notwithstanding the earnest remonstrance of the trade which called for the revocation of that measure, the aforementioned ministry, after having several times taken the advice of the superior board of health for guidance in their decision, concluded that the moment for the rescinding of that prohibition would not have come until the information received was such as to mitigate the gravity of the disease.

Only last year the aforesaid board was requested to examine again the subject; but in their meeting of the 30th of June the board expressed the opinion that in the interest of the public health the prohibition should be maintained absolute and general so long as assurances were not forthcoming such as to give reason to believe that all danger of infection had ceased,

In view of this opinion emphatically expressed by the first sanitary body of the state, and no information having been received on the subject in any way satisfactory, the Government of the King could but determine—nor could it do otherwise—to enforce firmly the prohibition imposed by the order before cited until the receipt of such information as would relieve it of all responsibility in a matter of such serious importance.

In transmitting to you, herewith inclosed, a copy of the order of May 6, 1879, I avail myself of this occasion to renew to you, Mr. Minister, the assurance of my high consideration.

For the minister:

A. PEIROLERI.

Hon. GEO. P. MARSH,
Minister of the United States, Rome.

[Inclosure 5 in No. 941.—Translation.]

Decree of the Italian Government forbidding the importation of pork.

1879.—SANITARY ORDINANCE NO. 13.

The minister of the interior:

In view of the law concerning public health of the 20th March, 1865, Annex C, and the ministerial instructions of the 26th December, 1871;

In view of the ordinances of the 14th and 20th February last past, Nos. 4 and 5;

In view of the difficulty of ascertaining the original place of departure of the hogs' meat;

In view of the fact that hogs' meat coming from places where trichina exists is indirectly inported into the kingdom by land;

Decrees:

ARTICLE 1. The prohibition upon importation imposed by the above-named ordinances is henceforth extended to all foreign hogs' meat from whatever place it may come.

ART. 2. Until a new disposition, this decree will apply equally to all importations by way of land.

The prefects and customs authorities of the kingdom are charged with the execution of the present ordinance.

Dated at Rome the 6th May, 1879.

For the minister:

G. B. MORANA.

No. 126.

Mr. Blaine to Mr. Marsh.

No. 778.] DEPARTMENT OF STATE,
Washington, June 10, 1881.

SIR: I transmit herewith copies of an exhaustive report, prepared by the officer of this department who was recently detailed to make a searching and impartial investigation concerning the truth or untruth of the alarming rumors which have prevailed of late as to the alleged unhealthfulness of the American pork products shipped to foreign countries.

This investigation was forced upon this Government by the disastrous effects produced abroad by those rumors, and by the action of several European governments in stringently restricting or prohibiting the importation of swine products from this country. It was undertaken in the most impartial spirit, and with full recognition of the weighty responsibility which would rest upon this Government should the prevalent rumors be substantiated. Had it been found that this great American industry was the means of disseminating disease and death abroad, no admission could have been too frank or prompt, and no re-

pressive measures too urgent to vindicate our national good faith. As it is, the result goes beyond our most sanguine expectations in proving the baselessness of the statements which have, unhappily, wrought such injury upon one of our most widely spread and valuable branches of foreign commerce.

It is desired that you should, after acquainting yourself with the facts shown in this report, bring it earnestly to the attention of the Italian Government, adding thereto such representations as, in your own good judgment, may induce an abandonment or very material modification of the oppressive measures which have been adopted in Italy with regard to the American pork trade. You may say that the entire good faith with which the investigation has been conducted, warrants us in expecting that the Italian Government will accept and act upon the result in equal good faith. You may also profitably refer to the singular gratifying action of the Belgian Government, which, disregarding popular clamor and prejudice, and examining the question fairly upon its merits, reached some time since the conclusion to which this government is irresistibly led, that of the widely spread food-staples of the world's commerce, none is grown, packed, and exported under conditions more calculated to assure safety and wholesomeness than the pork products of America.

You will give this report the widest possible publicity. A number of copies will be sent you for this purpose, under separate cover.

I am, etc.,

JAMES G. BLAINE.

(The inclosure, a pamphlet on "American Pork," has already been widely circulated. It is reprinted as an annex to the present Report of the Secretary of State.)

SWITZERLAND.

No. 127.

Mr. Mason to Mr. Hay.

No. 27.] UNITED STATES CONSULATE,
Basle, February 26, 1881. (Received March 16.)

SIR: On the 23d of the present month, notice was given in the Federal Congress of Switzerland that a measure would be introduced to prohibit the importation of bacon, lard, hams, and pork from the United States of America to this country.

This threatened action is based, not upon any recent discovery of trichinæ or other defect or impurity in American meats or lard in Switzerland, but is stimulated and suggested by the fact that the Government of France had a short time previously passed a decree prohibiting the importation of all hog products from the United States into France. The present state of feeling with regard to this matter, in Switzerland and adjoining countries, is such as to seriously threaten an important and valuable class of American exports, and the undersigned begs leave to submit to the Department the following statement of facts.

There prevails among business men in Europe a fear that the protracted and heavy drain of gold from the Old World to the United

States may eventually result in a serious disturbance of the monetary balance between the two hemispheres. Any prohibitory enactment which may curtail the influx of American products and compel the people of European countries to purchase their supplies from home producers, is regarded as part of a wise and self-protective policy. Added to this is the fact that American hams, shoulders, side pork, etc., can be profitably imported and sold at from 10 to 20 centimes per pound cheaper than the same articles when produced in Europe. It naturally results from this that butchers, dealers in domestic meats, and farmers who raise hogs for the home market, are strongly opposed to importations from America, and lose no opportunity to make this opposition potent and effective.

The prosperity of the United States under a protective system has produced a great modification of public sentiment on that subject in Europe, and from the comments of the French, German, and Swiss newspapers it would appear that the recent action of the French Government in regard to American meats is believed to have been inspired by the motive of protection to its farmers and its gold supply, rather than by any sense of danger from the impurity of American meats.

The ostensible occasion for the agitation of this subject and the decree of interdiction by the French Government was an outbreak of trichinosis in a family which was at first supposed to have eaten American pork; but it is now officially conceded that the trouble was caused by the flesh of a newly-killed home-bred pig, which was eaten in its raw state. In some instances of recent occurrence salt pork of alleged American origin, found infested with trichinæ, has been proven to have come from Germany, where, as is well known, the trichinosis originated many years ago.

For the reasons stated, however, the prejudice against American hog products is so general and uncompromising that the undersigned, in order to correct, so far as practicable, false impressions, and thus aid in averting the threatened prohibition by the Swiss Government, has unofficially caused to be published in the journals of Basle the following facts:

I. That in the United States all hog products designed for export are carefully inspected, first at the place where the animals are slaughtered and again at the port of shipment.

II. That there is no instance on record of any person in Europe being injured in health by eating hams or pork imported in a salted condition from the United States, the only danger from trichinæ being through the eating of hogs' flesh in a fresh state, recently slaughtered and imperfectly cooked.

III. That from the 1st of November, 1880, until the 15th of January, 1881 (two and a half months), 36,351,000 pounds of lard and 137,987,500 pounds of hogs' flesh have been exported from the United States to Great Britain, where the official inspection of such imports is most rigid, and that in all this vast quantity no instance of insecurity or infection has been discovered.

IV. That almost all authenticated instances of injury to human health by trichinæ have occurred in Germany, where fresh pork is sometimes eaten uncooked, and that no such danger has been incurred from eating salted and seasoned meats.

V. That during a period of two years the principal importer of American meats in the consular district of Basle has had all such goods which were imported by him carefully inspected by an official designated for that purpose by the city government, and that at the end of that time

this inspection was voluntarily discontinued, being considered by the civil authorities no longer necessary.

VI. That the Government of Belgium (as shown by the subjoined official report, which I have had published in the principal newspaper of Basle) has formally declined to adopt the interdiction against American meats for the reason, as stated, that no just ground for such action has been discovered in Belgium.

The undersigned has further taken the liberty to call the attention of the United States legation at Berne to these facts, and, in the absence of precedents or definite instructions, will, until otherwise directed, continue his efforts to counteract, so far as may be possible by unofficial means, the prejudice now existing against American meat imports.

Although the latest unofficial report from Paris shows that the decree against American meats has awakened strong opposition, and seems likely to be soon essentially modified or wholly repealed, still the situation in the whole of Central Europe is of such a nature as to seriously threaten an important and growing class of American exports, and imperatively suggests the necessity of increased care on the part of American exporters in keeping their meats above reasonable suspicion.

In addition to this, great advantage might be derived from the publication in Europe of an official statement, made under Government authority, showing that the reports of hog cholera and trichinosis in the United States have been greatly exaggerated, and that all hog products designed for export are carefully and repeatedly inspected.

The freedom with which the most damaging reports and rumors concerning this subject are published and believed in this country seems, in my judgment, to call for an authentic protest and denial.

I am, etc.,

FRANK H. MASON, *Consul.*

[Inclosure in No. 27.—Translation from the Basler Nachrichten, February 26, 1881.]

BELGIUM HOUSE OF REPRESENTATIVES. SESSION OF FEBRUARY 22, 1881.

[Extract from the official report.]

ORDER OF THE DAY.

M. WILLEQUET. A decree of the President of the French Republic interdicts the entry of all salted meats coming from America into France. It seems to me that this decree is of such a nature as to create a great panic in the country. After exact information, I dare say that there is in Belgium no case of trichinosis; nevertheless, I find it opportune that our people may hear officially from our minister of the interior that there is no danger at present.

M. ROLIN-JACQUEMYNS, *minister of the interior*. It is not my duty to examine the governmental measures in France, but I can reassure our honorable member about the trichinosis matter in our country. For a long time our Government has examined the danger question resulting from eating conserved swine-meat. During the past twenty years the academy and the sanitary board have examined the question, but never has any case of trichinosis been found. It is stated that there is no danger when the meat is properly cooked, and uncooked meat is very seldom eaten in Belgium. The Government will take no precautionary measures, but will declare some rules, the effect of which will be sufficient.

M. DE DECKER. My thanks to the honorable minister for his declaration. There was some agitation at the Antwerp exchange upon hearing of the French decree. As is well known, the trade in salted meats is very considerable at Antwerp. All observations are favorable to the importation of salted meats from the United States. The few cases of trichinosis were created by home-bred meat.

M. ROLLIN-JAEQUEMYNS, *minister of the interior*. I have never had knowledge of any case of trichinosis.

M. WILLEQUET. I am quite satisfied. I made my interpellation merely in order to allay excitement in Belgium.

No. 128.

Mr. Mason to Mr. Hay.

No 28.] UNITED STATES CONSULATE,
Basle, March 2, 1881. (Received March 19.)

SIR: Referring to dispatch No. 27 from this consulate, under date of February 26, reporting to the Department that a motion had been announced for debate in the Federal Council of Switzerland with a view to the enactment of a law to prohibit the importation of American hams, bacon, lard, and other hog products into Switzerland, I would now report that the motion has been changed to a request for inquiry as to what measure should be taken to guard against the damages that might arise from such importations. Public opinion on this subject has been considerably modified during the past few days, and it does not seem probable that any prohibitory measure will be enacted during the present session,

I have the honor to inclose also two articles from the Basler Nachrichten, with translations of the same.

I am, etc.,

FRANK H. MASON, *Consul.*

[Inclosure in No. 28.—Translation from the Basler Nachrichten.]

Mr. F. H. Mason, consul of the United States of America, at Basle, writes us:

"Will you kindly permit me to contribute a few words to the discussion of the subject of American meats, which is now going on in the newspapers? Whoever wishes to form a just opinion must bear in mind the following facts:

"I That all hams, shoulders, bacon, and lard intended for export from the United States to Europe are twice carefully inspected by official inspectors—once at the place where the hogs are killed and once at the sea-port where the meat is shipped.

"II. That there is no record of any person being infected with trichina from eating salted meats. The danger of trichinosis comes from eating freshly-killed pork which is not properly cooked. The case of trichinosis in France, which produced the recent agitation on that subject and led to the decree interdicting American meats, is now officially declared to have been caused by eating the meat of a newly-killed pig which had been raised in France and was not cooked at all.

"III. That in England, where the inspection of imported articles of food is the most careful and rigorous in the world, there was imported from the United States between November 1, 1880, and the 15th of January, 1881 (ten weeks), not less than 36,351,000 pounds of lard and 137,987,500 pounds of salted hogs' flesh, and not a single case of trichina or impurity has been found.

"IV. During a period of two years the principal importer of American meats in Basle had all his meats inspected by a city inspector, and at the end of that period this inspection was discontinued by the city authorities because they thought it no longer necessary.

"V. The Government of Belgium, which country imports large quantities of American meats, refuses to follow the example of France, and it is already announced by the French journals that the French governmental decree against those meats will be at once either essentially modified or wholly repealed.

"Switzerland in 1879 exported to the United States more than 60,000,000 francs worth of manufactured products, and imported in return only the value of 10,000,000 francs from that country. The reports of 1880 will show a still further disparity in favor of Switzerland. Is this causeless effort to prohibit one class of imports, which gives the Swiss people cheaper food, just or wise?"

[Translation.]

EUROPEAN HOG'S FLESH.

In the midst of the great clamor about American hog flesh it has been forgotten that there is also a considerable importation of European hogs into our country, in which the only so-called "Berne hams" are to be first considered. Here it is well known to us us that by this kind of importation many abuses occur. May not, therefore, our sanitary police begin with a very careful inspection of this class of European meats? Even Swiss swine may also be infected with trichina.

No. 129.

Mr. De Zeyk to Mr. Hay.

No. 69.] UNITED STATES COMMERCIAL AGENCY,
St. Galle, March 17, 1881. (Received April 14.)

SIR: From the following translation, the original of which I caused to be published as an editorial in the local Journal of Commerce, the Department will perceive that prohibitory measures already adopted in Austria-Hungary and France against our flourishing export trade in beef and pork threaten to endanger these interests in Switzerland.

Bearing in mind the regulation (United States Consular Regulations, § 424) which denies to consular officers the right of personally seeking through the press the redress of wrongs (however unjust, as in the present case, these wrongs may be), I was obliged to proceed indirectly. The editor of the St. Galler Handels-Zeitung obligingly gave space in his paper to the protest against the prohibition, and at the same time I drew the attention of our chargé d'affaires at Berne to the matter, and in my letter to him, a copy of which is inclosed, suggested that the American consuls in Switzerland should take appropriate action in the premises.

As whatever could be done to influence the deliberations of the federal council had to be done at once before a decision was reached, I had no time to consult the Department in the matter. I felt assured, however, from the straightforward action of the chamber of commerce at Cincinnati and the boards of trade at Chicago and Indianapolis that there was no just ground on which to base a prohibition of the importation of American pork. I trust the Department will approve of the course I have taken.

The following is a translation of what appeared in the St. Galler Handels-Zeitung of March 15, 1881:

On the 24th of February last, H. Estoppey addressed the following interpellation to the *Standerath*:

"The President of the French Republic has just issued a decree prohibiting the entry of pork coming from the United States of America. In view of the danger which may result from the use of such meat, arising from the trichinæ with which it is for the most part infected, the federal council should be invited to consider the advisability of issuing a similar prohibition for Switzerland."

This being considered an important question, the federal council was requested to consider the appropriateness of some measure prohibiting the importation and consumption of American meat, or of allowing the several cantons to take proper action for themselves.

We have seen that Austria-Hungary prohibited the importation of American meat.

Before reflecting upon these singular resolutions, we will lay before our readers a report of the proceedings in the Belgium legislative chamber.

The decree of the President of the French Republic prohibiting the importation of American pork has produced no little excitement in Belgium, and especially in Antwerp, which is well known to be the chief market for that commodity. The subject was brought into discussion in the legislative chamber by an interpellation of Deputy Willequet, and the fact was developed that "there was as yet not a single case of trichinosis in Belgium." Mr. Willequet wished to have the fact that no danger from American pork was to be feared stated officially through the minister of the interior.

Minister Rolin-Jaequemyns replied that it was not his province to consider a legislative measure taken in France, but that he thought he could re-assure the honorable member on the subject of trichinæ. He stated that the Government had long since considered the danger which might ensue from the consumption of pork, and that twenty years ago the Academy of Science and the sanitary commission had thoroughly investigated the matter. He stated further that no case of trichinosis had occurred in Belgium; that it was a well-known fact that cooking rendered the meat harmless, and that very little raw meat was consumed in the country. He finally said that

the Government had no intention or resorting to prohibitory measures, but would content itself with issuing sufficient cautionary notices.

The Deputy de Decker, after thanking the minister for his explanation, said that the Antwerp Exchange was sensibly affected by the issue of the French decree on account of the considerable pork trade at Antwerp. He added that it must be borne in mind that all experiments upon American pork resulted in its favor, and that the few cases of trichinosis which have occurred in Europe have been invariably traced to the use of inland pork. The minister of the interior stated anew that "no case of trichinosis had occurred." To all of which Mr. Willequet replied: "I declare myself to be satisfied. I made the interpellation only in order to be enabled to re-assure the country upon its sanitary condition."

We will give our federal council credit for the same tact as that shown by the Belgian Government in this all-important question to the Swiss people.

We are willing to suppose the originator of this motion, the delegate from the canton of Waadt, neither a butcher, nor a land-owner, or an agent for those of similar pecuniary interests. As his motives are thoroughly disinterested, therefore, and are inspired by patriotic solicitude for the well-being of his countrymen, the federal council will also, in the matter, confine its investigation to sanitary considerations.

In this investigation two questions will naturally present themselves: First, has the consumption of American pork produced any injurious effect upon Swiss consumers up to the present time? Secondly, do the exporters and sanitary officials in America offer sufficient assurances that only the meat of healthy animals shall be exported?

To the first of these questions the most searching inquiries have resulted in an emphatic negative. To the second question the affirmative must as surely be returned by any person conversant with the sanitary precautions which are invariably taken in America to secure wholesome food to the public. These precautions, which are taken by frequent visits of competent sanitary inspectors, are more stringent in American meat-packing establishments than in Switzerland, even in the largest cities. Furthermore, the producer will not risk his reputation by selling a few hams infected with trichinæ when he knows that by so doing he will, in all probability, lose a large and lucrative trade. The American producer is perfectly aware of the fact that he can command the markets of the world only by offering for sale an article of known excellence. Nor must it be forgotten that the meat exporters of America have made great improvements in their manner of fattening animals and in their processes of packing and preserving meats, so that they now excel the Swiss in such matters.

If the meat to which Mr. Estoppey took exception was indeed of American production, it must have been corned beef, or canned meat, or meat in brine, as it was imported ten years ago. We feel sure that if he could see American smoked beef, ham, and pork as it is now imported from Wisconsin and sold at St. Galle, Gossau, and Winterthur, he would have no fear of its unwholesomeness. We think that he would, with us, desire to see the trade in American meat introduced in all the larger cities in Switzerland to enable the workmen to obtain ch aper provisions. * - *

Hitherto all attempts to secure the regular importation of American meats have failed because not enough attention was paid to the taste of consumers. The Swiss are accustomed to smoked and dried meat, but do not like meat that is soft, as the meat generally is that is sent from America canned or barreled. It occurred to a butcher of Enneda, canton of Glaris, who has been for many years a farmer at New Glaris, Wis., that corned and smoked beef and pork, cured in the Swiss manner, would have a ready sale in this country. Encouraged by his first venture, he started a large packing establishment on his farm, feeding his animals from the waste from his dairy. As he is known to take every precaution in examining his meats before exportation, consumers in East Switzerland have great confidence in them, and they thus secure a ready sale. These meats and hams are of excellent appearance and flavor, and are sold by Swiss butchers 20 per cent. cheaper than other meats. This, besides being a direct advantage to the workingmen, has the effect of reducing the price of meat 10 per cent. wherever American meats are introduced. It is understood that the same farmer (Mr. Hösly) intends to introduce his meats into every large town in Switzerland, and doubtless many other Americans will follow him in providing the Swiss people with this cheap and wholesome food.

The Federal authorities before prohibiting the importation of American meat—in deference to the outcries of a few envious butchers and cattle dealers—should consider the interests of our working classes and of the Swiss farmers in America, and the slight it will offer to the American Government and to commerce at large. We are living in a country dependent upon America in many ways. America furnishes the market for our industries, receives the surplus of our population, provides us with most of our provisions. We should therefore desire to be on friendly terms with that country especially as we derive the most advantage from our intercourse with it. Would we not feel aggrieved if the Americans should retaliate by prohibiting the importation of our silk goods, embroidery. etc., on some pretext, actually arising from fear of our competition?

To return to the subject of American pork suspected of containing trichinæ, even if a few hams containing trichinæ were introduced accidentally into Switzerland, there would be little danger to be feared from their use. The Swiss eat no raw meat, and it is well known that pork containing trichinæ, in the most dangerous state, is harmless when cooked with a heat of 60° R. Would it not be better to prohibit the introduction of hams from Westphalia, sausages from Gotha, and pork from Italy and Hungary—countries which may be called the homes of trichinæ?

We have the firm belief, however, that the Federal Council, instead of resorting to extraordinary measures to prohibit importation, will allow the Swiss to take care of their own health and buy their meat and pork wherever they please.

I am, etc.,

A. J. DE ZEYK,
United States Commercial Agent.

[Inclosure in No. 169.]

Mr. De Zeyk to Mr. Fish.

UNITED STATES COMMERCIAL AGENCY,
St. Galle, March 14, 1881.

SIR: The inclosed number (21) of the St. Galler Handels-Zeitung of March 15, with its editorial against the contemplated prohibition of the importation of American meat will, I have no doubt, have sufficient weight with you to cause the same to be reproduced through our consuls in the commercial publications of their respective districts.

This I consider a measure of public utility, and in furtherance of our export trade, and as such will, I presume, be actively carried out by our consuls, that by its timely publication there may be exercised a favorable influence upon the Bundesrath's decision in the impending case of the proposed prohibition.

The cantons of my district being the most immediately concerned in the contemplated measure, I did not hesitate to do what I thought my duty, and appeal through the columns of the St. Galle Journal of Commerce, to the good common sense of the Swiss community at large, to use the weight of their opinion, and to disregard the wishes of a few, who, through mere envy and intrigues of competition, threaten to paralyze with their prohibitory measures the importation of American meat, one of our most thriving and extensive industries.

I am, etc.,

A. J. DE ZEYK,
Commercial Agent.

No. 130.

Mr. Mason to Mr. Hay.

No. 35.] UNITED STATES CONSULATE,
Basle, April 19, 1881. (Received May 7.)

SIR: I have the honor to report that in compliance with instructions received by telegraph from the Secretary of State, on the 24th of March, I have continued to investigate the subject of American meat imports in Switzerland, and have to submit the following:

I. The resolution which was introduced in the Swiss federal legislature on the 23d of February, demanding the enactment of a law prohibiting the importation of bacon, hams, and other hog products from the United States into Switzerland, was modified, as already reported in these dispatches, to a resolution of inquiry, and referred to the national sanitary commission, a permanent board of seven members, presided over by the eminent Dr. Schenck, of Berne.

Until the present time the commission has taken no definite action in respect to the resolution, but it is probable that during May or June

it will hold a special session to consider that subject, and will submit its report to the autumn session of the federal legislature, which will assemble in September.

The tenor of this forthcoming report of the sanitary commission will practically determine the character of the law which Switzerland will probably adopt to regulate the traffic in meats. In view of the importance of the commission's report, I shall feel justified, unless otherwise instructed, in attending its meeting, to present the facts as I understand them in defense of American meat-exporting interests.

From the present temper of the Swiss Government and the prevailing tone of public sentiment on this subject, it seems probable that the ultimate result will be the enactment of a statute which will require all hog meats which are sold for food in Switzerland to be examined and approved by official inspectors who shall be appointed and qualified under the law.

Against such a system no valid objection could, of course, be urged. It can only be asked in behalf of American meats that they shall be accepted and judged by the same code as that applied to meats from other countries.

II. Further observations concerning trichinæ:

From frequent inspections conducted personally by the principal meat importers of Basle I deduce the following facts with reference to the prevalence of trichinæ:

It is generally understood that the domestic swine of all countries are more or less liable to be infected with trichinæ. The danger and degree of this infection vary with different seasons and conditions, but the following is, perhaps, a fair average statement of the comparative degree of trichinæ infections in the meats principally used in this country: In native Swiss pork, 1 piece in 2,000; Westphalian meats, 1 piece in 200; from Berlin and northeast Germany, 1 piece in 250; from the United States, 1 piece in 100.

Among hogs of the Lower Rhine Valley 1 live hog in every 100 is infested with trichinæ; in Brunswick, 1 in 5,000; in Gotha, 1 in 1,800; in Schwerin, 1 in 550; in Kiel, Prussia, 1 in 260; and in some parts of Sweden, 1 in 63.

The conclusion is, therefore, that the hogs of the United States are as a whole not more nor less subject to trichinous infection than those of Europe.

There is no definite evidence to show that any danger to human life or health has been incurred in Europe by eating salted and seasoned meats imported from America; in fact, all testimony goes to prove that the salting and curing process destroys the vitality of the parasite, but the fact that it exists in a more or less developed state in perhaps one-half of 1 per cent. of American meats serves to confirm prejudices and seriously disturb the market. Any person with an ordinary microscope can detect trichinæ where they exist in freshly-killed hog's meat, but it requires an expert with a good glass to find them in salted and seasoned pork. They have been found, nevertheless, by the Basle importers in some American meats which had been twice inspected, once at the packing-house and once at the place of shipment.

The result of all the recent agitation of the meat question, since the announcement of the prohibitory decree by the French Government in February last, has been a falling off of from 12 to 15 per cent. in the import of American meats into Switzerland. In the cantons of Berne and Zurich the local butchers and meat dealers have influenced the cantonal authorities to refuse admission to American hams and bacon

on the unofficial certificate of a private inspector, although meats are admitted from Germany, the inspection of which, although nominally "official," has been obviously hasty and superficial. American meats are still, however, sent into the cantons of Berne and Zurich to some extent under invoices which make it appear that they came from Germany. To this extent only, so far as I can ascertain, is there a practical discrimination in Switzerland against American meats.

CONCLUSIONS.

The most obvious conclusions to be derived from the existing facts would seem to be:

I. That the fact must be recognized that an average of 1 per cent. of the hogs slaughtered in America during certain seasons are infected by trichinæ. Farmers should be made to understand that the danger of this infection is greatly increased when the hogs are permitted to eat decaying animal matter.

II. All pork slaughtered for export should be carefully inspected and trichinous carcasses rigidly condemned. The partial loss of 1 per cent. of the hog crop is trifling compared with the impending ruin of the pork export trade.

III. There should be published under national authority, and distributed for republication throughout Europe, clear and complete statistics showing the extent of the hog product in the United States; the immunity of the American people from trichinosis notwithstanding their large consumption of native meats; the numbers of hogs which die yearly of cholera and the accidents of transportation, *and what becomes of them*, and finally, the actual values of land and corn in the pork-growing States, by which it can be shown that American meats, notwithstanding their superior quality, can be legitimately sold in Europe from 10 to 20 per cent. cheaper than native meats. It is often published and popularly believed in this country that the hogs which die of disease or are killed or suffocated in transportation are packed for European markets; and that the comparative cheapness of American meats is due to their uncertain quality.

The widespread prejudice against American meats can be adequately met and overcome only by a rigid system of official inspection, by competent experts, appointed by national or State government, and empowered to use a seal or other device representing governmental authority. To the European mind an *official* seal is inferior in potency only to the edict of royalty itself. American pork of all kinds is conceded by intelligent and fair-minded dealers to be the best in the market, and it is growing better year by year, as the methods of curing and packing for European consumption are improved. Through a combination of adverse interests and misfortunes, for some of which careless and avaricious American exporters have been responsible, these meats are temporarily under suspicion, but there is apparantly no difficulty in the present situation which a prompt, positive, and thorough policy may not successfully meet and overcome.

I have, etc.,

FRANK H. MASON, *Consul.*

No. 131.

Mr. De Zeyk to Mr. Hay.

No. 78.] UNITED STATES COMMERCIAL AGENCY,
St. Galle, April 22, 1881. (Received May 12.)

SIR: Referring to my dispatch No. 69, of March 17, I have now the honor to state that Mr. Hösly, of New Glaris, Wis., has just called to inform me that, having lately come to Europe for the inspection of his retail shops at Winterthur, Gossau, and St. Galle, he was invited by Mr. Schenck, the member of the Federal Council for the Department of the Interior, to personally present his case, and that, during that interview, Mr. Schenck has, in so many words, told him to "go ahead" and to import all the pork, ham, corned beef, etc., that he can sell, without any fear of a prohibition from the Swiss Federal Government.

Besides what was published, conformably with its translation given in my said No. 69, I have given to the "press" the whole "embroglio" with Vice-Consul Crump, as reported in the March number of the American Exporter, in page 13, under heading of "Unfounded reports about American hog products."

The wide circulation of these publications may, as surmised in my No. 69, have had its influence with the Hon. Secretary of the Interior; his commendable action in the premises, as aforesaid, can at all events now be considered as a favorable solution of the affair.

I am, etc.,

A. J. DE ZEYK,
Commercial Agent.

No. 132.

Mr. Mason to Mr. Hay.

No. 38.] UNITED STATES CONSULATE,
Basle, April 29, 1881. (Received May 16.)

SIR: On the 26th of February, eight days after the promulgation of the decree of the French Government prohibiting the importation into France of salted pork from the United States, the undersigned had the honor to submit to the Department, in dispatch No. 20 from this consulate, some observations on the subject of that prohibition, which were given in substance to the American press.

Some of those statements seem to have been received in certain quarters with incredulity. It has seemed incomprehensible to various American journals that the Government of the French Republic should have formally prohibited the importation of salted meats from America, and that other governments should have manifested such readiness to follow that example, when not a single case of trichinosis could be established as having resulted from the enormous consumption of those meats in Europe during the past twenty-five years.

I beg, therefore, to submit as concurrent testimony the official protest of the syndicate of commerce of the city of Bordeaux, and its demand that the French decree of prohibition be repealed. This protest, which was issued after the disastrous effects of the decree of February 18 had become apparent, states so clearly and forcibly the objections of the French people to the prohibitory measure and fortifies so powerfully the

disputed points in the earlier dispatch above alluded to, that I have translated it into English and inclose herewith printed copies, in the hope that the Department will regard it worthy of the widest circulation in the American press. It will, perhaps, be sufficient that no statement made in this circular of the Bordeaux syndicate has been thus far successfully disputed. If it accuses the French Government of taking an important and unjust step through ignorance of facts or insincere motives, we have only to remember that this is French testimony of the highest mercantile character against a declared policy of its own Govment.

Not less extraordinary than the French decree itself has been the eager and unquestioning readiness with which it has been echoed and accepted by certain smaller governments, notably one of the French cantons of Switzerland. In the canton of Neuchâtel there was published recently in the official organ a proclamation from the minister of the interior to the following effect:

* * * The decree promulgated by the Government of the French Republic, interdicting the importation of salted pork meats from the United States of America, calls our attention to the dangers threatening the public health from the consumption of those meats. It is well established by microscopic examination that the *greater part of these meats,* which in the forms of hams *and conserved canned meats* constitute a portion of the public sustenance, contain trichinæ in greater or less proportions, and that their use as food, if not preceded by thorough cooking, so as to entirely destroy these parasites, may communicate to man the disease called trichinosis.

The peculiar kind of intelligence manifested in this proclamation is difficult to deal with when clothed with official dignity and authority. The most determined European enemies of American meats have never before ventured to assert that more than *one* or *two* per cent. of those meats are trichinous. It is generally known that canned meats sold in Switzerland are not only thoroughly cooked as the first essential of their preservation, but also only include beef, mutton, and the tongues of calves, sheep, and oxen, which are not subject to the trichinous infection at all. When, therefore, it is officially stated that *more than half the American hams, bacon.* and *cooked conserved meats* from America are trichinous, the magnitude and density of the error present some difficulties. The canton of Neuchâtel sells 54 per cent. of its annual product of watches to the United States for nearly 8,000,000 francs. It imports from the same country only 150,000,000 francs, principally cured and canned meats, and even this small trade has been for the present practically destroyed by the proclamation above alluded to. Not a single case of trichinosis had ever occured in that canton, nor, so far as I can learn, has there been any discovery there of trichinæ in American meats. I will further report that this consulate is in correspondence with the cantonal government of Neuchâtel on this subject, and will counteract by all available means the effects of its hasty proclamation.

There are abundant and unmistakable evidences that the artificially-created panic respecting American meats has reached its highest, and the tide is beginning to turn. From the first *the people* have taken no part in it, and, as they are the principal sufferers from the increased cost of meats, they begin to complain. Even the butchers and pork producers find that, though prices have advanced, sales have greatly diminished. The panic has seriously injured the demand for domestic as well as imported meats, and many of those who at first favored prohibition now oppose it. I herewith inclose a leading article from the *Journal de Genève* of a recent date (with a translation of the same) which concedes unreservedly the entire ground of dispute as to the wholesomeness of

American pork and the true motives which underlie the present agitation. The further the discussion is continued the more obvious becomes the logic and causes of the prohibitory movement. The utter failure of the alarmists to present a single authenticated case of trichinosis in France, England, Belgium, or Switzerland which could be traced to the use of salted American meat has left them practically without a tenable case.

Upon the general question whether salted and cured pork can, under any circumstances, infect man or animals with trichinæ, I have to present the following convincing evidence:

As reported in my dispatch February 26, the leading meat importer of Basle had for a period of two years subjected all his meats, including those from France and Germany, as well as those coming from America, to the examination of the official city inspector. In all these meats there were found occasional pieces in which the microscope detected traces of defunct trichinæ. These infected pieces were put aside, and for a space of six months were experimentally fed to hogs, dogs, cats, and chickens under the personal supervision of the municipal slaughter-house director. At the end of six months these animals were killed and their flesh carefully examined. In not one of them could the most skillful inspector discover the slightest trace of trichinæ. It was a result of this experiment that the inspection of imported meats was voluntarily discontinued by the city authorities.

It is felt that this record of observations will be incomplete without some definite practical suggestion as to the most practicable methods of inspection. The exaggerated prejudice against American pork may be exposed and the prohibitory decrees repealed, but I beg to repeat that in my opinion the European traffic in American salted meats can never be fully restored until a system of official inspection is established which shall carry with it the weight and force of Federal or State authority. From the working of the municipal inspection systems in several German cities—notably, Berlin—it is found that a capable inspector can thoroughly examine one hundred pieces during an ordinary working day. Young men of ordinary education, but strong, clear eyesight, might be trained in a fortnight, under skillful microscopists, to be perfectly competent inspectors. In Chicago or Cincinnati this system might be applied, and inspectors trained for service in the large packing-houses. Estimating their wages at $3 each, the cost per hog for the actual work of inspection would be 3 cents. The official inspector, having supervision of the practical microscopists, could seal and authenticate their work. Until this or some similar system is adopted the 1 per cent. of trichinous hogs, which is conceded to exist in the United States, will prove a serious obstacle to the maintenance and further development of our export trade in meats. The European meats, with which our own come into competition, are nearly all officially inspected; and until American hams and bacon bear the seal of official examination they will be, in presence of existing prejudices, at a serious disadvantage in the markets of the Old World. It is within the power of the American meat exporters to turn the momentarily disastrous pork panic of 1881 into an opportunity for making their meats more widely and favorably known than ever before. They are fighting a defensive battle, but they can win it.

I am, &c.,

FRANK H. MASON.
Consul.

[Inclosure 1 in No. 38.]

THE BOARD OF TRADE.—SYNDICATE OF LARD AND SALTED MEATS, BORDEAUX.

AMERICAN SALTED MEATS.

On the 18th of February, 1881, a decree rendered on the report of the minister of agriculture and commerce interdicted throughout the territory of the French Republic the importation of salted meats from the United States of America.

It is proper to examine, in the report which preceded the decree, whether a measure so grave, which strikes a blow so terrible to so important a branch of commerce, causes a serious derangement in the sources of public food, exiles from our ports so valuable an element of freight (60,000 tons), has been inspired by facts which adequately explain the precipitation with which it has been adopted.

We remark, in the first place, that the minister, in invoking the motive of hygiene, has not shown in his report any facts justifying his own fears; so, as he has shown none, we are justified in supposing that none existed.

It is not within our province to discuss the question from a scientific point of view; we limit ourselves in this protest to a review of the discussion which took place in the academy of medicine during the sessions of 15th and 23d of February, 1881, and in which it was decided that the danger resulting from eating trichinous pork is completely destroyed, first by salting, and above all by our culinary system, which secures for all our meats sufficient cooking.

One single case of trichinosis has occurred in France, viz, at Crespy en Valois (oise), in 1878, and that was caused by the meat of a hog raised and slaughtered in France.

This single fact serves to demonstrate that the French animals are as susceptible as those of America to infection with trichinæ. And behold! even this isolated charge against French pork is disputed by the honorable Mr. Bouillaud, member of the academy of medicine, professor of the faculty of Paris, who attributes that fatal illness to a typhoid disease.

Since then, during twenty-five years, there have been introduced into France from 400,000,000 to 500,000,000 kilograms of American salted meats, and the doctors have not established beyond dispute a single victim of trichinosis among the consumers of these enormous quantities. Is it then necessary to excite alarm and to have recourse to prohibitory measures?

We have now to examine the situation of different European nations, which the minister cited as having decreed a similar prohibition. Contrary to the documents which have been furnished to him, this prohibition does not exist in any part of Germany; to convince oneself of this, it will be sufficient to consult the official statistics of the ports of Bremen, Hamburg, and Stettin.

The Government of Germany has only prohibited the importation of meat for sausages. This meat, cut very fine, was only designed for consumption in that country. Its prohibition was not caused by the discovery of trichinæ, but solely on account of its unwholesomeness, resulting from the nature of its preparation. These meats, packed in barrels and very slightly salted, were generally sufficiently well preserved, but it sometimes happened that during the voyage they underwent a peculiar kind of fermentation, which, in the opinion of the German savants, rendered them unfit for food.

The prohibition does not exist in Spain. In that country it was decreed in March, 1880. We need not show the motives which provoked this measure, since the interdiction was repealed five months later, that is to say, on the first of August, 1880. American pork has to-day free entry into Spain.

The prohibition does not exist, except in Italy and Portugal. We have now cause to think that in the latter country the duty has been repealed recently, for in the exports made from New York in January last we see Portugal charged with 35,000 kilograms of salted pork. But in the absense of official statistics we affirm nothing on this point.

In Italy, the Government, yielding to the pressure of the home packers and hog growers, who found their industries depressed to the lowest extent by the competition of the American products, declared them prohibited. This measure could not have there the same disastrous consequences which we foresee for our country, since Italy produces more pork than its people consume. To show how exaggerated are the apprehensions of our minister of commerce, we feel constrained to present some observations, sustained by statistics, which we guarantee as perfectly exact:

The number of hogs killed in the Western States of America from the 1st November, 1879, to the 31st of October, 1880, were	12,190,000
The packers of the Eastern States, including the ports of New York, Boston, Philadelphia, and Baltimore, killed during the same period	2,415,000
Making a total of	14,605,000

In these figures are not included the hogs killed by the butchers to be consumed in a fresh state. We know, however, that the number of these hogs has been considerable.

We have here only to consider the salted meats. The 14,605,000 hogs have yielded a meat product of 1,404,000,000 kilograms. If we deduct the 265,000,000 kilograms, quantity of lard produced, there remain of salted meats 1,139,000,000 kilograms.

From this colossal sum the United States have exported during the same months 387,740,000 kilograms, retaining for their own consumption 751,260,000 kilograms, or 15 kilograms 300 gr. (about 32 pounds) to each inhabitant in a population of 49,000,000 of people.

The 387,740,000 kilograms exported are thus divided:

	Kilograms.
Great Britain	274,821,000
Continent of Europe	89,339,000
West Indies and Central America	23,580,000
Total	387,740,000

The population of Great Britain is 30,000,000, so that the average consumption of American pork is about nine kilograms per capita. The 89,339,000 kilograms consigned to the European continent include the shipments to France, Belgium, Holland, Denmark, Sweden, Norway, Germany, Russia, and Spain. Our country is included in this estimate for about 32,000,000 kilograms brought by direct transportation, and 5,000,000 or 6,000,000 kilograms coming from other ports of Europe; on the other hand, we have exported some millions of kilograms into Spain and Switzerland.

The average of our consumption is about one kilogram (2 pounds) per individual.

Why, then, should two great countries, such as England and the United States, which are quite as careful as ours of the health of their inhabitants, remain indifferent to the dangers which menace our French consumers?

But if the danger were as serious as it is pretended, what ravages, what death would it have caused among their population! A number of fatal cases would have been proved beyond dispute, and it is not to be doubted that those Governments, having recognized the peril, would have vigorously suppressed its causes.

The decree of February 18 has had the effect to arouse the cupidity of the protectionists of England and Belgium, countries in which the consumption of American meats is much greater than here.

At London an interpellation has taken place in the House of Commons. According to a dispatch of February 22, the Right Honorable Anthony John Mundella, secretary to the minister of the interior, said that "no official information had been received on the subject of the interdiction of American pork in France, Russia, Italy, Austria, Spain, Portugal, or Greece."

"The interdiction in England would bring great hardship to the poorer classes. Moreover, it would not be sufficient to merely prohibit the importation of pork from America, since the trichinæ exist in Germany and in France, and since other countries receive American pork England would in turn receive it indirectly from them."

At Brussels the minister of the interior, being interrogated, responded categorically that no case of trichinosis had ever been proven to have occurred in Belgium, and he had therefore taken no prohibitive measures. He further added that it was understood that in Germany the precautions taken to secure inspection of hog meats were unnecessary and causeless.

Italy alone maintains a prohibition rather as a measure of protection than hygiene, and should France, where free trade, by the grace of God, has taken such deep root, seek to imitate her?

Is it to be doubted that a measure so grave will have a disastrous influence on our export trade by encouraging the protectionist influences which surround Congress at Washington? We know that great efforts are being made to secure an advance in the import duties on wines and silks. Why furnish the enemies of free trade with such powerful arguments against the reduction of the tariff, which will encourage the Senators and Representatives from the West, whose interests are to-day directly sustained by the decree against which we protest?

To the foregoing considerations we wish to add that prohibition, the object of which is to afford us protection from a danger entirely hypothetical, would have as its effects:

1. To deprive the poor classes, without affording them an equivalent, of an article of food, the wholesome and substantial qualities of which they appreciate, and which they in many cases prefer to the French meats.

2. To diminish the consumption of French pork as well as that of American production; and our pork dealers, who have appeared to approve the measure, are on the other hand already constrained to protest against it because they find their receipts seriously diminishing.

We insist, finally, that the decree is ineffectual, because, if the barriers are set up against America, our ports are still open to European imports.

But such a distinction being impossible, since a knife can readily give a piece of pork various different forms, the American meats would continue to invade our frontiers, under the pretense of having had another and different origin, to such a degree that this deplorable measure would accomplish the ruin of our markets for the profit of neighboring countries, without in any sense protecting the public health, which would continue to be threatened by the same imaginary dangers. In view of such results we demand that the Government repeal the decree of the 18th February, a decree worthy of another epoch; that it take the necessary measures to examine all meats, from whatever source, at the moment of their entry into France; and that it remind the public that pork of all kinds should never be eaten without being first thoroughly cooked.

In yielding to our demand the Government would readily attain the desired result and establish the safeguards most efficacious for the public interests.

[Inclosure 2 in No. 38.—Extract from the Journal de Genève.—Translation.]

It appears at present that the current reports with regard to the danger arising from the use of American pork have been enormously exaggerated, if not entirely unfounded. The ministers of the interior at Paris, London, and Brussels have acknowledged before their respective parliaments, in response to the interpellations addressed to them on the subject, that up to the time of speaking *no case of trichinosis resulting from the use of these meats has ever been authentically proved to have occurred in France, Belgium, or England.*

The persistence of these reports, so injurious to the reputation of the products of the United States, is easily explained by the fact that there are two numerous classes who are interested in destroying the demand for these products. The enemies of American salted meats are, in the first place, the producers of European meats, who see with dismay the gigantic development of resources across the Atlantic, destined to revolutionize the entire provision trade in the Old World; and in the next place there is the ring of speculators in the United States interested in the decline of pork, and who endeavor to break the market prices, at present very high, by frightening the consumers with stories of trichinæ, hog cholera, etc.

An idea may be formed of the extent to which speculation in pork in the United States reaches by the statement that one firm in Chicago (Armour & Co.) is said to have made in one season, by a skillful combination, a profit of thirty millions of francs.

RÉSUMÉ.

1. It is generally believed that the *trichina spiralis* was derived originally from the rat, which is the only animal except the hog in whose flesh it is found until it is developed in the human body in the disease known as trichinosis. Wherever hogs have access to the flesh of rats, particularly when the latter is in a putrefying condition, there is danger of trichinal infection. Probably an average of one per cent. of the hogs slaughtered in Europe and America are thus infected, although the percentage varies greatly in different districts.

2. The ablest authorities in Europe now practically agree that the salting and curing process, as applied to hams, bacon, and side pork prepared for export or preservation, effectually destroys the vitality of the parasite. The most careful search fails to discover a single authenticated instance of trichinosis in Europe induced by eating salted meats imported from America. In the city of Basle, Switzerland, a number of hogs, dogs, and other domestic animals were fed experimentally, during a period of six months, with trichinous salted pork, and at the end of that time it was found that none of these animals had received the slightest infection.

This experiment was conducted under the supervision of the municipal slaughterhouse director, and at its conclusion the official inspection of imported meats, which had been maintained here for two years previously, was abolished.

3. The *trichina spiralis* is readily discovered with a microscope when existing in fresh pork, but it requires an experienced eye, with a strong glass, to detect the shrunken, lifeless parasite in thoroughly cured meats. For this reason a large proportion of the mercantile inspections in Europe and America have been, at least until recently, imperfect and inconclusive. It is not apparent that American pork is any more or less free from trichinæ than that of other countries, but as it is uniformly well cooked before being eaten at home, and thoroughly salted before being exported, it was never found "unwholesome" until its superior cheapness and excellence made it dangerous to certain foreign interests.

4. Only one case of trichinosis has ever occurred in Switzerland and only one in France, and these are both officially conceded to have been caused by fresh native pork. It is only in the one country where raw hog's flesh is eaten raw, usually in the form of sausages, that trichinosis has become a real danger to public health.

5. The real motive behind the present European crusade against American meats is openly conceded in Italy, viz, the fact that meats from the United States undersell the native product and thereby incur the hostility of local butchers and farmers, as well as economists, who fear the ultimate effect of heavy and increasing importations.

6. It will undoubtedly be necessary for American packers who wish to retain and enlarge their foreign trade to defer to the prevailing sentiment of European countries which demands a rigid and competent official inspection, at the time and place of packing, of *all pork* sold as food.

No. 133.

Mr. Mason to Mr. Hunter.

No. 42.] UNITED STATES CONSULATE,
Basle, June 13, 1881. (Received July 5.)

SIR: In dispatch No. 41 of June 4 from this consulate it was reported in substance that the federal sanitary commission of Switzerland, after mature consideration, had decided that the facts in evidence did not warrant the prohibition of salted meat imports from the United States to Switzerland, nor justify any compulsory official inspection of such meats after their arrival in this country as a precaution against danger from trichinæ.

I have the honor to now submit a copy (with translation) of the official circular in which the President of the Swiss Confederation conveys this decision, with the reasons therefor, to the several cantonal governments.

This circular is of great value and interest to the pending discussion of the question of American meats in foreign markets, first, because it embodies the deliberate conclusions of a committee of able and experienced men who have had access to all important facts pertaining to the subject; and, secondly, because the reasons for their conclusions are clearly and definitely stated upon the absolute merits of the case itself as a question of sanitary policy uninfluenced by any covert motive of retaliation or merely economic expediency.

It will be observed that the commission finds that American pork, like that produced in other countries, is subject to trichinosis infection, the percentage of American meats thus infected being rather above that of the pork produced in European countries; but it also finds that the process of salting and curing, as applied to pork imported from the United States, destroys the vitality of the parasite, and is nearly a practical protection against danger from that source, and it adds that this protection is rendered absolute when the meat is cooked at a temperature equal to or exceeding that of boiling water.

But the circular dissents sharply from current opinion when it asserts, and apparently with excellent reason, that no official inspection of meats can be sufficiently searching to be practically effective, since it is impossible to examine minutely every part of each piece of meat offered for sale, and thereby detect the eggs of the *trichina spiralis*, which, in the case of salted meats, are the only possible source of danger to human health. These eggs are less sensitive to the effects of salt and smoke than the matured parasites, but all are with equal certainty destroyed by adequate cooking, upon which the Swiss people are instructed

to depend in future, as they have so safely done in the past, for immunity from all dangers, real and imaginary, of trichinosis. As collateral with this highly gratifying action by the Swiss Government, and in order to allay more fully the popular suspicions and prejudices against American meats which have been awakened by the events of the past few months, the undersigned has translated and published in certain prominent journals of Switzerland the circular issued by the Department of State through the American press on the 16th of May,* describing the care with which the pork exported from the United States is grown, fattened, and prepared for markets. A copy of this circular as it appeared in the Berner Bund, the official organ of the Swiss Federal Government, is herewith inclosed.

Under the present favorable conditions it is reasonable to expect that the consumption of American meats in this country, which has been seriously checked by the discussions and agitation of the past four months, will soon resume its former proportions and steadily increase.

I have, etc.,

FRANK H. MASON,
Consul.

[Inclosure 1, in No. 42—Translation.]

CIRCULAR.

BERNE, *June* 3, 1881.

The Federal Council to all the Cantonal Governments:

FAITHFUL AND DEAR CONFEDERATES: The spontaneous interdiction of the importation of American pork by France has attracted attention in other countries to the dangers which may follow the consumption of those meats as human food. In Switzerland these apprehensions were expressed in a motion introduced by Deputy Estoppey in the federal senate.

Under the authority of this motion we have felt constrained to make a thorough examination of the entire subject. The result of this investigation and the teachings of obvious facts and experience do not justify an interdiction of American pork nor an obligatory inspection of those meats as a precaution against trichina.

The various examinations which have been made establish the fact without doubt that traces of trichinæ are found more frequently in American pork than in that of European origin, even more than in the meats from northern Germany.

The number of trichinosis pieces revealed by these experiments has ranged from 1 to 2½ per cent. of the whole number inspected. For Europe, including Switzerland, the consumption of these meats is considerable; nevertheless, in spite of the quantities of trichinæ which have been shown to exist, the cases of actual injury to the public health have been very rare. The few cases of trichinosis which have occurred in Switzerland can not be attributed to American meat. In other countries the cases of trichinosis are rare and the origin of the causes to a great extent disputed. This extraordinary result is explained by the now recognized fact that in the preparation of these meats by strong salting the trichinæ are for the most part destroyed. Living trichinæ have but rarely been detected in salted meats; at Basle, for instance, never; and numerous experiments in feeding trichinosis salted meats to animals have all shown negative results (*i. e.*, no infection was created). Moreover, in Switzerland, it is customary to entirely obviate all possible danger by eating pork only in a *cooked* condition.

In consequence of these facts, we have found no reason to interdict the importation of an article of food which has caused no unpleasant consequences among our people and but few in other countries, and which, by virtue of its cheapness, exercises an influence on the prices of home-bred meats, which is highly valuable to the public. On the other hand, the utility of a special inspection on account of trichina is by no means demonstrated. In northern Germany, where extensive inspections take place, trichinosis still prevails. Even a thorough examination of certain parts of a hog does not prove conclusively that no trichina exists in other parts of the same animal. It is probably due to this fact that the flesh of some hogs which have been officially

---

* *Vide post*, p.—

inspected and declared free from trichina has afterwards, on being eaten, caused trichinosis.

The easiest and only effective way to avoid all danger is, therefore, to cook thoroughly the meat before it is eaten, and this is all the more necessary because pork from other countries, as well as America, is liable to contain trichina. The few cases of trichinosis in Switzerland have been caused by the meat of hogs raised in this country and as the importation of living swine is an important traffic, there is a constant liability of importing animals already infected with trichina.

We urge you, therefore, to inform the people of your canton in the most effectnal manner that Ameriean pork, imported in part by local dealers, is largely consumed in Switzerland, *and the consumption of these meats, as well as of pork in general, is attended with possible danger unless it is thoroughly cooked before being eaten.*

As to the cooking, we find that a temperature of 60° does not secure absolute safety, but that in order to surely destroy the parasites which may be in the interior of the pieces a temperature equal to that of boiling water is required.

We embrace this occasion, faithful and cherished confederates, to commend you with ourselves to Divine protection,

In the name of the federal council of Switzerland.
The President of the Confederation:

DROZ.

The Chancellor of the Confederation:

SCHIESS.

[Inclosure 2 in No. 42.]

Announcement by the Department of State at Washington, May 16, translated into German and published in the Bund newspaper at Berne.

NOTE.—The announcement in the American press was as follows:

AMERICAN PORK.

In view of the recent action taken by the French and other European Governments in regard to American pork, as well as to be able to correct by positive and personal evidence the exaggerated reports which are published in Europe concerning hog cholera and trichina among American swine, Secretary Blaine sent the chief of the Bureau of Statistics of the Department of State to Chicago and Cincinnati to investigate the entire question of hog-raising and pork-packing in the West, in all its phases, "from the farm to the ship."

In accordance with the Secretary's instructions, this gentleman visited representative hog-raisers, buyers, shippers, packing-houses, stock-yards, rendering establishments, health offices, and forwarding agents, and has now submitted his report, which will be immediately published by the Department for circulation in Europe.

The conclusions arrived at in this report are as follows:

1. That the swine of America are of the best and purest breeds, and are fed and fattened for market on corn. It is not believed that swine are thus fed in any other country.

2. That the reports published in Europe concerning the deaths of American hogs from hog cholera are gross exaggerations.

3. That the percentage of deaths among American swine from disease is no greater than the percentage of deaths among European swine from similar diseases.

4. That American hogs which have died or may die of cholera, or from any cause whatever, can have no relation to the meat product (except to decrease it), as such animals can not, by any possibility, pass the severe scrutiny and inspection to which hogs destined for killing and curing are subject; that even if it were possible to pass such inspection, no art of the curer could convert such animals into meat which could pass the inspection, in the words of a leading curer, "even of a blind man."

5. That the fears excited and fostered in parts of Europe by interested persons, that any portion of hogs which have died, or may die, of cholera or from any other cause is or can be converted into merchantable lard, are founded on the grossest ignorance, for merchantable lard can not be produced from such dead animals.

6. That every pound of the product rendered from diseased hogs, except that part used as a fertilizer, is plainly marked "brown grease," "white grease," or "dead hog's grease," and sold as such largely to soap manufacturers; and that its color and odor preclude it from being mistaken for lard.

7. That the same care is taken in the handling and manufacture of American lard which is taken in the handling and curing of American meats; and that, as the corn-fed American hog is the cleanest of its species anywhere, it is undeniable that American lard is the purest lard in any market.

8. That the percentage of American hogs infected with trichina (though this question is thus far largely one of supposition) is in all probabiiity, by reason of the superiority of the breed and feed, much less than that among the hogs in any other country.

That the freedom from trichinosis of the two great pork consuming centers of the West, Chicago and Cincinnati, furnishes the strongest possible evidence of the purity of American pork. In Chicago, for a series of years in which forty thousand deaths were reported with their causes, only two cases of trichinosis were reported. In Cincinnati, during the same period, not one case was reported.

10. That the reported cases of trichinosis have resulted from eating uncooked meat, shown to be inferior or rejected, and that thorough cooking entirely destroys this parasite, and removes all danger in this regard from eating pork.

11. That the selection, inspection, and killing of American hogs, and the subsequent handling and curing of the meat, are not surpassed, if at all equaled, for care, precision, and understanding, by the packers or meat curers of any other country.

12. That, as a rule, the hogs selected for foreign trade are in all respects equal to the very best disposed of in our home market.

13. That the great exaggerations so industriously spread in regard to diseased pork have been aided by the different significations attached to the word "pig." In Europe it is used as the synonym of hog, whereas in America it means the young swine under six months, and generally refers to those only a few weeks old. The number of "pigs" that die from various causes compared to the number of "hogs" that die is very large, and grossly erroneous conclusions are formed by confounding the two words.

No. 134.

Mr. Blaine to Mr. Fish.

No. 217.] DEPARTMENT OF STATE,
Washington, June 21, 1881.

SIR: Referring to your No. 353 of the 25th February last, by which it appears that the Government of Switzerland had acted very temperately with respect to the consideration of measures proposed against the importation of American pork, I inclose herewith two copies of a pamphlet just issued by the Department, the contents of which you will perceive amply justify such wise and judicious action as has been taken in Belgium with regard to the same subject.

Suggesting that you communicate the conclusions of the "Report," as found on pages 14 and 15 thereof, in writing, to the foreign office, together with as many of the extra copies which may be sent to you, under separate cover, as you think proper; and asking that you will express such appreciation by this Government of any temperate action of Switzerland in this regard, as may seem due,

I am, etc.,

JAMES G. BLAINE.

No. 135.

Mr. Mason to Mr. Hitt.

No. 43.] UNITED STATES CONSULATE,
Basle, June 22, 1881. (Received July 11.)

SIR: I have the honor to submit herewith a report of the systematic and persistent warfare that is made by certain interested persons in Central Europe upon the reputation of American canned meats. The report embodies a statement made by Councilman Ruloff before a recent session of the "Berlin society for the protection of public health,"

which is submitted as a fair example of official opposition encountered by American exporters of canned meats to this and adjoining countries. As Herr Ruloff's statement has been republished in Switzerland and used as a weapon of attack upon American meats, it is held to be pertinent to the scope and purpose of this report.

The export of canned meats, although a large and rapidly growing branch of American trade, concerns chiefly the cities of Chicago, Saint Louis, Kansas City, and Cincinnati. If, therefore, the Department should not regard the inclosed report of sufficient general interest to justify its publication among the consular reports, the undersigned would respectfully suggest that it be submitted to the correspondents of the Chicago and other Western journals, who may find in it facts of importance to their special sections.

I am, etc.,

FRANK H. MASON,
Consul.

[Inclosure in No. 43.—Report.]

AMERICAN CANNED MEATS IN EUROPE.

Attention has been invited in various dispatches from this consulate during the past six months to the methods by which certain interested persons persistently seek to discredit the canned meats, soups, etc., which have become such an important article of export from the United States to European countries. The extent and value of this traffic can be readily understood from the statement that a single firm in Chicago sends to Europe annually more than $5,000,000 of canned meats. These goods include mainly canned beef, tongues, meat soups, and minced ham, all of which are thoroughly cooked and prepared for immediate use. Their superiority over all other conserved meats of similar kinds is so well recognized that they are rapidly driving all other canned meats out of competition. Naturally, therefore, they have awakened an enmity among the local European butchers, sausage makers, and meat dealers, which exceeds in vigor even the hostility of the same class of persons toward American pork.

Since the vigorous and effective action of the United States Government in vindicating the purity and excellence of American pork, the attack upon canned meats has been renewed with new and desperate energy. It is understood here that whereas the export trade in hams, bacon, and lard is a traffic of national proportions and interest, and therefore readily susceptible of governmental investigation and defense, the trade in conserved meats is a specialty in the hands of a few individual firms, and may therefore be attacked with impunity.

The methods by which this warfare is conducted, and the extraordinary lengths to which it is now being pushed, may be partly illustrated by a speech recently made by Alderman Ruloff in the sanitary council of Berlin, and reported at length in the *Fleischer Zeitung* of June 8. The *Fleischer Zeitung*, it should be understood, is the organ of the butchers' profession and interest for the whole of Central Europe. It circulates among butchers and meat dealers of all classes throughout Germany, Austria, and Switzerland, and extracts from its vindictive and reckless diatribes against American meats are constantly found copied approvingly in the daily journals of all these countries. To such a journal the official tirade of Councilman Ruloff was naturally a most important utterance, and it was published with great prominence, as follows:

AMERICAN PRESERVED MEATS.

In the last session of the "German society for protection to the public health" Mr. Alderman Ruloff gave an interesting discourse on the above subject. Basing his statements upon thorough examinations and elaborate experience, he explained the serious dangers that may result from eating animal food; the readiness with which the diseases of animals can be communicated to persons, and the absolute necessity of rigidly discarding the flesh of diseased animals as human food. "In America," said he, "*not the slightest inspection of animals takes place or can ever be effectively established. Even the meat itself is not examined*, and except in rare cases it is therefore impossible to prove instances in which meat has actually been made from diseased animals. In our own country, on the contrary, the system of governmental control

and inspection being so perfect, the danger of encountering diseased meats is reduced to a minimum. * * * The danger consists not only in trichinæ, but from the numerous diseases which prevail among American cattle, and which are even still more dangerous to human health. Besides splenitis and erysipelas, there exists there another disease, *the so-called 'hoof distemper,' which is so fatal that in the State of Illinois alone there died from it in one year* 1,000,000 *swine, and it may be asserted with entire certainty that the flesh of these animals was converted into canned meats!*

"Among American cattle malignant epidemic maladies are not less prevalent, and especially so is the so-called 'Texas fever,' a disease akin to rinderpest, which is a universal scourge. *And since beef cattle have a higher value than hogs, this disease can lie latent in them longer than in swine. So also there can be no doubt that the flesh of these animals becomes 'corned beef.'* Moreover, Chemist Meier has discovered in a box of corned beef 99 milligrams of lead.

"During the transportation of cattle from the States of Texas, Kansas, and Colorado to Chicago, where the conserved meats are chiefly prepared, a distance of about 1,500 miles, they are inevitably exposed to various contagious diseases, so that it is undoubtedly true that a large proportion of the cattle whose flesh is converted into 'corned beef' are infected with malignant diseases.

"All this must be true, since it is asserted by even the Am erican press, which further assures us that horse-flesh is also used for the same purpose. But since the virulent contagious matter is not destroyed by the process of preparing canned meats, the question appeals to us: Are we obliged to use this corned beef, and is its consumption really a measure of economy? The answer is inevitably, *No*, since recorded facts prove that in several cases persons having eaten these conserved meats were made ill thereby, and, moreover, because a can containing 2 pounds of meat, and which costs 43 cents, is much more expensive than the same quantity of equally good native meat.

"The form of these meats has, however, so many advantages that it is highly desirable to establish here the same industry, which shall provide for public consumption meats not only cheap, but securely wholesome and pure."

This is no mere accidental statement, made by an irresponsible person, and incidentally printed among the news of the day, but the deliberate utterance of a recognized official, made in the presence of the highest public sanitary tribunal of the German capital, and conspicuously published by the leading organ of the butchers' interest in Europe. It puts an effective official weapon into the hands of every butcher or local meat dealer whose interests or prejudices impel him to join in the crusade against American conserved meats.

It is hardly necessary in this connection to point out the grossly ignorant and mendacious character of this remarkable utterance. The important fact, which closely concerns the entire canned-meat exporting interests in the United States, is that such statements are publicly made, published, and circulated almost uncontradicted, as a means of destroying confidence in American meats, and ruining the market for them. From the nature of the case, every package of conserved meat is in some sense a mystery. Its purity can be practically proven only by the test of eating. As an experiment merely, this process is not inviting and can never become popular. The successful introduction of conserved meats as a standard article of food depends upon the faith of the public in the integrity of the persons by whom such meats are prepared.

It is of the first importance to the tinned-meat exporters of the United States that they should unite in meeting misrepresentations like that quoted above, with clear and authentic statements, describing the methods by which cattle are brought to Saint Louis, Chicago, and other meat-conserving centers; how they are inspected, slaughtered, and their flesh cooked and canned. The precautions by which the danger of lead poisoning is now entirely obviated should also be fully described. The simple facts are sufficient, and will be effective, if they can be authoritatively stated and thoroughly published.

Dealers who offer American conserved meats for sale in Europe should be armed with facts to meet their detractors, and the public here should be taught that the reports of wholesale exportations of the meat of diseased animals are as baseless as the now exploded trichina panic of four years ago, and are inspired by the same motives.

FRANK H. MASON,
Consul.

UNITED STATES CONSULATE,
Basle, June 22, 1881.

No. 136.

Mr. Byers to Mr. Hitt.

No. 259.] UNITED STATES CONSULATE,
Zurich, June 25, 1881. (Received July 11.)

SIR: Referring to obstacles placed in the way of free importation of American pork into Switzerland, and especially as to this canton, I beg to state as follows:

There exists a government order here, dated May 27, 1878, forbidding the importation of hams, bacon, etc., whether from America or elsewhere, unless said importation is accompanied by a certificate that the meat is "healthy." If no such certificate is presented, the meat must then be submitted to a microscopic examination for trichinosis.

This certificate is to be charged for at the rate of about 25 cents a ham, thus precluding, as a result, a greater part if not all the profits expected on the sales.

In cases of German meat imports into Switzerland, the burden is not so great, as "health certificates," without microscopic examination, are easily obtained there, and pass the meat into this canton, in lieu of the official examination here—the heavy charge, too, of 115 francs on every hundred hams, is avoided.

The practice has been to be especially severe in the execution of this order as to *American* hams, as certain interested parties have frightened the population into the belief that eating American hams is simply to court death. The result is, American hams can scarcely be sold here at all, or, if sold, the dreaded word "American" is left of, and the meat is offered as coming from Germany.

I have endeavored to point out to the officials of the canton the injustice of their regulations, and, I am glad to say, with most favorable results. The authorities here to-day told me that in consequence of my representations, and of certain action of the general government, they will consider the order to which I have referred as *void* or *revoked*, and a proposition to revoke it formally will be made at once to the council. I think this will end all difficulty in the matter as to this canton. I am, however, of the opinion that the first time trichinosis is found in American hams the scare will be renewed, and severe regulations introduced again. I am further of the opinion that our Government should promptly resort to an official inspection at slaughter-houses of all meats exported.

Proper and careful inspections by American officials would probably be respected all over Europe. Without such action the misunderstandings and troubles of the past, as to exported meats, are liable to be renewed in an aggravated form.

I am, etc.,

S. H. M. BYERS,
United States Consul.

TURKEY.

No. 137.

Mr. Duncan to Mr. Payson.

No. 47.] UNITED STATES CONSULATE,
Smyrna, May 14, 1881. (Received June 11.)

SIR: Turkey also catches the contagion of *porkophobia* from France, and other European countries that have followed her lead, and forbids the importation of American salted pork into the Ottoman Empire.

This may be regarded as a most extraordinary solicitude on the part of the Sublime Porte for the health and well-being of her *Christian* subjects, quite in contrast with Sadyk Pacha's action at Scio, for it is well known that neither Turk nor Jew ever deigns to touch this polluted meat in any form. This action, then, is taken entirely in the interest of her Christian subjects. The Turks even propose to surpass the French in their zeal, in so far that they order all American pork already in the country to be seized and destroyed, while, I believe, the French Government consents to admit what was actually on the way. Thus one of the important items of American trade at Smyrna, and in the entire Levant, is destroyed as the result of the hasty and inconsiderate action, as it would now seem, of the French Government, for the other Governments have only followed in the wake of the French. Of course, if it be a fact that American pork is generally, or even very frequently, infected with trichinæ, and therefore dangerous to the public health, every government has not only the right, but it is its duty, to forbid the importation, just as it has the right to establish quarantine against contagious diseases. But if we can credit not only the official reports of several of our most distinguished consuls in Europe, but also so important and trustworthy a body as the chamber of commerce of Havre, the French Government would seem to have based its action on entirely incorrect information as to the actual condition of American pork. The latter body urges its own Government, as I see in the papers, to rescind its order entirely, on the ground that there was never any good reason for issuing it.

For the French Government still to maintain this order after all the information and evidence produced as to the perfectly healthy condition of American pork, and in view of the great damage it has already done, and is likely to continue to do, to an important article of American production and foreign trade, could hardly be construed otherwise than as an intentional hostility to important American interests; and she could not reasonably complain of any measures our Goverument might see fit to adopt in the interest of public health against adulterated French wines and brandies, which are universally admitted to be very injurious to health, propably much more so than our salted pork.

I am, etc.,

B. O. DUNCAN,
U. S. Consul.

No. 138.

Mr. Blaine to Mr. Heap.

No. 33.]

DEPARTMENT OF STATE,
Washington, May 27, 1881.

SIR: Your dispatch of the 6th instant, No. 7, reporting that the Turkish Government had prohibited the importation of American pork on account of its being infected with trichinæ, has been received.

In reply, I have to inform you that this subject has been carefully and thoroughly investigated by the Department, and a detailed report in regard thereto will be sent you as soon as published.

I may add, however, that there never was the slightest foundation for the reports sent abroad of the prevalence of that disease in American swine, which, on the contrary, have been found to be singularly free from anything of the kind.

The prohibitory measures adopted by Turkey in this matter are, therefore, unwarranted discriminations against American industry, which that Government should hasten to correct.

I am, etc.,

JAMES G. BLAINE.

No. 139.

Mr. Blaine to Mr. Heap.

No. 40.] JUNE 16, 1881.

(Instruction of same tenor as Mr. Blaine to Mr. Marsh, No. 778, June 10, 1881.)

No. 140.

Mr. Heap to Mr. Blaine.

[Extract.]

No. 34.] UNITED STATES LEGATION,
Constantinople, July 16, 1881. (Received August 6.)

SIR: I had the honor to acknowledge on the 4th instant the receipt of your dispatch, dated the 16th of June last, No. 40, relative to the order prohibiting the importation of American salted pork into Turkey, and of four copies of the report on the subject of diseased pork printed under the authority of the Department of State.

Having received no complaint from importers of American salted pork since the Turkish Government issued the order forbidding its importation, I ascertained upon inquiry that since I wrote to the minister for foreign affairs protesting against the measure the decree was allowed to fall into abeyance, and no further action was taken in the matter.

I was informed, furthermore, that a large lot of American hams that arrived soon after the date of the decree was, after passing the custom-house inspection and paying the duties, entered for consumption. * * *

As Mohammedans, they are personally disinterested in the trichina question, and perhaps think that it is a matter of little moment. * * *

I am, etc.,

G. H. HEAP,
Chargé d'Affaires ad interim.

VENEZUELA.

No. 141.

Mr. Plumacher to Mr. Hunter.

No. 94.] UNITED STATES COMMERCIAL AGENCY,
Maracaibo, June 19, 1881. (Received July 13.)

SIR: I beg to call your attention to the inclosed extract from a newspaper of this city, quoting from a Puerto Cabello periodical in regard to trichinæ recently discovered in hams at that port.

As you will observe, the article in question does not inform us whether

the hams were from Europe or the United States, but it is safe to say that an effort will be made by the German merchants of this country to make us responsible.

I have written to the consul at Puerto Cabello for details, in order to be prepared to combat the movement against American hams and bacon which will most likely be attempted at this port should the inclosed notice prove to be correct.

I have, etc.,

E. H. PLUMACHER.

[Inclosure in No. 94.—Translation.—From the "Ecar del Zulia," of Maracaibo, June 18, 1881.]

LOOK OUT FOR THE HAMS.

The "Diario Mercantil," of Puerto Cabello, says of the trichinæ:

"A friend of ours has brought us a piece of ham containing millions of these little animals. In view of the publications we have made regarding this matter, which occupies so much space in foreign periodicals, it should not be contemplated with indifference."

This also we believe and recommend.

DOMESTIC.

No. 142.

*Messrs. Armour & Co. to Mr. Logan.**

CHICAGO, *December* 15, 1881.

DEAR SIR: Referring to our recent letter to you requesting favorable action upon the matter of the repeal of the French prohibitory decree against the importation of American hog product, we beg to call your attention to the following cable dispatch received by us from Havre to-day:

> You must get your Government to use strong pressure. We repeat our advice hurrying. Our Government willing, but afraid of feeling in Parliament. They are kept alarmed by willful false statements. Whole opposition based upon corrupt, interested motives. Believe energetic American action greatly help our Government.

This is from the well-known house of Gabain Frères, of Havre and Marseilles; and as this house has been greatly interested in this subject, we know, from long acquaintance with them, that their report is trustworthy.

We hope you will be able to help us in this matter. The interests involved are very large, not only as far as we are concerned here in Chicago, but all over the Northwest. There can be little doubt, we think, but that if some action is taken as suggested in the letter sent you by us and others recently, good results will quickly follow; and we again beg to ask your co-operation in bringing about some vigorous action that will conform to the views of the West and represent their energy and vigor.

Yours, truly,

ARMOUR & CO.

---

* Referred to the Assistant Secretary of State by Senator Logan.

No. 143.

*Messrs. Armour & Co. to Mr. Logan.**

CHICAGO, *December* 21, 1881.

DEAR SIR: We are in receipt of your favor advising us of your intention to take some action with reference to the French prohibitory decree, and are very much obliged for your assurance that this important matter will promptly receive your kind attention.

For your information and guidance, we beg to inclose a letter received by us to-day from Messrs. Gabain Frères, to whom we have previously made reference. This firm is well known in Havre and Marseilles, is perfectly trustworthy, and has been very valuable in bringing about favorable public action so far.

Yours, truly,

ARMOUR & CO.

[Inclosure.]

Messrs. Gabain Frères to Messrs. Armour & Co.

HAVRE, *December* 7, 1881.

DEAR SIRS: Your favor of the 17th to hand. We are making an attempt to get correct information about the state of the hog crop in France by sending out a series of questions to some 300 to 400 people, about 10 in each department of France, and shall see what result it leads to. We are not very sanguine of success, for the reason that the public in general are extremely ignorant of and still more indifferent to matters concerning the crop here, and it is difficult to get correct information even in quarters where folks *are* posted, for the reason that such people immediately suspect the inquirer to have some motive which they can't understand, and therefore make a point of giving him wrong information. However, we can but try it, and will let you know the result. In the meanwhile there can be no doubt that the number of hogs raised this year is larger than last, with the exception of some few districts, while the number of young pigs is reported as very large. Potatoes are extremely plentiful this year, and while last year young pigs were sold for next to nothing, they are fetching high prices this year, which shows that farmers mean to rear them, and have the food to do it with.

Concerning the decree, we suggested to you yesterday by cable that it might be a good move, and hasten a final settlement, if some member of your Congress were to bring the French prohibition question before the House of Representatives, and perhaps go so far as to move that the United States Government should be instructed to use reprisals against France if the vexatious decree were not withdrawn. From what we know of the present position of affairs, we believe such a step would greatly strengthen the hands of our minister of commerce, who, we believe, is willing to withdraw the prohibition, provided he can make sure of being safe from attacks from his adversaries. Mr. Chotteau has been using the argument of the probability of such action on the part of your Government with great effect, and the public in general would be much alarmed and speak out much louder if they saw evident signs of other interests besides those of the "pork butchers," as they call us, being threatened.

In the meanwhile all purchases of meats have stopped, awaiting the positive withdrawal of the prohibition.

Yours, truly,

GABAIN FRÈRES.

---

* Referred to the Assistant Secretary of State by Senator Logan.

No. 5.

House Ex. Doc. No. 70, Forty-eighth Congress, first session.

MESSAGE FROM THE PRESIDENT OF THE UNITED STATES, TRANSMITTING A COMMUNICATION FROM THE SECRETARY OF STATE RELATIVE TO THE RESTRICTIONS UPON THE IMPORTATION OF AMERICAN HOG PRODUCTS INTO GERMANY AND FRANCE.

JANUARY 31, 1884.—Tabled and ordered to be printed.

To the House of Representatives of the United States:

I transmit herewith, in response to the resolutions of the House of Representatives, the following report from the Secretary of State, with accompanying papers, relative to the restrictions upon the importation of American hog products into Germany and France.

CHESTER A. ARTHUR.

EXECUTIVE MANSION,
January 31, 1884.

The PRESIDENT:

There have been referred to the undersigned, for appropriate action thereon, the two following resolutions of the House of Representatives:

Resolved, That the President be, and he is hereby, requested to furnish for the information of this House, if not incompatible with the public service, all communications, documents, and papers in his possession relating to the exclusion of and restrictions upon the importation of American hog products into Germany and France.

Whereas Germany and certain other foreign Governments have interdicted the importation of the swine products of this country for the pretended reason that said products are not proper and wholesome for food; and

Whereas an invitation on the part of this Government to said foreign Governments to send agents here to test said products has been declined, thus indicating that the pretended reasons given for such interdiction are not real reasons; and

Whereas it is the duty of this Government to act promptly and with energy to resent the injustice done by said charges and to protect these great products from said imputation: Therefore,

Resolved, That the President of the United States is hereby requested to transmit to this House, if, in his opinion, it be not incompatible with the public interests, copies of any and all correspondence had by the State Department with all foreign Governments on this subject, together with any and all information that he may have bearing upon this question.

Regarding these two resolutions, jointly, as embodying the wish of the popular branch of Congress to be possessed of whatever may throw light upon the measures adopted by foreign Governments to the detriment of an important branch of the export trade of the United States, and, also, of all that may tend toward a just and effective remedy for such detrimental measures, the undersigned has endeavored to cover

the whole ground embraced by both resolutions, by collecting and submitting to the President, herewith, copies of all pertinent matter found of record in the Department of State, to the end that it, or so much of it as the President may deem proper, may be communicated to the House of Representatives in response to its requests; and in so doing the undersigned avails of the occasion to submit to the President, as briefly as possible, such considerations drawn from a general review of the action of this Government hitherto in the premises as seem to him appropriate to the understanding of the general subject in its international bearings.

The action of the leading Governments of Europe took shape between 1879 and 1881, and was practically simultaneous in several countries.

On the ground of the alleged frequent discovery of trichinæ in hog's meat coming from Cincinnati into Italy, the sanitary department of that Government issued an order on the 20th of February, 1879, prohibiting all pork imports of whatever character from the United States—a prohibition which was soon afterward, May 6, 1879, made general against all foreign pork. About September, 1879, the Hungarian council-general of public health caused a like prohibition in Hungary. Dr. Ludwig von Grosse, at the International Medical Congress of Amsterdam, in September, 1879, announced that the prevalence of trichinæ in pork products from America had led to consultation between the Austrian and Hungarian Governments, with a view to making the prohibition adopted in Hungary universal throughout the Austro-Hungarian Empire, which, however, was not accomplished until more than a year afterward. By an imperial decree of June 25, 1880, Germany prohibited the importation of chopped pork and sausages (but not of hams or bacon) from America. The French Government, as the result of the alleged discovery of trichinæ in some salt pork from America, issued a decree on the 18th of February, 1881, upon the advice of the consultative committee of public health, forbidding the importation of salt pork coming from the United States. This action on the part of France was followed by several other states of Europe, and Turkey and Greece excluded the pork products of the United states, professedly in pursuance of the French example. The consideration of the same measure in Austria-Hungary, pending since 1879, was closed by the promulgation March 10, 1881, of a decree prohibiting the importation of swine meat, lard, and sausages of every kind from the United States.

Efforts were made, for professed sanitary reasons, to effect like prohibitory enactments in Belgium and Switzerland during the same time, but those Governments, holding rightly that no danger from trichinæ attended the consumption of properly-cooked hog products, abstained from the interdiction sought.

Meanwhile, in England popular excitement arose in the early part of 1880, caused by the publication of reports by several British consular officers in the United States, alleging the prevalence of hog-cholera in the West to an unusual and alarming degree, and imports of live swine and swine products to the British islands were checked for a time, but no prohibitory legislation ensued.

Apparently confined at first to scientific and hygienic considerations, the movement soon took, in the great European countries, an interested commercial aspect. The Governments of France, Germany, and Austria seem to have become subjected to pressure from adverse quarters. On the one hand there became manifest a general tendency among men of science and practical economists to condemn the prohibition as un-

wise and needless. On the other, the local hog-raisers and packers raised objection to the admission of a foreign product which, from its nature and manner of packing, they alleged could not be subjected before entering into public consumption to the same methods of investigation which legislation had prescribed for native swine products. Thus, the question debated in the press and legislatures of France and Germany looked to determining whether the importation of pork products from the United States was or was not, in fact, a source of danger to the public health.

It now seemed no less the duty of the Government of the United States to investigate the question. A great industry, giving a prosperous export trade, had been declared pernicious to health, and its products debarred from use abroad. The same considerations of public health which operated to bring about total prohibition abroad made it necessary that the alleged perniciousness should be no less searchingly investigated at home.

As a preliminary step the Department of State in March, 1881, prosecuted an examination of the various phases of the pork industry in the Western States, from the raising of the hogs until their varied products are ready for marketable shipment. This investigation, made by Mr. Michael Scanlan, chief of the Bureau of Statistics of the Department of State, covered all the possible causes which might operate to render the product dangerous to health. It embraced the diseases of swine, hog-cholera receiving especial attention. The alleged prevalence of trichinæ among the swine of this country was rigidly inquired into. The results of that investigation appeared to the Department of State conclusive as to the healthfulness of a staple product consumed without evil consequences by millions of our own citizens. Not only were the asserted ravages of hog-cholera disproved, but it was shown that unusual precautions had been universally taken to insure that none but the healthiest animals should be slaughtered for packing. It was shown, moreover, that the existence of trichinæ in the hog, although detected by proper tests in sundry cases, was not as wide-spread as among the swine of other countries; and that a much greater immunity from trichinosis existed throughout the great pork-consuming communities of the West than in the rural districts of Central Europe, where none but native pork products entered into consumption.

The facts thus elicited warranted and constrained the Department of State to represent to the foreign Governments that the prejudicial judgment against the swine export of this country was *ex parte* and unfounded. How diligently the agents of this Department abroad have endeavored to overcome this adverse prejudgment is shown in the correspondence communicated herewith. The result has hitherto not been of such a character as this Government felt it had good right to expect.

In France the discussion has passed through several phases. The French Government showed an earnest desire to meet the problem in a just sense. Ministers, legislators, and the most eminent men of science there united in declaring their conviction that the use of American pork, in any of its exported forms, whether as fresh meat or prepared for keeping, was absolutely innocuous to health. Not a single case of trichinosis traceable to American pork had been observed in France for many years. It was demonstrated that cooking destroyed the communicable forms of the parasite in the rare cases where it was detected, Science asserted that even the low temperature of 158° Fahrenheit sufficed to kill the trichinæ. But the difficulty seems to have lain in applying to imported pork the same examination which sanitary regula-

tions provided for the native product. Various schemes of microscopic inspection on entry were devised, for the most part admittedly partial and fallacious, and all, according to the best judgment of this Government, needless, and serving only to impede a traffic which had been shown to be harmless. At length, in November last, the Government repealed the prohibition. The immediate consequence was the renewed agitation of the question in the French Chambers, and a very decisive vote against the removal of the prohibition. The Government of the Republic has therefore, with evident reluctance, been compelled to rescind its recent action, and, after a sufficient interval to admit of shipments which had been made on the faith of the revocation of November, the interdiction is restored from the 20th instant. The correspondence herewith submitted will enable Congress to judge impartially the course of the matter in France.

In Austria-Hungary and Italy the prohibition has been maintained. With Germany, the representations of this Government took a different, and to some extent an unusual direction. When, in February last, notwithstanding the proofs adduced to show that the restriction of pork imports into the Empire was not warranted by any state of facts known to prevail in the United States, but was rather at variance with the ascertained facts here, it was announced that the imperial Government was about to submit to the Reichstag measures of total exclusion. Reasoning that the emergency justified any and every mode of appeal to the sense of justice and equity of the German Government, against a measure believed to be no less injurious to the interests of the German people than to our export trade, the President directed that the imperial Government should be informed of his intention to appoint an impartial and competent commission to investigate the asserted danger of American pork products to health, with a view to ascertaining and promulgating the exact facts in relation thereto, and that it should be invited to send one or more experts hither to make such investigation, either separately or jointly with a United States commission. The invitation was declined, the reason briefly being that in a matter concerning domestic sanitary legislation the German Government could not enter into any arrangement which might imply an obligation on its part to accept and be bound by a state of facts existing outside of its jurisdiction.

The President has since appointed the commission then contemplated. It is composed of a representative of the New York Chamber of Commerce, Prof. Charles F. Chandler; a representative of the Chicago Board of Trade, Mr. E. W. Blatchford; two members nominated by the Commissioner of Agriculture, Mr. F. D. Curtis of Charlton, N. Y., and Prof. D. E. Salmon, the whole under the chairmanship of the Commissioner of Agriculture. In point of scientific competence and elevated impartiality the formation of the commission peculiarly fits it for the execution of its responsible task. To it should belong in great measure the shaping of the policy of this Government toward the pork question, in its domestic or foreign aspects.

In view, therefore, of the prominent part which the results reached by the pork commission must necessarily play in the further treatment of the question by the Executive or by Congress, the undersigned feels it incumbent upon him to advise that the President recommend Congress to abstain from any immediate legislative action until the report of the commission, soon to be presented, shall be before it.

In advance of such report, and indeed without any knowledge of its probable import or intimation of the suggestions it may offer, the un-

dersigned deems it his duty to lay before the President certain considerations prompted by the language of the resolutions to which he now responds.

The preamble to the second resolution above quoted indicates that Congress may feel impelled to take measures to resent the injustice which may be shown to have been done by the groundless charge that the swine products of this country are not proper and wholesome for food.

The President will see by the instruction of the undersigned to Mr. Sargent, of February 16, 1883, that there has been and is no disposition on the part of the Executive Departments of this Government to prevent or to remonstrate against or in any way to interfere with the right of the German Empire to exclude food the use of which would be deleterious to the people. The question to be carefully, frankly, and honestly met is whether the prepared meat products exported from this country are injurious to public health. We believe they are not, and have so represented it. On the contrary, all the facts which laborious and searching investigations have hitherto laid before us constrain the belief that such products are promotive of the public health in those countries into which they are imported. Diligent inquiry has been made, as the correspondence shows, to trace out the cause of the sickness imputed to the use of imported meats, and such investigations show, we think, that it is in no case attributable to the pork exported from this country.

Should it appear that the meat products of this country are, as we believe them to be, not deleterious, but promotive of health, it is believed that those friendly nations which have put forth decrees inhibiting the importation of our meats would annul those decrees. The undersigned is aware that doubtless in those countries there are producers of meats who would be glad of the continuance of such inhibition, because they would profit by avoiding the competition which our exports create; but he has no belief that they can or would have any controlling influence on the Governments of those countries. If, however, in the face of clear proof, elicited both at home and abroad, that our meet products are free from disease or communicable germs of disease—proof which might be established to demonstration by actual inspection, as well as supported by a knowledge of the precautions which surround the raising and packing industries here—any nations with which we are on terms of intimacy and amity should, by legislation, discriminate against the trade of this country rather than protect the health of their people, it would then be the province of the Executive to call the attention of such nations to the provisions of treaties, with the confident expectation that those treaties would be respected.

The President, in his message, recommended that in certain cases, such as when a foreign nation, by onerous storage charges, exorbitant penalties, differential duties in favor of a competing flag, or by the misuse of some other incident of commerce, discriminated against the United States, there might, by legislation analogous to sections 2502 and 4228 of the Revised Statutes, be vested in the President power to adopt, at his discretion, measures compensating for and countervailing such misuse of the incidents of commerce. It may be inferred from this that the suggestion extends to measures relating to the substance of commerce, and affecting our commercial relations with other nations.

It is submitted to the President that such measures are of an importance much greater than the administration of the incidents alluded to, and it would therefore seem to be proper that they receive the direct

consideration and determination of Congress, rather than that the subject should be disposed of by a reference to the Executive.

It seems, however, very plain that our policy in any event should be to prove that our meat products are wholesome. This the absence of trichinosis in this country, and particularly in our Army and Navy, where our meats are constantly used, goes far to demonstrate. Measures, however, might be taken to ascertain to an absolute certainty, by such means as a commission of scientists would devise, that our meats are or can be rendered innocuous.

With these observations the undersigned commits to the President the subjoined correspondence; taken in connection with the former correspondence communicated to the House of Representatives on the 26th of May, 1882, in answer to a resolution thereof (House Ex. Doc. No. 209, Forty-seventh Congress, first session), it is believed that it presents a connected view of the efforts of this Government to impress upon other countries the conviction it holds that the pork products of this country are not the means of disseminating disease and death they are represented to be, and to maintain the discussion of the international questions involved on the plane of disproving by fact and reason the sanitary argument put forth to justify the exclusion of those products from use as food in foreign lands.

Respectfully submitted.

FRED'K T. FRELINGHUYSEN.

DEPARTMENT OF STATE,
Washington, January 31, 1884.

[Extract.]

No. 26.] UNITED STATES LEGATION,
Vienna, November 28, 1882. (Received December 16.)

SIR: Inclosed I send an article, cut from a leading journal here, evidently written in the interest of the producers of meats in the Austro-Hungarian Empire. You will observe that it is proposed to extend the prohibition heretofore existing against pork to beef, and to all kinds of American meat. I have called upon the foreign office to inquire as to the purposes of the Government in regard to this matter, but could get no indication that the Government had it under consideration at all. Yet there seems to be an expectation that the Government will adopt the suggestions of this article. Two gentlemen of this city, Austrians, who are importers of American meats, have called upon me to see what could be done to prevent the carrying out of this purpose. They were very much alarmed, and said that if carried out it would ruin their business altogether. I have thought it proper to call your attention to the subject and ask your instructions.

In this connection I should be glad to know what is the present position of the French Government on the same subject. * * * I hope that this Government has no purpose to extend the prohibition, as has been suggested, but that, on the contrary, it may be induced, on a more full consideration of the facts in the case, to rescind its order against our pork; but it would seem to require some attention at this point.

I ought to add that the doctor, Kammerer, who presented these propositions to the city council of Vienna, is the head officer of the sanitary department of the city. To us, who have so long lived upon American meats, without a thought of danger, or of any need of inspection, and who have had far more fears of being struck by lightning than of being made sick by eating American beef or pork, the idea of forbidding the importation of our pork or beef into European markets on sanitary grounds seems very absurd; but there is evidently a good deal of pains being taken to create apprehensions among the people of danger from eating American meats.

I am, etc.,

ALPHONSO TAFT.

[Inclosure in No. 26.—Extract from the Vienna Tagblatt of November 5, 1882.—Translation.]

MEASURES AGAINST TRICHINOSIS.

In the Rudolfs Hospital a death occurred recently caused by trichinosis, in consequence of which the city physician, Dr. Kammerer, submitted a memorandum to the city council containing precautionary measures to be adopted against the spreading of this dangerous disease.

The examination of the meat of slaughtered animals takes place at present, as is known, in the districts of Vienna, by market commissaries, who go to the respective parties after having been notified. This measure the city physician finds inadequate, since at present a reliable control over these slaughtered animals is lacking.

As the best measure against the sale of meat injurious to health, the city physician points out the extension of the law requiring the killing of hogs to take place in public slaughter-houses in Vienna and the suburbs, since by these means alone a prompt, unexceptional, and technical examination of the animals can be arrived at.

Already by the law of March 9th, 1866, published by the governor of Lower Austria, a proper inspection of meat conducted in conformity with the regulations is required, and stress is laid upon the public instructions concerning trichinosis published by the governor of Lower Austria in 1877, that the *exact microscopical examination will be possible only when public slaughter-houses shall exist everywhere, and slaughtering be allowed to take place only in such.*

The city physician makes the following suggestions in the interest of the public health:

First. The slaughtering of hogs in the houses of the respective trades-people should be prohibited, and the slaughter-house requirement should be extended, for the reason above alluded to, to the slaughter of hogs.

Second. That means should be adopted to establish this law also in the suburbs, where, until now, it does not exist (not even for oxen).

Third. For every slaughtered hog brought from the suburbs into Vienna, proofs should be adduced that it has been examined microscopically.

Fourth. For sausages and smoked meats imported from abroad, proof should be demanded, on passing the custom-house, that they are free from trichinæ.

Fifth. The import of meat, of whatever kind, from America (so-called canned meat, etc.), should be prohibited without exception, on account of unreliable control and doubtful origin.

Fatal infective diseases are likewise of frequent occurrence among American cattle, and the so-called Texas fever, a disease related to the *rinderpest*, has made sad havoc, and since beef has a higher value than hogs, and this disease may lie dormant for a long time in the animal, there can be no doubt that such meat is prepared as corned beef.

Aside from this, Mr. Mayer, a chemist, has shown the presence of *lead* in corned beef; that is to say, as much as 99 milligrams in one box. To this it must be added that even the American newspapers have pointed out the fact that not only horse flesh, but also the meat of diseased animals, has been used by the people in the business. Since the preparation of canned meat does not destroy the disease, the question is: Are we bound to the consumption of corned beef, and is the consumption of it a pecuniary advantage?

These questions must be answered in the negative. The first by the fact that frequent diseases have resulted from eating these conserves; the second, by the circumstance that the box weighing one kilo contains about seven hundred grams of eatable meat, which, with one mark and seventy-five pfennig is sold at a higher price than a domestic article of equal value. In Vienna, likewise, these conserves are met in the market, and most dealers in delicacies sell the box for one florin and twenty kreutzers, or much dearer than a domestic article of the same value. For these reasons the proposition of the city physician to prohibit the import of American meats of all kinds is no doubt perfectly justified.

No. 2.

Mr. Davis to Mr. Taft.

[Extract.]

No. 22.] DEPARTMENT OF STATE,
Washington, January 19, 1883.

SIR: I am in receipt of your No. 26, of the 28th of November last, in regard to the agitation now being developed in Austria-Hungary in the interest of the meat producers in that empire. You inclose an ar-

ticle from the Tagblatt newspaper, in which it is proposed to extend the prohibition at present in force against American pork to all kinds of American meat on the ground that beef as well as pork is liable to be infected with trichinæ. You state that on inquiry at the foreign office you could get no intimation that any such measure was at that time under consideration, but that the opinion appeared to be general that the Goverment would adopt the suggestion of the newspaper article.

In this connection you inquire the present situation of the pork question in France. * * * In reply I regret to inform you that the prohibitory decree in France is still in force. A bill to withdraw the decree and adopt certain microscopic examinations in its place was passed by the French Chamber, but was defeated by a small majority in the senate, and since that time no other action has been taken by the French Government in the matter. * * * The existence of trichinæ in beef has never before been suggested. It is, in fact, an impossibility, as the ox is purely herbivorous, and trichinæ are only (and that rarely) communicated among carnivorous and omnivorous animals.

I am, etc.,

JOHN DAVIS,
Acting Secretary.

No. 3.

Mr. Davis to Mr. Weaver.

[Extract.]

No. 102.] DEPARTMENT OF STATE,
Washington, January 26, 1883.

SIR: I have to acknowledge the receipt of your dispatch No. 274, relating to renewed attacks on American canned meats on the ground that they contain trichinæ. A recent death alleged to have been caused by eating such meat is, you state, made occasion for the renewal of the attack.

In reply, I have to say that the only hog products exported from this country in cans are such as are believed to be incapable of containing trichinæ in a form that could by any possible chance be developed into life. Our hog products exported in cans are such as lard, pickled feet, gelatine, &c., all of which have been subjected to such degrees of heat in the several processes required to render them merchantable as would destroy any germ, had any existed, but I understand that it has never been claimed that trichinæ have been found in any of the products just named. Consequently we expect the fullest proof that the person who died in hospital had trichinosis from eating American meats. * * *

I am, sir, &c.,

JOHN DAVIS,
Acting Secretary.

BELGIUM.

No. 4.

Mr. Steuart to Mr. Davis.

[Extract.]

No. 105.] CONSULATE UNITED STATES,
Antwerp, November 20, 1882. (Received December 2.)

SIR: I have the honor to inform you that the dealers in American meat on this market are very much agitated on account of a notice widely circulated by the German press to the effect that Prince Bismarck is preparing to offer a bill to the Bundesrath demanding the prohibition of the importation of American pork produce into Germany.

The Kreuz Zeitung, a prominent journal, says:

We hear that the bill has not yet been presented, but is under consideration by the Prussian Government. The examinations of the German imperial health office show that there is danger from the importation of American pork. It is proven that there prevails in America a disease among hogs called hog-cholera, and that thousands of hogs die with it. The owners of these dead hogs do not hesitate to utilize them and the result is that some of the product of these animals is sent into Germany for consumption.

* * * * * *

The whole scheme is an unjustifiable attack upon an innocent article of American produce, and the dealers on this side of the water, the men who have labored to build up this branch of American trade, are earnest in their demand that the United States Government should come to their rescue, and defeat the adoption by Germany of such an unjust and injurious measure. With France and Germany both closed against American pork by governmental prohibition, the large trade on this market would be virtually ruined, as only Belgium would be left to supply.

As it is, the trade has been very much depressed for more than a year by the high prices ruling in America; and now, just when great hopes for a full revival of business were cheering the dealers, comes this blow from Germany to paralyze the market. The same cause that made the trade so dull greatly stimulated the raising of hogs in Germany, and it is now, when the decline of prices in America revives trade and threatens to place the meat on the German market cheaper than they can produce it, that the cry of prohibition comes from a *sanitary motive.*

Antwerp, from being the most important distributing point on the continent for American produce and provisions, has a very material interest in this matter, and hence I venture to call attention to the danger that threatens this branch of our trade. When you consider that of the very large quantity of American meat imported into Antwerp, Germany takes about 80 per cent., you can readily see of what vital importance is the retention of such a customer, and what the result would be if this prohibitory measure should be carried out by the German authorities. The effect of the rumor at present is to stop all transactions; for as contracts have to be made in advance, dealers are afraid, in the possibility of losing such a customer as Germany, to touch the goods even at a very low price. * * *

In conversation to-day with one of my colleagues from one of the northern countries of Europe, he said that he considered the importa-

tion into his country from America of petroleum and pork to have been the greatest boon ever conferred upon the laboring class, and I think the same remark would apply truthfully to the same class in Germany.

I am, etc.,

JOHN H. STEUART,
Consul.

No. 5.

Mr. Wilson to Mr. Davis.

No. 22.] CONSULATE OF THE UNITED STATES,
Brussels, February 24, 1883. (Received March 13.)

SIR: In a report made to the Department June 14, 1881, on trichinæ spiralis in American pork, a subject then very much agitating not only the people of Belgium, but of this entire continent, I gave in connection with a brief history of this parasite and the previous panics it had produced throughout Europe, the result of my own microscopic examinations of several lots of salted meats said to be inported from the United States into this country. In that paper I not only expressed the opinion that the cyst of the parasite was its tomb, but that I believed it did not long survive in well-salted pork, and I now beg to say that after much subsequent study of this subject I very much doubt whether a single competent microscopist can now be found who will be bold enough to assert that he has discovered the encysted living animal in thoroughly salted hams or bacon.

As the whole question of the dangerous or harmless character of this class of our foreign exports is based upon the truth or error of this opinion, and as there is now an effort being made in Germany to interdict its importation on account of its assumed unsoundness, from my previous professional training and habit of investigating vital phenomena I have felt justified in expressing to the Department this, as I think, well-founded opinion, in the hope that it may lead to such investigations by more competent persons as will forever set at rest this frequently recurring and damaging fear of mortal disease from eating American pork.

The most panic-producing writers on this subject generally admit that it is from eating raw or imperfectly smoked or salted swine's flesh that the disease known as trichinosis usually results, and they further confess that when once the little animal is inclosed within the walls of its enveloping cyst its active life ceases, and that in whatever numbers found, it henceforth ceases to endanger either life or health. Yet with a rare inconsistency many of them claim that in this quiescent state it retains its vitality for a long period, even extending through many years. Of this fact there can, of course, be but simple conjecture, seeing that no observer can tell at what exact time the parasite has thus enshrouded himself. But opposed to this theory is that almost universal law of animal life that the longevity of the animal generally bears a direct proportion to the period required for its maturation. Now it is claimed by most trichinic observers that the process of generation and birth of this little animal invariably takes place in the stomach and intestinal canal, and that within a few days from its birth it has so maturated as to penetrate the walls of the intestines and rapidly make its way through the various intervening structures to the remote muscular tissue of the animal it infects, there to be speedily encysted

and endowed with a subsequent dormant existence of several years, during which time its presence occasions little or no inconvenience. Of this theory of the life and movements of this little worm I can only say that it involves an almost unparalled exception to the law generally regarded as determining animal life, and ought not be accepted but upon the most positive proof.

It may further be stated that the law governing parasitic existence in living tissue usually involves the speedy death of the parasite after the pabulum upon which it feeds has passed from under the domain of vital force; hence, unless this tiny worm constitutes an exception to this law, its life must be short after the organic structure upon which it feeds has ceased to live.

But however this may be, the fact remains, according to my observations, that this parasite cannot live in a tissue saturated with chloride of sodium, or common salt. If in this opinion I am mistaken, I can only say that I have failed to receive authentic proof to the contrary, and, until otherwise convinced, I feel it my duty to reiterate the results of my own experience and observations, and that is that I have never myself seen or found a microscopist who would declare that he had observed trichinæ in motion, or manifesting any other sign of life, when found in well-salted meats. I have myself been present when officially-appointed microscopists, at some of the abattoirs of this country, have been engaged in examining American pork for trichinæ, and have been invited by these gentlemen to see for myself through their microscopes the peculiar cell and spiral coil of the animal, but on carefully examining them I have only observed, blended with the tissues and minute salt crystals, the entombed animals, evidently as destitue of life as the structure in which it was embedded.

If, then, salt really kills trichinæ, and of it I have scarcely a doubt, it is evidently an injustice on the part of foreign Governments to lay an embargo on our pork product, which of all others, in order to secure it against decomposition on a long journey to foreign markets, is better salted than that of any other country. Seeing, then, that this question of whether common salt is indeed an effectual destroyer of trichina-life is one of such vital importance not only to our export trade, but also to the poor and laboring classes of all countries, I can not refrain from urgently suggesting to the Department the propriety of an exhaustive examination of the subject, for if it once becomes an established scientific fact that salt really does kill this parasite, and our packers and shippers will but properly salt their meat intended for exportation, foreign Governments will no longer be able to justify their prohibitive measures by an appeal to the danger of communicating mortal disease by the introduction of the already too-much slandered American pork.

Very respectfully, etc.,

JNO. WILSON,
United States Consul.

No. 6.

Mr. Steuart to Mr. Davis.

[Extract.]

No. 116.] UNITED STATES CONSULATE,
Antwerp, April 12, 1883. (Received April 27.)

SIR: In the March number of the American Mail and Export Journal I read with much interest an article entitled the "Pork Question Again," but it contains the following erroneous comparison regarding Belgium, to which I wish to call attention and to correct, as it weakens the force of the argument by greatly underrating the importance of Germany and France in our foreign pork trade.

The author gives a table of "exports of American pork products during the fiscal year ended 30th June, 1882," and adds, "It will be seen by the foregoing that the consumption of American pork products, outside of lard, in Germany and France is insignificant, both countries not consuming one-half of that of Belgium alone."

The mistake he made is in assuming that the total importation into Belgium is consumed in Belgium, whereas it is merely in transit, and from 75 to 80 per cent. of the bacon and lard coming from the United States into Antwerp is sold to and consumed in Germany; and the same comparison might have been made in regard to American hams, with France, as before her prohibition decree Antwerp had a large trade with Northern France in that article, but the consumption of American pork in Belgium is very trifling as compared with Germany and France.

Antwerp acts as the broker for a great part of Europe, and the large importations find their way here simply because this is the best market and the best distributing point on the continent.

Since 1880 the imports of American meat have fallen off greatly on account of the continued high prices ruling in America; but the amount imported into Antwerp during 1882, as shown by the table herewith inclosed, had a value of more than $5,000,000, and it is this large interest that makes the dealers here watch with anxiety the action taken by the European Governments affecting this interest, and also to see what, if anything, is to be done by our Government.

I have called attention a number of times, and do again here, to the fact that American meat has its value on this market as an article of barter and not as an article of consumption; therefore, Belgium being a kind of transit depot, the heavy importation here tends to increase and not diminish the importance of Germany and France, for they are the recipients and consumers. They are very important to our foreign pork trade, and their absence will be felt when we again have a large surplus crop at home.

I hope to see these arbitrary prohibition decrees kept in view, for it is a question affecting not meat alone, but may be extended with equal justice or injustice to any other of our products that may stand in their way.

The sanitary plea is, of course, an invention without reason and without truth, * * * and as for France, in a question of endangering the public health, so long as we continue to import and drink her *so-called* wines and brandies, she would have greatly the advantage of us, if all her ports were thrown open to our pork, and if it should be really much worse than they claim it to be.

I have, etc.,

JOHN H. STEUART,
United States Consul.

No. 7.

Mr. Ryder to Mr. Davis.

No. 206.] CONSULATE OF THE UNITED STATES,
Copenhagen, April 5, 1883. (Received May 1.)

SIR: I have herewith the honor to hand a report on a subject which is at present creating considerable excitement amongst the agricultural classes in this country. I allude to an imperial decree lately enacted by the German Empire prohibiting the importation of live swine, pork, and sausages from the United States of America into the ports of the German Empire.

Fears seem to be entertained here that the very considerable export trade in these articles, which is now carried on from this country with Germany, may, at no very remote period and in consequence of this decree, be subjected to such regulations and restrictions as would materially interfere with this trade, and that for the important agricultural interests of this country it would be desirable that Denmark should also issue a similar prohibitory order against the importation of such stock from the United States. I do not, however, at present, anticipate any immediate danger of such prohibitory order being enforced; but should the German Government later on deem it necessary to place onerous restrictions on the trade from this country, under the plea that American swine and pork were being introduced into the Empire through this channel, great pressure would doubtless be brought to bear so as to compel the Danish Government to issue a similar degree of exclusion in the interests of their agricultural community.

In investigating the importance of this branch of Danish trade it will be found that the export of live swine is mainly directed toward Germany. Inasmuch as whilst the total export in 1881 of hogs and pigs from this country amounted to 253,294 head, of the value of $22\frac{2}{5}$ millions of kroners, of these no less than 237,118 head, of the value of $21\frac{1}{4}$ millions of kroners, were exported to the German Empire.

In the same year 979,000 pounds of pork and hams, of the value of 396,000 kroners, and 946,000 pounds of beef and sausages, of the value of 269,000 kroners, were likewise exported to the same country, giving a total export value of these articles of about 21,900,000 kroners. That a very considerable proportion of the live stock which is exported from Denmark to Hamburg is not intended for consumption in that Empire, but is again re-exported in a slaughtered state to Holland and to England, is not to be denied; but looking at the development which this trade has received in the latter years it is felt by the commercial and agricultural classes in this country that they can not at present afford to lose the market of Hamburg as a middle link in this trade; and that even supposing that other markets could be found for the absorption of their surplus stocks of live swine, this would, in the first instance at least, be attended with considerable pecuniary loss. At the same time, however, it may be presumed that Germany, especially at a time when their supplies from the United States are stopped, can not well afford to be deprived also of their supplies from this country, and that consequently they may not place further restrictions on this trade than may be thought absolutely necessary for the preventing of American produce being clandestinely introduced into the Empire through neighboring states. But if every shipment of swine or its products has to be accompanied by certificates and proofs of their origin, this will entail considerable expense, trouble, and loss of time.

Proceeding next to investigate the extent of the trade in these artices between the United States and this country, it will be seen that the importation of live swine, owing to the heavy expenses and risks attending the long sea voyage, may be classed as *nil;* whereas the trade in hog products has gradually been on the increase in the latter years, the importation of pork and hams in 1881 amounting to 4,175,000 pounds, of the value of 1,566,000 kroners; and of beef and sausages of 357,000 pounds, to the value of 98,000 kroners. It will thus be seen that a restriction simply confined to a prohibition of the importation of live swine would not have any injurious effects on the commercial relations between the United States and this country; and taking into consideration that the swine products are imported for home consumption, and not for re-export, thus tending to the welfare of the general community by lessening the cost of living, I am of the opinion that these views will tend to outweigh with the Danish authorities any pressure that might be brought to bear upon them from the commercial and agricultural interests for the furtherance of any such injurious restrictions.

The restrictive measure enacted by the German Empire under the pretense of sanitary reasons is but a flimsy veil, which might easily be torn into shreds; it has more the appearance of a sop to satisfy the clamors of the agricultural classes, which have no doubt been suffering from the bad harvests in the last years; but, fortunately, this class of the community in Denmark has, from various circumstances, certainly not been subjected to such unfavorable results as has been the case in most of the other European States, and consequently the Danish Government will be in better position to withstand similar pressure from this class of their community.

I have, etc.,

HENRY B. RYDER,
United States Consul.

No. 8.

Mr. Ryder to Mr. Frelinghuysen.

[Extract.]

No. 15.] LEGATION OF THE UNITED STATES,
Copenhagen, April 28, 1883. (Received May 14.)

SIR: I have the honor to refer you to my dispatch No. 206, addressed to the Hon. John Davis, Assistant Secretary of State, under date of the 5th instant, and to report now that the Danish Government, finding the regulations put in force by the German Government on the importation of live swine into the German Empire of such a character as to materially interfere with the trade, have proposed through their minister at Berlin to the German Government to prohibit the importation of live swine from the United States of America into the Kingdom of Denmark, providing the German Government would agree to remove the restrictions lately placed by said Government on the importation of live swine from Denmark into Germany. I was at first informed on good authority that the proposition from this Government to Germany was a general one with reference to the importation of pork produce from the United States, but on calling to-day on the foreign minister I found this to be a mistake. His excellency remarked that said proposition had only reference to *live* swine, and that it was very uncertain whether it would lead to any results. As no live swine are imported from the United States of America to this country, a restriction simply confined to a prohibition of this article would not have any injurious effects on the commercial relations of the United States and Denmark. * * *

I have written Mr. Sargent, our minister at Berlin, about this matter.

I am, &c.,

HENRY B. RYDER,
Chargé ad interim.

FRANCE.

No. 9.

Mr. Morton to Mr. Frelinghuysen.

[Telegram.]

LEGATION OF THE UNITED STATES,
Paris, January 17, 1882.

Faure, under secretary commerce, thinks bill introduced in Chamber Saturday will result practically in free admission American salted meats. He had hopes early passage both houses.

MORTON.

No. 10.

Mr. Morton to Mr. Frelinghuysen.

[Extract.]

No. 107.] LEGATION OF THE UNITED STATES,
Paris, January 20, 1882. (Received February 8.)

SIR: I have the honor to inclose herewith a copy and translation of a bill in relation to American salted meats, which was introduced in the Chamber on the 14th instant by Mr. Faure, deputy and under secretary of commerce.

This bill repeals the decree prohibiting the importation of American pork, and provides for its introduction into France upon certain restrictions which will, I believe, practically result in its free admission.

The minister in presenting this bill explained the reasons which dictated its action.

At the time the decree was issued, anxiety and alarm existed, microscopic examination could not be resorted to, and prohibition under the circumstances was necessary. But since that time nearly all the chambers of commerce of France have protested against the measure and the Government has been led to question seriously the propriety of maintaining it.

A careful examination elicited the fact that from 1878 to 1880, 95,000,000 kilograms of American pork were consumed in France without danger, and that Belgium, where the consumption is about six times as large as in France, and England, where it is eight times as large, did not suffer at all from trichinosis.

It was found besides that the cooking of the meat afforded an additional protection against trichinosis to the one already secured by its process of curing.

Upon the evidence of these facts the committee of public hygiene rescinded its former advice, and declared that, in its opinion, prohibition was unnecessary, provided the meat introduced into France was well cured. The Government, therefore, proposes the free admission of American pork upon the conditions stated in the bill.

It has taken nearly two years to establish the fact that the remonstrances which our Government made from the beginning to this unjustifiable measure, and which have been constantly pressed upon the French authorities by my predecessor and myself, were just and well-founded in every respect.

I regret that the bill proposed still maintains the prohibition of sausages and hashed meat, the reasons for which I do not understand. But, as the bill is, if its provisions are applied in a liberal spirit, as I believe they will be, our packers will have no reason to complain.

Mr. Faure expressed to me the opinion that the bill would pass both houses within four or five weeks.

I have, &c.,

L. P. MORTON.

[Inclosure in No. 107.—Translation.]

BILL ON IMPORTATION OF AMERICAN PORK.

The minister of commerce presented yesterday, in the name of the Government, the bill relating to the withdrawal of the decree prohibiting the importation into France of American pork. This is the text of this document:

ARTICLE 1. The decree of February 18, 1881, prohibiting the importation into France of salt meats of American production is annulled.

ART. 2. Salted pork of foreign production, accompanied by a certificate testifying that the meat has undergone a perfect preparation, and that it corresponds with the type known to commerce under the name "fully cured," can be imported into France.

These certificates will be made out in the places of their origin with promptitude, and at the cost of the parties interested, by local experts, whose qualifications will be attested and the signature authenticated by the consular agents of the Republic.

ART. 3. At the moment of the payment of custom-house dues in France the importers must prove that the meats which they propose to hand over for consumption are healthy; that they are in a perfect state of preservation, and that the salting is not defective.

This authentication will be made at the expense of the importers by inspectors appointed by the prefects of the frontier departments.

ART. 4. The present arrangements are not applicable to meats hashed and uncooked, such as different kinds of sausage (*saucisses*, *saucissons*, *cervelas*, etc.), nor to guts (*boyaux*) intended for culinary preparations, the importation of which into France is absolutely prohibited.

ART. 5. Will be punished by imprisonment of from two to six months, and by a fine of from 100 to 300 francs, those who will have brought into France uncooked and hashed pork, such as the various kinds of sausage (*saucisses*, *saucissons*, *cervelas*, etc.), or guts (*boyaux*), intended for culinary preparations, those who will have imported into France pork of foreign production which would not have been subjected to the inspection imposed by the present law, or which would not have been refused after examination.

In the two above-mentioned cases the imported meats will be, in addition, seized or destroyed.

The article 463 of the penal code is applicable in the cases provided for in the present article (fifth).

Mr. Davis to Mr. Morton.

No. 96.] DEPARTMENT OF STATE,
Washington, February 10, 1882.

SIR: I am gratified to learn from your dispatch No. 107, of the 20th ultimo, that it is very probable that the objectionable decree of the French Government against American pork will soon be repealed.

Thanking you for your full and interesting report on the subject,

I am, &c.,

J. C. BANCROFT DAVIS,
Acting Secretary.

No. 12.

Mr. Morton to Mr. Frelinghuysen.

No. 130.] LEGATION OF THE UNITED STATES,
Paris, February 28, 1882. (Received March 18.)

SIR: I have the honor to acknowledge the receipt of your dispatch No. 96, of date February 10, conveying the gratification of the Department for the information that the decree of the French Government prohibiting the importation of American pork would probably soon be repealed.

With the defeat of the Gambetta cabinet, which was pledged to the withdrawal of the decree, and the reinstallation of Mr. Tirard, who originated the measures of prohibition as minister of commerce, I regret to say that the prospects of an equitable and liberal settlement of this long-pending question are not now as favorable as heretofore.

The bill which was drawn up by the late minister of commerce, of which I gave you the substance in my No. 107, is still before the Chamber, and will not, I think, be withdrawn. But it is somewhat doubtful whether the committee to which it was referred will now report it favorably.

I must state that the renewal of the objection made to the importation of American pork is not to be attributed solely to the hostile influence of the minister of commerce, and of those who have adverse private interests in the matter, but mainly to the publication in some American papers of supposed fatal cases of trichinosis. These reports, which have been circulated unfortunately by the American Correspondence, a New York Franco-American weekly sheet, printed partly in French, are copied by the French papers, and its paragraphs upon American trichinosis have received a rather wide circulation. I inclose herewith, for your information, two of these paragraphs, which appeared in the Correspondence of January 28 and February 11.

Many people have called at the legation to ascertain if there was any foundation for these reports. I have not hesitated to declare that in my opinion they were spurious, and that there was nothing like an epidemic of trichinosis existing in the United States. It might, however, be useful if I could speak with official authority from the State Department in the matter.

I have, etc.

L. P. MORTON.

[Inclosure in No. 130.—Extract from the American Correspondence, January 28, 1882.]

TRICHINOSIS IN THE UNITED STATES—EXPERT INSPECTORS OUT OF THE QUESTION LEGALLY.

Like all Americans, we regret that the Chamber of Deputies did not instruct the Government to allow salt provisions from the United States to be admitted without restrictions, as we were in hopes that they would, and so expressed ourselves in our last number. We are confident, at any rate, that the French legislators will continue to overlook the publication in papers opposed to free importation of numerous cases of trichinosis; more, in fact, than have really occurred. Reliance can be placed upon our statement that there were only six cases last week, of which four were fatal, and but two this week; which shows conclusively that trichinosis is a scarecrow which has been made too much of.

We also expressed the apprehension that the Chamber of Deputies at Paris would take offense at being placed by the Government on the same level with American corporations, or even with the petty legislatures of separate States, with which it is proposed to treat (and not with the American Congress), for licensing, as experts, those persons in America whose duty it will be to issue certificates of the wholesomeness of such provisions as they may agree to admit into France. But it would appear, unfortunately, that such appointments as experts are contrary to the laws of the United States, as we are informed by a friend and correspondent who is a well known jurist, and was at one time a United States judge.

I call your attention to the text of the law as proposed, which will require the exporter to produce an inspection certificate from this side to identify the soundness of the provisions. It will be exceedingly difficult, if not impossible, to comply with such a requirement, for the simple reason that in this State and in Pennsylvania, if not in all the other States of the Union, there are no authorized legal inspectors. It is a matter of history that the inspection laws formerly existing in this country, requiring the inspection of exports and brands of the board on casks, barrels, or packages, hurt the sale of the article in the foreign market. It is unnecessary to detail the reason, but the abuse was so flagrant that in New York the constitution of the State forbid forever the appointment of inspectors or boards of inspection. And so it is in Pennsylvania. Whence is the exporter to obtain the inspection certificate demanded by the French law? In this country the purchaser must look out for himself. He has no other protection than the punishment of the person who, knowingly, sells putrid or unwholesome food. It is otherwise in France and other foreign coun-

tries, whose Governments deem it their duty to add to the common law requirements and *a priori* evidence that the article offered is sound. It is supposed that, perhaps, an inspection in the interior, or the place of manufacture, say at Cincinnati or at Chicago, etc., by private parties, would be sufficient. This is a delusive idea. The French bill requires the inspection by a competent, impartial, and disinterested expert, authorized by the local government; but, whilst there may be voluntary inspectors, they are not the class to which France looks for the protection of the lives and health of its inhabitants. In the next place neither of these centers is the point of export. The shipment to France is made here in vessels loading at this port. But pending the transit from the interior to the shipboard, on which the package will leave this country, there are so many opportunities of fraudulent marks, substitution of packages, and other tricks of trade, that the original certificate, if in all respects correct, would not be proof of the identity of the article finally consigned to Havre. Nor will the French consular certificate of authenticity of signature, etc., be of any avail. The French market still regrets with sorrow the certificate of authenticity of of the signature to a document, pretending to emanate from authority, that Fremont's notorious Memphis and El Paso Railroad was a duly recognized and salable stock at the regular New York Stock Exchange, a paper by which millions of French money were gathered for an unsafe and judicially fraudulent stock.

The only remedy for the free export of meat and provisions from here to France is the absolute and unconditional repeal of the existing ordinance. The Chamber will not permit a change which can easily be evaded by illegitimate means. Will it permit a trade in natural course? This is the question.

As we go to press we find the following dispatch published in all the New York papers of to-day (January 27), with displayed headings:

"FIFTEEN PERSONS POISONED—TRICHINOSIS CAUSED BY EATING RAW HAM—THREE FATAL CASES.

"MARSHALL, MINN., *January* 26.—Great excitement has been caused here by trichina poisoning from eating raw ham. Fifteen prominent citizens are afflicted, and three have died. An entire family, consisting of Mr. and Mrs. ———, &c."

Names and details are given. All which seems flatly to contradict those sanguine persons who, like ourselves, persistently maintain that the French Government ought to withdraw the prohibitive decree. It shows, at any rate, that the cases of trichinosis mentioned by us in our last number were not at all exaggerated. We say again that these are special and particular cases, and that they prove nothing in a general way. It should be noted that, in the above instance, those who died had eaten raw ham. In France it is always eaten cooked. Hence there is no cause for alarm. No uneasiness need be felt either about the lard in cans, prepared or purchased in quantities by leading speculators, such as Messrs. Armour, Fowler, &c., which they introduce in a roundabout way into France, where it is consumed without apprehension or suspicion of its American origin.

[Inclosure 2 in No. 130. Extracts from the American Correspondence of February 11, 1882.]

SPECULATION AND TRICHINOSIS.

The movement to bring about a withdrawal of the decree prohibiting the importation of American provisions into Europe, and particularly into France, continues to be carried on under unfavorable circumstances. As the American Correspondence has been predicting for a year past, the results have hitherto been negative. Matters are even worse at present, because speculation has thrust itself so deeply into this question which Mr. Levi P. Morton, the American minister, is trying so strenuously to settle, because he knows what privations the laboring classes in Europe and what losses the American cattle raisers are suffering, by reason of the prohibitive decrees. But the large speculators do not care much for that. Operators, for a rise, have published in certain papers that the decree had been abrogated in France by the Chamber, simply because a bill has been introduced by the Government, which will soon be buried out of sight, if people believe, in France, the exaggerated accounts of trichinosis published in certain other papers under sensational headings like the following:

THE POISONED FAMILY—THE AGONY ENDURED BY THE JAEGERS AT FORT WAYNE, IND.

[Official dispatch to the Evening Telegram.]

FORT WAYNE, *February* 9.—The News says, with reference to the Jaeger family, five in number, who are suffering from trichinal poisoning: "They suffer intensely. No immediate danger is anticipated; but their ultimate recovery is doubtful. The girl, aged fifteen, and her sister, aged five, are in a very bad condition. No hopes are entertained of their recovery. The balance may survive. The oldest child was work-

ing in the country, and came home to wait on the family, and ate once of the diseased meat. She has a very mild form of trichinosis."

It will be observed that this does not refer to the same case as that of which we deemed it our duty to publish the true particulars, because they had been too much magnified by some papers. These exaggerations originate with the bear speculators, who are well aware that if they should only hear in France of any new cases of trichinosis in this country they would never venture to withdraw the prohibitive decrees. For this reason we desire to caution the French public and Government once more not to attach any credit to exaggerated accounts like the above.

No. 13.

Mr. Morton to Mr. Frelinghuysen.

No. 138.] LEGATION OF THE UNITED STATES,
Paris, March 17, 1882. (Received March 30.)

SIR: I have the honor to inform you that the committee to which the bill providing for the free introduction into France of foreign pork had been referred has made a favorable report, and that the question will come up in the Chamber on the 23d instant. All indications now point to the passage of the bill.

The Academy of Medicine, to which the Government has submitted the matter, has pronounced itself against the measures resorted to or contemplate for obstructing the importation of pork. I annex herewith a copy of the report of the academy, which has been kindly furnished to me by Dr. William E. Johnston.

The Academy of Medicine of France is an official body authorized to answer the questions on sanitary measures propounded to it by the Government, and its decisions, when uttered in a clear and decided manner, as in the present case, have great influence with the executive and legislative departments of the Government.

I have, etc.,

L. P. MORTON.

[Inclosure 1 in No. 138.]

W. E. Johnston, M. D., to Mr. Morton.

PARIS, *March* 16, 1882.

DEAR SIR: I have the honor and the pleasure to inform you that after a full discussion of the question of trichinæ, in connection with American pork at the National Academy of Medicine of Paris, a discussion which ran through several sittings, that body has come to a decision which fully justifies the views your legation has maintained on this question.

The Academy of Medicine of France is an official body authorized to answer in an official manner the questions on sanitary measures propounded to it by the Government, and its decisions, when uttered in a clear and decided manner, as in the present case, always meet with the deference on the part of the Government to which they are entitled.

I subjoin the declaration voted by the academy.

I have, etc.,

W. E. JOHNSTON, M.D.

Report at the National Academy of Medicine of France on the questions propounded by the Government of the necessity of an inspection of foreign pork.

[Read by Dr. Bouley, professor of Alfort, reporter of the special committee, February 28, 1882.]

The academy taking into consideration—

1st. That for a great many years American and German pork has been freely admitted into France, without having been submitted to any kind of inspection as regards trichinæ;

2d. That notwithstanding the very extended use which has been made of this kind of meat, especially in the army and the large manufacturing and industrial districts, the disease called trichinosis, with the exception of a single case, which was produced by indigenous pork, has not been observed in any part of France, although at the same time the attention of the physicians has been frequently called to that disease in Germany;

3d. That this immunity enjoyed by the people of France in regard to trichinosis is due without any doubt to their culinary habits, pork being never eaten in France without having been submitted to such a temperature in cooking as is incompatible with the life of trichinæ;

4th. That an efficacious microscopic inspection would be with difficulty applied to the enormous mass of ninety millions of pounds of pork, which is the annual amount of importation, and that in any case the inspection would not prove to be a certain guarantee of the innoxiousness of the pork as regards trichinæ, since the irregularity of the dissemination of trichinæ does not permit the conclusion that because they do not exist in one part they may not exist in another—

Is of the opinion—

That it is not necessary to submit imported pork to a microscopic inspection in order to prevent trichinosic infection, the culinary habits of the people of France being such as to demonstrate thus far that precautions used in cooking are sufficient to preserve them from the infection; and that it suffices to put them on their guard against the possible danger of the use of raw or incompletely cooked pork to point out to them by a special printed instruction these dangers, and to distribute these instructions through the aid of the Government agents to every part of France.

A minority report on an unimportant point was read by a member of the committee, and was rejected by the academy.

No. 14.

Mr. Morton to Mr. Frelinghuysen.

[Telegram.]

LEGATION OF THE UNITED STATES,
Paris, March 20, 1882.

Pork bill comes before Chamber Thursday. Important to have cable from you denying reports of prevalence of trichinosis in United States.

MORTON.

No. 15.

Mr. Frelinghuysen to Mr. Morton.

[Telegram.]

DEPARTMENT OF STATE,
Washington, March 22, 1882.

Health officer of Cincinnati certifies that records of that city, the center of pork trade, do not show a single case of trichinosis. Doctor Ranch, secretary health board of Illinois, reports only eleven deaths from trichinosis in whole State in sixteen years, traced in each case to eating raw pork. City physician of Chicago states records show only two cases there in four years, also due to eating raw pork. The places mentioned are the great pork producing and consuming districts of United States, while the whole country consumes more pork *per capita* than any other country.

Mr. Morton to Mr. Frelinghuysen.

[Telegram.—Extract.]

LEGATION OF THE UNITED STATES,
Paris, March 29, 1882.

The pork bill passed yesterday provides for inspection in France by experts appointed by minister commerce, who shall have the right to prescribe mode of examination. This last clause, which was introduced by amendment, has in view the re-establishment of microscopic examination. * * *

MORTON.

No. 18.

Mr. Morton to Mr. Frelinghuysen.

No. 146.] LEGATION OF THE UNITED STATES,
Paris, March 31, 1882. (Received April 13.)

SIR: I had the honor to inform you on the 28th and 29th instant by cable that the pork bill had passed the Chamber, with an amendment aiming at the re-establishment of micrographic examination. I transmit herewith copies of my telegrams, and a translation of the text of the bill as it passed the Chamber.

The amendment, introduced by the opponents of the free admission into France of our pork, is contained in the three last paragraphs of article 2. It does not provide in terms for micrographic examination, but the debates show that it is intended to secure that result.

The minister of commerce, Mr. Tirard, who agreed to it and has secured its passage, is well known to be in favor of this mode of inspection, and to hold that it is the only one by which any effective guarantee can be given. In a conversation which I had with him the day before the debate he expressed this opinion, and remarked that there was a strong prejudice in France against American pork; that it would find no sale, although it might be perfectly sound, unless some kind of inspection was required which would satisfy the public.

He discussed the question in a friendly manner, and intimated that the inspection, if required by the new law, could be made easy, and would become more and more so if all meats were found to be in a sound condition,

Mr. Achard, of Bordeaux, the chairman of the committee who reported the bill, during the debate read your telegram, a copy of which I had furnished him, denying the existence of trichinosis in the United States, and made an able argument in favor of his bill, claiming that the prohibition was unjustifiable; that our pork was pefectly healthy, and that even if it should be unhealthy, no inspection or examination of such quantities could be in any way effective. His speech is too long to be translated, but by referring to the Journal Officiel of the 28th and 29th, which goes regularly to the Department, you will find it in full, with the whole proceedings.

It is believed that the Senate will pass the bill without change.

I have, etc.,

LEVI P. MORTON.

[Inclosure in No. 146.—Translation.]

BILL PASSED BY THE CHAMBER.

ARTICLE 1. Salted pork meats of foreign production which correspond to the type known in commerce under the name of "fully cured," can be imported into France through places on the frontier of land and sea, which will be designated by decree.

ART. 2. At the moment of landing the importers must prove that the meats which they intend to hand over for consumption correspond to the aforesaid type; that they are wholesome; that they are in a perfect state of preservation, and that the salting of them is complete. This authentication will be executed by special experts.

These experts will be appointed by the minister of commerce, who will possess the right to direct such manner of examination as will appear to him necessary.

The cost of the service of inspection will be paid by the importers under conditions to be established by rules of the public administration.

The custom-house service will only allow the removal of the meats on the certificate of these experts establishing that they consider the condition required in the first paragraph of the present article.

ART. 3. The present arrangements are not applicable to uncooked chopped meats, such as small and large sausages, Bologna sausage, etc., nor to guts intended for culinary preparations, the introduction of which into France is absolutely prohibited.

ART. 4. Will be punished by imprisonment of from two to six months, and by a fine of from 100 to 500 francs:

(1) Those who will have introduced into France uncooked, chopped pork, such as large and small sausages, Bologna sausage, etc., or guts intended for culinary preparations.

(2) Those who will have introduced, or attempted to introduce, into France without submitting them to the verification prescribed by the present law of pork of foreign production.

In the two above mentioned cases the imported meats will be, moreover, seized and destroyed.

Article 463 of the penal code is applicable in the cases foreseen in the present article.

ART. 5. The decree of February 18, 1881, which prohibits the importation into France of salted pork of American origin is repealed.

No. 129.]

DEPARTMENT OF STATE,
Washington, May 10, 1882.

SIR: Acknowledging the receipt of your dispatch No. 163, of the 20th ultimo, requesting authority to draw on the Department for the sum of 235.50 francs for expenses incurred by your legation in translating and printing the report on American pork, I hereby authorize you to draw

for the above sum on this Department. I will thank you to send with your draft an account for the amount thereof, supported by proper vouchers.

I am, &c.,

FRED'K T. FRELINGHUYSEN.

No. 20.

Mr. Morton to Mr. Frelinghuysen.

[Extract.]

No. 191.] LEGATION OF THE UNITED STATES,
Paris, June 27, 1882. (Received July 13.)

SIR: I regret to have to inform the Department that the pork bill, of which a copy was sent with my dispatch No. 146, of March 31, 1882, was defeated in the Senate a few days ago.

This result was quite unexpected. The bill had the unequivocal support of the Government, and of the Senate committee to which it had been referred. The chairman of this committee, Senator Wurtz, the eminent chemist and dean of the Academy of Medicine, reported the bill in the strongest language possible, showing, by conclusive proofs and arguments, that the trichinæ, wherever it existed, could not resist the double process of salting and cooking, and that, with a proper inspection, the introduction into France of our fully cured pork could not be attended with any danger or inconvenience. Mr. Tirard, the minister of commerce, advocated the passage of the bill on the same ground. The opposition, which came mainly from the hog-raising departments, contended that if there were no danger in allowing the free introduction of American meats into France the Government could remove the decree of prohibition without any law, and succeeded in defeating the bill by a majority of four votes.

I have, etc.,

LEVI P. MORTON.

No. 21.

Mr. Frelinghuysen to Mr. Morton.

No. 152.] DEPARTMENT OF STATE,
Washington, July 28, 1882.

SIR: The Department learned with regret from your dispatch No. 191, of the 27th ultimo, that the pork bill had been defeated in the French Senate.

Approving of your action in having an interview on the subject with Mr. Tirard, the minister of commerce, I need hardly add an expression of my desire that you shall omit no proper opportunity to urge upon the French Government the withdrawal of the objectionable decree with reference to American pork.

I am, etc.,

FRED'K T. FRELINGHUYSEN.

No. 22.

Mr. Wilson to Mr. Davis.

No. 12.] UNITED STATES CONSULATE,
Nantes, December 4, 1882. (Received December 22.)

SIR: I have the honor to transmit herewith a report on the subject of the prohibition of American pork in France. I have found certain evidence, consisting of official communications and reports made by the chamber of commerce of this city, which represents a large pork interest, to the minister of agriculture and commerce at Paris, which I consider to be newly discovered and highly valuable. It declares the inability of the French pork manufacturers to compete with the like industry of the United States. It charges their failures to the competition from the United States, and says plainly that if the administration does not desire the disappearance of this industry from France it must aid the pork manufacturers by such action as will hinder, if not prevent, the (to them) detrimental importations from the United States.

I, of course, can not know that it was in answer to these appeals that the minister issued the decree prohibiting the entry of American pork into France, but it is a fair subject for argument. If this was true it shows that the decree was passed more in the interest of the pork manufacturers than for the benefit of the public health. I do not say that the evidence I have herewith presented proves this conclusively, but it certainly tends that way. It shows the interested appeals for aid by the pork manufacturers.

If this evidence shall be as convincing to the Department as it has been to me, it will open with renewed vigor the question of reprisals, and, looking to that end, I am preparing a report on the falsification and adulteration of French wines and liquors which I had intended to have included in this. I will send it as a supplement.*

MEAT PRICES IN FRANCE.

The prices paid in France for meats for the table are much higher than in the United States. In Nantes, a city out of the current of tourists, the prices of meats are higher than in the markets of either New York, Philadelphia, or Washington.

I furnish the market reports of November 10, 24, and December 1, for beef, veal, and mutton on foot; live-stock market.

Beef.—Average weight, 1,300 pounds; price, $97.50; per pound, 7.5 cents.

Veal.—Average weight, 140 pounds; price, $14.70; per pound, 10.5 cents.

Mutton.—Average weight, 100 pounds; price, $9; per pound, 9 cents.

Marche de la place Talensac—Abattoir.

Meat dressed and sold by the carcass or side:		Cents.
Beef	per pound..	12 to 16
Veal	do....	14 to 17
Mutton	do....	14 to 22
Pork	do....	10 to 13

*It comes immediately after this report.

Retail butchers' shops.

		Cents.
Beef:		
Soup-joint	per pound	20
Boiling piece	do	20
Roasting piece	do	20 to 27
Steak	do	30 to 50
Veal	do	20 to 27
Mutton	do	22 to 30
Ham:		
French	do	35 to 35
English	do	38 to 50
Bacon	do	30 to 35

The business of meat dealer, butcher, etc., is one of the best in France, and it is said that a reasonably sharp and saving butcher expects to retire at the end of ten years or less, with a fortune of from two to three hundred thousand francs. This of course has to be paid by the consumer in the high prices charged.

These prices prevent the use of meat among the common and laboring classes as a regular article of diet as known and practiced in the United States.

This state of things might be corrected by the competiton from importation, but France, as is well known, has seen fit to prevent competition so far as American pork is concerned by prohibiting its admission into the country on any terms; this on the *alleged* score of its *alleged* unhealthiness.

PROHIBITION OF AMERICAN PORK.

In this communication I propose to show some of the influences brought to bear to obtain and continue the decree of prohibition, and believe it will have an important bearing upon the action of the United States in respect thereof. The integrity of the French Government in passing the decree is no wise questioned, but the evidence will show, I think, that there were influences brought to bear upon it and its representatives other than those interested for the public health; influences in favor of the French hog; influences of self-interest endeavoring to procure prohibition, either directly by a decree or by a tariff making importation impossible, and thus to save from ruin a French industry which acknowledges itself unable to support itself without State aid, or to successfully compete with a similar industry from the United States. The evidence will show that this, even more than the health of the public, was presented and used to obtain the decree.

PORK AS EATEN IN THE UNITED STATES AND FRANCE.

Some preliminary propositions concerning the latter, the health question, I desire to present, not discuss. They must be admitted, they cannot be denied.

1. American pork is no more liable or likely to contain trichinæ than that of any other country. The parasite is introduced into the live hog through his stomach, and with, or by means of, his food.

The opportunity for its introduction is quite as good in Europe as in America. A hog will be a hog, wherever he is raised. He does not receive in France that care and attention as to either his food or cleanliness which will make him the superior of the American hog. The number of hogs in the United States cannot be much under 50,000,000; the principal portion of the pork produced therefrom is consumed at home, pork being one of the standard articles of diet of the people, and no cases of trichinosis are known in the entire country.

American pork is, in the United States, a cheap, healthful, and satisfactory food for the people.

If the same pork is not, or is reported to be not, equally healthful in France, the cause must be either the prejudice of the people, or their manner of cooking or eating the pork.

It is also true that the curing and preparation of pork for foreign markets in the great pork-packing establishments of the West is carried on with a care and attention not exceeded in the world, and which leaves nothing to be desired on the score of cleanliness or healthfulness.

The mass of the people in the United States bestow greater attention at greater expense, and are more fastidious as to the kind and quality of their food than the same class in Europe.

Much food here used would be rejected in the United States.

2. The science and experience of all countries teach that the only danger from trichinæ in any pork arises from the savage and barbarous practice of eating it raw; that it is quite as safe as other meat when eaten as is other meat and as becomes civilized beings; that exposure to heat of 60° or 70° Centigrade, less than necessary for proper cooking, is amply sufficient to destroy all vitality in the trichinæ, and render the pork innocuous.

The French minister of agriculture and commerce declared this, and recommended it in his circular of February 14, 1881, four days before the decree of prohibition. It is re-enforced by the latest French authority, report of the director of the municipal laboratory of Paris, for 1882, p. 442, analysis of food and drinks. Uncooked and uncleaned pork stand together. A person uncivilized enough to eat pork raw is in, or may be in, danger from trichinæ. One who eats it uncleaned is in danger from the bristles.

Uncooked and uncleaned pork are equally unhealthy, and equally disgusting; trichinæ and bristles equally dangerous when the pork be eaten raw or dirty.

I have but little patience with a people who require the prohibition of *all* of a certain kind of meat in order to preserve themselves from maladies arising from eating it raw.

The civilized world will agree that there is squeamishness and caprice in the policy of a Government which prevents its people from eating American pork, and yet permits its capital city of Paris to make a record of "meat consumed" during the past two years as follows: 1880, 9,012 horses, 307 asses, 32 mules; 1881, 9,273 horses, 349 asses, 31 mules.

HOW PROHIBITION WAS SECURED.

I now proceed with the evidence, heretofore mentioned, of the interested influences brought to bear to secure the decree of prohibition.

1. I find extending through the business community a general and wide-spread dislike and opposition to the American tariff, so far as it may affect any article exported from France, and a disposition to retaliate.

The report of Chamber of Commerce of Nantes for 1879, p. 14, on the subject of sardines, says:

> This industry demands that when the Americans strike our products with a duty of 50 per cent. *ad valorem*, and go with their salmon and other preserved fish to compete with our products, even to Australia, *that we should strike their products with an equal duty* on their entry into France.

The subject of the American tariff is fully considered in a communication set out at length in the report of the same chamber for 1878.

It was on the occasion of a meeting called to secure the influence of the same chamber in favor of the commercial treaty between France and the United States, well known in our country by the connection of M. Léon Chotteau therewith. The conclusion was against the treaty, because in the proposed tariff certain articles were to be admitted into France at a less rate than into the United States, notably silks, wines, brandies (spirits). They declare this inequality to be shocking and offensive (*l'inégalité la plus choquante organisée au préjudice du travail français*), and conclude with the hope they will never (*jamais*) find an assembly which will impose it on the country.

2. This feeling of dislike and opposition is intensified by the situation in regard to American pork. Here is shown the willingness to retaliate.

The failure of the French pork trade because of the competition of the United States and the agitation of the subject of state or legislative interposition and aid, dates as early as 1877, four years before the decree.

The Chamber of Commerce of Nantes, in its report for that year (p. 18, Part 1), complains to the minister of agriculture and commerce that, as to the bacon and pork for the navy, American pork received too much consideration and favor, and the home product not enough.

In the report proper (Appendix, pp. 18, 19) the pork industry is described as in a situation "deplorable."

The American bacon and lard are imported on such conditions as render competition on the part of our merchants nearly impossible.

The subject is continued in the report of the chamber for next year, 1879:

We have been repeatedly approached during the year 1879 by the pork and bacon merchants with complaints relative to the fatal consequences produced upon that industry by the insufficiency of the customs duty imposed upon American pork.

We have transmitted these complaints to the minister of commerce, insisting that they should be taken into serious consideration. Afterwards we addressed ourselves directly to the president of the tariff commission of the Chamber of Deputies,

The following is the letter written to him by us on November 6, 1879. This letter reviews and completes the observations we had submitted to the minister of commerce, July 18:

[The letter.]

NANTES, *November* 6, 1879.

MONSIEUR LE PRÉSIDENT: The attention of the Chamber of Commerce of Nantes has been brought frequently during several years to the prejudice which has resulted to our pork manufacturers from the tariff to which foreign importations of the same industry are subjected in France.

The origin of the crisis which has brought about the successive disappearance of our establishments goes back to the decree of October 5, 1854.

That decree provided for the admission in France of American pork on payment of a duty of 50 centimes per 100 kilograms (220 pounds), though the French pork had to bear a duty of 5 francs per 100 kilograms for the tax on the salt employed in its preparation. * * *

This state of things subsisted for a long time in spite of the protestations reiterated from the French pork manufacturers; and the anomaly of which they complained was never ended only by grace of the law of March 24, 1874, by which the duty on foreign pork was raised to 4.60 francs (92 cents). Unhappily the alleviation which should have been procured for our merchants by this return to a more equitable tariff was only momentary, and the situation has returned to its evil state.

The causes to which to attribute the present decadence of the pork industry are many, but we believe they are all founded on the competition with the pork made in the United States of America.

By the favor of nearly absolute freedom enjoyed by them during twenty years the importations have developed into proportions more and more grand, and when the tariff of 4.60 francs was established it had become impossible to divert this invasion of our market unless by more energetic means.

The stoppage produced by the law of March 21, 1874, was only momentary, as will be shown by the following table of the importation of salt pork and lard from the United States:

Our figures are extracted from the tables of general commerce of France; they represent the quantities consumed (special commerce).

Description.	1872.	1874.	1876.	1878.
Salt pork.....kilograms..	10, 229, 397	4, 079, 139	5, 269, 960	28, 102, 290
Grease and lard.....do....	19, 162, 711	10, 676, 562	16, 865, 569	34, 725, 635
Total.....	29, 392, 108	14, 755, 701	22, 135, 559	62, 827, 925

This considerable progression in the importation of American bacon and lard sufficed to give birth to a crisis in our similar industry, but the conditions following which were developed and the particular circumstances, of which we will say a few words, have greatly aggravated the effects:

The tariff of 4.60 francs which was laid upon American pork upon its entry into Franco represents scarcely, as we have said above, the tax on salt paid by our pork merchants (manufacturers) who found themselves in reality without any protection against the foreign competition.

Now to give the principal reason for the situation it will suffice to compare the price of sale in our own markets of the American products with the price (net cost) of French bacon and lard.

[Abstract taken June 30, 1878.]

	Francs.
American pork, price current at Havre.....	104.00
Pickled pork made at Nantes.....	135.19
Loss.....	31.19
American lard, at Havre.....	99.00
Lard made at Nantes.....	139.00
Loss.....	40.00

We reproduce here these figures, Monsieur le Président, extracting them from a letter which was addressed to Monsieur le Ministre last 18th July, and of which we remit you a copy; they will suffice to explain the substitution of the foreign for national products in the domestic consumption of France.

Still the superior quality of French bacon and lard, and particularly those of our region, will be in the nature of a counterbalance, to a certain measure at least, to the bait of cheapness of similar products from America.

Our products were in great demand by the merchant-marine; they made an object of regular exportation to the French colonies, and until lately many of our neighboring counties addressed themselves to our manufactories.

Actually the outlets to our trade are in a great part closed. The merchant-marine has been itself subjected to a crisis of extreme rigor, and like everything else, is condemned to the strictest economy. Our colonies, because of the tariff system which detaches them from their metropolis, import the American pork direct from that country, or else purchase, under the name of French pork, that which has nothing about it French but the brand.

As to the other foreign countries, it is, if possible, worse yet. Alarmed by the cases of trichinosis which had been pointed out to them, either in America or in the countries importing American pork, Italy, Portugal, and Greece have prohibited the entry of American pork, in any of its preparations, into their respective countries.

We communicate to you the text of the decision of those Governments on this subject.

We will remark, Monsieur le Président, that Italy and Portugal have not stopped with the exclusion of American pork, but have at the same stroke excluded French pork, though it has never had a single case of the terrible malady from which the country is so willing, and has such good right, to preserve itself.

As far as concerns Greece, the proofs demanded touching the origin of all other than American pork, and the suspicion in that country, which only imports these meats for their own consumption, renders the importation of our manufacturers extremely difficult.

It follows from this aggregation of circumstances, Monsieur le Président, that our pork manufacturers see themselves in competition with the supply of American products, which is here made the more considerable, as the other markets commence to refuse the suspected meats.

The French market escapes us at the same time as foreign markets.

Then, unless the Government and our parliamentary assemblies do not wish to aid in the disappearance of an industry as considerable as that of which we speak, it is

indispensable that it and they should come to its aid by an alteration of the customs duties.

It belongs, therefore, to the commission of which you are the president to appreciate the observations which to you have been presented by the delegates from this industry, and which tend to the elevation of the customs duty to 35 francs ($7) per 100 kilograms upon American pork and lard. * * *

[Continuation of report, p. 43.]

It is possible that the distrust excited by the American meats may be impressed with a certain exaggeration, but it is nevertheless true that the facilities of introduction accorded by us to their preparations injure our manufactures in a sensible degree in our domestic markets, and stop their exportation to foreign markets.

These things constitute for the pork industry of France an exceptional situation, and, as we have written to the minister of commerce, October 31, it is regrettable that an industry, of which the interests are attached so intimately to agriculture and the public health, should see itself sacrificed to the profit of a commerce in suspected products, and rejected for that reason by the neighboring countries.

Another part of the same report for 1879, speaking directly to the minister of commerce, etc. (Appendix, p. 19), says on the subject of "salt pork for the navy and merchant marine":

We can only repeat here what we said last year on the subject of this industry. The commercial outlets are nearly closed in France, because of the competition of the United States and by the distress of the merchant marine.

It will be vain for us to expect a foreign demand for an article which has failed in France. Our colonies are provisioned directly by the United States, and the European markets refuse in great part to receive any salt pork, in fear that it may be infected with trichinæ. America therefore causes our manufacturers a direct loss in substituting her products for our own in France and the French colonies, and an indirect loss in making them victims of the suspicions of which American pork is the object in Spain, Italy, and other countries. * * *

When the last of our manufacturers of salt pork shall have closed their doors, the administration will have lost the possibility of recourse to a co-operation of which the last war demonstrated the utility.

In the following year, 1880, the subject is again taken up by the Chamber of Commerce; and here let me remark that the report of the chamber consists of two distinct parts—one a report to its members and the public of its doings during the past year; the other, a report to the minister of agriculture and commerce, being a *résumé* of the past and recommendations for the coming year.

[Report for 1880, p. 37.]

We have renewed to the tariff commission of the Senate the observations which we submitted to the Chamber of Deputies, in the interests of the French pork manufacturers, the industry of whom is more and more menaced by the development of American pork.

[The letter.]

NANTES, *November* 18, 1880.

MONSIEUR LE PRÉSIDENT: The 6th of November, last year, we wrote to Monsieur le Président of the tariff commission of the Chamber of Deputies, to call his attention to the deplorable situation of the pork industry.

We have the honor to transmit the text of that letter, which is inserted in the works of our Chamber of Commerce for 1879, p. 39.

We can not, Monsieur le Président, but maintain the observations which we have suggested concerning the decadence of an industry heretofore considerable in our region. This industry is menaced with complete annihilation by the competition of the United States of America.

In effect, the introduction into France of the American salt provisions under the duty of 4.60 francs has a continually increasing importance.

From 4,000,000 kilograms, figures of 1874, it has attained those of 28,000,000 kilograms in 1878, and the table of "commerce general of France" acknowledges for the year 1879 an importation of 31,784,913 kilograms of salt bacon from America. These figures are of the "commerce special," and consequently represent the salt provisions for consumption.

It belongs to the Parliament to fix the limits of the protection, which is the legitimate right of the French manufacturers, but it is important to remember that the actual duty of 4.60 francs, which is imposed on the salt pork from America, makes no protection for our manufacturers.

This tax is paid on French salt pork as well as on that coming from America, and represents the impost on the salt employed in the preparation of the French meats.

Referring again to our letter of November 6, 1879, etc.

[Continuation of report (to minister), Appendix, p. 16.]

SALT PROVISIONS FOR THE ARMY AND NAVY.

The situation of our salt-pork industry is in no wise ameliorated. In the French market our salt pork is subjected to the competition with similar products from America, and is rejected in other countries, which, refusing to receive the American bacon infected with trichinæ, refuse ours also, for the reason that they can not distinguish by the eye the suspected meats freely introduced into France, whether for consumption or re-exportation.

The foregoing action of the chamber of commerce and the French pork manufacturers seems to have been legitimate, and, so far as appears, not a subject of complaint. It consisted of a declaration of failure on the part of the latter, an admission of their inability to compete with the United States, and an appeal for state aid in form ot a protective tariff increasing the present by 800 per cent., which would be, and was intended doubtless to be, equivalent to prohibition.

While trichinæ were mentioned in those appeals it is only incidentally, not as a reason for prohibition; no cases cited, and it is not pressed upon the attention of the minister of agriculture and commerce.

The manifestoes were addressed both to the minister and to the tariff commission, the latter having then under its consideration a complete revision of the French tariff, which culminated in the law and decree of May 8, 1881.

The commission and both chambers remained deaf to all these appeals, decided in favor of cheap food for the people, made no change in the duties on American pork, and refused the desired aid to the French pork manufacturers.

The minister then took the matter in hand and the result was the two decrees of February 14 and 18, 1881, the latter being the decree of prohibition.

What relation there may have been between the appeals of the French pork manufacturers and what influence the demand for aid to prop up and save from ruin and disappearance a French industry may have had upon the passing of the decree of prohibition I have no knowledge, but two things seem certain: (1) That these appeals for aid were made or communicated to the minister; (2) that the decree passed gave to the French pork manufacturers the desired state aid in a manner equally if not more effective than that of prohibitory tariff, which had been refused.

The circular of February 14, 1881, and the decree of prohibition four days after, February 18, are doubtless well known to the Department and need not be herein set forth, but as pieces of evidence they are valuable, for considered together and unexplained they are anomalous if not contradictory.

The decree of prohibition having been passed and the end of the French pork manufacturers attained, to even a higher degree than they had asked in these communications, their only care now was to guard and protect the decree and its operations, the former from recision, the latter from infraction.

I continue my translation of evidence from the same chamber of commerce written just after the passage of the decree:

Opening our eyes to the dangers to the public health by the circulation of meats containing trichinæ, the government is interdicting their introduction into our country, yet the interdiction provides for no inspection of English meats. There is much to fear that the American products will continue to be imported, at least in a certain preparation, under the denomination of English products.

It belongs to the administration to baffle and thwart these frauds.

Then follows in the same old vein an appeal to obtain for the Nantes pork manufacturers the contracts for supplying the army and navy with salt pork and bacon.

At the close of the year 1881 the chamber of commerce, recounting the affairs of the year to its members and to the public, reports the following concerning my subject (p. 102, report 1881):

A decree dated February 18, 1881, rendered on the proposition of Monsieur Tirard, minister of agriculture and commerce, has prohibited the importation into France of salt pork coming from the United States of America.

This interdiction was moved because of the malady known under the name of trichinosis, with which the meats of that country were attacked or suspected.

The measure in question became attenuated in the practice by the creation of special laboratories charged with the examination and verification of salt provisions presented on our frontier.

Finally, to complete and generalize, within the necessary limits, the institution of these laboratories, Monsieur le ministre of commerce has presented, November 26, 1881, a project for a law providing for microscopic inspection.

Monsieur Tirard having been replaced as minister of commerce by Monsieur Rouvier, this projected law has been withdrawn by the government. On that occasion we submitted to the minister the following observations:

NANTES, *December* 3, 1881.

MONSIEUR LE MINISTRE: In the course of the session of November 21 last, monsieur le président of the Chamber of Deputies communicated to his colleagues the text of a decree by the terms of which "was retired the project of a law relative to the establishment of a service of inspection of pork coming from foreign countries, * * * presented to the Chamber of Deputies November 5, 1881, by the minister of commerce and of finance." The public has interpreted the act as a prelude to the abrogation of the decree of February 18, 1881, which interdicted in all France the importation of pork (salted) coming from the United States of America.

The projected service of inspection has the double purpose to guard the public health against the consumption of unhealthy meats, and at the same time to give satisfaction to certain commercial interests to which the absolute prohibition of American pork causes prejudice.

We regret, monsieur le ministre, that the greatest part, too much the greatest part, was made by or on behalf of that commercial interest aforesaid; for, as we have endeavored to show to you, the decree of February 18, 1881, responded also to serious and commendable interests.

Before the prohibition of salt pork from America was pronounced in France it had already been prohibited in many European countries, notably in Germany, Italy, Spain, and Turkey.

At the same time that they interdicted American pork they interdicted also French pork, not because it was considered as unhealthy (that was never suspected), but because France, receiving pork from America, to change the barrels or the marks was easy, and sufficed to make an error as to the true place of its manufacture when sought to be imported into these countries.

To preserve themselves surely from American pork they felt themselves obliged to interdict also French pork.

The pork manufacturers of our neighborhood have, then, demanded of us, monsieur le ministre, to represent to the government the grievous situation in which they are placed. Competition at home with American pork exempt from the duties on salt—they scarcely pay that much customs duty—and chased from the foreign markets by the fear which is inspired by these same preparations, our people lose their opportunity in the foreign markets, while the salt provisions imported from the United States to France are there consumed, which crushes the price of the French products.

In this juncture our fabricants must cease their work, and the closing of their manufactories will cause, or has caused, in this region much difficulty among our agricultural population. These things were known to and appreciated by your honorable predecessor.

It appears to us desirable, monsieur le ministre, before giving aid to the demands of, or in the interest of, the American pork manufacturers and importers, that the government render to itself an account of the conditions in which one of our national industries contests and competes for the furnishing of food for our country.

These conditions are truly painful. Then, when all the French products, and particularly all provisions imported to the United States of America, are subjected to an exaggerated and excessive customs duty is it a good title to enlarge the French market in favor of analogous products which come from that country?

Some persons have invoked the interest of the consumer as a justification for the proposed anomaly. Certainly no one would dream of proposing anything against the interest of the consumer, but will it be well served by giving encouragement to some exotic preparations that the most part of the countries of Europe hold in suspicion and the low price of which is definitely explained by their inferior quality?

We estimate and hope that such matters will not induce the administration to resign itself to the principle of *laisser faire*, and that it will preserve our nation by means of its attentive control against the allurements of cheapness of an article dangerous to the public health. In the present case the government in accomplishing this rôle will hinder a little, without doubt, the commerce in American provisions, but the measure which it will take can never be equivalent to the excess of protection in America, and we have nothing to fear from the pretended reprisals which, some people say, the United States may contemplate against our commerce.

We come now to demand of you, Monsieur le Ministre, not to welcome or receive the attempts that have been or will be made to obtain the abrogation of the decree of 18th of February, 1881.

The decree is, perhaps, susceptible of attenuations, and the projected law was prepared by your honorable predecessor to that end. Whatever measures may be taken by which its disposition will be replaced the Government will take account of the different national interests involved.

Those of the public health are here in accord with those of the French manufacturers and of the numerous workmen thus engaged and also the interest of the agricultural classes.

These will not be sacrificed, we have confidence, neither on the complaint of certain importers of foreign provisions nor from the chimerical fear of reprisals, nor yet from illusory hopes of a treaty of commerce with the United States.

In the same report, speaking directly to the minister, the Chamber says (pp. 11, 12):

> That the pork industry has not recovered from the situation *regrettable*, in which it has been placed for a long time by circumstances of divers natures. This situation would have been more unfavorable yet if the importation of American salt provisions had not been hindered or prevented by the measures of wise precaution to which the administration has had recourse for the preservation of the public health.

This ends the quotations, running through five years of reports, and ending only with that of last year, published last August.

To show the importance of the subject-matter, I have tabulated the importations of American pork and lard from 1872 to 1881—now, thanks to the decree of prohibition, I suppose, entirely ceased.

From 1872 to 1878 I have to depend upon the statements of the Chamber of Commerce, pp. 15, 16 of this report.

I have no means of verifying this. The returns from 1879 to 1881 may possibly contain some fresh meat. The *tableau général* of commerce does not give them separate, but the amount of fresh meat imported into France from the United States is very little.

Years.	Pork.	Lard.	Value.
	Kilograms.	*Kilograms.*	*Francs.*
1872 to 1878	47, 680, 886	81, 430, 477	180, 204, 304
1879	32, 594, 184	37, 229, 104	77, 888, 074
1880	34, 720, 221	42, 105, 990	83, 194, 067
1881	17, 699, 249	37, 290, 559	65, 870, 780
Total	132, 694, 540	198, 056, 130	407, 057, 225

Eighty-one and a half millions of dollars represents the pork and lard commerce of the United States with France during the period above

mentioned. The loss to the United States of this amount of French commerce is the effect and result of the decree of prohibition of February 18, 1881.

Thus is formulated in dollars and cents the complaint of the United States against France by reason of that decree.

The difference in price in favor of American pork and lard for the same period is stated, p. 16, by the Nantes Chamber of Commerce, at 31.69 francs per 100 kilograms of pork, and 40 francs per 100 kilograms of lard, so that—

Amounts.	Francs	Dollars.
132,694,540 kilograms of pork, at 31.69 francs	42, 050, 899	8, 410, 179
198,056,130 kilograms of lard, at 40 francs	79, 222, 452	15, 844, 490
Total	121, 573, 351	24, 254, 669

These figures show at a glance the difference in price between the American pork and lard during the period mentioned and the same amount of French pork. American pork and lard has undersold French pork and lard during that time by the amount aforesaid, and thus is formulated in francs (and dollars) the complaint of the French pork manufacturers.

This closes my evidence on this branch. It has been somewhat voluminous, but I have remembered, and have acted upon the rule of evidence which prohibits the introduction of a portion only, but requires the presentation of the entire document, so that no one can complain of unfairness in my having kept back any portion unfavorable to my side of the case.

These reports cover five years or more of time. There are many repetitions, but they are repetitions and reiterations of the objectionable argument, and prove beyond cavil the position of the Chamber of Commerce to have been inimical to the United States on the ground of self-interest, and that they sought to prevail upon the minister of agriculture and commerce to secure the intervention of the Government in their behalf, which was finally done by his decree of prohibition, and with which they were satisfied.

A summary of their position was as follows: The French pork manufacturers were in a failing condition, threatening to close their doors and suspend business; that the prime cause of their failure was their inability to compete, either in France or her colonies, with American pork manufacturers, who could undersell them at from 30 to 40 francs per 100 kilograms; that the situation has become "deplorable," and unless they received aid or protection from the Government which should hinder or prevent (*entraver*) the importation of pork and lard from the United States, their establishments must close, their workmen be discharged, and their industry disappear.

Whether these representations thus reiterated induced the minister to whom they were addressed to issue a decree of prohibition I suppose not to be susceptible of proof.

It is significant, however, and suggestive, that while the aid and protection of a high tariff should not have been granted by the Parliament, which would thus seem to have acted in the interest of the consumers rather than in the interest of the pork manufacturers, that the same benefits should have been granted to the latter much more effectively by the minister of agriculture and commerce by his decree of prohibition, though he based it upon different ground.

The benefits thus granted were thankfully accepted by the pork manufacturers, and they became at once the most ardent advocates of the decree and the most strenuous opponents of its repeal, strengthening the minister in adhering to the decree, and advising him not to yield to intimidation by the United States under any (to them) apprehended threat of reprisal, nor yet that he should be beguiled by any illusory hopes of a commercial treaty.

The right of the French Government to pass the decree of prohibition of American pork and lard, and the remedy of the United States against it, are questions beyond the province of a consul to discuss, and I shall make no attempt.

The Chamber of Commerce suggests the possibility of reprisals as a remedy. It is not unknown to me that a retaliation has been proposed by a prohibition on the part of the United States of French wines and liquors, and reports have been made touching their healthfulness, looking towards a prohibition on the same ground as the prohibition of American pork from France. If I were a statesman, as I am not, I should not seek for any such articles as would afford the excuse of unhealthfulness to justify the prohibition, but would choose one without any such cause, and prohibit its importation, calling it a reprisal, and placing it squarely on the ground of retaliation for the unjust prohibition of an equally healthful article of food from the United States into France.

But as French wines and liquors have been so mentioned, and might with great propriety be chosen as proper subject for reprisals, I submit the annexed report as to their effect upon the public health and *morale* in France.

I content myself with reporting such facts as I may be able to gather, without attempting any elaboration of argument, leaving that entirely to the Department, but endeavoring to place in its possession the material necessary to enable it to arrive at a satisfactory conclusion.

THOMAS WILSON,
Consul.

ADULTERATION OF FRENCH WINES AND LIQUORS.

[Continuation of Consul Wilson's report on American pork *versus* French wines and liquors.]

SECOND PART.

That the unjust prohibition of the importation of American pork into France, made, as it was, under the plea of public health, but in effect protecting French pork manufacturers, continued, as it has been, when every explanation and proof as to healthfulness and cleanliness has been made public, might be followed by a policy of reprisal by the United States Government against some article of French manufacture should not be unexpected.

The French have themselves suggested this possibility. (Chamber of Commerce, Nantes, 1881.)

This portion of this report is intended to deal with this question in its relation to French wines and liquors to show that they have been adulterated, have been made deleterious, if not poisonous, and as such exported to foreign countries, the United States among the rest; and if the policy of reprisal should be adopted, that French wines and liquors, as at present *manufactured*, would be a proper subject.

The evil effects of adulterated wines and liquors in France might be compared with those charged by France to trichinosis in American

pork. The magnitude of the one and the insignificance of the other may be shown at a glance, and will be apparent on a moment's consideration.

Take the crimes perpetrated, the punishments inflicted, the deaths caused, the suicides committed, the insanity produced (quite as grave effects as can be attributed to any cause) by the consumption and use of wines and liquors in France only; waive the amount of unhappiness and misery caused, the degradation produced, the blasted hopes, the ruined families, because they can not be calculated; take only those susceptible of being taken from the statistics of crime and compare these with the entire number of cases of sickness or death arising from trichinosis caused by the consumption and use of American pork, and the difference becomes apparent at a glance.

CRIMES OF DRUNKENNESS IN FRANCE.

Evil effects in France onlg arising from the improper use of wines and liquors, compiled from the latest official reports taken for 1880, *or the yearly average.*

	Year.	Page.	Number.
1. Crimes committed while under the influence, waived because the statistics are not specific	.....	.....	.....
2. Accidental deaths	1880	205	449
3. Misdemeanors combined with and aggravated thereby; disorderly street rows in the night; fights	1880	25	785
4. Simple cases of excessive drunkenness; yearly average convictions since	1873	77	422
5. Suicides arising from excessive use; yearly average since	1875	.....	799
6. Insanity from alcoholism (I have not the exact figures, but it is 14 out of every 100 cases), yearly average cases	.....	104	455

These are the figures at the minimum, and from them it will be apparent at a glance that there are a greater number of cases in France in one hour, possibly in one minute than there are of trichinosis in a year. The wider the comparison is extended the greater and more apparent becomes the difference. So that if the policy of reprisal shall be adopted by the United States and placed, as was the prohibition of pork in France, on the score of public health, the choice of wines and liquors as its subject would seem to be justified to such extent as that France could be estopped from making any complaint.

HOW WINES AND LIQUORS ARE ADULTERATED.

The successful adulteration of wines and liquors requires both the professional learning of the chemist and the technical knowledge and experience of the wine merchant.

Prohibited by law, rejected by the public when known, it will only be performed in secret and as one of the mysteries of the laboratory.

To discover and detect it in particular or specific cases requires professional knowledge of a high order, the possession of that sharpened, educated, or, rather, experienced taste which is almost equivalent to a sixth sense, and to these must be added the authority of the law by which private premises may be invaded and private property examined.

Few persons in France combine these qualifications, and I make no pretensions to be one of them. I shall not attempt to give private or secret information, nor to make specific or particular examinations.

Everybody knows, or says, that the wines and liquors of France are adulterated, and they deprecate it, but the consumption and use of the adulterated article goes on much the same as if no adulteration existed.

I shall endeavor to give some information from statistics furnished by French authorities, and so not to be controverted, showing the extent to which this adulteration is carried, and in some slight degree its effect upon the people. It would be aside from my purpose to make, or allow to be made, any comparison of French liquors with those of the United States, or to assert that ours are better than theirs. Our liquors in our own country are our own affairs. Not until we seek to introduce them into France will she have a right to complain of their quality or examine as to their purity. Because of this condition as against France I exercise this right and make this report.

Other consuls have made reports on the same subject, and one of the leading journals in France in that interest, the Revue des Vins et Liqueurs, in its last number, has made these reports a subject of criticism in a long article entitled "The Hog and the Vine." In this article the questions put by the Department in its confidential dispatch to its consuls in France were quoted at length, and the whole subject of adulteration and reprisals argued from the stand-point of a French wine merchant.

Some of its admissions concerning adulteration and falsification of wines and liquors, coming with its authority, are valuable contributions to the side of its opponents. The editor advises naturally enough against reprisals by the United States. He says:

> These reprisals are of doubtful taste, and it is never prudent to enter on this path. What, for instance, would the United States say if, to their prohibition against wines, France replied by establishing an inspector against tinned meats, against grain cargoes No. 2, or cotton, products which the French and foreign trade, rightly or wrongly, accuse more or less justly of being adulterated by the American shippers.
>
> Were it not better, since the cause our friends sustain in demanding the abolition of the prohibitory inspection is a just one, to convince the French Government of its error, raise a movement of public opinion, and, lastly, have recourse to the regular means which their genius as a practical people may suggest to them?

Of course the policy of reprisal is not to be lightly entered upon, nor until the attempt "to convince the French Government of its error" be made and exhausted. This attempt has been continued for now nearly two years without any perceptible effect. How long would the Revue des Vins have it continue? And when all efforts have failed must it not end in reprisals as the means of redress? This has been admitted by the Chamber of Commerce of Nantes and now again by the Revue des Vins.

If the Revue objects to wines and liquors being chosen as the subject of reprisals, it and its friends of that interest might act on its own advice: "Raise a movement of (French) public opinion and convince their own Government of its error," secure the abolition of the pork prohibition, and thus prevent reprisals from either side.

The report of the consul at La Rochelle is noticed as follows, and it shows in some degree the effectiveness of the entire criticism:

> Alone, the *diatribe* of the consul at La Rochelle seems at first sight worthy of consideration, but we are obliged to challenge him on account of reasonable suspicion, for we believe we know him to be a native of Maine, and consequently a bigoted teetotaller.

"*Diatribe*" is a hard word to apply to a report made by a United States consul to his Government, but "let the galled jade wince."

The consul at La Rochelle needs no defense at my hands. He is well able to defend himself. Besides, that charge will do him no harm at his home and where he is known, and there none can be made which will do him harm.

I have cited this to enable me to discount any similar opposition which this report may meet, by saying in advance that I am in favor of temperance; that I am opposed to intemperance, and that I think it a dreadful evil, a crime justly punishable by law in France, entailing misery on its victims, unhappiness on their families and friends, filling the prisons, almshouses, and lunatic asylums, begetting a large portion of the necessity and the expense of criminal procedure in the state, and to be attacked and suppressed by any legitimate means which promise success. Is the Revue des Vins opposed to this? Does it favor intemperance? Holding this belief, yet I am not a bigot, and am willing to agree that the wines of France, in their purity, are healthful, palatable, and agreeable, and that the southern portion of France, where there is more wine raised either actually or proportionally than in any country in the world, is, without any temperance society, one of the most temperate, having in proportion to its inhabitants fewer cases of drunkenness, of crime, of accidental death, of suicide, or insanity from the use of spirituous or alcoholic liquors than almost any other. If I were writing an article on temperance I would elaborate and prove this statement. I make this concession to the Revue des Vins, and close it by making my charge, *i. e.*, that the great curse and blight, and the one to be prevented, arises in France from the adulteration of wines and liquors otherwise pure, and the manufacture and doctoring of those inherently bad. Will not the Revue des Vins and the wine interest aid in its prevention, and, if so, are we not in accord?

A frequent response made to this charge, especially by French manufacturers to American importers or purchasers, is, that if the buyer will deal with only the best houses and is willing to pay for the best wines and liquors, he can always secure that which is pure, and will run no risk of getting adulterated or poisonous compounds. But this begs the whole question, for what should be required and enforced is that the wine merchant shall not be permitted to either make or sell those poisonous compounds, not even to those who from ignorance or cupidity might desire the cheaper article; that the drinker shall not be permitted to purchase, even though he may desire, poisonous compounds under the name of wine and liquors because he can get them at a low price. Least of all should the seller be allowed to sell them as pure. If there is demand for the adulterated, poisoned, or diluted liquors, let them be sold *as such*, and not represented and sold as pure.

A butcher will not be allowed to sell tainted meat, nor a baker bread made of alum, though they offer them never so cheap.

THE FAILURE OF THE WINE CROP IN FRANCE.

France is the greatest wine-producing country in the world. The total production and commerce in wine for 1882 amounted to 2,056,692,491 francs. One hundred years ago she produced 25,000,000 hectoliters. This increased in regular gradations until it culminated in 1875 in 83,632,391 hectoliters. The average crop from 1870 to 1875 was 58,000,000 hectoliters.

In 1879 commenced seriously the ravages of the national plague—the phylloxera. Without study one cannot appreciate the extent of the ravages, nor the great damage this inflicted on France. In 1879–'80 it utterly destroyed 1,250,000 acres of full-bearing vines. It seriously damaged about 1,250,000 acres more. It reduced the wine crop to 25,000,000 hectoliters in 1879, being a loss of about 800,000,000 gallons, to say nothing of Eaux-de-vie, Cognac, etc.

In 1880 the wine crop reached but 29,000,000 hectoliters, in 1881 to about 38,000,000 hectoliters, and in the past year, 1882, the same, 38,000,000, being less than half a crop for the past four years, and entailing a yearly loss averaging 25,000,000 hectoliters.

However interesting, it would be foreign to this report to follow the various means taken for the extermination of this insect; to tell of the Government commission, of the scientific examinations, of the syndicates formed among the owners, or of the methods adopted.

Isolated efforts were vain. General and united action was the only hope for relief. The result shows such improvement that we may hope the devastation has been stopped and the devastator conquered.

In her calamity, France has had the sympathy of all peoples, from none more than the United States, and in her efforts for redemption she has their encouragement. Had this failure happened to the grain crop, even for a single year, what distress and ruin would it not have caused? When continued for four successive harvests it would have produced a famine at which the world would have stood aghast. From such failures of its great crops of wheat, or corn, or cotton, the United States would not recover in a decade of years.

EFFECTS OF THE FAILURE OF THE VINE IN FRANCE.

On the wine growers sad enough, doubtless, for they could neither raise their usual crop of grapes nor could they use the ground occupied by the vines to plant anything else; and their efforts for the extermination of the insect must have been very expensive. Great excitement it doubtless caused; attracted the attention of the Government and of the world. Yet, this immense failure of from five hundred to eight hundred millions of gallons continued year after year, has had no perceptible effect on the quantity of wine drunk, the facility with which it can be obtained, nor the price to be paid for it.

The consumption of wine has maintained itself at about its average, diminished some years and increased others, but not more change than before the failure of 1879.

In Paris the average consumption of wine for each inhabitant amounted in 1877, to 212 liters; and in 1876, it was 230; and in 1878, 224 liters.

In the country it was, for 1876, 140 liters; 1877, 128; 1878, 124; 1879, 116 liters.

In the eight largest (*octroi*) cities of France the consumption of wine has diminished but 3½ per cent., while the consumption of alcohol has increased 31 per cent.

The average price of wine exported was as follows for 1879 and 1881:

1879, Bordeaux wine, in barrels, per hectoliter, 115 to 130 francs in bottles, per hectoliter, 150 francs; all other wines, in barrels, 50 francs; in bottles, 225 francs.

1881, Bordeaux wine, in barrels, per hectoliter, 140 to 145 francs; in bottles, 165 francs; all others, in barrels, 55 francs; in bottles, 225 francs.

This shows the slight increase of from $1 to $3 per 22 gallons, certainly not famine prices.

The exportations have maintained themselves about as has the consumption; fallen off slightly in some kinds, but increased in others.

The statistics will vary in the calculations of different persons, for the entries are varied under so many items; wine, Bordeaux and other, in barrels, in bottles; Eaux-de-vie, Cognac, etc., all spirituous liquors under different names, and the statistics consequently susceptible of infinite variety.

The exportation in francs shows an increase thus:

WINE.

	Francs.
1876	216,200,000
1877	225,500,000
1878	207,100,000
1879	264,900,000
1880	254,600,000
1881	264,200,000

OF WINES AND LIQUORS—TOTAL EXPORT.

1877	285,800,000
1881	332,300,000

The exportation, in quantity, is thus:

OF BORDEAUX WINE.

	Hectoliters.
1878	1,037,430
1881	1,165,575
Increase	128,145

OF OTHER WINES.

1878	1,707,974
1881	1,360,055
Decrease	347,919

Many of these statistics are given with accuracy and particularity in the tables appended to this report, and which I have taken from the *tableau général* of commerce for the respective years.

Here the round numbers were sufficient for my purpose, which was to show a decrease neither in consumption or exportation, nor that increase in price which usually follows failure of crops for even one year, but which, if continued for three or four, results in famine. How have the wine merchants of France been able to keep the supply equal to the demand?

How has this great feat been accomplished? The recuperative power of France after one year's war with Germany, and her ability to make the most out of the least, were at once the wonder and the admiration of the world, but in the case of failure of the wine crop she has shown unexpected recuperative power, and the ability to continue it for an indefinite period.

How has she been able to accomplish it? To solve this economic problem which so worried the Israelites during the last years of their sojourn in Egypt, to learn this secret of making something out of nothing and be able to follow their illustrious example in case the United States should be unfortunate enough to lose its crops for continuous harvests, will surely be worth while.

How has this been accomplished?

Answer. They have imported in large quantities the cheap, heavy wines of Spain and Italy. They have imported raisins from Greece and Turkey, soaked them and expressed the juice, and to these bases they add alcohol, coloring matter, and water in all imaginable proportions, kinds, quantities, and degrees, and thus they manufacture what they call wine, sell for wine, and export to the United States for wine.

This is not the first time the above question has been asked.

In the Journal Officiel, the same paper, and on the same day in which

was published the decree of the minister of agriculture and commerce against American pork, February 18, 1881, appear the debates in the senate of France on the subject of the new tariff.

The President of the tariff commission, Monsieur Pouyer-Quertier, made a speech in which he set forth the true condition of France and appealed to his colleagues to meet the tariff question fairly. He said, p. 133:

> I have seen on the quays of Bordeaux, and I believe I can see the same to-day, a quantity of wines of Spain which had come to the borders of the Garonne. I asked of the Bordelais if perchance these wines, worth only 80 to 85 francs per hectoliter, had not come to Bordeaux to breathe the air of Garonne and *be transformed into Medoc.*
>
> These, perhaps, are the wines which come to-day from Spain, and which *after a certain cure are again exported.*
>
> This represents a certain benefit, for we must admit that this wine contains alcohol to 15 degrees, and that with one barrel of *it and one of the water of the Garonne they make two barrels of wine.*

The minister of agriculture and commerce, who had that day signed the prohibition against American pork, replied:

> I remark to the Hon. M. Pouyer-Quertier that it is a singular fashion to defend the industries of a great country like France to come here and tell *à propos* of our wines of the *mélanges* which are made with the water, the mixing * * * (protestations from divers benches). [Several senators: "All the world answer it."] Monsieur le ministre, continuing: * * * and to come here, *to thus discredit, in this tribune, the French products destined for foreign countries.* In truth, it is *a singular fashion for him to proceed* (more interruptions). You understand that since two or three years, either from phylloxera, from frost, or from dropping of the fruit, we have descended from an annual production of 60,000,000 hectoliters to 28,000,000. It is incontestable that we have not produced the same quantity of wine, and *although we may add water*, it is still necessary to seek in foreign countries that which we have lost. We introduce the wines because they are necessary to our people. In 1876, and before, we imported no wines, because our harvest was abundant and we had no need of them.

This is enough for my purpose. I need follow him no further. It is a confession of my charge, made by the highest authority in the state, and it was in answer to the direct question.

INCREASE OF WINE IMPORTATIONS.

For specific information I refer to the tables in the appendix. I only give here general results.

We have seen that in 1876, and before, no *wine* was imported.

Years.	Wine only.	Wine and liquor, total importations.
	Francs.	*Francs.*
1877	34,800,000	54,506,000
1878	64,400,000	88,279,000
1879	126,700,000	155,760,000
1880	320,900,000	359,791,000
1881	375,700,000	410,004,000

Total *increase* in all kinds of wines and liquors since 1878, 6,342,510 hectoliters and 315,807,121 francs. *Increase in vin ordinaire alone* since 1878, 6,179,028 hectoliters and 296,312,280 francs

The total importations of *vin ordinaire in casks*—I do not speak of bottled wine; it would not be used for adulteration or manufacture—for the year 1881 amounted to 7,700,000 hectoliters, valued at 346,516,000 francs. Of this, 7,274,206 hectoliters came from Spain and Italy, valued at 336,271,447 francs, being an increase over 1878 of 5,731,000 hectoliters and 262,000,000.

In the mean time the exports of wine from France to Spain and Italy decreased 3,000 hectoliters.

By what might be called a remarkable coincidence, this great increase in importation arrived principally at the port of Bordeaux. In 1881 the importations of wine and spirits at that port amounted to 2,942,272 hectoliters, at 97,028,137 francs, which had been an increase over 1878 of 2,785,000 hectoliters and 87,404,958 francs.

The exportations from Bordeaux did not keep pace with this enormous increase in importation. The wine exported was, in 1878, 1,151,000 hectoliters, at 92,000,000 francs; in 1881, 1,173,000 hectoliters, at 135,000,000 francs, being an increase of only 22,000 hectoliters, but of 42,000,000 francs.

Of *spirits* there was a decrease of 23,000 hectoliters and an increase of 5,000,000 francs, the aggregate being a decrease of 1,300 hectoliters but an increase of 47,000,000 francs.

In 1881 the importation of raisins (dry) amounted to 68,000,000 kilograms, at a value of 37,500,000 francs, of which Greece and Turkey furnished 58,500,000 kilograms.

Raisins mashed or bruised in casks amounted the same year to 431,000 liters, at 64,000 francs.

The wine produced from raisins in France in 1881 is stated at 2,430,000 hectoliters.

These facts explain how the deficit caused by the failure of the wine crop has been made up. Thus, the *tableau général* of the commerce (special) of France for 1881, the last one issued, shows:

Description.	Hectoliters.	Francs.
Importations of wine	7, 883, 807	363, 923, 855
Exportation of wine	2, 572, 196	252, 815, 691
"*Marchandises étrangères nécessaires à la consommation française*"	5, 266, 711	111, 107, 794

France has the reputation of being a wine-exporting country, but this table shows that she is a larger importer than exporter; that the balance of trade against her on wine is no less than 137,000,000 gallons, valued at 111,000,000 francs.

The importation of wine from Spain and Italy amounted in 1881 to 7,700,000 hectoliters. It would not be fair to say this was all used, or to be used, in the manufacture of French wine—"to breathe the air of the Garonne and be transformed into Medoc." For though the bottled wine, amounting to 345,000 quarts or liters, has been excluded, yet it would include the sherry and malaga wine in casks. But it would be fair to say that the increased importation was for that purpose.

This increase from 1878 to 1881 of *vin ordinaire* only in casks, amounted to 6,179,028 hectoliters; wines made from raisins, 2,430,000 hectoliters; total, 8,609,028 hectoliters. According to Pouyer-Quertier they add an equal quantity of water, 8,609,028 hectoliters, making 17,218,056 hectoliters, or about 460,000,000 gallons added during the year 1881 to the wine crop of France by manufacturing process.

The foregoing statistics do not prove, I admit, *all* this imported wine to have been "manufactured" into French wine, but I have said this transformation was one of the secrets of the laboratory, and not to be discovered by ordinary means. What wine merchant from France, or anywhere else, would furnish information, much less proof, that his French wine had been by himself or by any one else manufactured, doctored, or diluted from Spanish, Italian, or raisin wine?

One who demands specific proof of this shows that he does not desire nor intend to be convinced.

I have shown enough to raise a presumption of its wholesale manufacture.

I have shown (1) the failure of the crop sufficient to produce a famine; (2) no diminution in either consumption or exportation; (3) no corresponding increase in price; (4) an immense increase in importation of the (known to be) heavy wines of Spain and Italy, and (5) the entire making of the crop of raisin wine, the two latter being in sufficient quantities in the aggregate to make good the deficit; (6) that the charge of this wholesale manufacture was made publicly in the Senate of France, and several senators shouted in support of it that "all the world knew it to be so;" (7) the minister of agriculture and commerce, replying to the senator, did not deny the charge, but upbraided the senator for making it, and said if it was true it had its justification.

These are, I think, enough to create the presumption and put the onus on the wine merchants.

The adulteration of wine naturally belongs to "ways that are dark and tricks that are vain," and it is not possible that the proof can be obtained and made clear, as in many other offenses against the law.

Recognizing this fact, the law of France, C. P., Art. 423, makes the mere *having, with intent to sell*, any adulterated or falsified food, medicine or drink, an offense equal to that of the adulteration or falsification.

I have said that the criticism of the consular reports of the Revue des Vins contained some important admissions bearing on this subject. In reading this, forget not that they come from the highest representative of the wine interest in France, and are contained in its reply to similar charges made by other consuls. It says, November, 1882, p. 881: "It is certain that there is made in France *a considerable quantity of adulterated wines*, although the last crop yielded 38,000,000 hectoliters.

"One estimates the production of raisin wines at 2,400,000 hectoliters. That a portion of this goes to the United States is possible, even probable, though in our opinion the proportion is very small.

"It is purely a question of price. As to brandies, we do not deny that it is possible there are brandies shipped that have very *little connection with the wine from which they are supposed to proceed.*

On page 668 it gives the wine product of 1881 at 38,000,000 hectoliters, and then says: "This is only wine from grapes, but beyond this genuine wine-growers have made 2,000,000 hectoliters of artificial wine by pouring sugared water on the residue." Here let me repeat a story told by the newspapers *á propos.* A wine-grower sold three-fourths of his crop and then filled up the casks with sweetened water. His neighbor twitted him that the *mélange* was not wine. "Why not?" demanded he, "*il tache le linge*"—"it will stain the table-cloth."

It seems to be considered as wine through all its dilutions and ablutions while it will continue "*tacher le linge.*"

The Revue, same page, gives thus the total production of wine for 1881, as follows:

	Francs.
Natural wine, 38,000,000 hectoliters, valued at	1,540,000,000
Production of wine from sugar and water	80,000,000
Production of wine from dry grapes	48,000,000
Importations	192,629,749
Total	1,860,629,749

FALSIFICATION OF FRENCH WINES FOR THE UNITED STATES.

One of the consuls of France in the United States, I believe at San Francisco, sent a report to his Government concerning the falsification of French wines imported into the United States. This report was deemed of sufficient importance to be made the basis of communications between the ministers of foreign affairs and of commerce, and by the latter to the Chambers of Commerce at Rheims and Bordeaux. The two former I have not seen, but the latter is published in the Revue des Vins:

MINISTRY OF COMMERCE,
Paris, August 29, 1882.

MONSIEUR LE PRÉSIDENT: It appears from a communication which has been made to me through the ministry of foreign affairs that the imports of champagne wines into the United States from 123,574 baskets during the first six months of 1881 have fallen to 104,755 during the corresponding six months of the current year, a diminution of 28,219. This result, according to American papers, is due not only to the competition of California wines, but is also due to the bad quality of the articles imported into the United States by our manufacturers of champagne, who, after having made a mark appreciated by the public, only send wines of an inferior quality.

Under these circumstances consumers fall back on imitations, which are not much worse than the imported article, and cost less.

The same remarks would apply, though in a less degree, to the wines of all growths.

As to the California wines, it is considered that the white wines especially are improving in quality.

The red wines, notwithstanding the peculiar taste due to the soil or the process of manufacture, are preferred by many to the Bordeaux wines, called cargo wines, which are of middling quality and relatively high price. * * *

The minister of commerce,

PIERRE LEGRAND.

I have nothing to do with the quarrel which grew out of this communication in Rheims, nor yet with the champagne wines to which it refers, but as to Bordeaux the Revue explains, p. 670:

The part of the circular relative to Bordeaux wines is partly (well) founded, as cargo wines can no longer be shipped at same prices as before for similar qualities, owing to bad crops and the phylloxera, which would have no sense if referring to champagne wines.

The Belgian Government has taken substantially the same view I have tried to present, and has attempted in some degree to provide a remedy by a bill introduced on March 24, 1882, by the minister of finance, under the title of "Excise duties on the fabrications of wines from dried fruits." It was a blow aimed at all manufactured wines.

Monsieur Girard, director of the *Laboratoire Municipal* at Paris, of which I shall have occasion to speak further on, commenting on this subject of adulteration of wines, says in his report for 1881, just published, p. 40:

Fraud alone, fraud on a vast scale, furnishes the key to this enigma. It is by the illicit operations that certain manufacturers (or dealers) come to make their fortune at the expense of the public health, at the expense of the interest of the state and its cities, at the expense of the agricultural and commercial prosperity of France.

THE MANUFACTURE OF WINE—ITS FALSIFICATION AND ADULTERATION.

Wine, properly defined, is that alcoholic liquor which results from the fermentation of the juice of fresh grapes.

Falsification or adulteration is the addition of any substance which changes the composition of the natural wine.

A French chemist once said:

Wine is a mixture of alcohol and sugar and water; but, added he, mixing alcohol and sugar and water will not make wine.

He who supposes that the juice of the grape is wine, or that by letting it ferment it will always make wine, is much mistaken. As well might he say that to open the throttle-valve of a locomotive a given distance it would make the run between two cities or stations by itself.

Both the grapes and wines have their maladies and their peculiarities, which sometimes are intricate and unmanageable, and need the utmost care and attention.

After the juice has been expressed, and in the cask, the most difficult and delicate portion of the task begins.

To make good and palatable wine, keeping it pure and healthful, and to do this continuously, without loss, is as much a trade or profession as any. To do it well requires aptitude, study, and patient, intelligent labor, long continued.

The palate must be educated to the same degree of fineness as is required by a singer of his voice, or by a musician of his ear.

I give all credit to the honest wine-makers.

What I condemn are the wine falsificators—those who make unhealthy and impure wine by unlawful and improper means.

Wine has been falsified and adulterated in all ages, but until twenty years ago it was done so clumsily that its detection was easy. Most wine-dealers would detect it by the taste, or, if not, at the expense of a piece of cream of tartar.

All this has been changed. Now the falsificators profit by and make use of all the progress of modern chemistry, and the art of making wine without the juice of the grape has attained such a degree of perfection and skill that experts, epicures, and chemists alike are baffled and hesitate before pronouncing.

Monsieur Girard, director of the *Laboratoire Municipal* at Paris, probably the foremost authority in Europe, or the world, who denounces adulteration, in his last report (for 1881), p. 93, follows the same line I have pursued concerning the importation of Spanish and Italian wines, and gives a table, such as mine, showing the progression from 1875 to the first nine months of 1881, and then says:

> These wines, rich in alcohol and extracts, are mixed with inferior, in an operation called *coupage*.
>
> The *coupage* practiced by honest dealers who sell their wines for what they are, is perfectly lawful, for their aim is to ameliorate and render proper for consumption those wines which can not be easily utilized as they are.
>
> Unhappily, the greater part of the heavy wines of Spain, Italy, and the south of France serve for a *coupage* in which water takes a large place; this operation takes the name of *mouillage*, and is the plague of the commerce in wines.
>
> The syndicate of wholesale wine and liquor merchants of France has energetically demanded its repression. (Session of June 16, 1881, p. 66.) Generally the *mouillage* is not made alone. Those who practice it almost always find themselves compelled to go further in their fraudulent operations. The water is clear; when they add too much to the wine it weakens the color so that it is perceptible, which, in its turn, must be corrected by the addition of heavy wines or some of the many coloring matters used for that purpose.
>
> After attempting to pass a large quantity of water under the name of wine, they add to the *mouillage* the alcohol, of an inferior quality, of potatoes or beets, which contains alcohol *amylique*, which produces a drunkenness far worse than that produced by the alcohol of wine. These, with all their ramifications, are not the only falsifications; the body, the aroma, the bouquet of the finest qualities of grand wines, are imitated on a large scale by scientific processes. * * *
>
> The ethers, *œnanthique*, *pélargonique*, &c., of the wine, are counterfeited by the mixing of other ethers and essences which are prepared artificially.
>
> The report of the "*Commission Supérieure de l'Exposition de Vienne*," vol. 1, p. 289, tells of the institute at Closterneuberg, Austria, where they make the extracts or ethers *œnanthiques*, which reproduce the bouquets of the most renowned wines.
>
> The fabrication of *piquettes* (poor sour wine) from dried fruits or raisins has still more complicated the problem; these *piquettes*, cut with one-half or two-thirds of red

wine from the south of France or Spain, whipped and filtered, constitute the heavy merchantable wine which can be mixed with light wines, or, more frequently, with water. The *piquette* has completed the means of action for the falsificator; it gives him the extracts, tartaric acid, tannin, glycerine, &c., which before he had not been able to procure.

Each day the chemist is met by new difficulties; he is obliged to labor without cessation to perfect his methods to combat those who dishonor science by using her to perpetrate frauds.

I have said that I had introduced enough proof to raise a presumption of a wholesale adulteration of wine in France and to put the *onus* of explanation on her wine merchants and distillers.

This last piece of testimony confirms and makes positive the charge against them. All that now remians to establish their guilt and complete this trial is to catch them in the act, which I now propose to do.

CONVICTIONS FOR ADULTERATIONS.

The offense proven, the law of France is very stringent against all deceit, fraud, adulteration, or misrepresentation as to anything sold. Article 423, *Code Pénal*, provides: whoever shall cheat or deceive a buyer as to the title, &c., or as to the nature, &c., or (by false weights or measures) as to the quantities of anything sold, shall be punished, &c. Law of March 27, 1855: whoever falsifies or adulterates provisions or medicines, or sells or attempts to sell what has been falsified or adulterated, shall be punished, &c. The fine is to be not less than 50 francs, the imprisonment from three months to one year. If the adulteration consists of anything unhealthy, the fine shall not be less than 150 francs and the imprisonment may be two years. For second offense, double maximum punishment. The articles sold are to be confiscated, and, if not unhealthy, given to the bureau of charity; if unhealthy, destroyed, all false weights and measures to be broken. (Law of May 5, 1855.) The former laws are made applicable to all drinks.

What has been the operation of this law? There have been convicted as follows:

Yearly average of convictions:

1851 to 1855	6,780
1856 to 1860	8,442
1861 to 1865	4,695
1866 to 1870	3,014
1871 to 1875	3,209
1876 to 1880	3,398

These have not all been condemned for adulteration of wines and liquors, nor yet for drinks, for it includes the adulteration and falsification of food and medicines, as well as drink.

The adulteration of these articles is determined by analysis, and each department has its *conseil* of hygiene which has control thereof. When a case is reported by the *conseil* or any of the inspectors, after analysis, the prosecuting officer of the Republic takes it before the court. Consequently the action is spasmodic, being determined by each department for itself.

The department of Loire Inférieure became interested in the matter of adulteration of wine and liquors through the action of some of its influential citizens, more especially the doctors of medicine, who reported many cases of sickness which presented curious and unaccountable phases, from causes apparently undiscoverable, until their attention was attracted in the quality of the wine used at table and for daily drink.

This interest culminated in a general inspection, in 1876, of the res-

taurants and other places where wines and liquors were sold. This inspection was principally for wines colored with *fuchsine*, it being known or determined that no combination of that article but was poisonous. The result of that inspection was as follows:

Number of establishments inspected	300
Number of establishments seized	60
Number of hectoliters confiscated	3,307

All being wine fuchsine.

This wholesale confiscation satisfied the people and the authorities, and frightened the wine dealers, so that no steps have been taken in that direction in a public or general way since.

These wines were largely wines coming from Spain; some of them were mixed with French wines, but they point with creditable pride to the fact that but one case was of Bordeaux wine. If this practice prevailed in Spain to the extent indicated in the year 1876, when the harvest of wine was good and before there was any extensive importation of wine from Spain, what may we not expect it to be now after four years of failure, when the imports have increased as heretofore shown, and when Bordeaux has so changed as now to be the great receiving depot of Spanish wine, where it comes "to breathe the air of the Garonne and be transformed into Medoc?"

What may have been the action in other cities, except Paris, I have no means of finding out.

ANALYZATION OF FOODS AND LIQUORS IN PARIS.

In Paris there has been established the *Laboratoire Municipal*, a city laboratory which has been in operation since March, 1881. It operates only for Paris. It receives and analyses any article of food, medicine, or drink, requiring pay in certain cases, and without in certain others. As this establishment has met much approval, it has been recommended by several consuls for adoption in the United States, in which I heartily join. I may be pardoned for a short description.

PERSONNEL.

	Francs.
1 chief, salary	6,000
1 subchief	4,500
1 chemist, first class	2,400
3 aids, second class	5,400
8 experts, inspectors, first-class	19,200
8 experts, inspectors, second class	14,400
3 laborers	4,500
Material used	20,000
Expense for one year	76,400

RECEIPTS.

The paid analyses were	6,200
Fees paid into court in cases of conviction	10,815
Total	17,015

There were received 6,251 samples (in 1881), from which were made 37,506 trials or analyses. The cost of each sample was 10 francs. The cost of each analysis was 1.69 francs. The money received (as above) reduced these costs, respectively, to 7.48 and 1.25 francs.

The operations of the bureau are purely scientific and advisory. It institutes no prosecutions. It makes its examinations and reports the

results to those authorized by law to act. It inspects premises and analyzes samples therein found, or which may be brought to it by private persons or by the police.

The operations for the ten months of 1881 were as follows:

Number of inspections made.

Markets	3,869
Restaurants, wine and liquor merchants, creameries, and milk shops	10,698
Salt-meat shops	522
Bakers, pie and cake shops	830
Grocers and fruit stands	4,461
Breweries and cafés	4,275
Total visits	24,655

Samples presented for analysis.

By the public:	
Paid for	378
Gratis	3,958
By the police and inspectors	2,181
Total	6,517

Of the above 24,655 visits, the inspectors made 394 destructions of articles manifestly damaged and unfit for use.

Result of the analyses of ten months, 1881.

* Principally articles of perfumery.

Proportion of samples found "bad" out of each 100 *analyzed.*

	Per cent.
Wine	59.17
Milk	50.66
All	50.43

The manner of procedure would be foreign to this report, however interesting it might be, and would extend it beyond bounds. I have given the foregoing in detail that the workings of the laboratory in its cost and its effects upon the public health may be appreciated. The operations for 1882 will be given with less detail.

I am not able to give either the number of prosecutions, convictions, confiscations, or destructions for 1881.

OPERATIONS FOR 1882.

Aggregate of samples analyzed		11,000
Of wine only (December estimated):		
Good		888
Passable		1,603
Bad:		
Not poison	2,208	
Poison	413	
		2,621
Total		5,112

Proportion bad, 50 per cent.

OPERATIONS FOR SIX MONTHS.

(*From June to December*, 1882.)

Establishments visited	20,765
Captures made	3,211
Destructions performed	989

Result of analyses of all samples.

Good		1,290
Passable		1,510
Bad:		
Not poison	2,309	
Poison	977	
		3,286
Total analyses for six months		6,086

Proportion bad, 54 per cent.

The *Laboratoire Municipal* is not charged with the prosecution of the offenders it discovers. It only reports them to the prosecuting officers of the law. It consequently has no record of convictions; but in a private interview the director announced that they had reported during 1882 to the *procureur de la Republique* 4,000 cases, of which prosecutions had been instituted against about 2,000 offenders, *of whom only two were acquitted.*

It may not be fair to say that 50 per cent. of all wine in commerce is bad because that per cent. proved bad on analysis, for it is probably only the suspected wines which are sent for analysis.

The truth is bad enough without exaggeration, and it is enough that there should have been sold or offered for sale in Paris in the past year, to 2,621 unsuspecting people, wine that was bad, and of which in 413 instances it was dangerous to health.

But I venture to say that the greater proportion of these samples of suspected wines is of the class of cheap wines to be found in everyday use at the restaurants and cafés and among the people. So that, as there is more cheap wine than high-priced, if there were a compulsory analysis of *all* the wines in use, the proportion of "bad" as above given might be maintained.

I do not even suggest, though I have no means of knowing, that the high-priced wines would not stand the analysis. I think, at least hope, they would. The wine-maker and wine merchant are interested in preserving *them* in their purity. When red wines of 1881 can be sold by the lot of 20 casks, at 5,500 francs per cask, and white wines same year at 4,000 francs, as was done at Bordeaux this season, the dealer can not afford to have *them* tampered with.

If purchasers should find themselves deceived but once, they would reject it entirely.

EFFECTS OF CONSUMPTION OF WINES AND LIQUORS.

The following table gives (by sections) the average yearly consumption (1) of wine, (2) of alcohol, (3) of the proportion of cases of drunkenness in each section of France:

Section of France.	Average yearly consumption of wine for each inhabitant, 1873.*	Average yearly consumption of alcohol for each inhabitant.†	Proportion of cases of drunkenness.†
	Liters.	*Liters.*	
1. North wine district	87	5.61	34
2. Northwest wine district	14	4.40	29
3. Northeast wine district	126	2.40	10
4. Center wine district	118	1.53	9
5. Southwest wine district	165	0.87	5
6. Southeast wine district	168	1.07	9
7. South wine district	190	1.19	4
Average for all France	119	2.84	100

* Dr. Lunier Production and Consumption of Alcoholic Liquors in France, 1877, p. 94.
† Report of minister of justice, 1826 to 1880.

I call attention to the differences in the foregoing table between the districts which grow wine and those which do not.

Drunkenness in public was not punished as an offense until the law of 1873.*

CONVICTIONS.

1873	9,347
1874	86,418
1875	98,482
1876	91,560
1877	84,893
1878	71,972
1879	65,989
1880	60,714
Total for the eight years	619,375
Average annual	77,422
Drunk and disorderly, 1880	25,785

The minister of justice, in his report for 1826 to 1880, devotes a chapter or section to drunkenness, one to accidental deaths, and one to suicides, with a reference to insanity, and the deductions from the one to the other as cause and effect are as follows:

While the number of cases of drunkenness have decreased from 98,000 in 1875 to 60,000 in 1880, a falling off of nearly 40 per cent., yet the number of cases of *suicides from alcoholism has increased*, since 1836, 483 per cent., nearly quadruple, while suicides from mental alienation have increased only 188 per cent.

Accidental deaths have remained at the same per cent.

Insanity from *alcoholism* has *increased* from 7 per cent. (7 cases out of each 100) to 14 per cent., and, strange to relate, suicides from crossed love have been reduced from 11 to 4 per cent.

Whether this increase in the evil effects of intemperance is attributable to the use of drugs in the wines and liquors or to a change in the

* Report of minister of justice, 1826 to 1880.

habit of drinking, is a subject for the examination of the political economist and the labors of the philanthropist. It may have been the result of both. It is quite enough for my purpose that adulteration shall have contributed its share.

CONCLUSION.

It will not be supposed that I have made the examinations and expended the time and labor necessary for the preparation of this without having some opinions.

On the subject of reprisals, however, I offer none. I have endeavored only to procure the evidence and present the facts, leaving the decision thereof entirely to those having proper authority.

On the subject of adulteration of wines and liquors, I would recommend the establishment of a chemical laboratory at New York, or any chief city of importation of wines and liquors, similar to that in Paris.

Analyze all wines and liquors by proper tests; provide as a system of rewards and punishments a graduation of duties, lower for pure wines, higher for passable, and confiscation for all others; those poisonous to be destroyed, and those not poisonous to be rectified if possible and sold, and the proceeds divided as in other cases of confiscated goods.

Let the laboratory be used by the people gratuitously for the testing of all articles of food, drink, or medicine, suspected to be adulterated. While the United States Government might not desire to attempt any punishment for the adulteration, preferring to leave that for the State governments, yet I believe the knowledge that such tests could be accurately made would be such a satisfaction to the consumer and such a terror to the adulterator, thus acting as a preventive of crime, that it would be a good investment and more than justify the expenditure. It would also act as an incentive to the State governments by showing to what extent the evil existed.

THOMAS WILSON,
Consul.

UNITED STATES CONSULATE,
Nantes, January 10, 1883.

No. 23.

Mr. Frelinghuysen to Mr. Morton.

No. 207.] DEPARTMENT OF STATE,
Washington, January 17, 1883.

SIR: Your No. 270, of the 15th ultimo, transmits a letter addressed to you by the Paris Chamber of Commerce and your acknowledgment thereof.

It is courteous and at the same time natural that the distinguished commercial body in question, which so largely controls public and legislative opinion in France on matters of trade, should be pleased to express its pleasure at any proposal on our part to reduce the rates of import duties. It would be well, when a similar occasion occurs, to express a hope that a reciprocal feeling might be shown in France to the few exports from this country thither as compared with the many France sends to us, and that commerce and legislation alike may unite in rebuking the blind prejudice which seeks to close a large foreign market to our most important products.

I am, etc.,

FRED'K T. FRELINGHUYSEN.

No. 24.

Mr. Morton to Mr. Frelinghuysen.

No. 324.] LEGATION OF THE UNITED STATES,
Paris, April 4, 1883. (Received April 18.)

SIR: I availed myself of an occasion, during a recent personal interview with Mr. Challemel Lacour, the new minister of foreign affairs, to call his attention to the subject of the decree prohibiting the importation into France of American salted meats, and subsequently addressed a communication to him on the subject, a copy of which I have the honor to transmit herewith.

In relation to this subject I have had different interviews with the representatives of the chambers of commerce of Paris, Marseilles, Bordeaux, and Havre, who take a special interest in the importation of American meats, and propose to make joint representations to the minister of commerce, and to originate a system of petitions among the working classes of France, urging the repeal of the decree.

This move, if properly directed, will be, it is hoped, effective. I have been, however, so often disappointed, that I will not venture to count upon the success of the present movement, though it is well calculated to reach the end desired. I may add that at the conference relative to the protection of industrial property, which was presided over by the minister of commerce, and attended by the director of exterior commerce, I insisted with both these gentlemen upon the necessity of the abrogation of the decree.

I have, etc.,

LEVI P. MORTON.

[Inclosure in No. 324.]

Mr. Morton to the Minister of Foreign Affairs.

LEGATION OF THE UNITED STATES,
Paris, March 24, 1883.

Sir: I beg leave to call the attention of your excellency to communications which I have had the honor of addressing to your predecessors, Mr. St. Hilaire and Mr. Gambetta, with reference to the decree prohibiting the importation of American salted meats into France.

This decree has now been in force for more than two years, while similar products from all other countries have been freely admitted in France.

An examination of the subject will, I trust, not only satisfy your excellency, but also your honorable colleague, the minister of commerce, that the decree was issued under a misapprehension of the facts bearing upon the question, and that there are no valid reasons why this exceptional measure, only applicable to the Government of the United States, should be abrogated.

The Government of the United States yields to none its desire to protect the public health, and claims that the searching and careful investigation conducted by a most competent officer detailed for the purpose by the Department of State, clearly established the unfounded and erroneous character of the statements regarding the alleged unwholesome qualities of American hog products, upon which the issue of the prohibitory decree was based. The result of the examination was presented to Mr. St. Hilaire by my predecessor, General Noyes, on the 23d of June, 1881.

I beg leave also to refer to the report of the National Academy of Medicine of France on the question propounded by the Government regarding the necessity of an inspection of foreign pork, and which, after referring to the free admission of American and German pork for many years, without inspection, and its extended use in the manufacturing and industrial districts of France, states that the disease called trichinosis, with the exception of a single case, has not been observed in any part of France.

I can but believe that your excellency's Government will, after a consideration of all the evidence now before it, cheerfully place the Government of the United States upon the same footing as all other friendly nations by the revocation of the decree.

I avail, &c.,

L. P. MORTON.

No. 25.

Mr. Roosevelt to Mr. Davis.

No. 99.] UNITED STATES CONSULATE,
Bordeaux, April 11, 1883. (Received April 25.)

SIR: I have the honor to inclose herewith a copy and translation of a petition from the dealers in American lard and pork, at Bordeaux, to the minister of commerce at Paris, France.

I am, &c.,

GEO. W. ROOSEVELT,
United States Consul.

[Inclosure in No. 99.—Translation.]

PETITION OF DEALERS TO THE MINISTER OF COMMERCE.

BORDEAUX, *April* 4, 1883.

SIR: We, the undersigned, dealers in American lard and pork at Bordeaux, have the honor to solicit from your kindness, Mr. Minister, the fulfillment of the promises which have been so often lavished upon us, by your claiming the recall of the decree of February 18, 1881.

The solution of this question can no longer be delayed; light is made, and our ports should be open to the free importation of those meats, indispensable to the nutrition of the poor classes, and the want of which has already caused so grievous a rise in the price of the food of workmen.

The spontaneous and disinterested step which has just been taken toward you, Mr. Minister, by Messrs. the president and delegates of the Chambers of Commerce of Paris, Marseilles, Bordeaux, and Havre, was to give us the hope that the just claims made in such pressing terms by the most considerable personalities of the French commerce, would have immediately brought forth the mere and simple recall of the prohibitive decree, and that you would thus have put an end to a state of things so fatal to the commercial and industrial welfare of our country.

But if you think of righting those just claims, we learn with surprise that you are going to study a bill which would consist in submitting the salt meats, upon their entering France, to a system of refrigeration, against the adoption of which we hasten to protest with great energy.

We know that since several years a patent has been taken for the preservation of meat by freezing; that the proprietors of that patent have been in search of the means of making use of it, but without any apparent success; but now they wish to find for it a lucrative use and easy profits, by having it adopted by the Government.

The application of that system would be disastrous and would completely impede that trade. Indeed, Mr. Minister, the excessive handling that the meat would have to go through before being submitted to the freezing, the unpacking of the cases, the hooking to the ladders for being more easily placed in the cellars, the repacking, etc., would cause such expenses, such waste, and such a depreciation of the quality, that it would be folly on the part of honest merchants to expose themselves to such risks.

To those annoyances, more than sufficient to cause such a scheme to be rejected, we must add that it seems to us impossible that the meats submitted to the action of freezing and passing to a high temperature could be preserved; and we maintain that statement in spite of the experiment of the laboratory made on one single ham. That trade should then be exposed to so many uncertain and unknown chances that there would be no safety in practicing it. Of all the proposed means, refrigeration is the one which we repel with most energy; but if the greatest part of the others present almost as grave inconveniences, one only has given proof of what it is worth, that is free circulation, which, for the last twenty years, never gave rise to the least claim, nor caused one single accident.

The return to common right is, then, the solution which we claim of your justice, Mr. Minister, as a redress for the harm done by the decree of February 18, and we claim it not only in the name of our trade, but in the name of public welfare.

That deplorable measure has, indeed, Mr. Minister, had for its effect to provoke in the American press violent and unjust attacks against all French products of food which France exports to the United States, which attacks, if they were perpetuated, would end in throwing discredit on those products, and in driving them from that important market.

Besides, the retaliation, of which the United States Government did not cease to threaten French commerce, has just received a commencement of execution, and the rise of the duties of entry which strikes our wines is such as will considerably reduce the exportation of them.

Now, we who had always foreseen such consequences to the decree of February 18, and that, in spite of interested denial, we do not hesitate in asserting that refrigeration will never be considered a reparative measure, since it will have all the effects of prohibition, but rather an indirect means of perpetuating the same, and that our Government will not succeed, by such a process, in forcing down the barriers which the new tariff has just raised against our products.

We well know the interest that you have in the national trade, and feel convinced that you will take in due consideration the observations which we have the honor to present to you, and that you will kindly admit our request.

We beg you, &c.

[Signatures of fifty-five dealers in American pork and lard.]

No. 26.

Mr. Morton to Mr. Frelinghuysen.

[Extract.]

No. 333.] LEGATION OF THE UNITED STATES,
Paris, April 13, 1883. (Received April 25.)

SIR: Acting under the strange delusion which still exists in official circles, notwithstanding the overwhelming evidence to the contrary, that

American pork is subject to trichinosis, the French department of commerce is contemplating the organization of a system of curative measures to guard against the supposed infection by submitting all our salted meats to a freezing process upon their entry into France. Whether this new device would or would not destroy trichinosis where it happens to exist, it has dissatisfied all the French importers and dealers in American hog produce, who consider it as calculated to greatly injure the meat, and have protested in strong language against its application. You will find herewith a copy and translation of the petition they have addressed in this respect to the minister of commerce.

One of the leaders in this movement informs me that all interested in this business prefer simple prohibition to the apparent facilities offered by the application of the freezing process. It is the intention of the French dealers to push this matter as strongly as possible and to bring it before a cabinet meeting.

I again, a few days ago, called the attention of Mr. Challemel Lacour to this subject, and I am sorry to say that although he is personally in favor of the repeal of the decree of prohibition, and has urged it, he does not believe that his colleague will favor, at present, its abrogation. His reasons are that other countries have taken similar measures of prohibition, and that French scientists are divided upon the question of the danger which may result from the consumption of American meats.

I did not conceal from Mr. Challemel Lacour the fact that the continuance of this long-standing prohibition had already created much feeling at home, and that our people could not understand why such discrimination should be made against them, when the highest French scientific authorities had emphatically declared that the measure was groundless, and my apprehension that Congress would take some retaliatory action unless the decree was abrogated.

Mr. Challemel Lacour said he would again call the attention of his colleague to the matter.

The truth is, that the decree was rendered under the pressure of certain French packers who are still interested in its maintenance. By a strange coincidence, these very men, who are also producers of sardines and other canned articles, have been specially favored by our new tariff. * * *

I have, etc.,

LEVI P. MORTON.

[Inclosure in No. 333.—Translation.]

PETITION ADDRESSED TO THE MINISTER OF COMMERCE BY FRENCH IMPORTERS OF AMERICAN HOG PRODUCTS.

BORDEAUX, *April* 4, 1883.

To the Minister of Commerce, Paris:

MONSIEUR LE MINISTRE: We, the undersigned, merchants in American salted meats and lard at Bordeaux, have the honor to solicit your favor, Monsieur le Ministre, for the fulfilment of the promises which have been so often made to us in claiming the abolition of the decree of the 18th of February, 1881.

The solution of this question can be no longer delayed, light has been brought to bear on it, and our port should be opened to the free importation of these provisions, indispensable to the nourishment of the poor classes, and the absence of which has already caused an increase of price, so hard for the nourishment of workmen.

The spontaneous and disinterested petition which has just been made to you, M. le Ministre, by the presidents and delegates of the Chambers of Commerce of Paris, Marseilles, Bordeaux, and Havre, lead me to hope that the just claims, made in such pressing terms by the most important personages of French trade, should have im-

mediately brought about the withdrawal purely and simply of the prohibitive decree, and that you would have thus put an end to a state of things so fatal to the industrial and commercial interests of the country.

But, if you contemplate acceding to these just demands, we learn with surprise that you are about to consider a project which will consist in submitting salted provisions on their entry into France to a system of refrigeration, against the adoption of which we protest with the utmost energy.

We know that for several years past a patent has been taken out for the preservation of provisions by freezing, that the owners of this patent have been seeking means to utilize it, but apparently without success, since at present they rush to find for it a lucrative employment and easy profits in having it adopted by the Government.

The application of this system would be disastrous, and would completely damage the trade; in fact, M. le Ministre, the numerous manipulations which the provisions would undergo in order to be submitted to the influence of the cold, the unpacking of the barrels, the hanging on the ladders intended to facilitate the storage, the repacking, etc., would give rise to such expenditure, such damage and depreciation of quality that it would be foolish on the part of serious business men to expose themselves to such risks.

To these inconveniences, which are more than sufficient to cause the rejection of such a project, we should add that it appears to us impossible that provisions submitted to the action of the cold and to a high temperature can be preserved, and we maintain this statement notwithstanding the laboratory experiments on a single ham. This trade would then be exposed to so many risks and hazards that there would be no security to engage in it.

Of all the means proposed, refrigeration is that which we most energetically reject; but if the greater part of the others present inconveniences almost as serious, one only has been put to the test, that is, the free circulation, which for twenty years has never given rise to a single complaint or caused a single accident.

The return then to the common right is then the solution which we solicit from your justice, M. le Ministre, as compensation for the harm done by the decree of the 18th of February, and we claim it not only in the name of our trade, but in the name of public interest.

In fact, M. le Ministre, this unfortunate measure has had the effect of provoking in the American press violent and unjust attacks against alimentary produce exported by France to the United States, attacks, which, if continued, would end by throwing disfavor on such produce and driving it from this vast market.

Moreover, the reprisals with which the Government of the United States has not ceased to menace the French trade have received commencement of execution in the rise of the entry duties imposed on our wines, which is of a nature to considerably reduce the sale.

We, then, who have always foreseen such consequences from the decree of the 18th of February, and that in spite of interested denials, do not hesitate to affirm that refrigeration can never be considered as a compensating measure (since it will have all the effects of prohibition), but rather as an indirect means calculated to perpetuate it, and that our Government can never succeed by such a proceeding in overcoming the obstacles which the new tariff has just raised against our produce.

We know sufficiently well all the interest you take in the national trade to be convinced that you will take into consideration the remarks which we have the honor to place before you, and that you will favorably receive our petition.

We beg you, &c.,

No. 267.] DEPARTMENT OF STATE,
Washington, April 26, 1883.

SIR: Your dispatch No. 333, of the 13th instant, inclosing a copy of a petition addressed to the minister of commerce by French importers and dealers in American pork, has been read with interest as a valuable indication of the tendency of sound opinion in France on the question.

I am, &c.,

FRED'K T. FRELINGHUYSEN.

No. 28.

Mr. Wilson to Mr. Davis.

[Extract.]

No. 24.] UNITED STATES CONSULATE,
Nantes, May 17, 1883. (Received May 31.)

SIR: I have the honor to inclose herewith newspaper slips containing two communications continuing the history of the agitation concerning the decree for the prohibition against American pork and the interest of the city of Nantes therein.

The first, dated March 21, 1883, is from the Chamber of Commerce of Nantes to the minister of commerce at Paris, and seems to be a reply to the communication of the Chambers of Commerce of Paris, Havre, Marseilles, and Bordeaux, of which the Department has doubtless received information.

The second, dated April 16, 1883, is intended as a reply in anticipation to my report No. 12, December 5, 1882, the quoted notice of which appeared in the newspapers of the city. These communications are sufficiently important as giving the Department *all* the steps taken to justify their transmission, but scarcely sufficient to justify their translation or transmission in written form. If I should be mistaken in the latter supposition I will take pleasure in correcting it and sending the translations.

I am unacquainted with the Congressional documents referred to in the latter communication and should be pleased to have them furnished. I shall attempt no reply to any of these or similar communications without instructions to that effect from the Department. * * *

I have, &c.,

THOMAS WILSON.

[Inclosure in No. 24.]

Abstract of newspaper cuttings sent by Consul Wilson.

AMERICAN SALTED MEATS.

The Chamber of Commerce of Nantes addressed to the minister of commerce, under date of March 21, 1883, a letter, of which the following is the substance:

We have been informed that the Chambers of Commerce of Bordeaux and Havre have taken steps to obtain from you the abrogation of the decree of the 18th February, 1881, which prohibits the introduction into France of American lard, and that you approved of these steps.

Since the French Government, with a view to protect the people, adopted measures to prevent frightful and incurable disease arising from infected salt meats, it appears that nothing has been done to remedy this.

Before France had prohibited the importation of American salted meats the greater part of Europe had already done so. Further than this, they had prohibited French salted meats, not that they were suspected of the infection of trichinæ, but because France had continued to receive American pork, and it was difficult to recognize the same from the foreign. Consequently we have suffered because our exports have become impossible.

It seems to us that the time is badly chosen to abrogate the decree, for Germany has just prohibited American pork. England and Germany were the only countries which had not prohibited it.

We therefore pray you, Mr. Minister, to maintain the edict of the 18th of February. 1881, for the interest of public health, particularly of the workingmen.

[Signatures.]

Here on the other hand is the substance of the memorandum remitted to the minister of commerce by the delegates of the Chambers of Commerce of Paris, Marseilles, Bordeaux, and Havre, the 10th of March, 1883:

We have the honor to present to you as delegates the following observations concerning the harm caused to the merchant marine, commerce, and public food by the prohibition of American salted meats by decree of 18th February, 1881.

During past years the commerce of American salted meats procured annually 50,000 tons of freight for our merchant marine, representing about 40,000,000 kilograms of meats and a value of 50,000,000 francs.

Prohibition causes us to lose annually under form of freights, duties, transportations, etc., the sum of 15,000,000 francs, a difference of about 30 per cent. between the price paid in the United States and the consumer.

We will not enter into the appreciation of the scientific discussions which preceded and followed the prohibitive decree of 18th February, since they seem to have been definitively decided by the consulting committee of public hygiene in its sittings of the 4th August, 1879, 6th September, 1880, and 4th January, 1882, which resulted contrary to prohibition, and rejected microscopic inspections, from the fact that the habitual cooking of food in our country prevents all danger.

After a complete study of the question, the Academy of Medicine in Paris formed identical conclusions and proves equally that—

1st. Trichinosis is a well-known malady, and its symptoms can not be confounded with any other.

2nd. That in spite of all the researches made by the medical corps, whether in autopsies or otherwise, not a single case has ever been proved in France.

The academy also pronounced against microscopic inspection.

The question remains, then, is it a protective or a sanitary measure? In examining the votes which were given in the deliberating assemblies, it is remarked that the protectionists voted for prohibition and the free-traders against it.

You are not ignorant, Mr. Minister, that prohibition was applied following the excitement caused in the political world by the clever and energetically conducted campaign by the salters of meats, a campaign sustained by the agricultural journals and the "Society of Agriculturists of France." The society is composed in a greater part by large proprietors, eager to defend the interests they represent without considering that it is contrary to the interests of public nutriment.

We may add that, while the direct importation of American pork is prohibited, this same pork comes into French territory under the name of Belgian or German pork, and is consumed without a single examination.

It is no less true that last year there was received at the market of La Villette 36,000 hogs from Germany, more or less infected with trichinæ, which were delivered for consumption without previous examination. At the same time all scientific men agree in declaring that fresh pork in which trichinæ are alive is much more dangerous than salt pork; in fact, it is only fresh pork which is dangerous. If the use of it did not cause sickness it was simply on account of our habit of cooking.

Besides, the habitual consumers of American pork have never been frightened. It is difficult to make them believe that what they have eaten with impunity for twenty years can be unwholesome.

The same motives which have impelled France induced Germany to prohibit American pork. The raising of pork in Germany has increased so much that it seeks foreign consumers. As we stated above, 36,000 hogs were sold at the single market of La Villette in 1882.

The point is, Mr. Minister, that prohibition of American pork touches the economic interests in a serious manner. Prohibition, in depriving the working classes from cheap food, causes them to demand higher wages, and harmony between proprietor and workmen is disturbed, and it is vexatious to state that this comes at a time when foreign industry is making great efforts to supplant our manufactures.

Americans consider these prohibitory measures vexatious. A reduction of duties on French products in the United States is extremely desirable for us, but so long as this prohibition lasts there will be no reduction, and perhaps retaliation may be expected.

To sum up, we request that the trade of American hog products should remain free, as it was before February 18, 1881, for we consider it is the only way in which our commerce will regain its activity and our working class cheap food.

To obtain this double object it will be sufficient—1st, to withdraw the project of the law laid down at the Chamber of Deputies; and 2d, to annul purely and simply the decree of prohibition.

The Chamber of Commerce of Nantes received a petition, which is submitted to the minister of commerce, the substance of which is as follows:

NANTES, *April* 16, 1883.

Some days ago we read in La Geronde, a Bordeaux paper, that the prohibition of American trichinæ pork would result in rendering the relations between proprietors and workmen difficult to sustain.

At this astonishing revalation we were contented to smile, thinking the cause must be a very bad one to have to resort to such arguments; the more so when we read from Mr. Baillet's essay on the inspection of meats (M. Baillet is veterinary-in-chief of the city of Bordeaux):

"American salt meats will never fill an important place in consumption beyond the wants of the marine. Experience has already decided on this point. In our port we have seen some attempts to popularize these meats among the work-people of Bordeaux, but without success."

We will add that since the decree of interdiction our farmers have raised hogs in such quantity that French salt meats are less in price than American, taking as basis the Antwerp market price.

The declaration of the United States consul at Nantes that "interested influences acted to bring about the prohibition of importation of American pork," can not be admitted. We would ask if the same influences acted in other states of Europe, such as Spain, Portugal, Italy, Greece, Hungary, Austria, Germany, who have equally prohibited the same. The Hon. Mr. Tirard, in his speech of 24th May, 1881, stated that England refused to receive American trichinæ pork, which they wished him to ship to France.

We can understand why the consul should ignore the sanitary edicts by different Governments of Europe. He probably knows of the numerous cases of trichinosis which the American papers are full of.

We equally think that he must have heard of the report of Mr. Clipperton, English consul at Philadelphia, in which he states that 700,000 hogs died of trichinosis in 1880 in the United States, which is less than in 1879, when the State of Illinois declared that 1,391,000 hogs died of the same epidemic. The Commissioner of Agriculture, in his report for 1878, states: "In less than half of the territory of the United States the annual loss on hogs alone is $10,094,400, which is occasioned by a malady which is not understood by farmers or hog raisers. I have thought the subject of so much importance that it is worthy of serious study. The health of our citizens demands the finishing of this study, for it is a notorious fact that herds of hogs are transported to the nearest market or killed by their owners for shipment as soon as the malady appears among them!"

We understand that the consul has no knowledge of what passed at the Chamber of Commerce at Havre on 5th May, 1881. "At Havre the proportion of 6 to 8 per cent., which it was at the commencement of the service of inspection of the microscopic engineers, attains to-day to 15 to 20 per cent. The Havre merchants, to simplify and hasten the re-exportation of their products, agreed with the merchants of Antwerp to allow a reduction of 50 per cent. on meats recognized as affected with trichinæ."

But we can not suppose that the consul has heard of the report of Dr. Detmers on trichinæ. Report printed with 100,000 copies by order of Congress; 60,000 of which for use of members of Congress, 25,000 for use of Senators, and 15,000 for the Commissioner of Agriculture.

After numerous accounts of accidents occasioned by trichinæ in America, the remedy proposed by Dr. Detmers, officially charged by the American Government to study the question, is: "A complete destruction of hogs in the region where the malady prevails is the only efficacious remedy. In each place where pork is raised a competent inspector should be placed, with the necessary authority to put into strict execution all the measures ordered by him. Every proprietor should be obliged by law under severe penalties to notify within twelve hours to the inspector of every case of trichinosis among his herds, or if he know of any existing in other herds. Every sick hog should be killed and burned, and objects which have been in contact with them should also be destroyed. All importations of foreign pork should be severely forbidden, unless it is proved that there is no contagion among them. All other remedies are good for nothing, and the country would be in continual danger."

Such is the conclusion of Dr. Detmers, appointed by Congress to make investigations on trichinæ.

No. 29.

Mr. Frelinghuysen to Mr. Morton.

No. 294.] DEPARTMENT OF STATE,
Washington, June 22, 1883.

SIR: Your No. 324, of the 4th instant, in relation to the French prohibition of the pork products of the United States from importation into France, has been received. Your note to Mr. Challemel Lacour is approved.

When the question of prohibitory measures against imports of American pork was lately under discussion in the German Reichstag the President extended to the German Government an invitation to send a commission of experts to the United States to investigate on the spot the operations of hog raising, slaughtering, and packing, and so satisfy itself that the conclusions reached by this Government, after a searching investigation, are sound. The German Government did not, however, find it practicable to act in season upon this suggestion.

I send you for your information a copy of the instruction sent to Mr. Sargent, conveying this invitation.* It might perhaps be embarrassing to extend a like formal invitation at this late day to the French Government, but you are at liberty to mention the circumstance to Mr. Challemel Lacour as an additional illustration of the conviction felt by this Government that the charges of unsoundness and deleteriousness brought against the pork products of the United States are without adequate foundation, and of the confidence with which we court the fullest investigation of the facts. You may say to the minister that is is probable that the President will, during the present year, designate a commission of the most eminent scientific men of this country to examine into the matter and make a searching and impartial report. If Mr. Challemel Lacour should express a desire to have a French representative appointed on such commission, or to send a French expert to act in concert therewith, you will say to him that such co-operation would be gladly welcomed.

I am, &c.,

FRED'K T. FRELINGHUYSEN.

No. 30.

Mr. Brulatour to Mr. Frelinghuysen.

No. 371.] LEGATION OF THE UNITED STATES,
Paris, July 17, 1883. (Received August 2.)

SIR: Referring to your dispatch No. 294, of the 22d of June, in relation to the commission of experts which the President will probably appoint during the present year to investigate on the spot the operations of hog raising, slaughtering, and packing, I have the honor to state that I acquainted Mr. Challemel Lacour with the intention of the President, and took occasion to say that should the French Government desire to appoint a French examiner, to act in co-operation with this commission, such co-operation would be gladly welcomed.

Mr. Challemel Lacour seemed rather pleased with the idea of putting this matter in the hands of experts well qualified to report fully and impartially, and said he would mention the subject to his colleague, the minister of commerce, and inform me of his decision.

I have, &c.,

E. J. BRULATOUR.

* See Instruction No. 87, February 16, 1882, to the United States minister at Berlin.

No. 31.

Mr. Davis to Mr. Brulatour.

No. 337.] DEPARTMENT OF STATE,
Washington, August 28, 1883.

SIR: Referring to dispatch No. 48 of your legation, of the 6th of October, 1881, I have to request you to send to Mr. Schuyler, the American minister at Athens, six copies of the French translation of the pamphlet on American pork issued by this Department. You may also send six copies of the translation to this Department, if you have them to spare.

I am, &c.,

JOHN DAVIS,
Acting Secretary.

No. 32.

Mr. Roosevelt to Mr. Davis.

No. 126.] UNITED STATES CONSULATE,
Bordeaux, September 26, 1883. (Received October 15.)

SIR: I have the honor to transmit herewith a copy and translation of a letter addressed to the minister of public works (M. Raynal), at Paris, France, by the merchants of Bordeaux dealing exclusively in American salt pork and lard.

I am, &c.,

GEO. W. ROOSEVELT.

[Inclosure in No. 126.—Translation.]

Bordeaux dealers in American pork to the minister of public works.

SYNDICATE OF THE TRADE IN AMERICAN LARD AND SALT PORK, BORDEAUX.—A STATEMENT RELATIVE TO AMERICAN SALT PORK.

American salt pork is freely admitted in England, Belgium, Holland, Sweden, Norway, and Switzerland; in Spain it is subjected, as is German pork, to inspection by experts.

With the exception of Germany, those European nations which have interdicted the use of American salt pork consumed very little of that article; Austria-Hungary, for instance, has never imported it directly.

Germany, therefore, is the only country in which American pork was consumed that has followed the example of France, and we assert that in that country, as in others, the health question was but a pretext to favor the farmers. The articles which appeared in the liberal German newspapers leave no doubt of this. It has, moreover, been frequently shown by official documents (as evidence of which we refer to Mr. Wurtz's report to the senate) that all the cases of trichinosis known to have occurred in Germany were due to the eating of fresh pork, while not one was caused by eating American salt pork.

There is consequently great cause to regret the adoption of a measure which is still kept in force without sufficient reason, and which deprives the laboring classes of a cheap article of food for which no substitute has as yet been found. The managers of large industrial or mining establishments have made serious complaints on this subject, which have found an echo in the commission of the chamber of deputies.

In France our pork butchers sell the greater part of their pork fresh, and salt those parts only that are sold at a higher price, as, for instance, hams, breasts, and fat backs. In America the salters salt all the parts of the animal; now, the shoulders and the strips with lean, which are excellent though cheap pieces, and which, for the latter

reason, are not salted by French butchers, formed the greater part of our imports, that is to say, from 32,000,000 to 33,000,000 of kilograms; the other cuts amounted to scarcely 8,000,000 of kilograms. The latter—that is, hams, breasts, and fat backs—were sold by the butchers at high prices as French productions.

Shoulders and strips containing lean were, on the contrary, bought by grocers, who, being accustomed to smaller profits, sold them to the poorer classes, among which they were in great demand, owing to their cheapness and good quality.

In order properly to appreciate the consequences of the decree of February 18, it is not sufficient to compare the prices of pork before and after that date; comparison should also be made between those prices and those at which grocers sold a kind of pork which is no longer to be procured in the French market. Moreover, as Mr. Achard's report contains precise data with regard to the average rates which prevailed previously to the prohibition, there is no need of referring to that; it appears to us that it will be more interesting to compare the prices at which French and American salt pork is now sold:

AMERICAN SALT PORK.

[Prices at which it could be sold at wholesale in French ports, with the duty paid, per 100 kilograms.]

	Francs.
Shoulders	80 to 82
Strips with lean strips	90 to 92
Breasts	115 to 120
Chines	120 to 135
Hams	145 to 160

FRENCH SALT PORK.

[Wholesale prices per 100 kilograms at Paris, Lyons, and Bordeaux.]

	Francs.
No equivalent.	
No equivalent.	
Breasts	135 to 150
Chines	140 to 160
Hams	200 to 220

If we compare the above prices with the retail prices we shall see what enormou profits the pork butcher makes in dealing with the consumer, owing to the monopoly which has caused the adoption of the prohibitory measure.

If, moreover, we consult the table given below, the figures of which are taken from the market reports of Bordeaux and Paris, we observe that producers now receive lower prices for their swine than they did prior to 1881.

Average price per 100 *kilograms, net weight.*

	Third quarter, 1880.	Fourth quarter, 1880.	First quarter, 1881.	First quarter, 1883.	Third quarter, 1883.
Bordeaux	130 to 140	128. 50 to 136	137 to 142. 50	104 to 114. 50	104. 50 to 114
Paris Villette	.....	.....	149 to 182	122 to 142	127 to 156. 50

Extraordinary as this consequence of prohibition may at first sight appear it is explained by the competition of the neighboring nations. Germany, whose hogs are by no means free from disease, sent 46,000 of them to the Paris market in 1882. Spain also sends her swine to our city. Austria-Hungary sends us its salt bacon, and other neighboring nations send us salt pork which is probably American; we say probably, because it is absolutely impossible to determine the real origin of any piece of pork.

The pork butchers are therefore the only ones who now have no competition to contend against, and who, owing to the exceptional state of things which has been caused by the decree of February 18th, are growing rich at the expense of both producers and consumers. At the time when the decree was promulgated they did not foresee the results which have inured so greatly to their benefit, for on the very day following its promulgation they all protested against the very measure which they now, with the same unanimity, ask to have kept in force. To cite but one fact in support of this assertion, we refer to a petition sent from Lyons, the signers of which, who had, it appears, engaged in an unfortunate speculation, requested the Government to adopt still more stringent measures, inasmuch as such measures would have afforded them relief by enabling them to dispose of the stock of goods which they had on hand at a large profit.

Now that the wholesome character of American pork is no longer seriouly disputed, even by our adversaries, there remain in behalf of prohibition none but the reasons put forward by protectionists. We have faith in the liberalism of the Government, and feel confident that it will treat those superannuated theories as they deserve; and since the fears no longer exist which, as we are assured, alone call forth the decree of prohibition, we trust that the days of prohibition are now numbered.

We ask, together with the merchants of Havre and Marseilles, for the revocation, pure and simple, of the decree of February 18, 1881; yet, in order to satisfy every-

body, we should be perfectly willing to have pork subjected to sanitary inspection on its arrival, with a view to furnishing evidence of its good condition.

We do, however, object to the other methods proposed, such as microscopic examination or refrigeration. These we consider as being impracticable, and of such a nature as to give rise to obstacles which would be equivalent to prohibition.

BORDEAUX, *September* 8, 1883.

[Signatures.]

No. 33.

Mr. Frelinghuysen to Mr. Morton.

No. 364.] DEPARTMENT OF STATE,
Washington, October 9, 1883.

SIR: With reference to previous correspondence on the subject, I have to inform you that in view of the action taken by Germany and several other foreign powers in prohibiting the importation of American pork upon the ground that it is an unhealthful article of food, this Government has now taken measures for such a thorough investigation of the subject as will, it is thought, leave no doubt whatever as to the facts.

To this end the President has designated a commission, which he has charged with the duty of making a searching and impartial examination of all the conditions of hog raising and packing industries of the United States. The chairman of the commission is Dr. George B. Loring, the Commissioner of Agriculture, whose official duties for several years past have made him very familiar with the subject now submitted to the commission for formal investigation.

The other members of the commission are:

1st. Prof. C. F. Chandler, an eminent scientist of New York, who was unanimously selected by the chamber of commerce of that city on account of his peculiar competency for the position;

2d. Eliphalet W. Blatchford, esq., who was nominted by the board of trade of Chicago as an intelligent gentleman of the very highest social and business standing, who "is in no way personally interested in the business to be investigated and is possessed of those characteristics which it is believed will enable him fully, ably, and fairly to co-operate with the members of the commission in placing these most important interests in their true position before the Government, and through it before the commercial world;"

3d. F. D. Curtis, esq., of Charlton, N. Y., recommended by the Department of Agriculture as a gentleman who has given long and diligent study to the industry; and

4th. Prof. D. E. Salmon, of Washington, D. C., nominated by the Commissioner of Agriculture, and well known as one of the most learned and skillful veterinary surgeons in the United States.

This commission will be organized at an early day, and the results of its investigation will be submitted to Congress as soon as practicable.

It appears from Mr. Brulatour's dispatch No. 371, of the 17th of June last, that when he informed the French foreign office of the President's intention to appoint this commission Mr. Challemel Lacour seemed pleased with the proposal and promised to mention the subject to his colleague, the minister of commerce, and inform the legation of the result. The Department not having as yet been advised as to the decision reached by the French Government in regard to the matter, I will thank you to lose no time in informing the foreign office of the action which the President has now taken in reference to the subject.

I am, etc.,

FRED'K T. FRELINGHUYSEN.

No. 34.

Mr. Glover to Mr. Davis.

No. 51.] UNITED STATES CONSULATE,
Havre, October 15, 1883. (Received November 2.)

SIR: In a speech delivered at a banquet in this city last evening Minister Ferry made the following remarks in regard to American salt meats, which I translate and forward for your information.

I am, etc.,

JOHN B. GLOVER,
United States Consul.

[Inclosure in No. 51.—Extract from Minister Ferry's speech.—Translation.]

There is, nevertheless, one of your claims of which I must immediately say a word, for it is a question of the utmost importance to the interests of this illustrious city, so well presented a moment ago in the speech of your honorable deputy, Mr. Penlevey. It is of American salted meats.

On this question you preach to one converted. I partake of your sentiment on the liberty of the commerce of salted meats, but I think also that it is proper to take account of the opinion of a certain portion of the public, on the question of healthfulness, to which science is searching to give a solution. At this moment, while I am speaking, the question is being studied by the most important of Government bodies the health committee.

Let it only give a guaranty covering the responsibility of the Government keeper of the public health, and the solution will be nigh. For myself I will do all I can, I assure you, and I hope that in the near future the question will be resolved in a democratic and liberal sense, not only for commerce, but also for the population that it sustains.

No. 35.

Mr. Wilson to Mr. Davis.

[Extract.]

No. 30.] UNITED STATES CONSULATE,
Nantes, October 20, 1883. (Received November 9.)

SIR: I have the honor to inclose slips from newspapers published in Nantes, which I transmit for your information, concerning the public feeling in this locality anent the subject of the prohibition of American pork. This feeling, as I have heretofore shown (dispatch No. 12), had its foundation in interested motives, those looking to the protection of the pork manufacturers of this vicinity; and doubtless these motives continue their influence. * * *

I have, &c.,

THOMAS WILSON,
Consul.

[Inclosure in No. 30.—Extracts from newspapers published at Nantes.—Translation.]

MUNICIPAL BOARD OF NANTES.

Mr. Normand, in behalf of the salters of our city, moved that the Government should be requested to maintain the decree prohibiting the importation of American bacon.

On a recent occasion, and with a certain solemity, said Mr. Normand, the revocation of this decree was asked for by the merchants of Havre.

It is important that we take measures to protect the health of all our people, and that we act in behalf of our manufacturers and farmers, who would be seriously injured if the Government were to abate the stringency of the measures which have been adopted.

Mr. Normand did not propose to address the deputies and senators of the department, doubtless lest it should then be necessary likewise to thank them collectively. He requested the mayor to prepare a letter to the minister of commerce asking for the maintenance of the present state of things.

The board requested the mayor to convey the expression of its wishes to the ministers.

* * * * * * *

AMERICAN SALT PORK.

In a previous number we said: "In our opinion these serious questions call for serious examination and discussion, and require that all the documents be laid before the parties interested."

We consequently now publish a translation of an important report, made by the British consul at Philadelphia, which has been very little read in our country.

THE CONTROVERSY WITH REGARD TO HOG CHOLERA—IMPORTANT CORRESPONDENCE—CONSUL CLIPPERTON'S DEFENSE—REPLY OF THE COMMITTEE.

The following correspondence relative to the reports made on hog cholera in the West requires no explanation. It will be remembered that Messrs. Orr, Fowler & Sinclair called recently on Consul Clipperton in relation to his report to his Government, in which he stated that 700,000 hogs had died of hog cholera in the State of Illinois. On their return these gentlemen prepared a report, which was published in full in the Bulletin, and requested Secretary Blaine to take the matter in hand. Consul Clipperton subsequently addressed the following letter to the committee:

MARCH 10, 1881.

Messrs. ORR, FOWLER & CO.,
Special Committee of the New York Stock Exchange:

GENTLEMEN: According to my promise to acquaint you with the result of my latest investigations relative to the hog disease in the State of Illinois in the year 1880, I have the honor to inform you that all the statistics of the State of Illinois for the year 1880 have not yet been published. If you will refer, however, to volume 16 of the reports of the Illinois Agricultural Department (for 1878), pages 377 and 378, under the heading "Hog Cholera," you will find that the number of hogs was 3,334,920, and that the number of those which died of disease was 474,758; that is to say, 14 per cent. of the whole. The loss in money is estimated at $1,438,589. In volume 17 (for 1879), page 383, the number of hogs destroyed by cholera from May 1, 1878, to May 1, 1879, is stated to have reached the enormous figure of 1,391,422 head, and the weight is stated to have been 139,893,508 pounds, being an average of 100 pounds per head. In a single county (Warren) 59,544 hogs died. On pages 544 and 545, the number of hogs lost up to May 1, 1880, is estimated at 182,577.

These statistics do not include the young pigs (the census having been taken in April), and hundreds of thousands are born after that date, among which there must have been more or less mortality from hog cholera.

The Department of Agriculture at Washington, without having been able thus far to give the exact figures, has expressed the opinion that the number of hogs that died in Illinois in 1880 was not less than 300,000.

This information was recently communicated to me by letter. Taking these figures into consideration, and bearing in mind the fact that the swine plague or hog cholera must have its fluctuations, it is very probable that if the amount of the present mortality could be made known the total number would differ little from that stated, *i. e.*, 700,000 head.

There is certainly a remarkable difference between the figures 1,391,422 for the year ending May 1, 1879, according to the report of the Illinois Agricultural Department, and those announced by Mr. Fowler for 1880, *i. e.*, 700,000 head.

Allow me to call your attention to the concessions which you were disposed to make, at the close of our long but interesting interview on Monday last. These concessions were: 1st. That the consular report to my Government did not concern the State of Ohio; 2d. That the report made by me to my Government was not a special report, but formed part of the monthly sanitary report which all consular officers, in all parts of the globe, are required to furnish; 3d. That hog cholera exists and has existed for years in all the States in which hog-raising is carried on on a large scale; 4th. That trichinosis is a disease which affects the human system, and that it is caused by the

use of unwholesome or raw pork. The patience and intelligence shown by you in the discussion of this subject, together with your affable manners, have merited our most sincere respect, and I take this opportunity to express my regret that the committees of other cities, as well as many of the daily papers of this country, have not shown the same moderation relative to this matter.

Now, gentlemen, allow me to quote from a report received this morning from Chicago: "It now appears that the State of Illinois, and not that of Ohio, is the one in which 700,000 hogs died in 1880, and my opinion is that the parties interested are *disposed to let the question rest, and that they will not ask for an investigation.* Should it be decided to hold one, the result might be quite different from the statements of the boards of trade of New York, Philadelphia, St. Louis, Chicago, Indianapolis, Cleveland, &c. I think I know that several members of the Chicago committee have made a trip to Springfield, the capital of the State of Illinois, and it is likely that the statistics which they have seen there have edified them as to the mortality among swine in that State."

The reasons that induced you to publish the decisions which condemned the consular reports will doubtless lead you to publish this letter.

I further beg leave to quote certain passages from official reports concerning agricultural matters in the United States.

Does the swine plague, otherwise known as hog cholera, exists in this country?

The Commissioner of Agriculture at Washington, in his report for 1878, says:

"For less than one-half the territory of the United States they show annual losses amounting to $10,091,483 in swine alone, and for all other classes of domesticated animals the losses are given for the same counties at $6,561,945, making a grand total of $16,653,428.

"These figures indicate that the losses of farm animals throughout the United States annually aggregate the sum of $30,000,000 or more. As at least two-thirds of this amount seemed to be sustained in the loss of swine from affections which appeared to be but little understood by the farmer and stock raiser, I regarded the subject of sufficient importance to call for an appropriation to defray the expenses of a scientific investigation into the causes of many of the more malignant, infectious, and contagious diseases of domesticated animals, but more especially of those incident to swine. * * *

"In addition to the saving of so vast an amount of property, the health of our people demands the completion of this work, as it is a noteworthy but lamentable fact that many herds of hogs are shipped to the nearest market, or are slaughtered by the owner for marketable purposes, as soon as disease makes its appearance among them." (Pages 24 and 25, report for 1878.)

Is the disease known as hog cholera contagious?

Dr. Detmers, in his report to the Department of Agriculture for 1878, says:

"The contagion or the infectious principle is and has been disseminated through the whole country in a wholesale manner, as I shall show immediately. During the first month of my presence in Champaign I stopped at the Doane House, a hotel belonging to the Illinois Central Railroad Company, and constituting also the railroad depot. Every night car-loads of diseased hogs destined for Chicago passed my window. Only a very short time ago, on one of the last days of October, a farmer, J. T. M., living near Tolono, sold sixty-seven hogs (some, if not all of them, diseased, and a few of them already in a dying condition) for two cents a pound to be shipped to Chicago. I could cite numerous instances, but I think it not necessary, because these facts are known to every one where the swine plague is prevailing. Besides, in nearly every little town in the neighborhood of which cases of swine plague are of frequent occurrence is a rendering establishment to which dead hogs are brought. These establishments pay one cent a pound, and the farmers haul their dead hogs, sometimes ten or fifteen miles, in open wagons, past farms, barns, and hog-lots, and disseminate thereby the germs of the disease through the whole country. The transportation of dead hogs by wagon, I admit, might be stopped by state laws, but the latter prove usually to be ineffective where railroad companies (interstate and international traffic) are concerned."

In his entire report Dr. Detmers shows that the swine plague or hog cholera is a contagious and infectious disease, that it is easily communicated by one animal to another, either by direct inoculation or by the introduction of the infectious principle into the digestive organs in the form of food or drink; that a very small quantity of the virus or infectious principle is sufficient to cause the disease; that the infection may be transmitted to other species of domestic animals; that so harmless a liquid as milk will produce the disease with as much certainty as direct inoculation from a dead or diseased hog, and that the contagion is transmitted from herd to herd and from farm to farm. (Special report of the Department of Agriculture, No. 22, for 1878.)

Mr. Robert Hodson, a store-keeper in Oquawka, made the following statement:

"I have a farm on the banks of Hend erson River, and last year kept quite a herd

of hogs. One morning I found lodged at my hog lot, which joins the river, a dead hog, which had come down stream, and had probably been thrown in some distance above. My hogs discovered it earlier than I and were feeding on the carcass when I came. Ten days later they commenced to die. My loss amounted to fully $1,500."

Mr. Miller's whole herd consisted of 240 head, and 237 died; only three survived or remained exempted. At that time no other case of swine-plague existed in the whole neighborhood, and, according to the best information I could obtain, there was none within twenty miles. Soon, however, the disease commenced to spread from Mr. Miller's herd to those of his neighbors, first to the herd of his neighbor towards the north; the prevailing wind was from the south; then all around, and finally over the whole township, and beyond. In November, 1878, Mr. Miller, when he had only three hogs left, bought again about thirty-two head. These, too, very soon became infected, and commenced to die at the rate of one, two, and three a day.

Pat Murphy lives one and a half miles south of Gap Grove. Up to January 2 he had lost five hogs out of a herd of ten head; seven had been sick, but two had recovered. * * * Those of his next neighbor south, Mr. Hadeler, became affected next. Mr. Hadeler lost 100 head, and saved 9. * * *

A radical extermination is the only thing that will be effective, unless it can be proved that a spontaneous development is taking place or can take place within the borders of the United States. Fortunately the low temperature of the winters in our principal pork-producing States facilitates a stamping out, if undertaken at the proper time in the winter and in the spring, because a low temperature (frost), and especially snow, interrupt very essentially the propagation of the disease germs and the spreading of the disease, and, although not absolutely destroying or killing the bacilli and their germs, cause a great many of them to perish or to be in a dormant state for some time. Besides that, the number of hogs and pigs in existence from the first of January to the first of April is a comparatively small one, because most of the hogs have been shipped and butchered and the young pigs have not been born. But the measures of extermination or stamping out must be thorough. * * *

Although not called upon to propose any law or legislation, I consider it my duty to lay before you a plan which, if executed, will lead to a prompt and effective suppression and the final extinction of that terrible plague which costs the country every year many millions of dollars, and undermines the prosperity not only of individual farmers, but of whole States. (Special Report No. 22, p. 45.)

CAN HOG CHOLERA AFFECT THE HUMAN SYSTEM?

Dr. Detmers says: "It may also not be out of place to relate a case that occurred last summer in Knox County, Illinois. A well-to-do and highly respectable family, residing near Yates City, lost, in last July, three children, aged, respectively, thirteen, five or six, and two and a half or three years, of a disease diagnosed by the attending physicians as diphtheria. The two remaining children of the same family also became affected, but recovered. Five physicians were in attendance, and made a careful research as to the possible cause or causes, and could find but one thing which might be construed as such. The family used ice which had been taken from a creek into which, above, some hogs (hogs that had died of swine plague) had been thrown just before the water of the creek became frozen. My informants are a highly-respected physician in Biggsville, Dr. Maxwell, and a near relative of the afflicted family, Mr. John McKee, who has a drug store in the same place." (Special Report No. 22, p. 45.)

In conclusion, although by no means ignorant of the result, it is unnecessary for me to follow up the question of trichinosis any further. All who read the newspapers know that serious cases occur in the various sections of this country and in Europe. It is moreover not for me to mention in this connection *the complaints which every now and then come from European ports with regard to the inferior quality and bad condition of the salt pork shipped thither, which cause it to be rejected by foreign inspectors,* occasion serious losses to importers, and bring American pork exports into discredit; nor is it for me to expatiate upon the causes of the difference of opinion between the chamber of commerce of this city and the United States consul at Brussels with regard to the certificates of inspection issued by the Government.

I am, &c.,

R. C. CLIPPERTON,
Consul of H. B. M.

MUNICIPAL BOARD OF NANTES, SESSION OF OCTOBER 18, 1883.

Mr. Normand remarked that the importation of American salt pork had been prohibited by a decree of February 18, 1881, owing to the prevalence of trichinosis in America. Mr. Tirard, he said, had issued that decree after a careful investigation, and Germany, Turkey, Italy, &c., had followed the example of France. Mr. Nor-

mand said that the minister of commerce, during a visit recently made by him to Havre, appeared to have lent too attentive an ear to the complaints of the merchants of that city, and there was reason to fear that the Government would revoke the decree of February 18, 1881. Mr. Normand therefore moved that the municipal board should adopt the following resolution:

"Whereas the decree of February 18, 1881, prohibited the importation of salt pork from America, because it had been found that such pork contained trichinæ, and that it could not be eaten without endangering the public health; and

"Whereas American pork is still trichinous, which is the best answer that can be made to the merchants of Havre, who are urging the Government to rescind the aforesaid degree at the risk of introducing trichinosis into France, which malady is frequently fatal to mankind, and may cause the destruction of all the swine in the country:

"*Therefore*, be it resolved that this municipal board request the Government of the French Republic rigorously to maintain the decree of February 18, 1881, and to disregard the wishes of the merchants of Havre."

Mr. Lechat thought that the importation of American salt pork was prohibited only when it was found to be trichinous, but that it was an error to suppose that the importation of all salt pork from America was indiscriminately prohibited. He said that the proper thing for the Government to do was to cause the pork brought from America to be carefully examined. Otherwise the French people would be deprived of an important article of food. Meat, he said, was already sold at very high prices; the rise in the price of beef, for instance, had been nearly 15 per cent. during the past year.

Mr. Lechat added that great strictness was necessary in the case of trichinous pork, for deception was easy. The Americans, said he, put choice pieces of meat at the top of the barrel and the diseased pieces beneath. Inspection is difficult, and it should be carefully performed. The Government had stated in reply to Mr. Penlevey, the gentleman who pleaded the cause of trichinous pork at Havre, that the governmental board of health should examine the question. The minister of commerce had said nothing more, and intentions should not be attributed to him which he perhaps had never entertained.

Mr. Lechat therefore thought that nothing more than a rigid inspection should be asked for.

Mr. Normand said that he simply asked for the maintenance of the decree of February 18, 1881. The prohibition thereby established, he said, was absolute.

Mr. Normand's motion was unanimously adopted.

His honor the mayor said that he would transmit the resolution which had been adopted to the Government, but that he had already transmitted a similar request from the merchants of Nantes, to which Mr. Ferry had replied by declaring that he would make no change in the decree without a thorough examination.

No. 36.

Mr. Morton to Mr. Frelinghuysen.

No. 425.] LEGATION OF THE UNITED STATES,
Paris, October 21, 1883. (Received November 3.)

SIR: Having had recent conversations with the President, the president of the council, and other members of the cabinet with reference to the decree prohibiting the importation of American salted meats, I deemed the present a fitting time to address another dispatch to the minister of foreign affairs, restating the reasons why my Government had expected for a long time the withdrawal of this decree, and asking the early and earnest consideration of the question by the French Government.

I have the honor to inclose a copy of my communication, which I hope will meet the approval of the Department.

I have, &c.,

LEVI P. MORTON.

[Inclosure in No. 425.]

Mr. Morton to Mr. Challemel Lacour.

LEGATION OF THE UNITED STATES,
Paris, October 20, 1883.

SIR: I beg leave to call again your excellency's attention to the subject-matter of my note of March 23, 1883, representing the injustice of the long standing decree prohibiting the importation of American salted meats.

The conversations I have had the honor to hold with your excellency and other members of the cabinet in relation to the decree had led me to believe that it would have been repealed long ago. I regret to say that it is still in force, and I must add that I fail to see upon what ground a measure so prejudicial to the true interests of two great countries so friendly allied as France and the United States are, is so persistently retained.

The present minister of commerce believes it uncalled for. His predecessor openly advocated its repeal in the Senate; the constitutional head of the government, the president of the council, has publicly declared that he disapproves of it; your excellency opposed it in the senate chamber. The house of deputies expressed itself unequivocally in favor of its repeal, and the senate, while declining by a bare majority to interfere in the matter, left the government free to take its own course; the Academy of Medicine of France has declared it unnecessary; the board of public hygiene has made the same authoritative declaration, and the great chemist, Mr. Wurtz, who is paramount authority for the whole scientific world, has demonstrated in unanswerable language its absolute inutility.

A moment's consideration will, I trust, satisfy your excellency that, on the ground of public health, it would be much more justifiable to exclude French wines from America than it is to prohibit American meats in France. The French scientific authorities do not contend that the consumption of American meats is dangerous, while they do contend that some French wines are adulterated to an extent prejudicial to public health.

On the one side there is the evidence of the most competent of your learned institutions in such matters that American salted meats are inoffensive; on the other there is the evidence of your own officials that French wines are manipulated in such a manner as to make them unhealthy.

Yet, notwithstanding the overwhelming weight of such facts, and in spite of the repeated complaints of the French chambers of commerce, and of the earnest representations of the United States, this obnoxious decree has remained standing for nearly three years, and has had the mischievous tendency of alienating from France the powerful commercial interests of our Western States. Your excellency cannot be unaware that the growing dissatisfaction caused by this extraordinary discrimination, only applicable to the United States of all the countries with which France is on friendly relations, against one of the most important products of the United States is likely to give rise to discussion in the Congress about to convene at Washington, which might result in measures which would seriously affect Franco-American commerce in some of its most important branches.

If I call your excellency's attention to these facts it is by no means with the intention of threatening the French Government with retaliatory measures, which, so far as I am informed, are not contemplated by my Government, but simply to show that the interests which are provoked to take such a course could find substantial reasons to support the position.

Believing that the French Government would satisfy itself that the decree was issued under a misapprehension, and cheerfully abrogate it, neither the Government nor the Congress of the United States, notwithstanding the constantly increasing pressure of public opinion, has taken any action with reference thereto.

I *can not* doubt that your excellency will, upon a review of the evidence in your *possession,* concur with me in the opinion that the results of the searching investigations *conducted* by competent officers of both countries have clearly established the unfounded and erroneous character of the statements regarding the alleged unwholesome quality of American hog products upon which the issue of the prohibitory decree was based.

I avail, etc.,

L. P. MORTON

No. 37.

Mr. Glover to Mr. Davis.

[Extract.]

No. 52.] UNITED STATES CONSULATE,
Havre, October 22, 1883. (Received November 9.)

SIR: Our commercial relations with France and Germany are likely to be very fully discussed during the next session of Congress. The edict promulgated by Mr. Tirard in 1881, which prohibited the importation of American salt meats into this country, demands, and will, I doubt not, receive the most careful consideration by that body. In my judgment it is one of the most important questions that will come before the ensuing session. It is gratifying to know that President Arthur, as well as the Department of State, is making active efforts to have the question settled on a just basis. A favorable report from the committee recently appointed by the President to investigate the subject will go very far towards removing the unjust discrimination against one of our chief products.

The edict was based on false premises, and, of course, nothing but injustice could result from its promulgation, both to the producer and the consumer. The plea that the health of the French people was endangered by the importation of American pork, is absolutely without justification as has been demonstrated and unanimously declared by the most competent body of scientists in France.

The French people, as far as I am able to judge, are in favor of its (the edict's) entire abolition. The laborers especially are opposed to the prohibition, as it deprives them of a cheap and wholesome article of food. I have never yet spoken to an intelligent Frenchman on the subject who believes that such an order was just or necessary. * * * The chamber of commerce of this city has shown conclusively that the edict is unjust to the working people and also detrimental to the commercial interests of the country. So also has the same been shown by the Chambers of Commerce of Bordeaux and other cities. Mr. Jules Ferry, president of the council, takes a liberal view of the matter, and it is believed that he will insist on a radical modification of the order. In his great speech, delivered in this city on the 14th instant, he declared that he was in accord with the people of Havre on this subject.

Some time ago I respectfully asked permission to import a few American hams for the use of my own family, but the request was as respectfully refused. * * *

Probably thirty millions of our people eat American pork every day in the year, besides several millions of Englishmen. There has never been but one well attested case of trichinosis in France, and that from the product of a French hog. * * *

I am, etc.,

JOHN B. GLOVER,
United States Consul.

No. 445.] LEGATION OF THE UNITED STATES,
Paris, November 15, 1883. (Received December 1.)

SIR: I called yesterday on the president of the council, who, in the absence of Mr. Challemel Lacour, has charge of the foreign office, to inquire if the Government had come to a conclusion as to the time of the withdrawal of the decree prohibiting the importation of American salted meats. Mr. Jules Ferry opened the subject pleasantly, by saying that he knew the object of my visit, but that, unfortunately, he was yet unable to give me a satisfactory answer, as the execution of his purpose had been interfered with by the extraordinary epidemic of trichinosis, which had lately appeared in Germany.

"The unusual and alarming character of this epidemic," said he, "is such that the committee of public hygiene has felt bound to devote to its examination more than it expected at first. I am satisfied," he continued, "that the consumption of American meats has nothing to do with this epidemic, but as we can not cancel our prohibitory measures without encountering a strong opposition, we must be prepared to meet all the objections which might be made to our action."

I stated very frankly to him that the reason of my anxiety for a prompt solution of this so long pending difficulty was a telegram which

I had received from you, asking for definite information on the subject which might be used by the President in his forthcoming message. I explained again the reasons which made it important to reach a satisfactory solution before the meeting of Congress, when the subject would no doubt come up for discussion, the necessity for which I was very anxious to avoid, and I urged him to press the solution of the question. He promised to do so in emphatic terms. "In the mean time," he added, "you can state to your Government that the French Government is animated by a strong desire to give to this question a most liberal solution, and at the earliest possible moment." I inquired, "May I expect action before meeting of Congress?" He said, "Yes."

Mr. Morton to Mr. Frelinghuysen

[Telegram.]

PARIS, *November* 27, 1883.

Mr. Morton informs Mr. Frelinghuysen that a decree has to-day been signed, and will be published November 28, in the official journal, canceling the prohibition of American pork, and that he will inform the minister in Greece of the fact.

No. 42.

Mr. Morton to Mr. Frelinghuysen.

[Extract.]

No. 452.] LEGATION OF THE UNITED STATES,
Paris, November 29, 1883. (Received December 13.)

SIR: As I had the honor of informing you by my telegram of yesterday the official journal of this morning publishes a decree repealing that of February 18, 1881, by which the importation of American pork was prohibited in France.

The French packers were so much interested and so persistent in obstructing this long-expected measure that I feared the withdrawal of the prohibition might be coupled with some kind of inspection which would practically restrict its effect, but the decree removes the prohibition without any conditions. A circular of the minister of commerce, addressed to the prefects, informs them of the decision taken, and simply advises them to see that the pork offered to the public is fully cured, and to recommend to those making use of such meats that they should be well cooked, as it is scientifically and experimentally established, says the minister, that thorough cooking and salting destroys trichinosis when it exists.

Thus the position taken in this matter by the legation and maintained in repeated communications, written and verbal, is at last officially admitted as correct by the French Government.

In view of the information conveyed in your dispatch No. 379, of November 13, I informed Mr. Schuyler of the withdrawal of the decree. * * *

I deem it proper to avail myself of this occasion to express my high appreciation of the valuable assistance rendered and cordial co-operation of Mr. Vignaud in the long-pending negotiations, as in all other matters, now so satisfactorily terminated by the withdrawal pure and simple of the prohibitory decree at a time when the current of public sentiment elsewhere in Europe appears to be running in a different direction.

I inclose herewith copy and translation of both the decree and the circular.

I have, etc.,

LEVI P. MORTON.

[Inclosure 1 in No. 452.—Translation.]

DECREE OF NOVEMBER 27, 1883.

The President of the French Republic, upon the report of the minister of commerce, considering the conformable opinion of the consultative committee of public health of France, dated the 26th November, 1883, decrees:

ARTICLE 1. Is, and shall remain, annulled, the decree dated the 18th of February, 1881, which prohibits on the territory of the French Republic the importation of salted pork of American origin.

ART 2. The minister of commerce and the minister of finance are instrncted, each so far as it may concern him, to execute the present decree, which shall be inserted in the Journal Officiel, and published in the Bulletin des Lois.

Done at Paris the 27th November, 1883.

JULES GRÉVY.

By the President of the Republic.

CH. HERISSON.

The Minister of Finance:

P. TIRARD.

[Inclosure 2 in No. 452.—Translation.]

CIRCULAR FROM THE MINISTER OF COMMERCE.

PARIS, *November* 27, 1883.

MONSIEUR LE PRÉFET: A decree of the President of the Republic of the 27th of November has just annulled the decree of the 18th February, 1881, which prohibits on the entire territory of the French Republic the importation of salted pork coming from the United States.

This decree, which has for object to restore to consumption a much-esteemed article of food among the working classes, will not efficaciously attain the end in view unless all requisite precautions for the preservation of public health are taken in the use of *this meat.*

This consultative committee of public hygiene of France, to whom I referred the question, undertook a minute examination of the subject, from which it results that *preserved* pork loses all serious danger of infestation of trichinosis if it is salted with care and if the brine in which it is deposited is of good preparation. You should therefore recommend to the municipal authorities, who have more especially in their *attributions* the supervision of articles of food, to examine with the greatest care whether these conditions are entirely carried out as far as concerns salted pork put up for sale in their commune, and not to hesitate to seize and destroy that which, from an imperfect degree of saltness, may appear to them unfit for consumption.

The committee has ascertained, besides, both scientifically and by experimental means, that trichinosis, when it exists in pork, is entirely destroyed by complete cooking, and that all danger will disappear for the consumer if, conformably to our well-known culinary habits, this meat is not eaten raw or rarely cooked.

You will please therefore bring this important particular to the knowledge of those under your jurisdiction by all the means of publicity at your disposal.

I beg you will acknowledge receipt of the present circular and give your careful attention to the execution of the directions contained therein.

Receive, &c.

The minister of commerce:

CH. HERISSON.

LEGATION OF THE UNITED STATES,
Paris, December 24, 1883.

In consequence of resolution voted Saturday by Chamber of Deputies requesting Government to suspend the free importation of American

pork until a bill which has been introduced to inaugurate a system of inspection shall have been acted upon, it is feared by minister that repeal of decree will be compelled. The cabinet council, however, has not yet arrived at a decision.

MORTON.

No. 46.

Mr. Morton to Mr. Frelinghuysen.

No. 464.] LEGATION OF THE UNITED STATES,
Paris, December 26, 1883. (Received January 10, 1884.)

SIR: The action of those opposed to the free admission of American pork has produced such a result that all the efforts made by this legation during many months to obtain an entirely satisfactory settlement of this vexed question are likely to prove fruitless.

About two weeks ago Mr. Gaudin, a deputy from Nantes, the center of the French pork-packing business, introduced in the house a bill providing for a system of inspection of all salted pork coming from abroad. This bill, which is substantially the same as the one voted by the Chamber last year, but defeated in the Senate, and of which I sent a translation to the Department with my No. 146 of March 31, 1882, was referred to a committee, where it was expected to remain without being acted upon by the committee.

A few days ago, quite unexpectedly, Mr. Paul Bert, formerly a member of Mr. Gambetta's cabinet and a scientist of note, asked the Government in the Chamber to suspend the operation of the decree of November 27, again admitting the free importation of American pork, until the Chamber should have acted upon the bill introduced by Mr. Gaudin. Mr. Paul Bert grounded his request on motives of public health; he described in vivid terms the fearful consequences of an epidemic of trichinosis, and asserted that he knew from his own personal experiments as well as by those made by others that trichinæ did not exist in French pork and did exist in foreign pork.

Mr. Herisson, the minister of commerce, replied to Mr. Paul Bert that the Government could not comply with his request; that its action in the matter had been duly considered, and that he and his colleagues were satisfied that the free importation of American pork would not be attended with any danger to the public health.

This plain and unequivocal answer did not satisfy Mr. Paul Bert, who moved to interpellate the government on the question. The interpellation was granted, and it came before the House on Saturday last, the 22d instant.

Mr. Paul Bert repeated his request to suspend the operation of the decree cancelling the one prohibiting American pork until some definite action be taken by the Chamber, and submitted the following order of the day:

"The Chamber, considering that it is proper to delay the admission of American pork until after the debate upon the bill now pending, passes to the order of the day."

Mr. Herisson declared that he was obliged to oppose this order of the day; that, as stated before, the government had acted only after mature deliberation, and upon the advice of the Academy of Medicine; that not a single case of trichinosis had been detected either in England, in Bel-

gium, and in Switzerland, where American pork is freely introduced, or in France when free importation was the rule; that the epidemic of trichinosis, which recently appeared in Germany, was known to have been caused by German pork, and that consequently there was no good reason to recall a measure which was satisfactory to so many people and open to so little objection.

Mr. Paul Bert said that the facts stated by the minister were not as conclusive as he supposed they were; that trichinosis was not easily detected; that its diagnosis was exactly the same as typhoid fever, and that it was very likely that many people had died of it without the cause being made known; and that, contrary to an opinion generally shared, salt did not kill the trichinæ, nor did the cooking except when the boiling of the meat is carried to 70° centigrade. In short, he believed the danger arising from the free admission of foreign pork was very great, and he thought it would be very unwise not to regulate in some way its importation into France.

Finally, after a long debate, in which the same arguments were asserted and reasserted in many shapes, the question came to a vote, and the order of the day, proposed by Mr. Paul Bert, was carried by 272 votes against 153.

It is but simple justice to state that Mr. Herrisson earnestly opposed every effort of Mr. Paul Bert and of his associates in behalf of the French hog raisers and packers. It is admitted openly that public health has little bearing upon the subject in its present stage; it is simply now a question of protection.

* * * * * * *

I have, etc.,

LEVI P. MORTON.

[Postscript.]

PARIS, *December* 28, 1883.

To comply with the vote of the Chamber it was decided yesterday in cabinet council to prohibit the free importation of American pork until parliamentary action is taken in the matter. In the mean time American pork will be admitted at the ports of Havre, Bordeaux, and Nantes, where an examination of the meat will take place under the control and at the expense of the Chambers of Commerce of those places.

This measure is satisfactory to the French importers, but the protectionists will probably oppose it, as many of the members of the Chamber of Commerce are interested in making the inspection as easy as possible. It is to be feared, therefore, that the propriety of this measure will be questioned in the Chamber.

The department of commerce contemplates the introduction of a new bill providing for a system of inspection.

* * * * * * *

The National of last night, speaking of this bill (the one recently introduced into Congress for the purpose of empowering the President to prohibit the importation of articles injurious to public health from countries which on the same ground prohibit American products), says it was at first directed against Germany only; but that, "in consequence of the recent vote of the Chamber postponing the removal of the restriction on American pork, France will now have to take her place by the side of Germany, and be equally made the victim of these reprisals. Owing to the order of the day of Mr. Paul Bert French products are

going to be driven out from America. It belongs to the Government to take steps as early as possible to prevent an eventuality which would be so damaging to French commerce."

[Translation.]

LEGATION OF FRANCE,
Washington, January 2, 1884. (Received January 3.)

Mr. SECRETARY OF STATE:

As you are aware, the President of the French Republic, by a decree bearing date of the 27th of November last, and issued at the suggestion of the minister of commerce, revoked the decree of February 18, 1881, which prohibited the importation of salt pork from the United States.

In adopting this measure the Government of the Republic was influenced by various considerations, and especially wished to furnish evidence of its sincere desire to promote as far as possible the development of commercial relations between the two countries.

However, in compliance with a wish expressed by the Chamber of Deputies in consequence of an interpellation which took place during the session of December 22, the French Government has been obliged to suspend for the present the execution of the decree of November 27.

In informing me of this fact, the president of the council adds that a bill has been introduced in the Chamber which is designed to regulate the importation of salt pork from the United States, and that the Government will hasten the discussion of this bill as much as possible. The meat in question will, as a temporary measure, be permitted to enter the ports of Havre, Bordeaux, and Marseilles until January 20, 1884, although previously to being sold it will be subjected to an examination.

I hasten, Mr. Secretary of State, to bring the foregoing information to your notice.

Accept, etc.,

TH. ROUSTAN.

No. 53.

Mr. Frelinghuysen to Mr. Morton.

[Telegram.]

DEPARTMENT OF STATE,
Washington, January 2, 1884.

Represent that decree published 29th, only allows three weeks, till 20th January, for importation American pork at three ports named. As we have only occasional steam communication with Bordeaux and Marseilles and none with Nantes, first named as a port, it is probable that *bona fide* shipments for France may have been made by sailing vessels. You will ask that the time be extended to February 1 for all vessels, and that in case sailing vessels show legitimate shipments made before December 29, entry be granted, subject to any reasonable inspection.

FRELINGHUYSEN.

Washington, January 2, 1884.

SIR: For your information I send herewith copies of telegrams received from Chicago on the recent vote in the French Chamber of Deputies reinstating prohibition of importation of American hog products.

CHICAGO, *December* 26, 1883

Hon. FRED'K T. FRELINGHUYSEN,
Secretary of State, Washington:

The recent vote in French Chamber of Deputies reinstating prohibition of importation of American hog products is, as you are aware, a serious blow to the provision interests of the whole country as well as those of the farmers of the Northwest.

Understanding that the French Government is favorable to the withdrawal of the prohibitory decree, and believing that Congress when reassembled will define a retaliatory policy, we ask that you will instruct our minister to France to work with utmost energy to bring about repeal of decree, intimating, if you think proper, that such action by Congress is probable. This we know would be of greatest value and would undoubtedly produce most favorable results.

ARMOUR & CO.

CHICAGO, *December* 27, 1883

Hon. FRED'K T. FRELINGHUYSEN,
Secretary of State, Washington:

I earnestly urge your special attention to the dispatch sent you by Armour & Co. of this city regarding the French prohibition of hog products. If continued it will be a serious blow to American capital and a heavy loss to our manufacturing and farming interests.

Prompt action seems to me necessary.

R. W. DUNHAM, *M. C.*

SIR: The following telegram was sent to Messrs. Armour & Co., of Chicago, Ill., December 27, 1883:

Your telegram received. Further instructions have been telegraphed Mr. Morton, who has been diligent and energetic in matter of repeal of decree.

I am, etc.,

FRED'K T. FRELINGHUYSEN.

No. 56.

Mr. Morton to Mr. Frelinghuysen.

No. 466.] LEGATION OF THE UNITED STATES,
Paris, January 3, 1884. (Received January 18.)

SIR: On the 26th ultimo (dispatch 464), I informed the Department of the resolution voted by the Chamber of Deputies, a few days before, expressing the desire that the free admission of American pork be again suspended, and of the action the Government felt compelled to take in consequence of this vote.

When my dispatch was forwarded (Friday the 28th), I had not seen the text of the new prohibitory decree, which was only issued on the following day, but my telegram of the same evening, of which a copy is herewith inclosed, gave you its substance. I have the honor of sending to-day a copy and translation of the decree, and of a report of the minister of commerce to the President, explaining his motives.

At the President's reception on New Year's day I had occasion of recurring again to this subject with the president of the council and the minister of commerce, and I am glad to say that both seem as desirous as I am of securing the permanent removal of any obstruction to the importation in France of American pork. I remarked to Mr. Ferry that I had not failed to inform you of his sincere desire to comply with my requests in the matter, and that I was in receipt of a dispatch expressing your appreciation of his friendly language and course, and instructing me to convey to him the satisfaction felt by the Government of the United States with his action, which I intended to do in a more formal manner. "This action of ours," said Mr. Ferry, "is not over; we do not intend to leave the matter as it now stands; we are collecting facts and scientific opinions which are of such weight that they can not fail to impress favorably the Chamber." Mr. Herisson confirmed this statement.

It can not be doubted that there exists in the public mind a strong prejudice against American pork, a prejudice which has been unfortunately to some extent created or aggravated by certain American newspaper articles of which the French protectionists adroitly took advantage. It was in reference to a statement made upon the authority of an American scientist that I telegraphed you to ascertain the correctness of those attributed to Dr. Detmers. Your answer furnished me with valuable information, the insertion of which I procured in all the leading French as well as in other papers.

Your cipher dispatch of the 27th ultimo, expressing your satisfaction with my diligence in the matter and the hope that energetic efforts would be continued to secure the permanent repeal of the prohibition, was duly received. I highly appreciate the expression of approval and shall spare no exertion to second your efforts in this matter so important to our commerce.

I have the honor to inclose herewith copies of a note addressed to Mr. Ferry, on the 2d instant, of the telegrams above mentioned, and of the one given to the press.

I have, &c.,

LEVI P. MORTON.

[Inclosure 1 in No. 466.—Decree published in Journal Officiel.—Translation.]

DECREE.

The President of the French Republic, upon the report of the minister of commerce, decrees:

ARTICLE 1. The execution of the decree of November 27, 1883, is adjourned; is in consequence suspended until such time as provision is made by a law upon the introduction of pork into France, the importation of the said salted meat coming from the United States of America.

ART. 2. Nevertheless, for contracts already made, this meat can be admitted exceptionally until the 20th of January, 1884, by the ports of Havre, Bordeaux, and Marseilles, and upon the condition that it shall be stated that it answers to the description known in commerce under the name of "fully cured"; that it is healthy, that it is in a perfect state of preservation, and that the curing is complete.

This statement shall be made by experts specially appointed by the prefects.

The importers must declare before any discharge that they consent to pay the costs that the inspection of the experts may entail.

The maximum of the tariff of these costs shall be fixed by the chambers of commerce.

ART. 3. The ministers of commerce and finance are charged, each one in so far as he may be concerned, with the execution of the present decree.

Done at Paris December 28, 1883.

JULES GRÉVY.

By the President of the Republic.
The minister of commerce:
CH. HERISSON.

[Inclosure 2 in No. 466.—Translation.]

Mr. Herisson's report to the President of the Republic.

MONSIEUR LE PRESIDENT: On the 27th November last I had the nonor to submit for your signature a decree repealing that of the 18th February, 1881, which prohibited on the territory of the Republic the importation of salted pork coming from the United States. This measure was grounded upon the opinion of the Academy of Medicine and upon the decision of the consultative committee of public health of France, specially appointed to deliberate upon the matter.

The Chamber of Deputies, at its sitting on the 22d December, evinced the desire that the execution of the decree of the 27th November should be postponed until the discussion of a proposed law, of which it has already had notice.

The object of the decree annexed herewith is to satisfy this desire in suspending the importation of American pork.

In order, however, to avoid confusion in commercial transactions, I have the honor to submit likewise for your high approbation a temporary measure with the view of conciliating the various interests involved.

It is as well to recall in this connection that when the decree of the 18th of February, 1881, had for the first time edicted the formal prohibition of American pork, the importation of the said meat was none the less, in consequence of the importance of the operations engaged, authorized until May 20 of the same year under the reserve of a microscopical examination.

The measure which I propose to you has been inspired by this precedent.

The meat can exceptionally enter France until January 20 next by the three ports of Havre, Bordeaux, and Marseilles, and under certain conditions to prove its harmlessness.

This very short period is proof that the measure of favor can be really applied to goods at the present time in transit or for which engagements have been made.

With reference to the guaranties required for the public health, I thought I could do no better to do away with all fears than to reproduce textually in the decree those which appear in the proposed law voted by the Chamber on the 28th March, 1882, and which has just been taken up again and supported before the same assembly by those of its members who have evinced the least desire for free importation.

It should be stated that the meat answers to the description known in commerce under the name of "fully cured;" that it is healthy, in a perfect state of preservation, and that the curing is complete.

The statements should be made by expert agents, appointed by the prefects, and the importers should declare, before any discharge, that they consent to pay the cost that may be incurred by the inspection.

If the advantages of the decree, which I have the honor to propose to you, appear to you of such a nature as to advise its adoption, I beg you, M. le President, to be so good as to affix your signature thereto.

Receive, M. le President, the assurance of my profound respect.

The minister of commerce.

CH. HERISSON.

[Inclosure 3 in No. 466.]

Mr. Morton to Mr. Ferry.

LEGATION OF THE UNITED STATES,
Paris, January 2, 1884.

SIR: It was an agreeable duty for me to inform my Government of the friendly manner in which you had received my earnest representations with regard to the long-standing prohibition of American pork, and of your liberal action in procuring the repeal of the obnoxious decree of the 18th February, 1881.

At the New Year's reception, at the Elysée, I intimated to you that I was in receipt of a dispatch from Mr. Frelinghuysen, in which he requested me to express to you his appreciation of your course in the matter, which I now take pleasure in doing more fully than I could yesterday.

"I have to request you," says Mr. Frelinghuysen, "to convey to the minister of foreign affairs the expression of the very great satisfaction which the liberal and enlightened course of the French authorities in reference to this matter, based upon thorough scientific investigation, has afforded this Government."

It is the hope of my Government, and my own, that this liberal action of your excellency will be continued, and that you will be able to bring about a permanent and satisfactory settlement of this question, which has been so unexpectedly and so unfortunately reopened by the resolution of Mr. Paul Bert.

I avail, &c.,

L. P. MORTON.

[Inclosure 4 in No. 466.—Extract from the Paris Morning News.]

We have received the following dispatch:

"WASHINGTON, *December* 30, 1883.—The Secretary of State has telegraphed to the American Minister at Paris, that a competent expert, Mr. Curtis, appointed by the Department of Agriculture to make an investigation as to trichinosis, reports officially that no disease exists among American hogs."

At a meeting of the Association of Western Swine-breeders it was unanimously resolved that in the five great producing States, Ohio, Illinois, Indiana, Michigan, and Wisconsin, no disease whatever existed among swine.

The discrimination of the French authorities against American pork is, therefore, made directly in the face of the evidence. A competent expert, appointed by the United States Government, reports that the disease, against which the prohibitive French legislation was directed, does not exist. As the object of such legislation is not to prohibit the pork itself, there appears to be, under the circumstances, no good reason for its continued existence.

GERMANY.

No. 57.

Mr. Davis to Mr. Everett.

No. 301.] DEPARTMENT OF STATE,
Washington, February 8, 1882.

SIR: I inclose herewith for your information a copy of a letter from Messrs. William Archdeacon & Co., of Indianapolis, Ind., stating that they have been advised that the German authorities have prohibited the importation of one hundred barrels of pigs' tongues shipped by them to Altona, Germany, and also that a general prohibition has been issued by the Government of Germany against American pork.

I will thank you to lose no time in calling the attention of the German foreign office to the case of William Archdeacon & Co., with a view to securing for them such relief as the facts may be found to make necessary.

I have furthermore to instruct you to report to this Department at your earliest convenience all the information you may be able to obtain as to any recent action by the German Government in reference to the importation of American pork into Germany; and all the facts which may tend to throw any light upon the subject.

I am, etc.,

J. C. BANCROFT DAVIS,
Acting Secretary.

[Inclosure in No. 301.]

Messrs. William Archdeacon & Co. to Mr. Frelinghuysen.

INDIANAPOLIS, *February* 5, 1882.

DEAR SIR: We received an order early in December from Altona, Germany, for 100 barrels of pigs' tongues, and shipped same early in January. We are now in receipt of a letter from the bank in Hamburg saying "that American pork has been prohibited in Germany," and our goods will not be allowed to land there.

The shippers and shipping agents from whom we have sought information deny that such is the case, and our goods in the meantime lie there.

If you can give us any information on the subject you will confer a favor on

Yours respectfully,

WM. ARCHDEACON & CO.

No. 58.

Mr. Everett to Mr. Frelinghuysen.

No. 298.] LEGATION OF THE UNITED STATES,
Berlin, February 23, 1882. (Received March 18.)

SIR: I have the honor to acknowledge your instruction No. 301, of the 8th instant, received this day, inclosing a complaint of Messrs. William Archdeacon & Co., to the Department of State, that the importation of American pork had been prohibited in Germany, and that they are thus prevented from bringing into Germany 100 barrels of pigs' tongues, which they have shipped to Altona, and directing me to call the attention of the foreign office to the matter.

In reply I have the honor to state that this prohibition of the importation of pork is not new, but dates back to June, 1880. On the 29th of June, 1880, Mr. White informed the Department by telegram, as also in dispatch No. 136, of the prohibition by imperial decree of the 25th June, 1880, of the admission of all kinds of pork, except hams and sides of bacon, and inclosing a copy, with translation, of the decree. Mr. White at the same time stated that in an interview with Mr. Von Hoffmann he had ascertained that the reason of the prohibition was that trichinæ could not easily be detected except in these two forms of pork.

From the special mention of hams and bacon in the decree I have no doubt that tongues are included in the category of forbidden forms of pig's flesh, but I will, in accordance with your instruction, address the foreign office on the subject, and ascertain whether there is any special exemption for pigs' tongues, and, in case there is not, whether it would be possible to pass this one shipment of Messrs. Archdeacon & Co., after a rigid inspection to ensure the pigs' tongues being in a fit condition for food.

I would also state in this connection that in December, 1880, Messrs. Armour & Co., of Chicago, the largest pork packers in the world, addressed a similiar complaint to this legation that they were debarred by the above mentioned decree from exporting their canned brawn to Germany, and they claimed that this particular preparation of pork was safe from the danger of trichinæ, as it had been subjected to a temperature of 250° Fahrenheit, a certificate of which could be sent with each shipment. They were advised, in reply, to lay their case before the Department of State, which would then instruct the legation to intervene in the matter as it should be thought best. I trust that I shall not be exceeding my instructions if I include Messrs. Armour & Co.'s grievances with those of Messrs. Archdeacon & Co., in my note to the foreign office.

I have, etc.,

H. SIDNEY EVERETT.

No. 59.

Mr. Everett to Mr. Frelinghuysen.

No. 308.] LEGATION OF THE UNITED STATES,
Berlin, March 27, 1882. (Received April 13.)

SIR: Referring to your instruction No. 301, of the 8th ultimo, and my reply to the same of the 23d ultimo, I have the honor now to inclose the correspondence between this legation and the foreign office on the subject of the importation of pork products, by which it will be seen that the German Government refuses to modify its prohibitive decree of the 25th June, 1880, so as to allow the consignment of pigs' tongues from Wm. Archdeacon & Co., and the brawn of Messrs. Armour & Co., of Chicago, to enter Germany.

I have, etc.,

H. SIDNEY EVERETT.

[Inclosure 1 in No. 308.]

Mr. Everett to Count Hatzfeldt.

LEGATION OF THE UNITED STATES,
Berlin, February 24, 1882.

The undersigned, chargé d'affaires ad interim of the United States of America, has the honor, under instructions from his Government, to call the attention of his excellency Count Hatzfeldt, provisional secretary of state for foreign affairs, to the subject of the prohibition of importations of the flesh of pigs into Germany under the imperial decree of the 25th June, 1880, and to respectfully inquire whether this decree is still in force, and, if so, whether it would include the tongues of pigs alone, which are exported from America packed in barrels. A large quantity of this article has been sent out to Germany by the firm of Archdeacon & Co., of Indiana, United States of America, but is now waiting at Altona on account of the refusal of the customs officials to allow it to pass, and the undersigned would respectfully ask if the consignment in question can not be allowed to enter after a proper inspection to make sure of its being in a suitable condition for food.

The undersigned, in this connection, would also ask whether such preparations of pork as are known as "brawn," in soldered tin cans, which have been subjected to a temperature of 250° Fahrenheit, would be allowed to enter Germany if they were accompanied by an official certificate that they have been subjected to this heat, which, it is believed by chemists, removes all danger from the germs of trichinæ.

The undersigned, while respectfully requesting an early reply, as the goods referred to are now at Altona awaiting the decision of the German Government, avails himself of this occasion to renew to his excellency the assurances of his most distinguished consideration.

H. SIDNEY EVERETT.

[Inclosure 2 in No. 308.—Translation.]

Mr. Busch to Mr. Everett.

FOREIGN OFFICE, *Berlin, March* 22, 1882.

The undersigned has the honor to inform Mr. H. Sidney Everett, chargé d'affaires of the United States of America, in reply to the esteemed note of the 24th ultimo, concerning a consignment of American pork which has been detained at Altona, that the prohibition of June 25, 1880, is still in force and is especially applicable to prepared pigs' tongues.

After a careful examination in the proper quarter of the facts in the case, it has not been considered feasible to make an exception to the existing prohibition in favor of the large consignment of pigs' tongues and the preparation known as "brawn" referred to in the esteemed note.

The undersigned avails, etc.,

BUSCH.

No. 60.

Mr. Brewer to Mr. Davis.

[Extract.]

No. 23.] UNITED STATES CONSULATE-GENERAL,
Berlin, March 30, 1882. (Received April 19.)

SIR: I have the honor of again calling your attention to the agitation which is going on in Germany, touching American meats and the importation of the same into this country. On the 18th of March last an editorial article appeared in The North German Gazette (Norddeutsche Allgemeine Zeitung), which clearly shows the means which are being used to prejudice the minds of the people here against the use of American meats. * * * So much has heretofore been written upon this

subject that I deem it useless to further comment. We have caused the editorial referred to to be translated, and herewith inclose the translation.

I am, &c.,

M. S. BREWER,
Consul-General.

[Inclosure in No. 23.—Extract from the North German Gazette of March 18, 1882.—Translation.]

American competition in meat, etc., which is of late more and more felt by German cattle breeders and dealers, makes a close examination of the extent which imports of American meats have assumed and are capable of assuming of interest and importance; while hitherto only lard, ham, bacon, and salt meats of all kinds were exported from America, recently exports to France and England of not only fresh meat, but also of live stock, have been made, and the enterprise has met with considerable success. As appears from an American journal, The Farmer, a union of marine insurance companies, "The Cattle Lloyds," has been formed, with the aim, by especial arrangements and provisions respecting the treatment and feeding of cattle while being transported, of reducing to a minimum the risks and losses in exporting cattle.

According to the statistical abstract of the United States the exports of meat from July 1, 1879, to July 1, 1880, were as follows:

	Value.
Bacon and ham, 759,773,109 pounds	$50,987,623
Fresh beef, 84,717,194 pounds	7,441,918
Salt meats, 45,237,472 pounds	2,881,047
Lard, 374,979,286 pounds	27,920,367
Fresh mutton, 2,335,858 pounds	176,218
Pork, 95,949,780 pounds	5,930,252
Live stock:	
Neat cattle, 182,756 head	13,344,195
Hogs, 83,434 head	421,089
Sheep, 209,137 head	892,647

In 1880 the imports of American meat into Germany were as follows:

Meat, fresh and prepared, ham, bacon, and sausage, to the value of $4,963,014; and lard to the value of $11,160,050.

Now if the steady increase of the importation of American meat into Germany continues, and notwithstanding the duties, which are altogether too low, it assumes, as the above figures go to prove, such an extent, it will be but a natural consequence that American meat products will drive the German out of the market.

The United States commercial agent at Geestemunde reported to his Government that owing to the importation of American provisions many butchers and meat dealers at Bremen and Hamburg were compelled to abandon that line of business, they being unable to stand the American competition; that American articles had totally destroyed the meat export trade at the German seaports, once so flourishing; that German vessels running between German and American ports took in supplies of beef, pork, and other provisions in America sufficient to last for the trip to Germany and back.

Of much more serious consequence, however, than the mere rapid increase of American meat importations into Germany, is the fact that the quality of such importations must, unfortunately, frequently be pronounced detrimental to health. This fact, in many cases admitted even by the American papers, such as the Lancet, Grocer, Herald, Davenport Daily Gazette, was most thoroughly discussed by one of the leading authorities in veterinary science, Professor Dr. Roloff, privy sanitary counselor and director of the Royal Veterinary School, who, in the sitting of the German Society for Public Hygiene, on the 16th of May, 1881, delivered an address on "American canned meat." The speaker showed that the consumption of American provisions in many cases was very dangerous; that diseases of animals were communicable to men, and therefore the meat of diseased animals must be considered as unfit for use or consumption; that in America the official inspection of animals is not provided for, and it can at best in but few cases be ascertained whether the meat is taken from diseased animals or not. Therefore, the consumption of American meats would, at any rate, be connected with more danger than the consumption of domestic meats, since a strict inspection of animals to be used for food is made in Germany.

As appears from statistics of the United States, from the 1st of July, 1876, to July 1, 1877, about 23,000,000 pounds of meat, and in each of the following years about

25,000,000 pounds were exported from the United States, 5,000,000 pounds of which went to Germany.

Mr. Köhler, a veterinary surgeon at Hamburg, has found among 55,800 hams and 22,700 sides of pork, 1 per cent. infected with trichinæ, while others found even 4 per cent. of meats imported from America infected with trichinæ. Dr. Billings, a young physician in America, found 154 among 2,700 hogs in America to be infected with trichinæ. Trichinosis, however, is not the only disease to be found, as many other cattle diseases exist in America, which are equally if not even more dangerous. Besides inflammation of the milt and "wild-fire," another disease, the "yard fever" (*Hoffieber*), had made its appearance in so malignant a form that in the State of Illinois alone 1,000,000 hogs died of it within one year; and it may safely be taken for granted that the meat of these animals was canned. Among American neat cattle malignant epidemic diseases are by no means on the decrease. The "Texas fever," a disease resembling the *rinderpest*, has been especially severe. No doubt can be had but that much of the flesh of cattle affected with such diseases has been used for corned beef. Mr. Meier, a chemist, has found lead in canned corned beef in large quantities.

It must be admitted that the transportation of cattle from Texas, Kansas, and Colorado, some 1,500 miles, to Chicago, where the meat is preserved, gives rise to many diseases, so that a very large percentage of the animals from which the canned corned beef is made may fairly be supposed to be diseased. Moreover, even American papers have called attention to the fact that not only horse meat but also the meat of diseased animals is regularly put upon the market. Canning meat assuredly does not destroy such diseased matter as may be contained in the meat, as many cases of sickness have ensued after the consumption of such canned meat. In addition to all these objections, it is a question whether this corned beef is of any advantage financially, or rather economically. A two-pound can contains about 700 grams of eatable meat, and costs 1.75 marks, which is much more than what domestic meat of the same kind costs.

The above important facts of so great public interest being established, doubts may be raised as to whether the ordinance of June 25, 1881, prohibiting the importation into Germany of chopped, minced, or otherwise prepared American pork is sufficient protection. Like apprehensions have induced Austria-Hungary to prohibit the importation of American meats and prepared meats of any kind whatever. The minister of foreign affairs at Vienna, in reply to a protest raised by the American minister against the prohibition of the importation of American meats, stated that the intent of the provisions of article 5 of the treaty of commerce and navigation, concluded August 27, 1829, could not possibly go so far as to prohibit the contracting parties from taking such measures as necessity should demand for the protection of their sanitary interests.

The sanitary congress, which met at Amsterdam in 1879, has unanimously pronounced the opinion that the importation into Europe of American pork of all kinds should be prohibited.

No. 61.

Mr. Sargent to Mr. Frelinghuysen.

[Extract.]

No. 74.] LEGATION OF THE UNITED STATES,
Berlin, November 6, 1882. (Received November 25.)

SIR: I have the honor to state that there is renewed agitation in Germany against the introduction of American pork, and I am informed that a bill has been prepared, with the Emperor's approval, to be submitted at the forthcoming session of the Reichstag, as a Government measure, to prohibit the importation of all American pork, including hams and live animals. Heretofore adverse action has only extended to sausages and chopped meat. This was excluded on the ground that it contained trichinæ, and from its nature, being hashed, these could not be detected in it. These articles of trade were excluded on the ground that the public health required it, and could not be otherwise guarded. * * * American pork enters into competition with the domestic article, and very largely, and is afforded much cheaper than the domestic

article can be. * * * The proposed law does not, as I am informed, proceed upon the theory that American pork is put in disguised forms, in which ordinary care would not detect disease, but assumes that all American pork and swine are dangerous from disease, and the task of discrimination among them is useless trouble. So far as I have been able to learn up to this time, American lard is not among the prohibited articles, although it embraces a large item in our exports to this country. Whether it will finally be excluded depends in some measure upon the power of the interests adversely affected by it. * * *

This exclusion of a great article of American product comes just at a time when trade reports show an unexampled export of German manufactured articles to the United States.

American competition is a sore point in Germany, and qualifies to some extent the views entertained here of America. Although we are large customers of the mass of German products, many of ours, including some manufactures, as well as wheat, etc., bear hard on certain interests here, and cause a clamor for special relief. This can not always be granted without an appearance of unfriendly discrimination against a friendly power. * * *

Of course this bill is now only proposed. There are interests here opposed to its enactment. Hamburg, Bremen, Stettin are largely concerned in the commercial aspects of the matter. They will be injured by the stoppage of the carrying trade in American pork. Merchants dealing in this article in its various forms will object. Some of the newspapers call attention to the fact that there would be reasons to regret the adoption of such a measure in that it would render meat dearer to the mass of people and restrict the consumption of meat by the poor. I inclose an article from the Tageblatt of the 3d instant, in which this view is taken, and wherein the cheapness of American pork in comparison to that raised here is given as a reason why the poor should have a chance to buy it. It also believes it yet unproven that the American article is so unwholesome as to justify its exclusion. I shall keep watch of this matter and further report to you its progress.

I have, etc.,

A. A. SARGENT.

[Inclosure 1 in No. 74.—Extract from the National Zeitung of November 2, 1882.—Translation.]

We are informed that, with the Emperor's approval, the draft of bill looking to the prohibition of the importation of American swine, pork, and sausages has been laid before the Bundesrath. The reasons given for this measure are the frequent cases of trichinosis, as well as the prevalence among the pigs of an epidemic disease which is alike dangerous to man and beast, and it is for these reasons that the imperial Government deems it expedient to prohibit their importation in the future.

[Inclosure 2 in No. 7.—Extract from the Berlin Tageblatt of November 3, 1882.—Translation.]

Should this prohibition go into effect we should have cause to regret it for the reason that it would result in making meat dearer to the mass of people, or even restrict them in its consumption. American meat undoubtedly is, and always was, cheaper than the domestic article, and the claim that it is unwholesome is not sufficiently proven to justify its exclusion from our market.

No. 62.

Mr. Sargent to Mr. Frelinghuysen.

[Extract.]

No. 77.] LEGATION OF THE UNITED STATES,
Berlin, November 13, 1882. (Received December 4.)

SIR: I have the honor, referring to my dispatch of November 6, being No. 74, referring to the exclusion of American hogs, pork, and lard from Germany, to now inclose two very exhaustive articles from Berlin Tribune of the 10th and 11th instant, with careful translations. The articles present very fairly the effects which the proposed exclusion would have upon the trade of Germany, and upon the subsistence of the poorer classes, and prove by irrefutable facts that the clamor against these productions is born of prejudice. * * * The articles are written in admirable temper, and it is to be hoped will have weight in showing to the German statesman and public the truth in a matter so important to the interests of both countries.

I have, etc.,

A. A. SARGENT.

[Inclosure in No. 77.—Extract from the Berlin Tribune of November 10 and 11, 1882.]

THE PROHIBITION ACT.

I.

An imperial decree was lately laid before the Imperial Diet (Bundesrath) regarding the prohibition of the importation of pigs, pork, and sausages from the United States. As regards American sausages, they were excluded from importation some time ago. This prohibition seems justifiable on the ground that the nature of this article of food renders an inspection difficult; whereas it is very easy in the case of pigs and pork. It would be hard to conceive why our meat supply from this quarter should encounter such opposition, if we ignored the fact that a more or less artificial agitation against the importation of American meat had been set on foot long ago. It is only too apparent that this agitation is more in the interest of our cattle breeders than of our poorer classes. Our farmers fail to understand that the development of our industries entails a constantly increasing demand for food from foreign sources to supply the people engaged in them. From a grain-exporting country we have finally become a grain-importing country, and we are likewise obliged to import a constantly increasing quantity of meat, the home supply having become inadequate to meet the demands of our growing population. This applies to all Europe, but more especially to Germany. Although the actual number of live-stock has greatly increased in the last fifty years, the relative number has materially diminished. In 1830 there were in Europe 70⅓ million beeves, 164 million sheep, and 42½ million swine; in 1875 there were 88⅛ million beeves, 191 million sheep, and 43½ million swine, the latter number, as will be seen, having remained almost unchanged. The relative number of live stock, on the other hand, gave to every 1,000 inhabitants in Europe:

	Beeves.	Sheep.	Swine.
1830	328	764	197
1880	310	682	156

Still more remarkable is the disparity between the increase of the population and the increase of live-stock in Germany. Whereas the population in the German Em-

pire in 1860, was 37.7 millions, and in 1870, 40.8 millions (about 10 per cent. increase), the number of live stock has increased only as follows:

	Beeves.	Sheep.	Swine.
1860	14,999,194	28,016,769	6,462,572
1873	15,776,702	24,994,406	7,124,088

According to these statistical results our importation of cattle and animal products will have to be increased year after year. The annual statistics for the German Empire show that there were, for instance, in the year 1861, 548,737 pigs imported; in 1880, almost twice that number, *i, e.*, 1,104,321. The past year this number was still further increased by the importation of sucking pigs to 1,272,816, whereas the exportation amounted to 804,867 head.

It can, therefore, no more be a question whether or not we are to import meat products, but from which source we can draw the best and cheapest article. Whereas formerly Russia and Austria-Hungary supplied the German markets with cattle, America, which is sending its enormous meat products to all Europe, has now also entered the lists with these States in Germany. For several years already a regular line of ships has been organized for the transportation of live-stock to England. As yet Germany is supplied principally with salted and corned beef, lard, and pork only. The United States are, by reason of their enormous wealth in cattle, peculiarly adapted to supply Europe with meat, to give us from their superabundance what we lack. In a comparatively short time the exportation of fresh meat in ships supplied with refrigerators has assumed astounding proportions. In 1875–'76 the export of fresh and salted meats amounted to 36½ million pounds, valued at $3,000,000; from 1878–'79, 54,000,000 pounds of fresh meat, valued at $4,800,000; and of salted meat 37,000,000 pounds, valued at $2,300,000. According to official statistics there were in 1878 in the United States:

Total for every 1,000 inhabitants:

Beeves, 30,523,400	653
Sheep, 35,740,500	764
Swine, 32,262,500	690

With this natural wealth is combined the advantage of a very good quality. The manner of fattening cattle in the extensive fields of ripening corn on which the cattle are driven, makes it possible for the Western farmer to raise cattle and render the meat of a quality which can not be attained in any other manner. In this manner the cheapness of the meat is explained. According to Neumann and Spallart, the best quality of beef brought 11 to 12 cents per pound in New York. The exportation of pork products (meat, hams, pork, and lard) has been the most extensive. In 1879 it reached the following enormous fiqures: 1,081,892,318 pounds, estimated at $77,356,947, but in 1880 these figures were exceeded by 1,326,157,330 pounds, valued at $100,799,414.

It is only too apparent that the importations of such quantities of meat for the European markets will tend to lower the price and bring it within the reach of the poorer classes. Under all circumstances the supply of the European markets with American meat has become a real blessing to our poor people, whose standard of life has been materially improved. When in February of last year the French Government prohibited the importation of American salted pork the price of meat rose in the following month in the seaports 25 per cent.; so also poultry and other animal food (see official report of Consul Bridgeland in Havre, July, 1881). It is now proposed to decree a similar prohibition in the German Empire.

If, therefore, we oppose this measure we do so solely because the prohibition of the kind proposed will rob the poorer classes of the means of procuring cheap and wholesome nourishment and sink them to a lower grade of subsistence. Lard, for instance, has become an important and extensively used article of food only through the American import; whereas German lard was formerly and is still a luxury. In 1870 American lard cost 70 marks per 100 kilograms (200 pounds); German lard 160 marks. At present the comparative prices of lard are 125 marks and 145 marks per 100 kilograms. In 1881 and the first half of 1882 Westphalian and Oldenberg hams cost 1.05 to 1.10 pfennige per pound; American hams 60 to 64 pfennige. At present German hams cost 1.05 to 1.10 pfennige; American 63 to 63½ pfennige per pound.

None the less these advantages would not weigh with us if it could be proven that the imported American meats, as far as the pork production is concerned, are injurious to health. In that case we would urge the exclusion of American meats as strenuously as we would in the case of Russian and Austro-Hungarian produce. But we could not, after a careful inquiry into the matter, discover that it was based on any-

thing more than an unfounded prejudice and a superficial knowledge in the premises, premising, however, that the agrarian interests formed no part of the question. In a second article we shall enter more into the details of this question.

II.

At the time the abolition of the duty on lard was discussed in the Reichstag, the director of the ministry, the present secretary of state, Burchard, declared that "Trichinæ can not be detected in lard, but lard can be made from pigs infected with diseases, and any one who has given the subject any attention knows that a disease prevails, or prevailed, to a large extent among the pigs in America, which was called the hog-cholera. Fears were openly expressed, and evidence has been obtained to show that these fears were well-grounded, that a large number of these pigs were killed and used in the manufacture of lard." We do not know whether the Government has since obtained more plausible reasons to justify the proposed prohibition, but the reasons as given in the above explanation are altogether inadequate. As far as the report of the employment of infected and dead pigs in the preparation of lard is concerned, it may be well to state that at the first appearances of the report, in February of last year, the New York Produce Exchange, forseeing the danger which threatened the export trade, made representations to the United States Government, which immediately ordered an investigation in the premises. At the instance of the then Secretary of State, Mr. Blaine, Mr. Michael Scanlan, chief of the statistical bureau, made a most searching investigation into the matter at Chicago and Cincinnati, the centers of these industries, the result of which was published in the spring of that year in a pamphlet entitled "American pork; result of an investigation made under authority of the Department of State of the United States." Mr. Scanlan had received strict injunctions to subject every phase of the pork industry, from the rearing of pigs to the manufacture of the pork products for consumption, to a most minute investigation. Accompanied by a stenographer and experts, he visited the principal breeders of pigs, traders, and exporters, packing-houses, cattle-yards, abattoirs, shippers, instituted meetings of those engaged in the trade, subjected them to cross-examination; in short, he fulfilled his mission so thoroughly that we lay down his report to Mr. Blaine (in which all the material was inclosed for his consideration) with the fullest conviction that here a thoroughly competent man has done all that could be done in the matter.

Mr. Scanlan first went to Illinois to investigate the extent of the "hog-cholera." Nobody made a secret of the fact that this disease infected the hogs for several years and caused sad havoc. The department of agriculture of that State published the following exhibits of the losses. (The first figures show the percentage of the hogs that died of the disease, the second proportional weight):

	Per cent.	Pounds.
1876	17	103
1877	12	104
1878	14	108
1879	6	98
1880	7	104

According to official statistics there were in the State of Illinois for several years past 3,133,557 swine, of which 227,259 died. Whilst on the one hand the percentage of loss during the last five years decreased from 17 to 7 per cent., it was ascertained that, on the other hand, all cases of death were attributed to hog-cholera, even if death had ensued from other causes. A classification of the cause of death was not made, not even in the case of death by accident. It was further ascertained that in the above statistics no difference was made between pigs and hogs. The name "pig" is applied to the sucking pig until it is six months old; it is only after this age that it becomes marketable, and is then called "hog." In Europe this distinction, as made repeatedly by Mr. Scanlan, is unknown, hence the groundless and exaggerated fears. The living weight of hogs marketed is between 250 and 260 pounds, whereas the average weight of the pigs that have died is 103 pounds, which is conclusive evidence that the hog-cholera carries off the sucking pigs. "But the presence or absence of this disease exercises, as has been proven, no influence whatever upon the quality of the hogs sent to market, or upon the quality of the meat obtained from them, because it is utterly impossible to dispose of a hog that died by disease or accident for purposes of consumption.

We have no time to enter into the details of the minute description of the breeding, fattening (in the open air, in corn-fields, and a continual supply of pure water), of the transportations. Anybody at all acquainted with the subject knows that it is impossible to conduct the whole business in a more rational manner. On the arrival of a shipment of pigs at the cattle-yards "the dead hogs (for in spite of all precautionary measures deaths in the cars through suffocation, exhaustion, and want of water,

will occur) are taken in charge by the officials of a company, which, by a concession, has the sole right to confiscate all dead animals within the cattle-yards. This company fixes such prices as is deemed proper to be paid to the owner of such pigs, a price so advantageous to the company that that alone would be a guarantee for the watchfulness of its employés. It is not probable that a dead pig would escape the vigilance of these interested parties." In Chicago the Union Rendering Company is established, having its establishment at Globe station, near Chicago, where the confiscated dead hogs are boiled down into tallow and grease (white and brown grease); the offal is used for manuring purposes. The grease is sold to soap factories.

There are houses in Chicago which, owing to excellent machinery and other technical arrangements, can kill and prepare 4,000 swine daily. The Anglo-American Packing and Provision Company has packed in the two seasons from March 1, 1880, to March 1, 1881, 1,166,377 hogs; Armour & Co., in Chicago, 1,210,092 head. In all there were packed in that city 5,693,569.* This is an exceptionally extensive industry. To assume that an industry which is carried on with such painstaking cleanliness and such order and regularity would expose its interest to the danger of ruining the entire product, by introducing diseased swine, would indicate a total ignorance of the principle underlying its prosperity. The American speculates, but he does not adulterate, for he well knows that he would ruin his trade forever. "To mix and to fix" is better understood in Europe than in America.

Regarding the trichinæ, the report affirms that the inhabitants of America are the greatest pork-consuming people in the world, and that the people in the rural districts eat it two or three times a day, without the slightest fear of trichinæ. Of course, only the most thoroughly boiled meat is eaten. In fact, our habit of eating meat in a raw state is looked upon in France, England, and America as barbarous. Of 40,000 deaths in Chicago only two were traced to trichinæ, and in Cincinnati none have died through this cause for a number of years. The report assumes the percentage of American swine infected with trichinæ, owing to the superiority in breeding and fattening, to be much smaller than the swine in any other part of the world. An obligatory inspection of swine can not be introduced in a city where daily sixteen to eighteen thousand hogs are slaughtered. An inspector of meat can inspect at the highest only thirty pigs per day, nor so many thoroughly. There is no reason to doubt the thoroughness of this official investigation unless we would doubt the integrity of Mr. Scanlan and the honesty of purpose of the United States Government. This our Government certainly will not do. We may, therefore, inquire are they cognizant of this investigation? Have they, nevertheless, other reasons for decreeing this prohibition? On reading the remarks made by Mr. Burchard, we are almost compelled to assume that he was specially ignorant of the true state of affairs, and that his assertions were based solely on hearsay. Of course, since the retirement of Mr. Delbrück, we are accustomed to see every new economic measure proposed by the Government end in a miserable failure; and on the whole it is not worth the while to devote any serious consideration to such general and superficial remarks as were made in the debate in the Reichstag on the 7th June by the opponents to Mr. Booth's bill.

While on the one hand a prohibition of the importation of American pork would deprive the population of a cheap and nutritious article of food, and destroy the pork and beef trade in the German sea-ports, the question arises on the other whether it is wise from a commercial point of view to introduce a prohibitive policy towards a country which is purchasing a constantly increasing portion of our manufactured wares. The United States have paid for 257,000,000 marks' worth of German wares between the months of October 1, 1881, to September 30, 1882; that is to say, for about 56,000,000 marks more than in 1880–'81. Will we then insist in forcing them to adopt measures of reprisal, in which we would certainly be the losers, because our exporting interests in America are greater? We fail to see in any quarter any cogent reason for the introduction of a prohibitory measure, for we can scarcely believe that the agrarian interests should alone be the motive for such a measure, for there are too many weighty and general interests involved in the question.

No. 63.

Mr. Bailey to Mr. Davis.

No. 86.] UNITED STATES CONSULATE,
Hamburg, November 20, 1882. (Received December 8.)

SIR: I have the honor herewith to transmit a translation of the leading editoral in the Hamburger Handelsblatt, of November 10, 1882, together with the original.

---

* We have in Germany a large packing-house of this kind—J. D. Koopman, Hamburg—which packs 130,000–140,000 German pigs yearly, exclusively for London.

The Handelsblatt is the chief commercial paper of Hamburg, and the article is from the well-known pen of its efficient and impartial editor, Mr. Franz Rosatzin.

For some time past there has been much discussion throughout Germany, and especially at the centers of commercial business, concerning the importations of pork and hams from the United States.

As is well known the people here do not eat as much meat of any kind as in America, chiefly on account of the high prices demanded for such articles.

The newspapers throughout the Empire have from time to time called the attention of their readers to the great danger (as they regarded it) to health and life in eating American pork and hams. Many educated and intelligent men have also promulgated the same notions, and now, go where you may, and converse with whom you please, you will generally find a wide-spread prejudice against this American article of consumption on account of the suspected trichinæ.

Of course there is no real foundation for all this fear and talk, but that it largely exists is indisputable.

It is also well known here to some, but not to the masses, that American pork and hams are imported and afterwards branded and sold as domestic meats, thereby enabling sales to be made at higher prices.

I have yet to learn of any deleterious effects or fatal cases arising from eating our pork and hams; but every American in Europe knows perfectly well the almost universal bias that exists here against all American productions; and our exports to Germany would be almost stayed were we not able to successfully compete in prices and superiority of article and manufactures.

If the proposed legislation is enacted, and the gate is shut against our pork, hams, and lard, I may venture the opinion that the people of Germany will soon realize the enhanced cost of living, and that the race is not essentially healthier and stronger for such exclusion.

I am, etc.,

J. M. BAILEY,
United States Consul.

Mr. Frelinghuysen to Mr. Sargent.

[Extract.]

No. 66.] DEPARTMENT OF STATE,
Washington, November, 28, 1882.

SIR: Your dispatch No. 74, of the 6th instant, in which you communicate to the Department the fact that you have received information to the effect that there is renewed agitation in Germany against the introduction of American pork, and that a bill has been prepared for submission to the Reichstag prohibiting the importation of this important article of our foreign commerce, has been received.

Thanking you for so promptly calling the attention of this Department to the matter, I have to request you to lose no suitable opportunity to oppose the measure and to show that it is groundless and unjust. * * *

I am, etc.,

FRED'K T. FRELINGHUYSEN.

No. 65.

Mr. Sargent to Mr. Frelinghuysen.

No. 85.] LEGATION OF THE UNITED STATES,
Berlin, December 11, 1882. (Received December 29.)

SIR: I have the honor to state that the following is the draft of the ordinance that has been presented to the German Federal Council for the prohibition of the importation of American pork products, viz:

1. The importation from America (the United States) of pigs, pork, bacon, and sausages of all kinds is forbidden until further notice.
2. The imperial chancellor is empowered to permit exceptions to this prohibitive rule, subject to the necessary measures of control.
3. The restrictive ordinance of the 25th June, 1880, with respect to the importation of pork and sausages from America, is abolished.
4. The present ordinance comes into force thirty days after its promulgation.

Commenting on the above, the Berlin correspondent of the London Times, usually well informed and impartial, but in this case evidently * * * catching at superficial appearances, has the following, under date of November 30, 1882:

The prohibitive ordinance of June, 1880, above referred to, only applied to the importation of minced pork and sausages, but not to hams, etc., it being supposed that microscopic examination of the latter would secure the exclusion of unwholesome consignments. But it has been found impossible to exercise a rigid surveillance in this respect, and as it is known that American pigs suffer much more than the German from trichinosis, as well as from the infectious disease called hog cholera, the German Government feels compelled to take effective measures against the introduction of the dreaded germs. It is urged that the commercial and financial importance of the measure is not considerable. Live pigs are not imported into Germany from America in very large numbers, and of hams, pork, etc., only about 3 per cent. of the total national consumption; so that the difference could easily be made up by native breeders, or be derived from other states, such as Russia.

The correspondent accepts, as in good faith, and apparently without personal examination, statements to the prejudice of American pork as compared with the German article, which are totally unfounded, as also that the trade interests involved are very slight.

On the other hand a very strong memorial, in admirable temper, had been presented to the Bundesrath at the time this correspondent sent his dispatch by a committee appointed by a meeting of merchants at Hamburg interested in the American pork trade. This memorial, a copy and translation of which I inclose, shows by facts and irrefutable logic that the pretense that American pork is peculiarly diseased is the result of misinformation, and that the German trade interests in this article are very great.

The basis of this memorial is the report on this whole subject, made in May, 1881, to the State Department. I do not know how fully this report was circulated in Germany, but its conclusive statements are used with great effect in this memorial, and are proffered by the latter to the minds it is most necessary to influence.

The memorial alleges that the principal danger from pork consumption is from the use of native pork, which can not be subjected to the inspection which can be applied to the imported article, and points out as a fact that notorious recent cases of infection have arisen from the use of German pork. It has been conveniently assumed heretofore that pork in which trichinæ were found was American, the proof of its being American being that it contained trichinæ. The singular fact is stated that German pork is sold by the producers at higher prices than the imported article, the producers then buying the cheaper American article for their personal use.

The effect on the poorer classes by depriving them of a food necessary for their physical and mental development is well pointed out, and the loss of revenue is shown, amounting to 2,271,480 marks, which must be supplied by taxation on other objects.

It is also shown that the loss to German shipping interests will be enormous, and the loss so occasioned will, in great measure, accrue to England, Holland, and Belgium.

I am more than ever satified that there is no real foundation * * * in fact * * * for the assumption that sanitary reasons require this measure of exclusion. Such documents as that I transmit are conclusive to any unbiased judgment. The facts are too well supported, the arguments are too logical, and the illustrations too persuasive to leave a doubt. There is the pressure of the pork raisers in Germany back of the measure of the landed interest that is taxed by the tariff on many articles of consumption, and demands a monopoly in this market, an artificial scarcity, that their goods may be enhanced in price.

* * * * * * *

Singularly just at this moment the German press discusses the message of the President to reduce our import duties, by which it expects a large increase of German exportation to America. That justice requires careful * * * consideration of American claims has not apparently occurred to them, at least not in connection with this sweeping exclusion of American pork products.

I have, etc.,

A. A. SARGENT.

[Inclosed in No. 85.—Translation.]

MEMORIAL OF HAMBURG MERCHANTS TO THE BUNDESRATH.

HAMBURG, *November* 21, 1882.

The undersigned, citizens and merchants of this city, respectfully beg leave to make the following representations to the honorable Bundesrath for its consideration:

It having come to our knowledge through reputable journals that it was proposed to finally prohibit all importations of American pigs and pork into the district of the German Customs Union for sanitary reasons, a meeting of merchants engaged in that trade in this city was called on the 14th instant, at which the undersigned were authorized to call the attention of the honorable Bundesrath to such objections which, in their opinion, the proposed measure would encounter, not only from the interests involved at the places engaged in the traffic, which interest, however, we admit at the outset, will always have to give way to those of a more national character, but also, in a far greater degree, where national, economical, and fiscal interests are at stake.

If the reasons which on a former occasion led to the imperial decree of June 25, 1880, regarding the exclusion of chopped pork and sausages from America from Germany, are now also to be made to apply for prohibitive measures against other portions of pigs, such as are less easily controlled, as for instance, hams, shoulders, etc., they can not possibly be advanced to justify the projected prohibition against salt pork and bacon, for the reason that salt pork is only edible in a boiled state and trichinæ are never found in bacon. If, however, there should still be some apprehension that trichinæ might be contained in the small strips of meat that occur in bacon, the danger of infection could be reduced to the slightest minimum by the introduction of an obligatory inspection of the meat, which could be controlled at the ports.

But a comparatively greater danger lies in the consumption of our home productions, which can not be so easily controlled, and in which every part of the pig is employed in the preparation of food, and it is from this source that most of the serious cases of infection of which we read in the papers originate, as, for instance, the late case in Brunswick. Although we can not believe that in influential quarters any importance is attached to the newspaper reports regarding hog cholera, which are actuated by interested motives, we can not, nevertheless, refrain from calling attention to the official report made in May of last year to the American Secretary of State,

Mr. Blaine, which sufficiently refutes the slightest suspicion that diseased pigs could be employed in the preparation of human food.

In this report, "Result of an investigation made under authority of the Department of State of the United States," it is remarked: "The fact can readily be attested to that all rumors and reports that American pigs that have died of disease, or even by accident, are ever sent into the market, either in the form of meat or lard, are founded on malice and ignorance; for it is quite impossible for the packer or lard renderer, however much he might be inclined to do so, to use the carcass of a diseased pig in the preparation of human food in any form that could escape detection even by the most superficial inspection."

The justness and warranty for the above remarks must be apparent to all who, like the undersigned, are acquainted with the true state of things from personal experience in the great American stock-yards, and it is this fact which, in our opinion, imposes upon us the duty of making the following statement. By far the greater part of bacon that is shippped from America comes from Chicago, which place, as is well known, has not its equal on the face of the earth as regards the magnitude of its pork-packing establishments. The shipments of pigs to that place frequently exceed 50,000 head per day, and there are often no less than 10,000 to 15,000 pigs packed, as is the technical term used for slaughtering and preparing the pigs for the market, per day. It must be quite apparent to anybody that so enormous an industry can only be conducted by means of the most careful classification of the work, and hence it follows that each separate branch of the work is done by such fixed rules that any deviation therefrom, as, for instance, the advancement of the interests of any single branch, would be highly prejudicial to the interests of the whole. The swine are driven into the stock-yards (cattle-yards of one square mile, English, in extent), and thence selected and purchased by agents, excellently trained and experienced in their calling, for the packers.

The company, a stock company with a large capital, to which the stock-yards belong, has a contract with another company, "the Union Rendering Company," according to which the latter company has the right and duty, and, as it derives large profits from it, the *interest* to claim for itself all diseased animals.

From this arrangement, which has existed for years, it will be seen that it is utterly impossible to bring a diseased pig into market, and consequently it would be impossible for a packer, even if he desired to do so, to purchase a diseased animal.

But the business of those packers, too, is so extensive, each one of them, and especially all of them who work for the European trade, are so well known, and are such wealthy people and have acquired so world-wide a reputation for their wares in consequence of their scrupulous, conscientious management of their business, that their own interests would seem to compel them to exercise unceasing vigilance against any other than the best quality of absolutely healthy pigs ever reaching the market under their names.

All cases, barrels, and boxes, in which their wares are sent to all parts, bear their firm's name, and it is known throughout the business world with what justifiable pride these firms strive to send nothing but the best article into market. They are well aware of the injury that would be done to their interests if they could be ever justly reproached with shipping a bad or even inferior article. By these principles they demonstrate anew the fact, that has been observed everywhere, that whenever a large commercial or industrial enterprise was made to flourish, it was done only by the application of honest principles, and herein lies, in our opinion, the best guaranty for the protection of the consumer.

The diseased animals are used exclusively in the preparation of grease, which, as is well known, is used only for technical purposes. Any attempt to mix it with pork productions designed for human food would lead to ruinous results to those engaged. Such a manipulation would be quite as foolish as an attempt on the part of a renowned brewery to mix a quantity of spoiled beer with that of an excellent quality, in order to increase the quantity. All the above details are not only well known to American and European business men, but any one having enough interest in the matter, and who has occasion to express an opinion upon it, can easily inform himself as to their authenticity.

If, in the face of such well-known facts, it has still been possible to circulate the reports that, in our day even, diseased animals were intentionally and systematically used in the preparation of human food at the great American packing-houses, we believe, until we have received proofs to the contrary, that they were circulated by mistake, and on the strength of misleading statements. If we may now be allowed to regard the question from a national, economical point of view, we are convinced that a *general* prohibition would be greatly prejudicial to the interests of a great number of consumers, more especially to the poorer classes of our fatherland, without any advantage accruing to the German agriculturist. Yes, it can even be proven that such a prohibition would be injurious to the real interests of the latter. Of meat (salted, fresh, and prepared) there was imported into Germany, in—

	Hundred weight.
1878	632,235
1879	800,788
1880	477,314
1881	378,580

Although the customs tariff makes no distinction between the kind of meat, it is nevertheless well known to the initiated, and also apparent from the returns from the places whence these articles are principally shipped (Bremen, Hamburg, Belgium, and from the United States direct) that bacon is an important factor in the foregoing figures.

Of late years the importation has been sensibly diminished, owing to the high prices which have been occasioned by the short crops in America. When, however, prices were moderate, and the shipments more extensive, it was possible to supply a large portion of our poorer classes, and notably in the industrial district of Germany, with an article of animal food in the form of cheap American bacon, so useful to this class, and so necessary to their physical and intellectual development. The same state of things will again result from an increase in American crops, and nothing, in our opinion, could justify a measure which would deprive the classes in question of this so important article of food—not even a consideration for the interests of the German agriculturists—for what the latter produce in pigs and pork preparations brings such high prices, and during the period of cheap American pork brought such high prices, that our poorer classes could never think of purchasing domestic hams or bacon and lard to any extent worth mentioning.

On the contrary it has frequently happened—and herein lies the proof of the above made statement—that the unrestricted importation of bacon has redounded to the interests of the German agriculturists; that land-owners and farmers have sold the swine raised on their lands for the high prices which were paid in the markets (the price seldom fell much below 50 marks for 100 pounds, no matter whether American bacon cost 30 or 75 marks per hundred pounds), and bought for their own use the cheaper American bacon.

If, therefore, the sanitary reasons advanced for the prohibition and consumption of American bacon are not tenable, whereas on the other hand the interests of the poorer classes would seem to demand imperatively an unrestricted importation of this important article of food; and experience has taught us, moreover, that such importation can in no way be prejudicial to German agriculture—we may be pardoned for pointing out the fact that through a prohibitive measure the income from this source, which amounted to, in—

	Marks.
1878	948,359
1879	1,736,219
1880	2,863,884
1881	2,271,480

would cease, and the deficiency would probably have to be made good by the imposition of heavier duties upon other articles.

We would also, in conclusion, refer to the enormous loss accruing to the German shipping interests (even the provisioning of the ships, as far as this article of food is concerned, would have to be done in foreign ports), as also to the extensive intermediate traffic in the article in question with Scandinavia and Denmark by such prohibition. This traffic, in case the transit trade were not also prohibited by an especial measure, would be unnecessarily lost to German shipping and German trade and be diverted into Belgian, Hollandish, and English channels.

We therefore take the liberty at this early day to express the hope that, in case a general prohibition should be considered inevitable, the honorable Bundesrath will be pleased to consider as feasible the request to retain to the seaports the international traffic in the articles in question as soon as the latter shall have adopted such measures that will prevent any of the prohibited articles from reaching the German markets.

As any other motives for the contemplated prohibition than those alluded to have not been made public, as far as we are aware, we are constrained to confine ourselves to the foregoing statements and remarks, to which, however, we respectfully beg leave to make such further additions as occasion may offer.

We express the hope, however, that the honorable Bundesrath, in giving all due consideration to the German interests involved in the question, will come to the conclusion that the said interests do not require a prohibition of the importation of American pork and bacon; and that these two articles may be exempted from any prohibitive measure that may by adopted.

With all due respect for the honorable Bundesrath,

HEINRICH PFEIFFER.
ED'M J. A. SIEMENS.
GUSTAV J. J. WITT.

No. 66.

Mr. Sargent to Mr. Frelinghuysen.

[Extract.]

No. 87.] LEGATION OF THE UNITED STATES.

Berlin, December 18, 1882. (Received January 5, 1883.)

SIR: I have the honor to state, referring to my dispatches recently sent, stating the agitations for and against the prohibition of the importation of American swine products into Germany, that strong protests, similar to that of the Hamburg merchants, have been sent from Bremen and several other cities interested in the commercial aspects of the matter.

During the past week Herr Richter, the distinguished leader of the Progressist party in the Reichstag, made a powerful speech in opposition to the proposed exclusion, denying the soundness of the reasons adduced for such action, and also the power of the Federal Council to make the prohibition without the sanction of the Reichstag.

I presume you are aware that the proposition is pending in the Bundesrath, and is to be affected by a simple order or decree of that body, and is not to be adopted in the form of a law. In fact, it could not gain sanction as a law. In a more popular body, like the Reichstag, it would surely be defeated.

The power is claimed for the Bundesrath under an article in the tariff laws of July 1, 1869, which reads as follows:

> ARTICLE 1. All productions of the nature of art or industrial productions may be imported into, exported from, or transported through the entire district of the customs union.
>
> ART. 2. Exceptional measures may be temporarily adopted under extraordinary circumstances for the prevention of dangerous contagious diseases, or for other sanitary or precautionary reasons, for a part or the whole district.

The power herein granted is obviously for temporary purposes and for emergencies. Some great and unusual calamity impending must have been in the minds of the legislators. * * * [No] emergency now exists nor disaster impends from the importation of American pigs or pork; certainly not one so threatening that there is not ample time for ordinary legislative processes.

In view of these obvious considerations it is alleged that the Progressist party intends making an interpellation in the Reichstag regarding the threatened prohibition of the importation of American pork products. This interpellation I find reported in one of the local papers as follows:

> In reference to the project now pending before the Bundesrath to prohibit the future introduction of American pork products, the undersigned would address the following inquiries to the imperial chancellor:
>
> 1. Has the Bundesrath caused any statistics to be collected showing to what extent American meat products, especially bacon, are necessary articles of food to a large class of the poorer people in different parts of the country?
>
> 2. Does the Bundesrath propose to cause special statistics to be collected relating to the alleged unwholesome character of the American meat products at the port of entry and at the place of origin of the article?
>
> 3. Does the Bundesrath, apart from the question of a continual sanitary consideration in the premises, hold itself authorized to adopt measures restricting importations without the concurrence of the imperial Parliament, by virtue of the right vested, for temporary circumstances only, in the Bundesrath by article 2 of the tariff laws of July 1, 1869.

These questions go to the root of the matter. The considerations which they raise can hardly be ignored in the Bundesrath, though they may not prevail to prevent the foreshadowed action.

I have, etc.,

A. A. SARGENT.

No. 67.

Mr. Sargent to Mr. Frelinghuysen.

[Extract.]

No. 90.] LEGATION OF THE UNITED STATES,
Berlin, January 1, 1883. (Received January 19, 1883.)

SIR: I have the honor to report that a very strong feeling of opposition has been aroused in Berlin and other German cities as well as in the manufacturing districts generally against the threatened exclusion of American pork products.

Strong protests are being sent in to the Bundesrath, and committees of merchants and others have visited the capital to protest against the measure. Editorials in leading papers have fully exposed the falsity of the excuses for exclusion.

If this were strictly a Government of public opinion in the American sense, these general public appeals, backed as they are by solid reasoning upon indisputable facts, would prevail, and the project would be abandoned. But this is far from being the case, and the prospect is stronger than ever that the decree will be issued. I am informed that Mr. Bottischer, the imperial minister of the interior, informed a protesting delegation during the past week that the measure would certainly be adopted.

It is believed in some well-informed quarters that this will be done in a day or two, to anticipate the impending discussion in the Reichstag, which was adjourned until its next sitting, about the middle of January, when the opponents of prohibition will undoubtedly make a strong showing against both the policy and the legality of the measure.

There is considerable feeling on the part of the opponents of prohibition in the Reichstag in view of this threatened snap judgment, and a leading member of that body characterized it to me as "a mean trick."

The pretense of sanitary reasons is becoming the thinnest veil, which has been torn into shreds, and which is now apparently only insisted on as an excuse to the United States. The Berliner Tribune, a powerful organ of the Progressists, clearly showed in an article published on Saturday, the 30th ultimo, that it appears from official reports that from 1877 to 1879 there was an average of thirty-three deaths per year in Germany from trichinosis, and that the average has increased since then; and yet it asserts there has not proved to be one case of death, or even disease, from eating American pork.

On the other hand, it is shown that the methods of preparing export meat in the United States are absolute death to trichinæ. It says that in every case of death or disease from eating pork it has been from the use of freshly-slaughtered German, Russian, or Hungarian pork. It holds that the American assertion that diseased meat is never exported from our country is maintained, and such meat is too rapid in decomposition to be prepared for export. In a word, as it shows, there is no sanitary objection to American pork. It gives the true explanation of the agitation by saying that it is a thorn in the flesh of German proprietors that a pound of American pork can be sold here for 10 pfennige less than the home product.

If the move of keeping out the half million cwts. of American pork, imported into Germany yearly, could succeed, then their greatest rival is out of the way, and they will fix prices to suit themselves.

Of course, if the public is not to be benefited, the great landholders are.

If the price of pork rises 5 pfennige per pound, a hog of 300 pounds gains 15 marks in value on present prices, and the result is that the large farmers who slaughter yearly from 500 to 1,000 head have a gain of 7,500 to 15,000 marks.

It is no wonder that the hog raiser works in the interest of his pocket-book against the importation of American meat. "But woe to the poor, who pay to him the 15,000 marks! Woe to the hungry, who imagine that it is a duty of the Government not to make the means of living exorbitant!"

The falsity of the pretense of sanitary reasons, and the real motives, are here clearly exhibited, directly under the eyes of the council.

A similar showing is made in yesterday's National Zeitung. Both papers show that the present is, above all, an improper time for such a measure. There exists no reason for helping German agriculturists, for this year's harvest has been remarkably abundant, while American crops have fallen off, and consequently American exports to Germany, leaving the German farmers a nearly clear field and good prices; and these conditions can not be changed until the harvest of 1883.

But Europe needs American agricultural products, for it can not feed itself, but must pay for these with its labor.

It is also pointed out that Germany is likely to be a great gainer by the proposed reduction of the American tariff.

The Americans cannot be convinced that the meat which they freely eat without injury is unwholesome, or that the measure is not a selfish, injurious blow at their interests. The danger of reprisals is pointed out; and it is suggestively stated by the Tribune that because the French have recently been buying railroad supplies of Austria instead of Germany, probably getting them cheaper, a mere private corporation business, not involving governmental action, the German press has been clamorous for reprisals by overtaxing champagnes.

If the action of a few Frenchmen can raise such stormy calls for reprisals, what will the Americans think on seeing their pork prohibited while Russian pork is allowed to come in?

The Tribune sees in this measure new powder for the guns of the social democrats, and deprecates the adoption of a measure where the gains must be so little, and the damage is certain to be so great.

I have given the substance of these newspaper articles that you may see that there is no lack of light shed on the subject.

I have sought by every means to oppose the measure, and have lost no opportunity to expose its true character and to show that the health of American swine is unimpaired, and American swine products are entirely wholesome. I do not think these latter propositions are now seriously disputed by people of intelligence. The movement is merely selfish, and in disregard of the interests of the United States. The only argument which would be effective against the measure would be the fear of reprisals. We could not insist upon any people receiving from us articles deleterious to health, but we can as little submit to the exclusion of our products upon false pretenses—pretenses so obviously false as in this instance.

I have, etc.,

A. A. SARGENT.

No. 68.

Mr. Wamer to Mr. Davis.

No. 31.] UNITED STATES COMMERCIAL AGENCY,
Dusseldorf, January 10, 1883. (Received February 19.)

SIR: Judging from the tone of the large number of petitions that have recently been addressed to the German Federal Council, praying for a repeal of the law it has in contemplation of enforcing against the importation of American hog meat into the German Empire, a certain class of manufacturers here have felt no little anxiety that should the German Government persist in adopting any such stringent measures the American Government might retaliate in a manner that would work very detrimental to the importation of a certain kind of their goods into the United States. This hint toward retaliation by many of our American journals has had a decided effect in stirring up the Germans to feel wherein their interest lies, and they have perceived that the American nation is not that kind to accept anything like the sort of reciprocation their Government proposes to offer by excluding from their markets good and wholesome American products.

Considering the great interest that is now being manifested on the part of the German Government in its offering every possible encouragement to the extending of Germany's exporting trade, and as the industrial classes of Germany, chiefly of the iron and woolen industries, are wide awake to the increasing demand for their products in the United States and the bright prospects for them in the future should the tariff on foreign goods to the United States be lowered, there is no wonder that these people should be greatly desirous of putting a cessation to any unwise legislation by their Government that would exert the slightest influence in arresting in any way this thriving business with our country.

A glance at the value of the exports to the United States from Germany for the years 1881–'82 will show the increase above referred to. The total value of exports for the year ending 1881 was $52,989,181, and for 1882, $56,368,542. The values of woolen goods for the same years were $4,815,376 and $5,441,408, respectively, showing a trifle over half a million of dollars in favor of this one class of goods.

The petitions say that to prevent the importation of American hog meat into Germany would be a great deprivation to the indigent laboring classes in the industrial districts, who could not afford to pay anything like the prices that would necessarily be charged for the home production, and would have to live and work on food into which meat would not enter. They (the petitioners) further claim that all the excitement about the American meat containing trichinæ is to be attributed chiefly to gross exaggerations, without any foundation for proof, and that the German hog meat is just as liable to be diseased as the American.

In the iron mining and smelting district of Aix la Chapelle the petitioners have been very earnest in their appeals. They say the society for furnishing provisions to the workingmen in the iron works of Altenberg issued to their laborers, during the years 1874 to 1882, 428,404 pounds of the American hog meat and its products, and the mining works in the Eifel consumed 42,130 pounds from 1878 to 1882, which was purchased by the workmen in quantities varying from a half to one pound at a time. Now, as the supporters of this prohibitory law claim that *all* the American hog meat that is imported into Germany contains

from 1 to 5 per cent. of trichinæ, or is otherwise diseased, it will be seen that of the above amounts, even if reckoned as containing only 1 per cent., there would have been something like 4,704 pounds of trichina meat consumed by these people—enough to have afflicted every one of them with trichinosis. But there was not a single person that was so affected.

There were imported into Prussia, *via* Antwerp, from the year 1871 to 1881, 138,301,590 pounds of American hog meat and its products. Now, if all this amount has contained even 1 per cent. of trichinæ, it can be reasonably supposed that large numbers of Prussia's laboring people would have become afflicted with trichinosis.

If, after all, the proofs contained in the above petitions, which have been presented to the German federal council in the interest of the working population of Germany, should not have the desired effect, I think the American Government would be perfectly justified in inaugurating some such sort of retaliatory measures as suggested by many American newspapers and feared here.

I have heard it hinted by men whose opinions I have no reason for doubting that the chief object of the prohibition of the importation of American hog meat into the German markets is to force the population to raise its own pork.

Commercial Agent.

No. 69.

Mr. Frelinghuysen to Mr. Sargent.

No. 74.] DEPARTMENT OF STATE,
Washington, January 12, 1883.

SIR: Acknowledging the receipt of your very interesting and instructive dispatch No. 87, of the 18th ultimo, in which you give an account of the method in which it is proposed to accomplish the exclusion of American pork from Germany, I have to request you to lose no occasion to compass the abandonment of the restrictive and unjust measures now proposed.

I am, etc.,

FRED'K T. FRELINGHUYSEN.

No. 70.

Mr. Sargent to Mr. Frelinghuysen.

[Extract.]

No. 96.] LEGATION OF THE UNITED STATES,
Berlin, January 13, 1883. (Received February 19.)

SIR: I have the honor to state that an interesting debate occurred at the session of the Reichstag on the 9th instant, upon the mooted prohibition of the importation of American pigs and pork by decree of the Bundesrath, of which I inclose a full report, without translation. This debate arose upon an interpellation addressed to the chancellor by

Herr Richter on behalf of the Progressist party, a copy of which is given in my dispatch No. 87, of December 18, 1882.

Herr Richter opened the debate by saying that the interpellation is in the interest of a large circle of poor people. He showed how injurious the previous prohibition of American sausages and chopped meats had been, and dwelt upon the entire lack of any effort by the chancellor to collect or present any evidence of the unsoundness of American pork, or that any diseases had been engendered by its consumption. He alluded to proofs accessible that cases of trichinosis observed arise from the use of German chopped meat fresh from the butcher. The only source of information of the chancellor was a document written probably as an advertisement, * * * and full of sensational stories. Goulard is himself quoted in the chancellor's memorial as an authority; yet the witness would not be for a total exclusion, but for a prohibition only of such importation as he did not profit by. A collection of the advertisements of the "Golden 110" (a cheap clothing store in Berlin) would be as good evidence in New York of the condition of German trade as this circular is here of any fact in American production. On such flimsy evidence was a measure proposed that would cut deep into German food relations. He denied that American pork furnishes only three per cent. of the German meat food, and that the deficiency could be easily made up otherwise, for in some parts of Germany the imports represent a very considerable percentage of meat nourishment. Consumers of beef might eat a small percentage of pork, but the poor classes used it wholly, and it was a large percentage of their subsistence. A food association of mining workmen near Aix states that 80 kilograms of American meat is used per head every year. Often the piece of American bacon is the only animal food in the dish which the wife brings to her husband for his noon meal at his place of work. Already the high price of American products causes the Westphalian workman to subsist on the refuse of sausage factories, or go without animal food. The short maize crop had raised the price of American pork, but a good harvest would put this food cheaply in the reach of the German poor.

He also challenged the right of the Bundesrath to make the prohibition under the tariff law of 1869, its only pretense of authority, which gives only the right of temporary suspension in cases of emergency. The whole speech was admirable and convincing.

Upon its conclusion, and as if to close the discussion, the ministerial director, Marcard, arose and answered the interpellation at once, not responding to any of the propositions of law or fact propounded, but declaring that the Bundesrath was still investigating the matter and had come to no conclusion, and no one had a right to announce its intentions in advance; that its decision would undoubtedly be laid before the Reichstag after it was arrived at.

Deputy Kapp was not disposed to have the interpellation so easily disposed of. He declared that the proposition of the Bundesrath is based on the allegation that American pork is dangerous, and the proof of this is not furnished. The Bundesrath had not obtained sufficient information. This it could have easily done, for the American Goverment had published the result of official investigations, especially the collective experience of Chicago and Cincinnati. The business amounted in 1880 to 100,799,414 tons. So great a trade could not take place unless it were conducted on the most conscientious and scientific principles. The continuation of the trade was only guaranteed by furnishing the best article. He regretted that so high an official as State Secretary

Burchard had promulgated such a groundless assertion as that cholera had broken out among American pigs, and had therefore demanded prohibition for sanitary reasons. Competent judges would have told him that cholera only affects young swine, which are never sent to market, as they pay too little. These also, when dead from disease decompose so soon that it is not possible to turn them into lard, and the pigs are used for grease and soap. He showed the care used in feeding and handling American pigs. He thought no one would be surprised at the manipulations of Messrs. G———. It would not be surprising if these gentlemen spread a report that they had been spoken of by the Reichstag with high praise. A decisive question with him was, Is it desirable to disturb the good relations with the American Government, which is engaged in reducing the tariff? Were this proposal now the law the working classes would be less physically able to serve the Fatherland. He trusted the council of state would abandon the injurious step.

The chancellor, Prince Bismarck, arrived during this speech to announce certain relief proposed by the Emperor for the flooded districts. He made a few incidental remarks upon the interpellation, and called pork "the poor man's trichina." He excused himself on the plea of ill health from speaking at length, and for that reason denied himself the pleasure of refutation. His remarks show that he was not moved by the arguments and facts presented by the opposition and had no disposition to relax his purpose to secure the exclusion of American pork products. * * *

When the debate was resumed Dr. Frege spoke in favor of exclusion, saying the speech of Mr. Kapp was entirely in the American to the exclusion of German interests. He believed the great quantity of hogs slaughtered made it impossible to eliminate the diseased. The German poor were not dependent on this food, as this pork is only 3 per cent. of their food.

Secretary Burchard defended his statement as to the danger from hog cholera by citations from the New Yorker Staats Zeitung, stating that the business is no longer a clean one, and alluding generally to scientific opinion.

Bundescommissioner Dr. Köhler asserted that it is established that, for instance, in Dresden, 10 per cent. of the American hams had trichinosis. Similar instances occurred in Magdeburg, Brunswick, Gestemünde, etc. The health officials have also announced that 3, 5, and 8 per cent. have trichinosis, and that pickling and smoking are not sufficient to destroy this. There are cases of fatal sickness as the result of eating this meat, especially at Bremen, Bostock, etc. He doubted if distress to the poorer classes would arise from exclusion, which would be a grave matter, but the duty of the Government is first to prevent dangerous articles from being imported.

Dr. Barth said he was not convinced by anything that had been said that there was danger from American meats. He carefully refuted the statements of the previous speaker in regard to the prevalence and consequences of trichinosis in American pork, and said the consumers of the food petitioned against prohibition, and the only ones in favor of it are the Bundesrath and some interested hog-breeders.

In France and Austria-Hungary the prohibition was imposed before the investigation by the American Government. In the latter country it is about to be taken off. If Germany now imposed it, after the investigation, it would act very offensively to the American Government, and drive them to reprisals, such as there were in 1872, on the part of the United States against France. Deputy Kapp did not, as Deputy Frege

charged him, serve American, but German interests, as he warned them before such reprisals. The danger which the use of brandy brings with it is immeasurably greater than that evoked by the use of American pork. In the Berlin hospital in 1878–'79 there were 623 persons suffering from chronic alcoholism, of which 40 died. Yet nobody would deduce from that the necessity of forbidding the use of alcohol. In the interest of the relations with America, of the laboring classes and commerce, he invoked further serious test by the Bundesrath before excluding American pork.

Deputy Ahlhorn said the working classes are accustomed to this food. He had collected many reports and made many investigations, but not a single case had been authenticated whose sickness has been the result of using American lard or bacon. If this measure is deemed necessary it should be brought before the Reichstag for legislation. It is a question of the indispensable food for the poor man, who is already injured by the new taxes.

Here the debate on the interpellation closed. The vigor with which it was wagered by the opponents of the measure and the fact that very serious interests, commercial and others, are affected by it may have the effect of preventing the decree, though I am not sanguine of that at this writing.

I have, etc.,

A. A. SARGENT.

No. 71.

Mr. Fox to Mr. Davis.

No. 192.] UNITED STATES CONSULATE,
Brunswick, January 15, 1883. (Received February 9.)

SIR: I have the honor to inclose an article, with translation, which I take from the Magdeburger Zeitung of January 12. It is not in my province to even refer to the political reasons which the Government had for proposing the prohibitory measures against American meats. It must, however, be very satisfactory to our exporters to note that the result of the discussion has been to bring forth indisputable evidence of the fact that American pork is an absolute necessity in Germany, and the statement coming from such recognized authority as Professor Virchow must carry conviction that the German health is not jeopardized by eating it.

I am, etc.,

WILLIAMS C. FOX,
United States Consul.

[Inclosure in No. 192.—Extract from the Magdeburger Zeitung of January 12, 1883.—Translation.]

The following letter from Iserlohn, received by a delegate (of the Imperial Parliament) on the day following the debate in regard to the measure prohibiting the importation of meats, has been handed us, and we publish the same as supplementary to the discussion in question:

"In our mutual benefit store in this place—whose business manager I am—we have for the past ten years kept American bacon in stock, during which time we have sold some 300,000 pounds. In the other local business establishments about 700,000 pounds have been sold, and not one single case of trichinosis has occurred. A prohibitory decree would rob the workman of a good, healthy, and thereby a cheap nourishment. Three years ago, the then newly imposed duty had the effect of greatly in-

creasing the price. Before the introduction of the duty I bought American bacon for 34–35 pf. per pound; Westphalian bacon for 45–50 pf. per pound; to-day the same costs: American bacon, 62 pf. per pound; Westphalian bacon, 84 pf. per pound.

"We formerly sold 1,500–2,000 pounds, to-day only about 500 pounds, monthly. A prohibitory measure would simply so increase the price of Westphalian bacon that it would be an impossibility for the workmen to purchase this healthy article of food."

* * * * * * *

It is of great importance that Professor Virchow, who is recognized as the leading authority on the subject of trichinæ, is against the prohibition. He says that with absolute certainty he has not been able to find one case of trichinosis caused by American bacon or ham, and that he has only heard of one, viz, in 1874. It appears that the American trichina loses its injurious properties through smoking, salting, pickling, and especially through the long journey. This fact has been certified to by Dr. Schulze, Government medical counsellor in Minden, in his report for the year 1880. He says: "The assertion that the trichinæ loses its infectious properties through transportation, smoking, and salting must certainly be maintained, since, notwithstanding the presence of trichinæ, no case of illness from eating such meat has been recorded."

No. 72.

Mr. Wamer to Mr. Davis.

No. 32.] UNITED STATES COMMERCIAL AGENCY,
Dusseldorf, January 22, 1883. (Received February 19.)

SIR: The speech delivered in the German Imperial Diet at Berlin on the 10th of this month by one of its distiuguished members, Herr Eugen Richter, a representative from the district of Hagen, Westfalen, is so strong in its plea against the passage of a decree by the German Government, prohibiting the importation of American hog meat and its products into the German Empire, that I have thought it important to furnish the Department of State with a translation of the same. It is also based on similar protests against the prohibition of the importation as contained in my dispatch No. 31, transmitted recently to the Department.

WM. D. WAMER.

[Inclosure in No. 32.—Extract from the Kolnischen Zeitung.—Translation.]

MR. RICHTER'S SPEECH.

GENTLEMEN: The interpellation is offered in the interest of the population of extensive districts. As a representative of the people of the district of Hagen, who are greatly interested in this matter, I support this interpellation.

On the 21st of November last year proposals were made to the German Federal Council, by the imperial chancellor, to issue a decree of prohibition against the importation of American pork and its products into the German Empire. The prohibition will cut very deeply into the food supply of the population, inasmuch as there are many hundred thousands of *centner* (equivalent to a little more than one hundred pounds) that will be affected annually by this prohibition of the importation.

It was no later than the year 1880 that the Federal Council issued a decree in reference to the importation of American sausages and hacked meat, in which it was expressly prescribed that the importation of whole hams and sides would be permitted. Now the imperial chancellor bases his proposal in the Federal Council upon the unhealthfulness of the products of American meat, particularly of the hams and bacon. But since the year 1880 nothing has become known to either the consumers in these districts that has given cause for any complaint against the use of the American hog meat on account of its unwholesomeness or to the officials in those communities, whose official duty it is to examine into everything that is supposed to be injurious to the health of the people where the American products are generally enjoyed.

Some few years ago the scientific commission of the Prussian ministry for sanitary affairs also declared itself against such a prohibition.

Since then other petitions to the imperial chancellor have become known, which have been presented at the request of various agricultural societies, aiming at such a prohibition of American products. The memorial of the imperial chancellor to the Federal Council first proves that the injury to health of these articles is by their producing the trichina disease, and secondly, by the cholera among American hogs.

In reference to the trichina disease, the memorial says that the danger from the eating of American hog meat is at least six times greater than from the eating of the home products.

I will not go into the particulars from which this conclusion has been drawn, since the simple question is this: If of these articles hundreds of thousands of *centner* are annually consumed, and that thereby the danger is six times greater than with the domestic ones, where are the sick, where are the dead, which in consequence of this quality of the American hog meat we have to complain over?

The memorial of the Federal Council simply says: Undoubtedly diseases have been declared by the control at the places of import, in Germany, in consequence of the eating of American hog meat. The memorial does not make the slightest attempt to specify in numbers a single case.

* * * The superior medical adviser (*obermedicinalrat*), Eulenburg, who imparts his advice in the ministry of the interior, and who is a distinguished authority on sanitary matters, quotes from a report made by him in 1881 the cases where sickness and death have occurred, and I hereby declare that in all these cases not a single case of sickness or of death can in any way be attributed to the diseased condition either of the American or German hams and bacon. [Hear! Hear!] There are but two cases of sickness given as having been produced by sausages, and there is no proof indicating that American import products were in any way concerned in them.

The chief causes of the trichina disease have been in consequence of the eating of hacked raw meat, and the three cases there noted are much more important than all the rest of the diseases together.

On the ground of these experiences the eating of hacked raw hog meat could be forbidden, but not the importation of hams and bacon, which play no part in these statistics.

Now, I have conversed with my friend Virchow [the great German pathologist] concerning this matter. He is known for his strict demands, which he chiefly places on the police sanitary board, and, again, through the great attention which he has given from the beginning in the investigation of the trichina disease. He is in certain circles of the butchers and slaughterers one of the best interested and most hated of men. My colleague, Virchow, has authorized me to declare that he considers this prohibition of the importation in no manner justified. [Hear! Hear!] He says he has investigated this matter very thoroughly, and has taken the greatest pains, and up to the present has not been able to find out but one case, and that was in the year 1874, that is eight years ago, in which the trichina disease was produced by the eating of the American hog meat.

A valuable testimony is furthermore the report of a coöperative association, which states that the association had ordered in one year in its district 212,200 kilograms of American hog meat, and that not one single case of sickness has occurred, although, according to the usual calculation, 4,704 purchasers have received bacon containing trichinæ.

If on the one side it is acknowledged that there exist in a comparatively large number of the sides of bacon trichinæ, and upon the other side none, or only single cases of sickness can be proved, then the conclusion is evident that in consequence of the salting, pickling, smoking, the long transportation, and in general the whole manipulation to which this article is subjected previous to its being placed on the market, the trichinæ are either no longer living or no more in condition when they reach the human organism to produce in any way dangerous effects. This conclusion is confirmed by a statement of Dr. Schülz, government medical adviser at Minden, in whose district a large part of the investigation of American bacon has been made, and who says:

"The assertion that the trichinæ which appear in great masses in American prepared meats have lost, through the manipulation to which they are subjected, their power of reproduction in the human system, must still be maintained; that notwithstanding the enormous consumption of these meats there has not been a single case in which the sharpest kind of a diagnosis has revealed the presence of trichinæ."

In the face of this statement one may better conclude that the investigation of American hams and bacon is superfluous rather than its being insufficient.

Nevertheless, I will make no objection against the investigation of American bacon and hams, through official inspectors. It may be necessary to satisfy the consumers, and to the rejection of bacon that is more or less objectionable.

But when it is said that among the examined bacon are so many trichinæ, it may rightly be said that this investigation of the American import is much easier than the investigation of hogs butchered in Germany, for these are scattered over the whole

country, while the importation comes *en masse* only from certain places, and where the regulations for the investigation are at hand. * * * Now the memorial continues:

"Yes, even if the American bacon should be examined at the port of entries it would still be difficult to destroy the rejected bacon in a manner to prevent contagion; dogs, rats, and mice could transmit the trichinæ."

Yes, gentlemen; when that is possible here, it is also possible in reference to trichinæ found in the rejected German bacon, and then we come to the point of the Mosaic rule (very true), for dogs, rats, and mice make no distinction in regard to their appetite whether the rejected meat is American or German.

In regard to the second ground for the prohibition of importation, namely, the cholera, the memorial does not say that such a case has occurred in Germany at all; only in England live hogs have been introduced which had been infected with the disease, and the English ordered them to be killed immediately after their arrival.

The English, therefore, are satisfied with this police order; with us, where no such cases have come to light, a general prohibition of import is at once ordered.

Years ago the Secretary of the Department of State had taken occasion to institute a formal *enquete* in reference to the cholera disease, and appointed the director of the Bureau of Statistics to make the investigation.

The American Government had the results of this investigation published and forwarded to all their diplomatic agents in foreign countries. It maintains that all the American hogs are of the best and purest breed; that the report spread in Europe concerning the disease of American hogs in consequence of the hog cholera is greatly exaggerated; that the percentage of death among American hogs is not any greater than in Europe; that of the American hogs which die of cholera in consequence of the strictest investigation and inspection to which they are subjected no diseased ones can be sent abroad, and that out of the meat of such hogs no bacon nor lard can be prepared for the trade.

One should think when a Government prepares such a memorial as this that proper notice should by all means be given to the investigations of the American Government. But what does the imperial chancellor do? He creates the impression that the memorial of the American Secretary of State had been written in the year 1882, and says nothing else concerning its contents save only that "the results of the *enquete* form a comparatively valuable material," but calls attention to the fact that these compounded reports are neither complete nor sufficiently reliable for a control. Official proceedings to confirm these declarations by oath as bound by law have not taken place.

Yes, gentlemen, neither have they taken place with us. One should think that if the imperial chancellor utters such positive judgment in regard to the official *enquete* of the United States he would have greater reason to produce on his side truthful and complete statements of impartial men.

As proof of the proportion of the disease of American hogs a paper of an official American stenographer is mentioned. The imperial chancellor puts, then, against the Secretary of State of the United States a stenographer of New York! I do not know what stenography has to do with this question. Has that man been ordered when he hears complaint about hog meat to stenograph the same? He appears as a man who at times is employed by authority for stenography, and who has been ordered to put his name on a pamphlet which is put together out of various articles from a New York commercial paper [Hear! Hear!]; and in the memorial of the Federal Council of the size of nineteen quarto pages, the extracts of the official stenographer out of the commercial paper occupy fully four pages [Hear! Hear!], such great value has the imperial chancellor placed upon the stenographer.

By closer inspection one finds that all articles of this commercial paper are nothing else but a business advertisement of the firm of Goulard, Rouse & Bostwick.

In America it is a private business to grant certificates in regard to the meat intended for export. A number of persons in New York make a good business from it. But by degrees Europeans have become wise enough to avoid the middlemen of New York by securing certificates directly from export places in the West.

The New York men, not being pleased with the loss of their former profit, give their competitors in the West a bad name by saying they do not understand how to examine the meat properly.

This puff appears even in the extracts. In the paper of the American stenographer we read: "The Western colleagues seem to show a great indifference in reference to the manifest superiority of the New York inspection." When Austria received meat from New York which had been subjected to the inspection of the house of Goulard, Rouse & Bostwick no complaint was ever made. The dreadful stories which New York business men have circulated about their competitors in the West form what the imperial chancellor has communicated to the Federal Council on the condition of the American hogs.

The imperial chancellor has, of course, been more careful in his proceedings, but other people have procured the American pamphlet for themselves, and found that the extracts in the memorial break off just where the puff advertisement begins. The

memorial says, "There is but one remedy to protect against danger in the importation of hog meat, and that is by careful inspection." The pamphlet then continues, "Such an inspection will only be guaranteed through the firm of Goulard, Rouse & Bostwick." [Great hilarity.]

If an official stenographer should be called upon to make for the American federal council compilation of what has been written concerning the golden number one hundred and ten, the people there would perhaps come to a peculiar conclusion about German solidity and German industry. [Here the speaker read other passages from the American pamphlet to prove that the pamphlet is written as an advertisement.]

The pamphlet is the more remarkable since Goulard himself acts as a principal witness of the imperial chancellor. His testimony is quoted under the title, "Our reporter's interview with Mr. Goulard of March 14, 1881."

Now, I must say if an order is to be issued upon the basis of such material, the same should read that the only products allowed to be introduced into Germany should first be seen and inspected by Mr. Goulard.

That, gentlemen, is the argument for a measure of the most decided effect. It shows how easy the imperial chancellor is influenced in making such proposals to the Federal Council.

Such a prohibitory decree of an article of export is for our people of the greatest importance, since annually several hundred thousand *centners* are imported.

The memorial says it concerns only about 3 per cent. of our meat consumption. It does not depend upon the general percentage which this importation has for certain parts of Germany and certain classes of the population. For example, it is mentioned in the petition of the Consumption Association for Mines and Iron Works that each workman consumes from 140 to 160 pounds of this product yearly, which amounts to a very high percentage of their entire nourishment. The principal thing is that American *bacon is much* cheaper than the German, and that it is for many people the only meat diet available, which is true in particular of the workingmen of Westfalen. For this reason the board of trade in Westfalen have declared against the prohibition of importation, not, indeed, in consequence of commercial interests, but on account of the difficulty of replacing the product.

Even the Chamber of Commerce at Dortmund, which upholds the politics of the chancellor, has petitioned against the prohibition. Agricultural societies in Westfalen also oppose the prohibition, simply because the production of hog meat in Westfalen is not sufficient for the supply in these regions, and they therefore find the import indispensable.

The question now comes up, how happens it that the Federal Council can issue a prohibition of such importance without the co-operation of the Reichstag (Imperial Parliament)? As a single argument in its favor one paragraph in the customs regulations can be cited, which speaks only of a temporary prohibition for sanitary reasons, and this can not be taken into consideration with the present case.

The law of the German tariff union mentions, instead of a "temporary prohibition," a "fixed time," for the duration of the prohibition can not be determined in the beginning; but this can only apply to prohibition of import on account of cattle plague and the like. For this reason the Federal Council is not justified in issuing a prohibition against the importation of American hog meat without the co-operation of the Reichstag, and I hope that the Federal Council will duly consider the material reasons which speak against the prohibition, and not conclude to make the question of law objectionable, in which case we must resort to special proposals to protect our interest.

If you dissent from the prohibition you will confer a great deed of charity on large districts of the population.

No. 73.

Mr. Frelinghuysen to Mr. Sargent.

[Telegram.]

DEPARTMENT OF STATE,
February 15, 1883.

The President invites Germany to send a commission of experts to the United States to examine raising and packing of hogs and hog products for food. He asks that final decision in prohibitory measures be suspended until commission can adequately report.

Instruction by mail.

FRELINGHUYSEN.

No. 74.

Mr. Frelinghuysen to Mr. Sargent.

No. 87.] DEPARTMENT OF STATE,
Washington, February 16, 1883.

SIR: I transmit herewith copies of a memorial addressed to the President, under date of the 9th instant, by the Chamber of Commerce of the State of New York concerning the apprehended prohibition by the German Government of the importation of American bacon—hams and hog products—into the territory of the Empire.

The considerations set forth by the memorialists are believed to be justly stated. They represent what this Department has so frequently hitherto represented through your legation, that the alleged existence of trichinæ, and of diseases among swine in this country to an alarming extent, can not, even if established, affect the healthfulness of the exported product, inasmuch as the hog products of the United States are prepared for market in a manner which renders their uncooked consumption all but impossible; that the disease known as trichinosis is rare among American consumers of swine's flesh, and that not more than two or three cases in Germany during the past ten years have occurred where the disease could be ascribed to the consumption of American pork, while most of the reported cases in Germany are directly traceable to the consumption of the raw meat of freshly killed domestic hogs. And they state further that with respect to alleged exportation of deleterious meat from diseased hogs no substantiation whatever has been shown.

As you are aware, this Government at home and through its legation at Berlin has made every effort from the first to countervail a tendency toward what it believes to be uncalled for and unjust legislation on the part of Germany, in seeking to exclude from one of the largest markets of the world a product of such great importance to the United States. No endeavor has been spared to bring home to the mind of the Imperial Government the conviction, reached by this Government after exhaustive and impartial investigation of the subject, that the premises upon which the intended prohibition rests are unfounded, and that the exported hog products of the United States are in nowise the indiscriminate source of danger to life and health which they are alleged to be. You and your predecessors have earnestly set forth all this to the Imperial Government; you have labored to convey a right understanding of the facts of the matter as they are ascertained to exist here, and you have urged the hardship, almost amounting to an international wrong, which would be inflicted alike upon the producers of the United States and the peasantry of Germany, by cutting off from the one class a large and secure market, and depriving the other of a cheaper food than their own country can supply. So far as is now known, your efforts in this direction have not been crowned with the hoped for result.

But one course now remains. It is believed here that if the Imperial Government itself were to do as the Government of the United States has done, and closely examine on the spot all the conditions of the hog-raising and packing industry, if it were to follow by practical observation the course of this staple of food from the fields and farms to the packed state, the same conclusions would be inevitably reached as those to which this Government has been drawn. So firmly is this believed that the Government of the United States deems it a common duty to

its own citizens and to the consumers in Germany to invite the Imperial Government to examine into the matter for itself, by a commission of experts sent to this country, before final decision is taken on the proposed measures.

This Government stands ready to extend to that of Germany the fullest facilities for the profitable pursuit of such an investigation. Believing that the results which it will promise are of no less moment to the consumers of hog products in the United States than to those in Germany, it is willing to lend the services of one or more impartial experts, scientists of known probity, to co-operate with those whom Germany may send, if such co-operation be deemed desirable and acceptable by Germany.

You will therefore present to the Imperial Government, in the name of the President, a formal proposal and invitation to send to the United States a commission of experts, who shall either by themselves or jointly with impartial scientists named by the United States, investigate the whole question of hog raising and the curing and packing of hog products as food in the United States. And you will ask that action in a final sense upon the pending prohibitory measures may be suspended during such reasonable time as may be necessary for such a commission to make a thorough examination of the subject and report thereon. You will add that in making this proposition the Government of the United States is actuated by the fairest and most friendly motives; that its desire, no less than that of Germany can be, is solely that the truth of the matter may be established, and that it deems its reasonable request entitled to friendly consideration on the part of a Government bound to the United States by so many ties as is that of Germany. It is thought, above all, necessary that some such course as that now proposed be adopted to free whatever resultant course Germany may adopt from the possible charge of being an unfriendly discrimination.

You will read this dispatch to the minister for foreign affairs, and leave with him a copy.

I am, etc.,

FRED'K T. FRELINGHUYSEN.

[Inclosure in No. 87.]

CHAMBER OF COMMERCE OF THE STATE OF NEW YORK.

Memorial in regard to the prohibition of the importation of American bacon and hams into Germany.

To the President of the United States:

The Chamber of Commerce of the State of New York respectfully asks leave to represent that the Imperial Government of Germany has openly declared its intention to prohibit the importation of American bacon and hams into their country, on the ground of the alleged unwholesomeness of these products, and that such prohibition threatens to destroy a valuable and growing branch of commerce between our country and Germany.

Your memorialists are aware that the honorable the Secretary of State has already directed the attention of the United States minister at Berlin to the subject. In view of its grave importance, and of the fact that the German Government has only recently made a public statement of its intention and of the reasons that have prompted it, your memorialists nevertheless deem themselves justified in adding their testimony to the information already in possession of the Government, and in directing its attention to those points which, in the present position of the matter, appear to be of the greatest importance.

The German Government bases its intention on two facts which it claims to be established, namely, first, on the occurrence of the parasite *trichinæ spiralis* in the American hog products to a greater degree than it is found in the German hog; and secondly, on the wide-spread prevalence in our hog-producing districts of the disease known as hog-cholera.

Your memorialists are convinced not only that both these charges are exaggerated, but also that the conclusions drawn from them by the German Government are not justified, and can form no reasonable ground for the contemplated prohibition.

1. *Trichina.*—The German Government claims to have established the occurrence of this dangerous parasite in about 4 per cent. of the American bacon and hams imported into Germany, which is stated to be the result of accurate investigations prosecuted during a series of years. No similar official tests having ever been made on this side, your memorialists are unable to disprove or to confirm the alleged fact, and any contradiction from our side, therefore, is not likely to be accepted. But there is one fact which, if properly urged, should convince the German Government of the injustice of basing a decree of prohibition on the alleged occurrence of trichinæ in American bacon and hams, which is this: That these products of our country are prepared for market in a manner which renders their consumption in the raw state all but impossible. This alone accounts for the rare occurrence among American consumers of the disease known as trichinosis, and for the fact that, according to the German Government's own statement, not more than two or three cases have, within the past ten years, occurred in Germany, where the disease could be ascribed to the consumption of American pork, while all wide-spread and dangerous cases of trichinosis in Germany have been traced to the consumption of the raw meat of freshly-killed domestic hogs. These facts, instead of justifying the threatened prohibition, rather go to establish a great advantage, in a sanitary point of view, of the use of the American product over that of the domestic meat.

2. *Hog-cholera.*—The existence of hog-cholera also is not denied, though the prevalence of the disease can be proved to be greatly diminished, since the bulk of our hogs is no longer raised mainly in connection with our distilleries, but on our Western farms, where they are fed on Indian corn. In urging this charge the Government appears to have placed more faith in exaggerated newspaper reports than in the results of the official investigation instituted by our Government, which were embodied in the report made to the State Department by Mr. Scanlan, Chief of the Bureau of Statistics, dated April 26, 1881, which report has been before them. Here again, however, the German Government has drawn conclusions from the facts alleged which are not justified even by these facts, since they have been unable to point out the occurrence of any American meat which might have been called diseased from that cause, much less any injury that might thereby have been inflicted on the health of the consumers.

In view of the fact that the thorough and systematic exclusion of diseased hogs from our packing establishments can easily be proved to any fair-minded man that will take the trouble of examining into the process connected with the preparation of these products for market, your memorialists respectfully suggest that the German Government should be invited to examine into this matter by a commission of experts sent to this country before final decision is taken on the proposed measure.

And your memorialists will ever pray, &c.,

GEORGE W. LANE,
President,
GEORGE WILSON,
Secretary.

[SEAL.]

NEW YORK, *February* 9, 1883.

No. 75.

Mr. Sargent to Mr. Frelinghuysen.

No. 109.] LEGATION OF THE UNITED STATES,
Berlin, February 17, 1883. (Received March 10.)

SIR: I have the honor to report that, at the request of Count Hatzfeldt, imperial secretary of state for foreign affairs, I had an interview with him to-day, where a number of questions interesting to the United States, which I had previously called to his attention, were provisionally discussed, of which I will make full report as soon as conclusions are reached. When he had concluded with his topics I read to him your telegram of the 15th instant, which states that the President invites

Germany to send a commission of experts to the United States to examine the raising and packing of hogs and hog products for food, and that he asks that final decision on prohibitory measures may be suspended until the commission can adequately report.

I told him that the proposed prohibition had excited a good deal of attention and some feeling in America, explained the importance of the proposition to the United States, informed him that there was a general belief there, founded on experience and careful examination, that the objection to American pork as a sound article of diet is unfounded, and that the exclusion would be improvident. I called his attention to the conclusive and candid report of the commission appointed by the State Department to examine and report on the mode of raising hogs and preparing their products for market, made after extensive and exhaustive investigation. I told him I would send to him a fuller statement of the matter as soon as I received the instruction now on the way to me by mail, and would also at the same time send a copy of the public document to which I referred; and I trusted that while the imperial government were considering this proposition of the President nothing further would be done, and the proposition would be accepted. He said nothing decisive upon the subject, as, of course, he could not of his own responsibility, but expressed a desire to have the documents and information in question.

I have, etc.,

A. A. SARGENT.

No. 76.

Mr. Sargent to Mr. Frelinghuysen.

[Extract.]

No. 111.] LEGATION OF THE UNITED STATES,
Berlin, February 24, 1883. (Received March 13.)

SIR: Referring to my No. 109, of February 17, acknowledging my receipt of your telegraphic instruction, dated the 15th, and stating my reading the same to Count Hatzfeldt, imperial secretary for foreign affairs, and stating the importance of the subject from the American stand-point, etc., I have now to report that the Bundesrath, on the 18th, unanimously approved the decree of prohibition of American pork products, taking no notice of the proposal of the President, if the same was brought to their notice by the imperial foreign office.

I have no official statement of the decree as yet. The Berliner Tageblatt of last evening contains the following:

> As we announced, the Bundesrath has approved the ordinance on the prohibition of the importation of American pork, with some reservations, which seem to contradict the reasons given for prohibition, viz, that the meats are unhealthy. For instance, the commerce in such meat is not only permitted to German ships with other countries, but it is also allowed to the Hanse towns to supply their ships with such meats.
>
> The permission, according to rumor, has been given on the ground of the existing laws.
>
> The power of the Bundesrath to issue such ordinances rests upon the *Zollverein* laws, and especially upon article 2 of them. The Hanse towns, which stand outside of such *Zollverein*, do not thus come under the provision in question, and to obtain their adhesion the reservations were added.

Immediately upon the action of the Bundesrath becoming known to me, I prepared and sent to Count Hatzfeldt a note, a copy of which is

inclosed, in which I called his attention to the honorable Secretary's telegram which I had submitted to him on the 17th instant, stating that I had promptly conveyed the proposal of the President through the only possible official channel to the Imperial Government, and that it had been also widely published in the German newspapers, where it would unofficially reach the Bundesrath. I requested that an official copy of the late ordinance of the Bundesrath might be furnished to me, so that I might notify my Government of the exact terms of the response or constructive refusal made to this request of the President upon a matter of very much importance to the United States, and deeply affecting the trade relations of the two countries.

I, however, expressed my impression that the ordinance could only go into effect by the express approval of the imperial executive, and therefore asked leave to again call the attention of the imperial secretary to the proposal of the President, and to repeat what I had said at our interview of the 17th instant, that the United States view with concern this ordinance designed to destroy an important part of its export trade with Germany; that the United States had had the whole question of the soundness of American pork, the modes of rearing hogs and preparing the products for market, carefully and impartially examined, and are convinced by the report made to it, a copy of which I inclose, that the attacks made upon the great article of product are unjust and prejudiced, and not in any degree warranted by the facts in the case. This being so, I stated that the President confidently relies upon the result that would follow the examination by a German commission, and invites the Imperial Government to send such an one, and await its report before striking down an industry that not merely furnishes all the animal food to large classes in Germany (a consideration more immediately addressing itself to the Imperial Government), but causes great loss to the people of the United States, whose capital is involved and labor employed in preparing pork products for market.

I suggested further that there is no emergency in this matter that can not await ordinary modes of dealing with questions of such moment, there being no apparent reason why this ordinance should be enforced this month, or year, more than last or the next, as there is no epidemic caused by German consumption of American pork, not even a well authenticated instance of casual sickness; that high German scientific authority stated that the very rare cases of trichinosis found in Germany for years past have arisen from eating raw German or Hungarian pork, and that no case whatever is traceable to American pork, which is so cured as to be harmless.

I suggested that where the evidences of harm done are so shadowy, and are opposed by carefully grounded statements, and the interests involved are so great, the request of the President for investigation might well commend itself to the Imperial Government as reasonable and statesmanlike, and consonant with the kindly relations existing between the two countries, a sense of which on the part of his Imperial and Royal Majesty had been recently conveyed to me by the chancellor on the occasion of the generous relief extended by the citizens of the United States to the sufferers of the Rhine Valley. Believing the imperial Government to be animated by the sentiment expressed in the chancellor's communications, I believe it would not desire that the American Government or people should rest under a sense of injustice from the execution of this measure, yet such a consequence seemed inevitable where all modes of honest investigation had been exhausted by the American Government, with the result of apparently proving this product sound,

and where daily experience shows none of the assumed inconvenience to either German or American health, and where the Imperial Government is formally and courteously asked to look into the whole subject for itself before acting upon possibly interested advice, or in the absence of anything worthy the name of evidence. I therefore asked for a response to this proposal of the President, that investigation be had, and that meanwhile this serious blow to American interests be suspended.

I deemed it best to add, that as the United States are a large and growing consumer of German manufactures, and the food they export to Germany is their principal article of exchange, the laws of trade must dictate their obtaining the goods they import elsewhere if the equivalent which they furnish is refused. This would probably result even if the Congress did not meet the issue by legislation, under the belief that another motive than the unsoundness of American pork products caused this exclusion; though such a belief could not obtain, if fair investigation on the spot by German experts showed dangerous and peculiar unsoundness to exist. I expressed a hope that this many-sided question may be tested as its importance deserves.

As this question is a burning one, I have acted in advance of the receipt of your detailed instructions by mail, and keep you advised of progress, without waiting for the imperial secretary's reply to this note.

I have, etc.,

A. A. SARGENT.

[Inclosure No. 111.]

Mr. Sargent to Count Hatzfeldt.

LEGATION OF THE UNITED STATES,
Berlin, February 23, 1883.

The undersigned, envoy extraordinary and minister plenipotentiary of the United States of America, had the honor, in his interview on the 17th instant with his excellency Count Hatzfeldt, imperial secretary of state for foreign affairs, to submit a telegram from the Hon. Secretary of State, Mr. Frelinghuysen, containing a request of the President of the United States, which telegraph was in the following words:

"The President invites Germany to send a commission of experts to the United States to examine the raising and packing of hogs and pork products for food. He asks that the final decision on prohibitory measures be suspended until such commission adequately report."

This proposition of the President of the United States was promptly conveyed to the Imperial Government through the only possible official channel, and was also widely published in the German newspapers, where it would unofficially reach the Bundesrath. The undersigned respectfully requests that he may be furnished with an official copy of the late ordinance of the Bundesrath in the matter, so that he may notify his Government of the exact terms of the response, or constructive refusal made to this request of the President upon a matter of very much importance to the United States, and deeply affecting the trade relations of the two countries.

As the undersigned is under the impression that this ordinance can only go into force by the express approval of the imperial executive, he most respectfully asks leave to again call the attention of his excellency, the imperial secretary, to the proposal of the President contained in the telegram above cited, and to repeat what he said in his interview with his excellency on the 17th instant, that the United States view with concern this ordinance, designed to destroy an important part of their export trade to Germany; that the United States have had the whole question of the soundness of American pork, the modes of rearing hogs and preparing the products for market, carefully and impartially examined, and are convinced by the report made to them, a copy of which is herewith inclosed, that the attacks upon this great article of product are unjust and prejudiced, and not in any degree warranted by the real facts in the case. This being so, the President confidently relies upon the result that would follow the examination by a German commission of the whole matter, and invites the imperial Government to constitute such an one, and await its report, before striking down an industry that not merely furnishes all the animal food to large classes in

Germany (a consideration more immediately addressing itself to the Imperial Government), but causing great loss to the people of the United States, whose capital is involved and labor employed in preparing pork products for market.

His excellency's courtesy will allow the undersigned to suggest that there is no emergency in this matter that can not await ordinary modes of dealing with questions of such moment. There is no apparent reason why this ordinance should be enforced this month, or year, more than last, or the next. There is no epidemic caused by German consumption of American pork; not even well authenticated instances of casual sickness. It has been stated by very high German scientific authority that the very rare cases of trichinosis found in Germany for years past have arisen from eating raw German or Hungarian pork, and that no case whatever is traceable to American pork, the mode of curing which makes it harmless.

Where the evidences of harm done are so shadowy, and are opposed by carefully grounded statements, and the interests involved are so great, the request of the President for investigation may commend itself to the Imperial Government as reasonable and statesmanlike, and consonant with the kindly relations existing between the two countries, a sense of which on the part of His Imperial and Royal Majesty has been recently conveyed to the undersigned by his serene highness, the imperial chancellor, on the occasion of the generous relief extended by the citizens of the United States to the sufferers of the Rhine Valley.

The undersigned is fully aware that the Imperial Government, animated by the sentiment expressed in the esteemed communications of his serene highness, would not desire that the American Government or people should rest under a sense of injustice from the execution of this measure. Yet such a consequence seems inevitable where all modes of honest investigation have been exhausted by the American Government with the result of apparently proving this product sound; where daily experience shows none of the assumed inconvenience to either German or American health, and where the Imperial Government is formally and courteously asked to look into the whole subject for itself before acting upon possibly interested advice, or in the absence of anything worthy the name of evidence.

The undersigned, therefore, again calls attention to this express request of the President of the United States, and respectfully asks for the sense of the Imperial Government thereupon, that investigation be had and that meanwhile this serious blow to American interests be suspended. Inasmuch as the United States are a large and growing consumer of German manufactures and the food they export to Germany is a principle article of exchange, the laws of trade must dictate their obtaining the goods they import elsewhere, if the equivalent which they furnish is refused. This would probably result even if the Congress did not meet the issue by legislation under the belief that another motive than the unsoundness of American pork products caused this exclusion. Such a belief, of course, could not obtain if fair investigation on the spot by German experts showed dangerous unsoundness to exist.

Expressing the hope that this many-sided question may be tested adequately, as its importance deserves, the undersigned avails, etc.

A. A. SARGENT.

No. 77.

Mr. Frelinghuysen to Mr. Sargent.

No. 88.] DEPARTMENT OF STATE,
Washington, February 21, 1883.

SIR: Your dispatch No. 96, of the 13th ultimo, giving a summary of a recent debate in the Reichstag concerning the proposed exclusion of American pork from the German market, has been read with interest. This Government can not but welcome as a hopeful sign any disposition to bring the subject to a parliamentary discussion on its true merits. My instruction to you of the 16th instant, No. 87, proposing a German investigation in the United States, will have shown the confidence that this Government feels in the soundness of the views it has heretofore expressed, and its belief that the interests of all demand a full and conclusive examination of the whole matter of pork exportation.

I am, etc.,

FRED'K T. FRELINGHUYSEN.

No. 78.

Mr. Vogeler to Mr. Davis.

No. 77.] UNITED STATES CONSULATE-GENERAL,
Frankfort-on-the-Main, March 3, 1883. (Received March 21.)

SIR: I have the honor to inclose herein my report on "The resolution of the German Bundesrath prohibiting the importation of American hog meat."

I am, etc.,

FERDINAND VOGELER,
Consul-General.

[Inclosure in No. 77.—Extract.]

THE RESOLUTION OF THE GERMAN BUNDESRATH PROHIBITING THE IMPORTATION OF AMERICAN HOG MEAT.

In my report on the tariff laws and customs regulations of Germany, dated January 25, 1882, I showed that the principal reason for the many devices resorted to by German customs officials to impose a higher rate of duty on certain articles than the law contemplated was not a direct purpose to discriminate against goods of American production or manufacture, because these devices affected importations from other countries as well as those from the United States, but that they proceeded rather from a desire to propitiate and minister to that protective spirit which, since the year 1879, was known to have come into favor with the leading spirits of the German Government.

When I now refer to the resolution adopted by the German Bundesrath on the 21st day of February, 1883, prohibiting the importation of American hog meat, a subject which I am aware has engaged the attention of the Department for several weeks, I do so merely to call the attention of the Department to a peculiar circumstance in the adoption of that resolution, tending to show that it was born of the same spirit, which for a long time confidently asserted that, in the eye of the German tariff laws and regulations, canned meats or peaches were "fine iron ware."

I shall endeavor to trace the resolution referred to to its real origin. It is clearly the policy of the German Government in these times of turbulent socialistic agitations to form around itself a phalanx of loyal and conservative elements, by means of legislation, which will convince them that the Government is appreciative of their wants and anxious to foster and enhance their material welfare. As in all other European countries, except Great Britain, the rural population of Germany is not only the most numerous, but also the most conservative element, and least inclined to adopt new political or social theories.

A paternal care exercised over the rural population, a proper ministration to their wants, therefore, must greatly strengthen the Government. Thus gradually a reliable majority in the Reichstag, the popular and most essential legislative factor of the Empire, may be created, which will support and carry out reformatory plans and assist in keeping in check the turbulent socialistic elements of the great cities.

Now, the competition of the American hog raiser and pork packer was severely felt by the rural producer of Germany. The imposition of a duty of 12 marks per 100 kilograms did not deter the American shipper. According to the present composition and temper of the Reichstag, however, it was impossible to obtain a majority for a law either prohibiting, on some specious ground, the importation of American pork, or so to increase the duty thereon as to make American competition impossible. But an expedient was soon found. The Bundesrath is not only one of the legislative factors of the German Imperial Government (and in that respect it somewhat resembles the Senate of the United States, while the Reichstag corresponds to the House of Representatives), but it also exercises executive authority and functions; in other words, its powers are not only legislative, but also supervisory, regulative, and executive. It is charged with the adoption and passage of suitable rules and regulations to carry into effect the laws of the Empire.

The Bundesrath consists of 58 members. These, in one view, represent the several sovereign States of the German Empire. They are not elected like the members of the Reichstag, but appointed by the several German Governments. Of the 58 members Prussia appoints 17, Bavaria 6, Saxony and Wurtemberg 4 each, Baden and Hesse 3 each, Mecklenberg-Schwerin and Brunswick 2 each, and all other principalities, including the three Hanse towns, Hamburg, Bremen, and Lubeck, 1 each. This body, so constituted and empowered, was requested by the imperial chancellor to en-

join, by virtue of its regulative power, the importation of American pork on the ground that it was affected by trichinæ, and therefore unwholesome.

Now, although this sweeping allegation was not supported by sufficient proof, and although numerous petitions and remonstrances against such a regulation were sent to the Government and to the Bundesrath from the manufacturing districts of Germany, where American pork and hams had become indispensable articles of nourishment, yet the Bundesrath unanimously passed the resolution referred to, the prohibition decreed to go into effect thirty days after its promulgation by the imperial chancellor.

It is likely that the point which readily suggests itself, viz, whether one branch of the Government can, upon an unproven assumption of facts, by a so-called "regulation" abrogate and annul a law duly enacted and in full force and effect will be raised in the Reichstag when that body convenes in May next; but I doubt that the discussion of the question will have any practical result whatever.

The public journals now announce that the decree of the Bundesrath will be published in a few days, and that the regulation therefore will go into effect early in April, 1883.

The unanimity of the decision reached by the Bundesrath, however, has surprised even the friends of the measure. It was confidently believed that not only the Hanse Towns, but also some other members of that body, would vote against a proposition of such doubtful justice and utility. Subsequent developments, however, have shown how that unanimity was reached, and at the same time how little the Bundesrath itself believed in the correctness of the allegation that the American pork was unwholesome.

To make this statement of mine clear it is only necessary to cite an article which appeared in the Cologne Gazette, a leading and influential journal of Germany, in its issue of the 26th of February, 1883, which article I attach to this report, and of which the following is a correct translation, viz:

"On February 21 the Bundesrath decreed that thirty days after the promulgation of a regulation to that effect by the imperial chancellor the importation of American hogs and hog meat shall be prohibited, this resolution having been adopted unanimously. It might create astonishment that the HanseTowns have also given in their consent. But it must be observed that they have only reluctantly said, '*Si omnes consentiunt, ego non dissentio.*' They have declared that they have been unable to convince themselves of the utility or necessity of this measure, and that they have given in their consent only because sanitary considerations alone were urged as a reason for the measure, and they were unwilling to take the responsibility of being alone indifferent to the health of the German people. But as wise merchants they have at least averted the worst consequence of their carrying trade, inasmuch as they have obtained permission to import American hog meat for re-exportation and to provision their own ships with American hog meat. That seamen may eat trichinous meat with impunity we had not hitherto heard of. Or do the Hanse Town men not believe in the danger of trichinæ and the seriousness of the arguments in favor of the measure?

"As to the sanitary consideration, the prohibition of American hog meat will undoubtedly prove very healthy for the purses of our estate owners, but very unhealthy for the poorer classes of our population.

"We will not to-day enter further into the subject, which to us is the most melancholy piece of our economical policy."

Comment on this article is unnecessary. It fitly characterizes the spirit of the measure referred to. I will only add in conclusion that the views expressed and implied in the article are shared by almost all those who have given the subject any attention.

FERDINAND VOGELER,
Consul-General.

SARGENT.

No. 81.

Mr. Frelinghuysen to Mr. Sargent.

No. 98.] DEPARTMENT OF STATE,
Washington, March 14, 1883.

SIR: I inclose herewith for your information a copy of an interesting letter from Messrs. Armour & Co., of Chicago, concerning the exclusion of American pork from Germany.

I am, etc.,

FRED'K T. FRELINGHUYSEN.

[Inclosure in No. 98.]

Armour & Co. to Mr. Logan.

CHICAGO, *March* 1, 1883. (Received March 8.)

DEAR SIR: The recent action of the German Government, in prohibiting the importation of American hog products, it seems to us, demands some effort towards checking a policy that must unquestionably result (if persisted in) in disaster to the farming interests of Illinois and the Northwest. We know that your familiarity with this subject renders it unnecessary for us to enlarge upon it for your information, but recognizing and acknowledging, with thanks, your former interest in this question, we now beg to ask your co-operation in the adoption of some measure calculated to bring about the speedy repeal of existing prohibitory decrees, or at least to render their adoption in other quarters less attractive than at present.

Knowing, as well as ourselves, that the sanitary pretexts of both the French and German Governments need no arguments, we feel that you will heartily support any wise retaliatory measure brought forward to counteract their disastrous legislation. And while aware that you are truly informed as to the magnitude of the interests thus attacked, we may state that, from our intimate relations with this most important Illinois industry, the time can not be far distant when our own and adjoining States will suffer to the extent of millions of dollars.

We refrain from inflicting upon you at length the reasons for this conviction, which to us present the feature of absolute certainty, because we feel that your own information is ample, and that you must, having already broadly considered the matter, fully agree with us.

We therefore confidentially request that you will make some effort, retaliatory in its character, the details of which you can much better suggest than ourselves, and will conclude by saying that while our own interests are necessarily involved, they are, as you know, secondary to those enormous interests which involve the welfare of the State to as great a degree, perhaps, as those of any other important industry.

The time, we suppose, being short for action during the present Congress, we, of course, leave the matter in your hands, hoping you may be able to do something either before or after the close of the present Congress, but as promptly as your numerous duties (and the importance of the subject) will permit.

Yours, truly,

ARMOUR & CO.

No. 82.

Mr. Frelinghuysen to Mr. Sargent.

No. 99.] DEPARTMENT OF STATE,
Washington, March 14, 1883.

SIR: Your No. 111, of the 24th ultimo, concerning the decree prohibiting the importation into Germany of the hog products of the United States, has been received.

The note addressed by you to Count Hatzfeldt, on the 23d ultimo, in relation to the President's invitation to the Imperial Government to send a commission of experts to the United States to examine into the operations of hog raising and packing here, based as it was on the brief telegraphic instruction sent to you, has, in the main, anticipated the instruction, No. 87, dated the 16th ultimo, and presented with considerable fidelity the considerations contained therein in support of the President's invitation.

It must, however, be observed that you have to some extent gone beyond the intention of the President in the concluding part of your note to Count von Hatzfeldt. You therein say:

> Inasmuch as the United States are a large and growing consumer of German manufactures, and the food it exports to Germany is a principal article of exchange, the laws of trade must dictate its obtaining the goods it imports elsewhere, if the equivalent it furnishes is refused. This would probably result, even if the Congress did not meet the issue by legislation, under the belief that another motive than the unsoundness of American pork products caused this exclusion. Such a belief, of course, could not obtain if fair investigation on the spot by German experts showed dangerous unsoundness to exist.

So far as your intimation touches the operation of the laws of international trade, it is unexceptionable. Those laws control themselves, and commerce must perforce work its own channels in the most natural directions; but when you go further, and indicate the possibility that this Government may resort to retaliation if its views be not assented to by Germany, you introduce an element which it was not intended to present.

The action taken by this Government was unusual, and necessarily presupposed that the direct proposal of the President to the Imperial Government would be entertained in the same frank spirit in which it was proffered; and, no doubt, it will yet receive a courteous reply, whether favorable or unfavorable.

It may be that His Majesty the Emperor may decline to send hither such a commission as has been proposed, through unwillingness, possibly, that the results of its labors should have a binding effect upon his Government, such as might naturally be supposed to follow from a commission created by imperial order. The German Government has an undoubted right to withhold its concurrence in the suggestion of the President, and the exercise of this right would give no occasion for offense. It is the duty of governments to be jealous of the health and careful of the interests of their citizens or subjects, and the President does not seek to support an appeal to the German sense of equity of any menace.

In this view of the matter, therefore, any intimation, such as is contained in your note to Count Von Hatzfeldt, that retaliation might ensue in the event of a refusal, was out of place.

If the Imperial Government declines to send the suggested commission to examine into the operations of hog raising and packing in the United States, it is more than probable that the President will cause

such an examination to be made in so thorough and impartial a manner as to satisfy that Government that the health of the German people will not be imperiled, but rather promoted by the importation of American pork. But it is, of course, impossible for the executive branch of this Government to anticipate what may be the action of the legislature of the United States, if the prohibitory measures contemplated by Germany should be adhered to.

Lest the statements in your note of February 23 might prove liable to misinterpretation, you are authorized to make the contents of this instruction known to Count Von Hatzfeldt by reading it to his excellency, and, should he desire it, by leaving with him a copy. In doing so you should state to him that this instruction is explanatory merely, and does not put on record a censure of your course.

I am, etc.,

FRED'K T. FRELINGHUYSEN.

No. 83.

Mr. Sargent to Mr. Frelinghuysen.

[Extract.]

No. 121.] LEGATION OF THE UNITED STATES,
Berlin, March 15, 1883. (Received March 27.)

SIR: Your instruction No. 87, of 16th February, was received March 10. On the 13th, the first subsequent opportunity, I called on Count Hatzfeldt, and, in obedience thereto, read it to him and left with him a copy. He said he had my last note on the subject, and that it had been submitted to the chancellor, who had written to the German minister at Washington on the matter. I asked him if I might understand that this communication to Washington was evidence of a purpose to convey through some other channel the answer to the President's proposal which I had submitted, to which he replied "Not at all." I then said: If the matter, then, was not foreclosed I would remind him that the ordinance was impending, and the United States Government had submitted a definite proposition for a commission, and that unless the Imperial Government is so clear in its conclusions that evidence could not change it, or unless it had other motives than the unsoundness of American pork for its prohibition, so that evidence was unimportant, it would appear that this proposition of the American Government should be accepted.

Count Hatzfeldt replied, that Herr Bojanowski, president of department No. 2 of foreign affairs, was fully in possession of the views of the chancellor on the matter, and requested me to have an interview with him. As the latter is an officer intrusted with all commercial duties and relations, and equal in station with the secretary, I consented to call upon him to learn the decision of Prince Bismarck, in case an appointment were made for me, Count Hatzfeldt stating that the copy of the instruction which I presented should be laid before the chancellor. I had no doubt, however, that the answer it would get from Herr Bojanowski would be unfavorable. * * *

To-day, at 2 o'clock, I called at the ministerium and had an interview with the president of department No. 2. He stated that instructions had been sent to Mr. Von Eisendecher about the matter. I asked if a

commission would be appointed to investigate the alleged unsoundness of American pork products, and he said "No." I asked him if the ordinance would be suspended until Mr. Von Eisendecher's response could be had, or until the latter had consulted with the Hon. Secretary of State, and he said "It will not." I said, "Very well, that answers my questions; and I will communicate the facts to my Government for such further action as it deems proper." * * * I deemed it indiscreet to ask the nature of Mr. Von Eisendecher's instructions, and if they contemplated investigation. I presume he will lay before you whatever his Government would wish known of its purposes. * * *

I have, &c.,

A. A. SARGENT.

No. 84.

Mr. Sargent to Mr. Frelinghuysen.

[Extract.]

No. 122.] LEGATION OF THE UNITED STATES,
Berlin, March 19, 1883. (Received April 4.)

SIR: I have the honor to inclose a copy of the decree of the Bundesrath excluding American pork products, as approved by the Emperor, March 6, with translation. It is a pure and simple exclusion, containing no reservation on its face, whatever may be in practice.

I also inclose an article and translation from the "Norddeutsche Allgemeine Zeitung" of the 14th March, showing the regulations which the chancellor proposes by which to enforce this ordinance. These are stringent and severe, and calculated to totally interrupt all trade in the prohibited products, whether the same come direct from America or through other countries. These regulations are the logical result of the ordinance, and are subject to no criticism that does not apply to the ordinance itself; though the chancellor is represented as justifying them on the ground that the American papers have said the ordinance would be evaded by indirect shipments. If the American papers have so said, which I have not observed, the enforcement of these regulations will defeat any such anticipations. It will be seen that considerable ingenuity is used to detect and exclude the obnoxious food.

This is sufficiently remarkable, considering the welcome the same regulations extend to Austro-Hungarian and Russian pork, which is said by scientific German authority to be the cause of all the (few) cases of trichinosis that have occurred in Germany for several years, from the habit of the people to eat it raw; the Russian pork, I am told by Germans, being the worst in the world.

I am able to say that there is as little apparent public opinion back of this prohibition as there is justification for it in the character of the excluded articles. * * * Physicians who ask, for obvious reasons, that their names be not mentioned, have assured me personally and by letter that there is no disease in Germany from American pork. The only case now known to exist among forty mllion people is said to be at Bremen, and that from eating raw German ham. According to these respectable authorities, if a child were to be poisoned at Philadelphia from sucking the paint from a German doll, legislation to prohibit all German toys would be a parallel measure, provided this case of trichinosis at Bremen could be really proved to arise from eating American pork.

Deputations of merchants have called on me, anxious to know if the measure was inevitable. One banker spoke of it as gross ingratitude to America, whose contributions for the Rhine sufferers, about 1,000,000 marks, are, he said, insignificant beside the amounts annually sent out from America to dependent relatives and others, for which no return is ever expected. He spoke of this as in his own knowledge, by means of his business. I presume the international money-order office would tell the same story. He also said the United States are the most important market of Germany, and the latter had it in its own hands whether they should be ignominiously hustled out of the German market. As illustrating the dependence of Germany upon American custom, I cite the following from the Berliner Tageblatt, the correctness of which I have not the means of verifying:

The prohibition of American pork products begins already to show a reaction. In Germany, for instance, there exist five large manufactories of dextrine, whose products are principally sent to America, and which are worked so advantageously that a larger number of similar establishments are to be erected. The duty on dextrine amounted hitherto to 4 marks. After the 1st July, however, it will be raised to 16 marks, thus rendering the exportation of the German article to America almost impossible, and checking home labor very sensibly.

* * * * * * *

I have, etc.,

A. A. SARGENT.

[Inclosure 1 in No. 122.—Translation.]

ORDINANCE CONCERNING THE PROHIBITION OF THE IMPORTATION OF PIGS, PORK, AND SAUSAGES OF AMERICAN ORIGIN OF MARCH 6, 1883.

We, William, by the grace of God, Emperor of Germany, King of Prussia, etc., decree in the name of the Empire, and with the consent of the Bundesrath, as follows:

SECTION 1. The importation of pigs, pork, including bacon, and all kinds of sausages of American origin, is prohibited until further notice.

SEC. 2. The imperial chancellor is empowered, by applying the necessary precautionary measures, to permit exceptions to be made in this prohibition.

SEC. 3. The ordinance of the 25th June, 1880, concerning the exclusion of American pork and sausages (Im. Law Gazette, p. 151) is abolished.

SEC. 4. The present ordinance goes into force after the expiration of the 30th day after its publication.

Given under our hand and the imperial seal.

Berlin, 6th March, 1883.

WILHELM.
VON BISMARCK.

[Inclosure 2 in No. 122.—Article from the Norddeutsche Allgemeine Zeitung of March 14, 1883.—Translation.]

On the order of to-day's appointed session of the Bundesrath stands the proposal concerning the prohibition of the importation of pigs, pork, and sausages of American origin.

After the Bundesrath has voted the decree for the prohibition of the import of pigs, pork, and sausages from America, it will be necessary in the interest of an efficient enforcement of the prohibition to extend the same not only to such products which are shipped directly to Germany from America, but to all products included in the prohibition of American origin. In a communication to the Bundesrath the chancellor makes no suggestions about carrying out the decree, and orders, for the prevention of its evasion, that the importation of such articles from other countries than America shall only be admissible in future when it is proved by official certificate that the articles are above suspicion, *i. e.*, not of American origin. If the prohibition is really to impart the sanitary protection aimed at by it, then, says the chancellor's communication, further, only the certificates of such officials must be recognized as are, on the one hand, in a position to testify to the truthfulness of their statements by their per-

sonal knowledge in the premises, and on the other hand, too, are responsible to the Empire or the Government of their country for the conscientiousness of their statements.

The certificates of German consuls will, accordingly, be of primary consideration, but as the interests of traffic would seem to forbid our confining ourselves to their certificates exclusively, it might be practicable to admit the certificates attested to by the proper police authorities at the place of origin as sufficient. But inasmuch as the German frontier officials may not always be able to tell whether the persons certifying are actually the proper police authorities, this fact would have to be attested to by the German consul of the district in question. Exceptions to this measure would only be admissible in the case of certificates of origin which come from Austria-Hungary, if issued and attested to according to the provision of the treaty with that Empire of 25th February, 1880, as in all other traffic between these frontier districts.

If the attest is not written in the German language, a certified German translation would have to be added by the importer on demand.

Besides this, the certificate of origin would have to be issued at least thirty days before the arrival of the goods at the German frontier, and to be kept by the German frontier officials to prevent a second use thereof. As specially regards the import of living pigs, the foreign police authorities would have to certify that the animals belonging to the shipper, who is to be specially named, are described singly and according to kind, size, age, sex, color, and other outward marks, are born and raised in Austria-Hungary (Belgium, etc.), and that they have been kept at and within the district of the authorities certifying for the last thirty days. In the case of sucking pigs (pigs of less than 10 kilos weight), as their importation from America might scarcely be attempted, a certificate describing the animals collectively and as to kind, as having been born in Austria-Hungary (Belgium, etc.), might suffice.

The matter is, however, much more difficult with regard to preparations of pork and sausages. A certificate issued by the authorities at the place of origin of the animals would be of little value, as it could not be proved by the articles in question that they really are made from the animal mentioned in the certificate of origin, and therefore a certificate from the police authorities at the place where they were made (except America), that the ware specially designated and described, if chopped, by signature, and packing; if in larger pieces, by a stamp which is to be placed upon them by the authorities at the place of origin, to the effect that the wares emanate from the butcher, etc., residing at and in the district of the certifying office, and are made from animals of English (Belgium, etc.), origin, would be necessary. Besides this, it might be practicable to demand a certificate to the effect that the manufacturer in question is not engaged in manufacturing wares from pigs, pork, or bacon of American origin, nor in the purchase or sale, directly or indirectly, in these articles of American origin. In justification of these suggestions, the communication refers to utterances in the American press that an evasion of this prohibition by repacking the American article in European (not German) ports is contemplated.

Finally, the chancellor requests a decision of the Bundesrath in the matter, with the remark that the officials intrusted with the execution of the decree at the frontier will be furnished with instructions before the time that the decree goes into force, thirty days after its proclamation.

No. 85.

Mr. Bailey to Mr. Davis.

No. 103.] UNITED STATES CONSULATE,
Hamburg, April 7, 1883. (Received April 25.)

SIR: I have the honor to transmit you herewith an article cut from the Hamburger Nachrichten of this date.

The figures are taken from the official report, and they are furnished for such information as they may contain.

I am, etc.,

J. M. BAILEY,
United States Consul.

[Inclosure in No. 103.—Extract from the Hamburger Nachrichten of April 7, 1883.—Translation.]

EXAMINATION OF PORK IN HAMBURG.

The Government veterinary surgeon has published an account of the examinations of American and European pork which have been made during the past five years. He states that 18,619 specimens of American pork were examined during that time by 48 inspectors. Of these, 175 were found to contain trichinæ. During the same period 60,527 specimens of European pork were examined, not one of which was found to contain trichinæ. It thus appears that 0.96 per cent. of the American specimens contained trichinæ, and 0.00 per cent. of the European. In the year 1881, 73,113 American, and 55,799 European specimens were examined by 60 inspectors. Of the former 695, *i. e.*, 9.95 per cent, were found to contain trichinæ, and of the latter 2, or 0.004 per cent. In the year 1880, 78,597 American, and 49,043 European specimens were examined by 108 inspectors; of the former 836, or 1.05 per cent., contained trichinæ, and of the latter, none at all. In the year 1879, 102,662 American, and 47,247 European specimens were examined by 91 inspectors; of the former, 1,290, or 1.16 per cent., were found to contain trichinæ, and of the latter, 3 or 0.006 per cent. In the year 1878, 49,513 American, and 28,173 European specimens were examined by 17 inspectors; of the former, 392, or 0.79 per cent., contained trichinæ, and of the latter, 3, or 0.01 per cent.

No. 86.

Mr. Frelinghuysen to Mr. Sargent.

[Confidential.]

No. 108.] DEPARTMENT OF STATE,
Washington, April 11, 1883.

SIR: Your dispatches Nos. 121 and 122, of the 15th and 19th ultimo, in relation to the ordinance and regulations of the German Imperial Government for the prohibition of American pork products have been received.

Until the text of the promulgated regulations for the execution of the prohibitory ordinance shall be received it may seem premature to consider the details of the question and express an opinion thereon. The general issue, however, is one which can not fail to demand the most careful attention of this Government, not only on its own merits, but also in its bearing upon Article V of the Treaty of Commerce and Navigation between the United States and Prussia, concluded May 1, 1828, and especially the concluding clause of the article, which reads as follows:

> Nor shall any prohibition be imposed on the importation or exportation of any article the produce or manufacture of the United States, or of Prussia, to or from the ports of the United States, or to or from the ports of Prussia, which shall not equally extend to all other nations.

The treaty question which may be thus involved is receiving attentive consideration, and may hereafter be the subject of a special instruction to you. Meanwhile I have to thank you for the information conveyed in your dispatches, and to remark that your suggestions will have due consideration.

I am, etc.,

FRED'K T. FRELINGHUYSEN.

No. 87.

Mr. Sargent to Mr. Frelinghuysen.

[Extract.]

No. 135.] LEGATION OF THE UNITED STATES,
Berlin, April 13, 1883. (Received May 2.)

SIR: I have the honor to state that on the 22d March, 1883, I received a letter from Mr. Emile Neignouret, president of the *Chambre Syndicale du Commerce des Saindoux et Salaisons d'Amerique*, Bordeaux, France, a copy of which is inclosed, informing me that the French papers were publishing a dispatch from Tilsit, Germany, stating that some cases of trichinosis existed in Tilsit, especially in the garrison, and that there were already thirteen deceased. He requested me to make inquiries on the subject, as the syndicate is doing its best to obtain the recall of the edict of prohibition of American meats in France, and had already serious promises from the French Government. They were, however, afraid the many advices from Germany like the above would raise difficulties and prevent their success. He expressed the opinion that if there were such trichinosis it came from eating home meats and not from American salted meat. If the facts could be ascertained and vouched for by me it would aid them to obtain free importation in France.

Immediately on receipt of this letter I wrote to United States Consular Agent Mr. Conrad Gaedeke, at Königsberg, the nearest consular officer to Tilsit, inclosing him a copy of it, and informed him that the question of the exclusion or admission of American pork products is now being agitated here and in France, and that he would much oblige me, and do the United States a service, if he would ascertain and inform me promptly if these cases of sickness referred to exist, and, if so, if the pork was of American or other production.

The same day I wrote to Mr. Neignouret, stating that I had ordered an investigation to be made into the alleged cases of trichinosis at Tilsit by the nearest American consul, and if there were such, if they originated from eating American pork. I told him further that I find that all cases of alleged trichinosis are ascribed to American pork, even where the proof is open to any one that they arise from eating raw native or Hungarian pork; that interested parties spread such stories, and frequently the stories are entirely false, there being no sickness; that high German scientific authority states that there is not now and has not been for years any case of trichinosis in Germany from eating American pork.

The United States consular agent at Königsberg acknowledged receipt of my letter, under date of March 27, and promised immediately to try to ascertain and inform me as soon as possible of all the facts in the matter.

I am now in possession of this report, under date of April 9, in which he informs me that fourteen cases of trichinosis have occurred at the garrison at Tilsit, being early in March, all very light and everybody now recovered. It is officially stated to him that the soldiers did not receive the infected meat in the *menage* of the *caserne*, and it is not possible to state where they got it, and not, therefore, whether it is of native or American production, but they probably got the pork from their relatives. * * *

I have to-day written to Mr. Neignouret, giving to him these facts, and calling his intention to the exaggeration or falsehood of the telegraphic account, in that no deaths had occurred; that the cases were

all slight, and everybody had recovered, and pointing out the certainty that, as the pork was probably furnished by relatives, it was the local raw article, which is the ascertained cause of all known cases of trichinosis where the trouble has been taken to trace the cause.

I have also written to Mr. Gaedeke, thanking him for his promptness and efficiency in the matter, and stating that I should take pleasure in mentioning it to the State Department.

This correspondence tells its own story, and remark may be unnecessary. In this case thirteen persons are announced as already dead from trichinosis, and the fatal disease still raging, and American pork—that "unutterable flesh"—is swiftly assigned as the cause. The disastrous news is spread over the continent to create prejudice against our productions and strengthen the hands of those who favor prohibition. When the Government officers, peculiarly informed, are questioned, it is found no deaths have occurred; that there were only some slight cases of sickness, and pregnant circumstances imply that American pork had nothing to with the cases of sickness that did exist.

* * * * * * *

While the German Government may properly decline to bind itself by the report of its own or any other commission for investigation into the truth or error of its own allegations that American pork products are dangerous to health, and into the soundness of the grounds which it has for striking a severe blow at our trade or manufactures, it may reasonably be expected to be * * * cautious how it lends itself to * * * statements againt the interests of a friendly nation. * * * When the chancellor sent his request for the prohibitive ordinance to the Bundesrath he accompanied it by a memorial in which he did not give reasons based on the bills of health of the Empire, but cited at large from a printed pamphlet in German, * * * which pamphlet was a compilation of certain New York newspaper articles published in 1881, which, while condemning the prohibitory policy of the French Government, laid blame upon the Western packers, who, these alleged, put up meats before they were properly cured, and dwelt upon the carelessness of freight handlers, Western inspection, etc. The pamphlet also contained the opinions of French and German exporters that the complaints of the French authorities were unfounded from a sanitary stand-point, and the faults of careless packing could be remedied on through transit meats by having them overhauled at New York prior to shipment. The appointment of a certain firm of New York packers * * * was recommended for the purpose. This pamphlet was denounced by Herr Richter, in the Reichstag, as compiled in the interests of the firm alluded to, and as utterly unworthy as authority for the proposed exclusion. Of course it does not come anywhere near proof of danger of trichinosis from American pork. Imperfect packing may cause rotten pork, which no one would buy or use, but not trichinæ; yet this unresponsive evidence stands as the basis of exclusion in this Empire to-day. Investigation might * * * [show] that the statements of the pamphlet in regard to packing are false, and that the supervision of the before-mentioned firm is unnecessary. Every barrel of pork that reaches Europe bears its special testimony, and the interests of trade insure fidelity of means. If any steps were taken to ascertain in what condition packed pork reached Germany the conclusions were not added to the assertions of the pamphlet in the chancellor's memorial, and the investigation carried on under orders of the State Department was not deemed worthy of notice.

* * * * * * *

One effect of this prohibition is now obvious. The masses here are accustomed to reverence government, and look to it peculiarly for guidance in matters which, in different communities, it could not influence. The Government has condemned American pork products as dangerous to health. Its action fosters alarm in that connection, and it will take years to recreate the confidence in these which has been impaired.

To avoid multiplying dispatches I will here state that on the 10th there was a discussion on the bill amending "trades law." In section 56*b* the Federal Council (Bundesrath) is authorized, in cases of necessity, to suspend for a certain period some of the provisions of section 56 and 56*a*, the same right being conferred upon the appropriate state authorities for the individual states of the Empire. This is not the law regulating imports, which contains a somewhat parallel provision, it being therein provided that the council may suspend any importation temporarily in case of emergency.

During the discussion Dr. Baumbach proposed an addition to this paragraph, making it obligatory upon the Federal Council to submit its decrees to the Reichstag for subsequent approval.

State Minister Scholz declared himself decidedly opposed to this proposal, expressing the view that it would be detrimental to the dignity of the Government to see its decrees annulled so soon after their promulgation. He said the motion of Dr. Baumbach would make the authority conferred upon the Federal Council so entirely illusory that the united governments would prefer to dispense with it altogether. The minister conceded that there existed in certain cases similar provisions, requiring subsequent parliamentary approval of decrees of the Federal Council, but past experience did not dispose him to advocate an extension of this principle. The proposed motion would confuse legal relations, and he must urgently request that it be rejected.

Deputies Heydemann, Maibauer, Dr. Réeand, and Dr. Bamberger spoke in advocacy of Dr. Baumbach's motion. The latter declared it to be of the greatest importance to oppose the principle set up by Minister Scholz. The proposed condition had the very practical purpose of compelling the united governments to consider duly, before issuing a provisional decree, whether it was in harmony with the law, and whether it would receive the approbation of Parliament. For instance, if the united governments had been compelled to submit to Parliament for subsequent approval the decree prohibiting the importation of American meat, he was convinced the decree would never have been issued at all. He therefore, that there might be no question of the principle, would recommend the adoption of Dr. Baumbach's motion.

Scholz, finance minister, felt called upon to protest energetically against the suggestion that the Government did not in every case maturely consider, before its issue, every provisional decree, and the necessity for subsequent approval could not make it more so.

After speeches by Dr. Hänel, Richter, and others, earnestly advocating the amendment, it was adopted by a small majority.

I have, &c.,

A. A. SARGENT.

[Inclosure 1 in No. 135.]

Mr. Neignouret to Mr. Sargent.

CHAMBRE SYNDICALE DU COMMERCE DES SAINDOUX ET SALAISONS D'AMERIQUE,
Bordeaux, March 22, 1883.

SIR: I now see in our French papers a dispatch, coming from Tilsit, and telling that some cases of trichinosis have occurred in this town, especially in the garrison, and that there were already thirteen deceased.

I shall be most obliged for your inquiries on the subject, as our syndicate is making the endeavor to obtain the recall of the edict of prohibition for American meats in France, and we have already received serious promises from our Government; but we are afraid that the many advices from Germany like the above will be a difficulty in the way, and perhaps an obstacle to our success.

Besides, if there is such trichinosis, my opinion is that the cases must come from home meats and not from the salted ones imported from America, and should the matter be investigated, your information and certificates on the subject would be of great assistance in our endeavors to obtain the free importation in France.

I rely on you to know exactly what is the matter, and with thanks remain, &c.,

EMILE NEIGNOURET,
The President of the Syndicate.

[Inclosure 2 in No. 135.]

Mr. Sargent to Mr. Conrad Gaedeke.

LEGATION OF THE UNITED STATES,
Berlin, March 24, 1883.

SIR: I inclose to you a copy of a letter from Mr. Emile Neignouret, which speaks of some cases of trichinosis from eating pork which have recently occurred at the fortress at Tilsit. The question of the exclusion or admission of American pork products is now being agitated here and in France; and you will much oblige me, and do the United States a service, if you will ascertain and inform me promptly if these cases of sickness referred to in the inclosed exist; and, if so, whether the pork was of American or other production.

Very respectfully,

A. A. SARGENT.

[Inclosure 3 in No. 135.]

Mr. Sargent to Mr. Neignouret.

LEGATION OF THE UNITED STATES,
Berlin, March 24, 1883.

SIR: I have ordered an investigation to be made by the nearest American consul into the alleged cases of trichinosis at Tilsit, referred to in your letter, and whether, if there are such, they originated or not from eating American pork. I find that all cases of alleged trichinosis are ascribed to American pork, even where the proof is open to any one that they arose from eating raw native or Hungarian pork. Interested parties spread such stories. Frequently these stories are wholly false, there being no sickness. High German scientific authority states that there are not now, and have not been for years, any cases of trichinosis in Germany from eating American pork.

I will promptly inform you of the result of my inquiries.

Respectfully,

A. A. SARGENT.

[Inclosure 4 in No. 135.]

Mr. Gaedeke to Mr. Sargent.

UNITED STATES CONSULAR AGENCY,
Königsberg, March 27, 1883.

SIR: I beg to acknowledge receipt of your communication of the 24th instant, with inclosure of a copy of a letter from Mr. Emile Neignouret. I will immediately try to ascertain, and inform you as soon as possible, of the cases of trichinosis at Tilsit, and whether the pork was of American or other production.

I have, &c.,

CONRAD GAEDEKE.

[Inclosure 5 in No. 135.—Extract.]

Mr. Gaedeke to Mr. Sargent.

UNITED STATES CONSULAR AGENCY,
Königsberg, April 9, 1883.

SIR: In pursuance of my communication of the 27th past, I have the honor to inform you that I have ascertained that fourteen cases of trichinosis have occurred at the garrison at Tilsit in the beginning of March, but that all these cases have been very light, and that everybody has already recovered.

It is officially stated that the soldiers have not received the infected pork in the *menage* of the *caserne*, but it has not been possible to state whence they got it, and it is, therefore, impossible to say whether this pork has been of inland or of American production, but it is most probable that the soldiers have received the product from their relatives. * * *

I have, etc.,

CONRAD GAEDEKE.

[Inclosure 6 in No. 135.—Extract.]

Mr. Sargent to Mr. Neignouret.

LEGATION OF THE UNITED STATES,
Berlin, April 10, 1883.

SIR: Referring to your letter of March 22, and mine of March 24, concerning the cases of trichinosis alleged to exist at Tilsit, I have the honor now to inform you that the United States consular agent at Königsberg, Mr. Conrade Gaedeke, a very reliable and intelligent gentleman, writes to me, under date of April 9, that he has observed my instructions and investigated the cases of trichinosis at the army quarters at Tilsit, and the causes thereof, and now states * * * that at the beginning of March there were fourteen very slight cases of trichinosis, from which every one suffering has now fully recovered. The soldiers did not receive the infected pork as rations, but ate it outside, probably receiving it from their relations, in which case it was undoubtedly native pork. As raw native pork is the ascertained cause of all trichinosis in Germany, when the cause has been traced, as I am informed by German medical authority, it is most certain to have been the cause in this instance.

I inclose a copy of Mr. Gaedeke's letter, by which you will observe also that the statement that deaths had occured was totally false, and have, etc.

A. A. SARGENT.

[Inclosure 7 in No. 135.]

Mr. Sargent to Mr. Gaedeke.

LEGATION OF THE UNITED STATES,
Berlin, April 10, 1883.

SIR: I thank you for the promptness with which you have complied with my request to investigate and report upon the cases of trichinosis at Tilsit. I have taken pleasure in informing the State Department of the promptness and efficiency you have shown in this matter.

Very respectfully, etc.,

A. A. SARGENT.

No. 88.

Mr. Sargent to Mr. Frelinghuysen.

[Extract.]

No. 137.] LEGATION OF THE UNITED STATES,
Berlin, April 13, 1883. (Received May 2.)

SIR: I have the honor to acknowledge the receipt of your instruction No. 99, of March 14. * * * I beg leave to submit a few considerations suggested to my mind by the instruction in question. * * *

The phrase used by me in my note of the 23d ultimo addressed to

Count Hatzfeldt, pointed out by the Department, was not inadvertent. I carefully weighed every word of that note, and desired to present every reason that could influence the German chancellor to avert the yet suspended blow of prohibition. Please observe that any allusion to action by the American Law-making power was not suggested to depend upon acceptance of the President's proposition, but upon the fact of prohibition, a measure replete with disaster to an enormous American agricultural and manufacturing interest. In the firm belief, then and now entertained, that phrase-making would not prevent or repeal such an unfriendly ordinance, and only the prospect of retaliatory legislation would, I distantly intimated that the United States, through its only law-making body, might possibly take notice of this prohibition. It certainly should be an element in the chancellor's estimate of the question that a nation of over 50,000,000 people, of resolute character and noble history, might adopt some form of legislative reprisals. In the absence of instructions, and in the face of an emergency, I advanced this suggestion instead of leaving him to infer or overlook it. Before my note to Count Hatzfeldt was written the American papers came containing some of my dispatches, in which I had strenuously urged that the only way in which the German Government could be influenced was by the fear of reprisals by legislation. These were republished from the American in the German newspapers; those papers which were our friends in the controversy saying the considerations advanced should be heeded by this Government. * * * As these publications necessarily were authorized by the Department, I then saw no error in saying directly, but courteously, to this Government what it was thus informed that I had officially said of it.

* * * * * * *

I have, etc.,

A. A. SARGENT.

No. 89.

Mr. Sargent to Mr. Frelinghuysen.

[Extract.]

No. 145.] LEGATION OF THE UNITED STATES,
Berlin, April 28, 1883. (Received May 16.)

SIR: I have the honor to report that No. 27 of Commercial Relations, January, 1883, contains a dispatch of mine, on page 1, upon the subject of the prohibition by Germany of our pork products, wherein the representations on the subject by various trade associations and the opposition press are stated, and the reasons why the prohibition is likely to be made, and what remedy the United States may have, and should use, to prevent such experiments against their interests, are stated.

As was necessary in such a dispatch, the truths, as they appeared to me, were clearly stated, that you might be perfectly familiar with the issue with which our Government had to deal so far as a close observation here, and a zealous wish to do my duty, could enable you to become.

In the dispatch was also a personal allusion, useful to give an idea of the state of feeling here in various circles. Such a dispatch, informing the State Department of necessary facts was, according to my view, entirely proper. The St. James Gazette recently said, referring to the

probability that the English home office was well informed in regard to an annexation:

> With what object do we keep up diplomatic establishments in every European capital, if the first hint of a design on the part of some rival power to seize an important territory is to come from a little group of colonial politicians?

So it might be asked, "With what object does the United States keep up diplomatic establishments in Europe if they must depend upon chance and tardy sources for information as to measures affecting their interests?" To send such information in such colorless form that if it were published the Government to which the minister is acredited could not find a shade of criticism or matter of exception, and yet the Department get from it a true picture of occurrences having inimical tendencies, and of which it should be expressly warned, would seem impossible.

* * * * * * *

I inclose with translation an article from the Norddeutsche Allgemeine Zeitung, * * * in which it is falsely alleged that the dispatch in question was a newspaper article published by me in a newspaper of New York over my signature, and distorting ingeniously the contents of the dispatch. It ascribes to me the words and arguments which I expressly said were copied from German papers; declares that I said the German Government is not at all a Government of public opinion, but is sure to do the exact opposite of what public opinion demands; whereas I said, "If this were strictly a Government of public opinion in *the American sense*, these general public appeals would prevail." It alleges that I said (three months before the ordinance was passed at all) that it was passed by a trick over the heads of the Reichstag, &c. By a comparison with the original you will see the malignity and falsehood of this travesty.

If I had so far forgotten my duty as to publish an article on a political subject in an American newspaper over my signature, I should feel only repaid even by such gross caricature of what it contained. The paper in question knew that I was innocent of any publication whatever, for a month before it had published the substance of it correctly, and said it was a dispatch to my Government, and berated the opposition papers for furnishing such argument against the measures of their own Government. To give plausibility to this attack it was necessary to ignore that, and to sufficiently fire the hearts of its readers it was necessary to grossly misrepresent the contents of the document.

The undoubted purpose of this publication was to work on the patriotic pride of the Germans by leading them to resent foreign complaint of the action of their Government, and make partisans for the maintenance of prohibition. The scheme was well planned, and undoubtedly works in the way foreseen.

* * * * * * *

I have, &c.,

A. A. SARGENT.

[Inclosure in No. 145.—Extract from the Norddeutsche Allgemeine Zeitung, April 24, 1883.—Translation.]

In the New Yorker Handels-Zeitung of March 10 last we find a publication which bears the signature of the minister of the United States at Berlin, and treats of the prohibition in Germany of American pork. The first half of this article endeavors to describe the "opposition" to the exclusion of American hog products manifested in Berlin and other cities, and refers in particular to articles of the National Zeitung, and the—in the mean time deceased—Tribune. A political criticism of the present form

of government in Germany is connected with the description of that opposition movement, the German Government being described as one not "in the slightest degree a Government of public opinion," but one which most probably always did the reverse of that demanded by the voice of public opinion as well as by the press on the basis "of logical deductions from indisputable facts."

The decree of prohibition is criticised as an illegal measure adopted over the head of the Reichstag, and characterized by a leader of the opposition in the Reichstag *to be the author of the article* as being an "unworthy trick."

It is possible that a German deputy has used such an expression to the representative of a foreign power. We know more than one whom we consider capable of such an act. On the other hand, it surprises us to find the signature of a minister accredited to His Majesty the Emperor under such declarations.

In the article it is further stated: "The Tribune, an influential organ of the party of progress, has convincingly shown the sanitary harmlessness of American pork products. It was solely in the interests of the larger land owners and meat producers of Germany that the prohibition which took 15,000 marks annually from the poor to give them to the rich was issued." At this point the style of the publication attains a pathos, to which we fear our quotation will not do justice; it is stated word for word:

"But woe to the poor who pay to him (the rich) the 15,000 marks; woe to the hungry who imagine that it is a duty of the Government not to allow the price of food to become too high."

The National Zeitung had also furnished a similar argument that could not be refuted in favor of American interests; that journal had in particular asserted that last year's good harvest had afforded such rich profits to German land owners, that their interests did not require this exclusion of American pork from German markets. Here too, therefore, the unveiled insinuation is uttered that the Imperial Government had adopted those measures solely for the purpose of favoring a single class, while the existence of weighty, sanitary police motives for the prohibition is not conceded or mentioned with a single word.

In the last part of the publication the damage to American interests to result from the decree of prohibition is referred to, and reprisals are threatened, leaving out of consideration the fact that North America for whole decades has shut itself off from the products of European industry by the highest protective and prohibitive duties, without our ever having thought of demanding of America consideration for injured German and disregard of American interests.

The publication closes with the declaration that America "can not submit to the exclusion of her products under false pretenses."

The article, therefore, anticipates the employment of international pressure to force the American trichinæ upon the German consumer, after the latter has borne the burden of inconsiderable taxation in order to be protected against the domestic trichinæ. This view is not without analogy to that which was at the bottom of the Chinese opium war. What would the public and the press say in England if a German publication, similar to that contained in the columns of the New Yorker Handels Zeitung, had attacked the prohibition of the importation of German cattle into England with such arguments, and if under such publication the name of the German ambassador accredited to the Queen of England had stood? Assuredly such international warfare would not have found in the English press organs to advocate the interests of a foreign land at the expense of domestic policy.

No. 90.

Mr. Von Eisendecher to Mr. Frelinghuysen.

IMPERIAL GERMAN LEGATION,
Washington, May 2, 1883. (Received May 4.)

SIR: I have received from my Government copy of a note addressed by Mr. Sargent to Count Hatzfeldt, under the date of February 23, of this year, for the purpose of preventing the ultimate proclamation of the prohibited measures resolved upon by the confederate Governments, against the importation into Germany of American bacon, hams, and pork.

Under instructions from the chancellor of the Empire, I have the honor to communicate to you the following reply to the note in question:

The prohibition resorted to by Germany is a measure of internal German legislature, found necessary after careful investigations on sanitary grounds and closely connected with the internal institutions of the country.

Germany has always carefully avoided all interference in regard to measures which other Governments, and especially the Government of the United States, think just to adopt in the interest of their country.

This principle of non-interference has been preserved by Germany also in relation to the high and often prohibitive duties imposed upon German industries in the United States in consequence of their adopted financial system. Germany has never even ventured the slightest remarks in this respect tending to suggest an eventual friendly consideration of German interests in the framing of American internal laws and measures. In the prohibition referred to above, however, higher interests of the nation are at stake than tariff laws, that is the protection of the people against a danger to health. Now, as Germany by its strict and rigorously enforced legislation affords the same protection to its people at home against all danger from German cattle and hogs, it can not possibly treat the foreign producers better than its own.

An investigation of the American methods of raising hogs and preparing hog products by a commission of German experts in the United States could not effect a material change in this respect.

Germany taking fully into account the very considerable importation of German cattle into England, would nevertheless not feel at liberty to request the British Government to inquire into the necessity of the restrictions imposed upon the importation of German cattle into England by a commission traveling over Germany. The measures adopted in England against the importation of German cattle are also based upon sanitary but much less important reasons than those existing in Germany in regard to American pork. Even the most favorable report rendered by such traveling members of a commission about the health of German cattle and the methods adopted in Germany for its preservation would not constitute a sufficient motive for the British legislature to recall their sanitary precautionary measures.

Austria-Hungary, also, to whose cattle the German frontier has been closed upon sanitary grounds for a number of years, has not considered the suggestion of an inquiry by German officials within its possessions as a likely means to have that prohibition removed or made less rigorous.

These extensive and long established prohibitive measures against Austria-Hungary, a country bound to Germany by the closest political and commercial ties, may at the same time be mentioned as a proof that taking for granted an impartial and unbiased consideration of the question, such measures which due regard for the health of the people compels the Government to adopt need in no way interfere with our friendly relations existing with Austria, England, and America.

Expressing the hope, in the name of my Government, that the foregoing remarks may receive at your hands the appreciation warranted by the happy and friendly relations of both nations and their Governments, I avail, etc.

VON EISENDECHER.

No. 91.

Mr. Frelinghuysen to Mr. Sargent.

[Extract.]

No. 116.] DEPARTMENT OF STATE,
Washington, May 4, 1883.

SIR: Your action, as reported in your dispatch No. 135, of the 13th ultimo, in causing an investigation of alleged cases of trichinosis at Tilsit, is heartily approved by the Department. It is desirable that every well-authenticated report of an outbreak of trichinosis in Germany which may come to your ears should be inquired into on the spot, with an honest and evident purpose to arrive at the exact facts so far as may be possible.

* * * * * * *

I am, etc.,

FRED'K T. FRELINGHUYSEN.

No. 92.

Mr. Sargent to Mr. Frelinghuysen.

[Extract.]

No. 146.] LEGATION OF THE UNITED STATES,
Berlin, May 4, 1883. (Received May 21, 1883.)

SIR: I have the honor, referring to my No. 145, of 30th April, to state that the Norddeutsche Allgemeine Zeitung has, since I sent said dispatch, viz, in its issue of the 1st May, partially atoned for the inhospitable attack upon the representative of a foreign Government, and its gross misrepresentations of his utterances, by publishing the whole of my dispatch of January 1, accompanying it with the remarks that it had no wish to be inhospitable to an accredited representative to His Majesty of a friendly foreign country, but still affecting to believe that my name to the document was a forgery or unexplained. It is somewhat comically contradicted in this by the introductory remark of the New Yorker Handels-Zeitung which it copies, and which precedes the dispatch in its columns. This apology is as much as may well be expected, * * * and perhaps much more, and I presume the incident is terminated.

Meanwhile the German and continental press has been somewhat busy over the matter. The semi-official German press has become very moderate or been silent.

* * * * * * *

The London Times correspondent of the 1st instant says:

Imitating the action of the German Federal Council the Greek Government has, from sanitary considerations, forbidden the importation of all sorts of American pig flesh. It may be mentioned that Prince Bismarck's organ, the North German Gazette, publishes to-day the text of the dispatch which Mr. Sargent, the American minister here, addressed to his Government on the subject of the interdict, and on an incorrect rendering of which this organ founded its late personal attack on the accredited representative of the United States, an attack which any member of the diplomatic corps would have been justly entitled to regard as a clear infringement of his rights and privileges. The

publication of the full dispatch in question, though prefaced by a weak and transparent attempt to excuse the previous attack, must therefore be regarded as an humble, but inadequate aplogy to the American minister, seeing that the North German Gazette thus convicts itself of having grossly misrepresented his excellency's meaning and imputed to him words which he never used.

The North American Times, published in London, says:

The United States minister at Berlin has been attacked by the Norddeutsche Zeitung for sending to a New York paper his official report on the prohibition of the import of American pork into Germany. How does the journal know that the minister sent the article in the New York paper? And how can it complain of Mr. Sargent sending a dispatch to his Government on a matter concerning American commerce? It is the duty of the minister to write such dispatch, to express an opinion on the matter, to quote other opinions both for and against—in a word, to give his Government all the information he could glean. The point of attack is that the North German Gazette is under the inspiration of Prince Bismarck, and the exclusion has been exciting a strong feeling on the other side.

The same paper, referring to a former dispatch in the London Times, says:

The Times tells us that the minister's comments thus published in a New York trade journal have caused no slight displeasure in high quarters in Berlin. But we can tell those who feel this displeasure that their action had aroused no slight displeasure among the sovereign people of America; not that the exclusion is a matter of moment just now, but that it indicates an inclination to exclude American products generally. It is true, as the Times remarks, "that the measure was less of a sanitary than of a prohibitive nature."

The American Register, published in Paris, has the following:

The North German Gazette, the official organ of Prince Bismarck, criticises an article in the New Yorker Handels-Zeitung, respecting the prohibition to import of American pork into Germany. The article in question spoke of reprisals, and was signed by the American minister at Berlin. The North German Gazette expresses surprise at seeing the signature of the American minister to the article in question, and adds, "that when the article in question speaks of reprisals in order to force American trichinæ upon German consumers, it was an argument not unlike that which formed the ground of the Chinese opium war."

The commercial policy of Prince Bismarck is a protective policy, and so far it resembles that of the United States. Now the protective system is essentially one of strict reciprocity, and it was only the other day that the German minister of commerce threatened Spain with reprisals; there is therefore no reason why the minister should be so horrified at the system which he applies to others being applied to himself. Of course, Germany does quite right to exclude American pork when it is infected by trichinæ, but what Americans object to is the assumption that American pork is infected with trichinæ after it has been shown that, owing to the length of the voyage from America to Europe, the parasite can not survive in the dead animal, and that, therefore, trichinæ in American pork are an impossibility. It is very curious that, while the North German Gazette denounces American pork, the French papers denounce that of Germany on similar grounds. Perhaps German trichinæ require to be protected, and, if so, the solicitude of the North German Gazette for their welfare is comprehensible.

* * * * * * *

I have, &c.

A. A. SARGENT.

[Inclosure in No. 146.—Extract from the Norddeutsche Allgemeine Zeitung, May 1, 1883.—Translation.]

The Börsen Courier brings an alleged conversation with the American minister, Mr. Sargent, with reference to our article of April 24.

We can make no better answer to the statements it contains than by simply furnishing a copy of the article which appeared in the New Yorker Handels-Zeitung over the full signature of the minister. We must leave it to the organs which have relations with the minister to enlighten the public more effectually than has heretofore been done as to how this article could have been reprinted in the New Yorker Handels-Zeitung with the minister's name and official title without a protest or correction, official or otherwise, having hitherto been made with regard to this abuse--for as such

we must now regard it—of the name of the minister. We, in our turn, protest against the heading selected by the Börsen Courier for its article: "The American minister and the Norddeutsche Allgemeine Zeitung." We shall never permit ourselves to so far violate hospitality and international courtesy as to attack or criticise the official acts of a minister of a friendly state accredited to His Majesty the Emperor. We have to deal only with the article of the New Yorker Handels-Zeitung, offensive to the German Empire, and we should be glad to learn that the signature to that article is based upon some error.

The article is as follows:

"The report sent to our Secretary of State dated January 1 last of United States Minister Aaron Sargent, at Berlin, in the matter of the prohibition of the importation into Germany of American pork, of which we communicated an extract in the last number of this sheet, reads as follows:"

[Here follows a translation of the text of the minister's dispatch.]

No. 93.

Mr. Sargent to Mr. Frelinghuysen.

[Extract.]

No. 147.] LEGATION OF THE UNITED STATES,
Berlin, May 5, 1883. (Received May 21.)

SIR: I have the honor to report that in obedience to your telegraphic instruction to execute the instruction 99, I had an interview on yesterday with Count Hatzfeldt, it being the first opportunity therefor, and read the same to him, stating that I was happy to present the views of my Government upon the note which I had heretofore addressed to him asking a suspension of the prohibitory ordinance until an examination in the soundness of American pork could be made by a commission of German experts, and, at his request, I left him a copy of your said No. 99.

Count Hatzfeldt replied that he was glad to have a formal communication from the State Department showing that the note had exceeded the views of the American Government in some particulars, viz, its discussion of the internal affairs of the German Government, and the menace that the American Government might resort to retaliatory measures, although he had already been informed of that fact from Washington. He also said he would lay the matter before the chancellor, who would no doubt be much pleased, and all the more as the relations between the two Governments had always been so satisfactory.

Considering my duty expressly limited by your instruction, I refrained from discussion, and did not say what seemed to me true, and on again reading my note still seems to me to be so—that I have not discussed in it the internal affairs of the German Empire except so far as its acts directly affected America, and that your No. 99 then presented contained no correction on my views in that regard.

* * * * * * *

I have, etc.,

A. A. SARGENT.

No. 94.

Mr. Sargent to Mr. Frelinghuysen.

[Extract.]

No. 155.] LEGATION OF THE UNITED STATES,
Berlin, May 19, 1883. (Received June 5.)

SIR: The fierce heat of discussion that has followed the publication of my report of January 1 on the prohibition of American pork, or, rather, since the attack upon the same by the North German Gazette, especially the severe comments upon that paper and on the imperial administration by the American press, have compelled the same paper to finally attempt a justification of the prohibitory ordinance by showing that clear sanitary reasons exist therefor. I send this article to you inclosed with translation, that you may have both sides of the case, and the best that can be * * * said for the ordinance * * * I will remark that its statements of German facts are contradicted by the representations of the members of the Reichstag who opposed the measure. Thus, Herr Richter said that proofs are accessible that the cases of trichinosis observed in Germany arise from the use of German chopped meat. Dr. Barth refuted the statement from statistics, which are now marshaled in the North German Gazette, and which were then presented by Dr. Kohler, and declared the American meat to have been demonstrated as comparatively sound. Deputy Ahlhorn stated in the same debate that he had collected many reports and made many investigations, but not a single case had been authenticated whose sickness had been caused by using American lard or bacon.

You will observe that the Tilsit cases are referred to in this article to strengthen the argument, although, as it must be * * * known that I had investigated that matter, and knew that the amount of disease was greatly exaggerated, and that the pork used was undoubtedly the domestic article, this case is passed lightly over as a newspaper statement. * * * The great fact remains that the bills of health show no particular inconvenience from the consumption of this article of food in Germany or elsewhere. The article admits that such inconvenience does not arise elsewhere, and would not exist in Germany did not the consumers here like the flavor of raw pork. There may be something in the argument that the customs of a country should be considered by its rulers, and if the people here will eat raw pork and so get disease, diseased pork that would be made sound by cooking must be kept out of the country. * * *

The falling off of importations of American pork being so great as represented, it is claimed that the alleged evil should soon cure itself, and it is not worth while to disturb the tranquility of two continents by prohibiting an importation that has decreased by eight-ninths in a single year. The argument is not ingenuous. A partial prohibition, covering all our chopped meats and sausages, was in operation in 1882, and the threatened prohibition of all pork products, which has been since pending, contributed, with less production in the United States, to decrease the amount sent here.

* * * * * * *

I have, etc.,

A. A. SARGENT.

[Inclosure in No. 155.—Extract from the Norddeutsch Allgemeine Zeitung, May 16, 1883.—Translation.]

In view of the lively discussion caused by the publication of the report of the American minister at Berlin concerning the prohibition of the importation of American pork, it seems appropriate to call attention to the sanitary grounds upon which alone the issue of that prohibition was based.

On the American side it is asserted with emphasis that the frequent occurrence of trichinæ in American pork is a fable, such pork being really much more healthy than the German. This assertion is entirely unfounded. Apart from the circumstance that uniform measures for the suppression of contagious diseases of animals are utterly wanting in the United States, the official investigations, even as to the extent of the danger, and especially as to the occurrence of trichinæ, are not commensurate with the requirements that must, in the interest of thoroughness, be insisted on in compiling statistics. The pamphlet of Mr. Scanlan, "American Pork," often cited by the opponents of prohibition, touches trichinosis quite superficially only, confining itself essentially to general unauthenticated statements of individual pork-packers and by hog-raisers, that is to say, of persons interested in an unobstructed sale.

Under these circumstances we must consult supplementary investigations in Germany and other countries of Europe, and the statements of American experts (veterinary and medical persons).

Let it be remarked in advance that the microscopic examination of hogs raised in Germany has yielded the following results: Of 12,816,931 hogs examined in Prussia during the period from 1876 to 1880, 6,945, or 0.054 per cent., contained trichinæ; of 29,832 examined at Dresden, in 1878, and of 41,500 examined at the same place, in 1881, 11 and 7, or 0.036 and 0.017 per cent., respectively, were thus affected; and of 444,832 hogs examined in the duchy of Brunswick during an extended period, 74, or 0.017 per cent., contained trichinæ.

How, on the other hand, does American pork stand in this respect? The health commissioner of the city of Chicago, Dr. Dewolff, found that from 3 to 5 per cent. of the hogs examined by him contained tricihnæ. The health officer of Erie, Pa., Germer, places on the basis of an experience of long years the percentage of hogs containing trichinæ at something less than eight in a hundred. Billings, of Boston, a veterinary surgeon, educated in Germany, has particularly occupied himself closely with the subject, and, pursuant to his latest communications in No. 222 and in later numbers of the New York Medical Journal of March last, there were in 1879, among 2,701 hogs, 154, or 5.7 per cent., and in the years 1879, 1880, and 1881, among 8,774 hogs, 345, or about 4 per cent., which were found to contain trichinæ. The results of investigations in Europe are entirely in accord herewith; at Turin, Volanti found 4 per cent.; French experts found 3 per cent. to contain trichinæ. In Germany the average of imported American pork is 4 per cent.; a lot of living hogs imported thence into Germany, in 1880, yielded even 15.9 (in Dresden) and 23.3 per cent. (in Magdeburg) containing trichinæ. It is therefore evident that the danger of trichinosis from indulgence in American pork, including the sides of fat, which always contain layers of meat, is absolutely, as well as in comparison with our German product, extremely great; it is more than sixty times as great as in the case of German pork.

Examinations at the places of importation have not proven to be an efficacious means of control, the mscroscopic examination being less reliably performed at those places in consequence of the great quantities to be inspected in a short time. It thus repeatedly occurred that meat certified to at a port of entry as being free from trichinæ was, upon a subsequent examination in the interior, found to contain trichinæ.

The objection has been raised that the number of cases of disease actually arising from indulgence in American pork is not in harmony with the above. To meet this objection it must be stated that in ports of entry epidemic trichinosis has repeatedly been proven to have been caused by indulgence in such meat (as, for instance, in Bremen, Rostock, Dusseldorf, and, according to recent newspaper notices, at Tilsit), but that apart from these instances it has, in many cases, been found quite impossible to ascertain the source of meat that had occasioned disease, the fact having been established *that a very considerable part of the pork from America is sent to Germany but slightly cured (brined), and is then worked up here and adapted to German taste, and finally put on the market as Westphalian hams, Gotha or Brunswick cervelat, sausages, etc.* The American method of preparation does not suit German taste. Diseases arising from trichinæ wares thus imported, or naturalized in Germany, are, as a matter of course, charged to the account of our domestic hogs.

It is also an entirely unfounded assertion, in conflict with the results of close scientific examination, that trichinæ are destroyed by the customary salting and smoking of pork. There is but one reliable way of attaining this end—to cook the meat thoroughly, trichinæ not being able to withstand boiling heat. In point of fact, in most of the other states of Europe pork is eaten only when thus cooked, and that is why there is much less complaint about trichinæ elsewhere than with us; for the German consumer prefers a product the natural good flavor of which is not impaired by high

seasoning. But as our Government must, in the measures it takes, reckon with the habits of our people, it was a simple duty, on its part, to ward off, by a decree of prohibition, so serious a danger, and one against which the poorer portion of the consuming public, in particular, could not in the least protect itself.

In conclusion, a word about the economic importance of the importation. The amount of meat (fresh and prepared, article 25, g. 1 of the tariff) imported into Germany in 1881 was 190,090 double cwt.; deducting the amount of the export, 56,283 double cwt., there remains 133,807 double cwt. meat (game, beef, veal, pork, sides, etc.); of this about three-quarters, or 100,355 double cwt., consist of pork and sides. The entire consumption of pork, including sides from domestic hogs and from importations (in particular from Russia and Austria-Hungary) of pork and living hogs, amounted, on the other hand, in 1881, according to the most exact calculation possible, to 4,106,483 double cwt.; hence the importation from abroad of pork covers only $2\frac{2}{5}$ per cent. of the entire amount consumed. But even this comparatively small amount of 100,355 double cwt. decreased, in the year 1882, to the ninth part; that is to say, to 11,444 double cwt., although no decree of prohibition had as yet been issued, and the apprehension of such decree should rather have stimulated importation. Thus the best testimony is afforded of the slight importance of the matter from an economic stand-point.

No. 95.

Mr. Sargent to Mr. Frelinghuysen.

[Extract.]

No. 157.] LEGATION OF THE UNITED STATES,
Berlin, May 21, 1883. (Received June 5.)

SIR: Wishing to keep you informed of all facts bearing upon the controversy in regard to the exclusion of American pork products, whether the same be of greater or less importance, I have the honor to state that * * * the North German Gazette, published on yesterday, but without comments, another of my dispatches on the above-named subject, crediting it to the "Reports of Consuls of the United States." It is to be found on page 39 of the January number of that publication.

So far as I have observed no comment has so far appeared in any German newspaper upon the strenuous articles in the American press which have followed the North German Gazette's attack on the American minister.

I have, etc.,

A. A. SARGENT.

No. 96.

Mr. Davis to Mr. Sargent.

[Extract.]

No. 119.] DEPARTMENT OF STATE,
Washington, May 23, 1883.

SIR: Your No. 145 of the 28th ultimo has been received. The Department appreciates the embarrassment to which you have been subjected by the misrepresentation in the Norddeutsche Allgemeine Zeitung of your published report of January 1, on the subject of the impending prohibition of American pork imports in Germany.

It is quite evident that the embarrassments to which you advert were not due to the fact of an official publication of your report by the De-

partment, but to what appears to have been a willful perversion of that fact by an unfriendly journal, which, if later telegraphic reports are to be credited, has been brought to admit the groundlessness of its main allegation, that you had corresponded on the subject with an American journal, and to admit that the obnoxious views it had attributed to you were in reality the views of the German press quoted by you.

The Department gives to the consideration and preparation for publication of the dispatches of its agents abroad every attention, with the object of guarding against the publication of their personal views which might, if known, expose them to criticism or censure in the land of their official residence. On an examination of the blue books of other Governments, it is believed that far more care is here exercised in this respect than in other countries. It is, of course, impossible to prevent malicious or honestly mistaken perversions of such publications by outside parties.

* * * * * * *

I am, etc.,

JOHN DAVIS,
Acting Secretary.

No. 97.

Mr. Frelinghuysen to Mr. Sargent.

[Extract.]

No. 141.] DEPARTMENT OF STATE,
Washington, July 25, 1883.

SIR: I inclose herewith for your information a copy of a note addressed to this Department by Mr. Von Eisendecher, dated May 2,* in which he communicates by instruction of his Government, the reply to your note to Count Hatzfeldt of February 23 last. Previous instructions from this Department, No. 88, of February 21, 1883, and No. 108, of April 11 last have already put you in possession of the views of the President on this subject. A perusal of Mr. Von Eisendecher's note will immediately suggest to one so familiar as yourself with this particular question, as well as with the distinction between general and discriminating internal measures, certain points wherein it is open to valid answer.

It will be observed that the note contains in substance, although not in terms, a rejection of the President's proposal that a commission of German experts be appointed to examine into the raising and packing of hogs and hog products for food, because Germany by its laws affords its people protection against danger from German cattle and hogs, and can not treat the foreign producers better than its own, and therefore an investigation of the American methods of hog raising and preparation would not affect a material change. With the sanitary legislation of Germany thus alluded to this Department is not familiar, but it might well have occurred that a careful investigation of the processes in the United States would have shown that strict legislation of this character is unnecessary here, because of the different situation of the two countries, and the different methods followed in the United States by reason

* See *ante*.

of their large area of thinly settled land, the cheapness of corn and grain, and other incidents peculiar to the occupation of hog or cattle raising in a large and sparsely populated country.

The appointment of the commission suggested would at least have prejudiced nothing, and might have resulted in removing the fears of the Government of His Majesty, and thus aided in securing the revocation of a decree which seriously impaired an important trade between the two countries.

The parallel sought to be drawn between the protective tariff system of the United States and this prohibition of the importation of American pork and pork products does not seem to be well founded. Our tariff is a measure of general application; it applies to German exports to the United States no more and no less than to French, Austrian, or English exports; it is distinctly an internal measure of general and universal application, and as such no more open to objection than any other well considered and fair system of taxation or custom tolls. Were our tariff to prohibit the importation of certain articles because they come from Germany, permitting the importation of the same articles coming from other countries, or were it to impose a higher duty upon German exports as such than upon the same exports from other countries, then the parallel to the decree now alluded to would become apparent. Nowhere in the tariff, however, is such a discrimination found.

The objection to the decree is not that it excludes unhealthy or diseased pork or pork products, for such a decree would be a praiseworthy sanitary measure, but that it excludes American pork, healthy or unhealthy, good or bad; the test is not the condition of the food but the place it comes from. In certain exceptional cases even discrimination in this form would be unobjectionable, as during the prevalence of an epidemic. On this principle, all vessels coming from certain infected ports are quarantined regardless of the actual health of the passengers and crew, but such measures are at the most only temporary, and should be based upon good cause; whereas in the present case there is nothing to show the decree to be of temporary application, and this Government has offered to that of Germany an opportunity to examine into the facts for the purpose of discovering whether the alleged cause actually exists, which offer has not been accepted.

The fact that certain exceptional legislation in Germany as to Austro-Hungarian cattle has not met with objection from that Government may arise from the geographical situation of the countries requiring peculiar and strict regulations not so properly applicable to the products of a nation over 3,000 miles distant, and which can only reach Germany by well-known channels through ascertained ports, where they may be easily examined and inspected. * * *

I am, &c.,

FRED'K T. FRELINGHUYSEN.

No. 98.

Mr. Von Eisendecher to Mr. Frelinghuysen.

IMPERIAL GERMAN LEGATION,
Washington, July 27, 1883. (Received August 1, 1883.)

ESTEEMED Mr. SECRETARY OF STATE: The United States minister at Berlin some time since communicated to the secretary of state for

foreign affairs the instruction sent to him by his Government under date of March 14, 1883, relative to the German prohibition of the importation of American hogs, &c.

In connection with this communication, for which the chancellor of the Empire feels grateful to your Government, the Imperial Government desires, referring to the previously received note of the United States minister, again to explain its own position in this question.

The aforesaid note of Mr. Sargent made an unpleasant impression in Berlin, both because of its interference in the domestic affairs of Germany, and of its tone, which was not in harmony with the friendly relations existing between the two Governments. The German Government is consequently much gratified to find that the Government of the United States does not adopt the position taken by its representative in his aforesaid note.

In issuing the prohibitive decree in question the object had in view was simply the adoption of a sanitary measure. The only design of Germany was to protect her own population from disease, and there is less reason to suppose that there was any intention to pursue a course calculated to influence the relations existing between Germany and America, inasmuch as similar prohibitions of the importation of American pork have long existed in other countries, viz, in France, Italy, Austria-Hungary, and Greece, which circumstance has occasioned no similar proceedings on the part of the American representative at Paris, Rome, Vienna, or Athens.

This difference of action causes the more surprise at Berlin, since in Germany only does this complaint made by America furnish ground to the political opponents of the Government on which to base their denunciations of its course.

The trade in hogs and their products is subjected to the most rigid control in the interior of Germany. Not only does the sale of pork containing trichinæ subject the seller to severe penalties, but even the manufacture (through negligence) of pork products that may endanger the health of the consumer.

There are, moreover, in the various districts of Germany police regulations providing that all pork shall be examined, and that all hogs before being slaughtered (even by private parties) shall be subjected to a microscopic examination. Butchers are, furthermore, obliged to slaughter their hogs in slaughter-houses which are under police inspection. The prohibition of the importation of these products of the American market was therefore indispensable to the observance of strict impartiality toward citizens of the German Empire and foreigners.

With regard to the proposition to allow the American slaughter-house arrangements, etc., to be examined by a commission of German experts, the imperial Government gladly recognizes the good intentions thereby manifested; it is unable, however, to reach the conviction that such an examination would secure the desired result, since, although the imperial Government does not doubt that precautionary measures are adopted in many such establishments in America, or that the products in question are prepared with care and under proper inspection, it nevertheless thinks that it is impossible to secure and maintain uniformity among all such establishments in the United States, and a German commission will never be able to become convinced, even from the most complete arrangements of exporting houses, that the latter are able to furnish a constant guarantee of safety from trichinæ. The sending of such a commission would doubtless reveal the best intentions and the most perfect order in the establishments visited by it, but also the impossi-

bility of preventing the exportation of trichinous pork even when every conceivable precaution is taken.

It may be remarked in conclusion that a petition remonstrating against the prohibition to import American pork was some time since received from the tradesmen of Königsberg, some of whom, and the very ones who had been most prominent in getting up the petition, have since been punished for selling trichinous American pork.

Accept, etc.

VON EISENDECHER.

No. 99.

Mr. Frelinghuysen to Mr. Sargent.

No. 156.] DEPARTMENT OF STATE,
Washington, October 9, 1883.

SIR: With reference to previous correspondence on the subject I have to inform you that in view of the action taken by Germany and several other foreign powers in prohibiting the importation of American pork, upon the ground that it is an unhealthful article of food, this Government has now taken measures for such a thorough investigation of the subject as will, it is thought, leave no doubt whatever as to facts.

To this end the President has designated a commission which he has charged with the duty of making a searching and impartial examination of all the conditions of hog raising and packing industries of the United States.

The chairman of the commission is Dr. George B. Loring, the Commissioner of Agriculture, whose official duties for several years past have made him familiar with the subject now submitted to the commission for formal investigation.

The other members of the commission are:

1st. Prof. C. F. Chandler, an eminent scientist of New York, who was unanimously selected by the Chamber of Commerce of that city on account of his peculiar competency for the position;

2d. Eliphalet W. Blatchford, esq., who was nominated by the board of trade of Chicago as an intelligent gentleman of the very highest social and business standing, who "is in no way personally interested in the businesss to be investigated, and is possessed of those characteristics which it is believed will enable him fully, ably, and fairly to co-operate with the other members of the commission in placing these most important interests in their true position before the Government, and through it before the commercial world;"

3d. F. D. Curtis, esq., of Charlton, N. Y., recommended by the Department of Agriculture as a gentleman who has given long and diligent study to the industry; and

4th. Prof. D. E. Salmon, of Washington, D. C., nominated by the Commissioner of Agriculture, and well known as one of the most learned and skilfull veterinary surgeons in the United States.

This commission will be organized at an early day, and the results of its investigation will be submitted to Congress as soon as practicable.

As the imperial German Government has declined to be represented it will not be necessary for you to communicate the contents of this instruction to that Government, but you may, when a suitable opportunity presents itself, informally make known to the foreign office the action which this Government has taken with reference to the matter.

I am, etc.,

FRED'K T. FRELINGHUYSEN.

No. 100.

Mr. Sargent to Mr. Frelinghuysen.

No. 201.] LEGATION OF THE UNITED STATES,
Berlin, October 15, 1883. (Received October 29.)

SIR: I have the honor to state that I have observed with some interest the news in the German newspapers as to the existence of trichinosis in the Empire since the absolute exclusion of American pork and pork products, and since a sufficiently long time has elapsed to insure accuracy in the conclusion that the stock of American products of that kind is exhausted. From time to time notices of the prevalence of the disease have appeared.

It seems to me now just to conclude that cases reported are caused by the consumption of German or some other than American pork; and that it is no longer possible to ascribe to the articles furnished by the United States the disagreeable results of the consumption of raw pork.

In the Berliner Tageblatt of October 11 appears a telegram from Ermesleben, near Halberstadt, in Prussian Saxony, in which it is stated that there are now in that town about one hundred and eighty persons who have been seized with trichinosis. It is also stated that the epidemic does not seem to have reached its height, as new cases are reported daily, and that four persons have already died.

It is entirely safe to say that no such epidemic as this is shown to have ever resulted from the consumption of American salted pork, which must be cooked to be eaten.

I have, etc.,

A. A. SARGENT.

No. 101.

Mr. Smith to Mr. Davis.

[Extract.]

No. 104.] UNITED STATES COMMERCIAL AGENCY,
Mayence October 17, 1883. (Received November 12.)

SIR: As all items which appear in the newspapers of Germany respecting the occurrence of cases of trichinosis in the Empire are doubtless of interest and value to the Department just at this time, when American pork is excluded from this country under the plea of unwholesome ness, I have the honor to herewith lay before you the following short article which I met with in yesterday's evening edition of the Frankfurter Zeitung in regard to numerous cases of trichinæ infection recently brought to public notice in the province of Saxony, namely:

FROM THE PROVINCE OF SAXONY.

Various places in the province have recently been badly afflicted by trichinæ. In Ermesleben, according to the Nordhaüser-Zeitung, are at present 183 persons down therewith; in Deesdorf about 70–80; in Nienhagen, 57; in Crottorf, about 30–40; furthermore, are also lying in Gröningen, Klein-Gröningen, Quenstedt, Schwanstedt, and Wegeleben, persons ill from trichinosis. Cases of death have also begun to occur; in Quenstedt, 1; Ermesleben, 5; Gröningen, 2; and there are 30 or 40 persons of whose death intelligence is daily expected. The distress is indescribable. In Ermesleben, Crottorf, Deesdorf, Nienhagen, are whole families down sick. The cattle have departed in search of food, because there is no one to attend to them, or other-

wise must have gone hungry. The physicians are of the opinion that a further extension of the disease is to be feared, for, according to previous experience, persons who have partaken of flesh infected with trichinæ, not in a fresh state, but as black pudding, pickled pork, boiled flesh, etc., only after four weeks, and even later, have been seriously attacked with the malady. A judicial investigation is now in full progress.

I doubt not that I am fully justified in saying that there is no instance on record of the consumption of swine flesh in the United States of America having ever played such havoc with a community as that set forth in the foregoing article, and to the major part of our people it would seem almost impossible that any calamity of the kind could take place. In comparison with his German kinsman, the American hog is a very inoffensive creature, and more sinned against than sinning. He is reviled and persecuted here, but I do not believe that it is really so much because his flesh is considered dangerous as a food as because it is inimical to the farming interests of the Empire. Anyway, the Government at Berlin has forbidden its importation, and the great body of the German people are honestly of the opinion that its flesh is suspicious. * * * A residence of two years in Europe has led me almost to conclude that the people over here are very much inclined to regard everything American and from America as of the devil, for the devil, and by the devil, and ought to perish from the earth. Potato rot, phylloxera, trichinæ, and all the pests, plagues, hurricanes, and direful calamities by which the nations are visited, according to their disordered imaginations, have their origin in America.

I have, etc.,

JAS. HENRY SMITH.

No. 102.

Mr. Frelinghuysen to Mr. Sargent.

[Telegram.]

DEPARTMENT OF STATE,
Washington, October 20, 1883.

Mr. Frelinghuysen telegraphed to Mr. Sargent, instructing that a thorough investigation be made promptly by the nearest consuls of the origin of present trichina cases reported in Germany, for the information of the Commission.

No. 103.

Mr. Sargent to Mr. Frelinghuysen.

No. 204.] LEGATION OF THE UNITED STATES,
Berlin, October 20, 1883. (Received November 10.)

SIR: Referring to my No. 201, of 15th October, relating to the prevalence of cases of trichinosis in Germany since the absolute exclusion of all kinds of American pork products, and after the lapse of sufficient time to exclude the conclusion that the cases of disease arise from the consumption of American pork, I am now enabled to state fuller particulars of the epidemic that has broken out in Prussia, as I gather them from the Berlin newspapers, and the dispatches sent from this city to

the London journals. A telegram from Berlin to the London Daily News of Tuesday last has the following:

Concerning the Draconian measures taken by the German Government against the importation of American pork, it is very strange that a most alarming outbreak of trichinosis is reported from Saxony. In some ten villages nearly four hundred persons, including entire families, are prostrated by the terrible disease. Deaths are occurring daily, and over fifty cases are stated to be beyond hope, while the physicians expect the disease to spread still further. The police are actively engaged in searching for the origin of the epidemic.

The "Draconian measures" referred to have only been directed against American pork, and that in view of the fact, seemingly well founded, that the consumption of American pork in the United States, England, Switzerland, and Belgium, where it is thoroughly cooked before eating, very rarely produces consequences injurious to health; and also that investigation showed that the cases of trichinosis occurring in Germany before the prohibition arose from the consumption of native or Hungarian pork in its raw state, and not from the use of American pork. Good medical authority in France sanctions the view that American pork is not dangerous.

However much controversy might be raised over these propositions, there is no room for assumption that the present distressing epidemics are caused by the American articles. It might be worth all the inconvenience of a year's exclusion of our products of this kind for the result to be so clearly demonstrated that the cases of trichinosis which sometimes occur in Germany are unjustly ascribed to American pork. It has been the universal habit here to assign, without inquiry, this origin to trichinosis cases. Thus the cases occurring at Königsberg (Tilsit) were so accounted, although the inquiries which I caused to be made of the local military and civil authorities controverted that conclusion.

The correspondent of the Daily News falls into the same strain, and holds it extraordinary that trichinosis should be so prevalent and disastrous after the severe measures taken against American pork, as if such measures were all that were necessary to insure immunity.

I inclose a dispatch from the infected district, published in the Berliner Tageblatt of the 17th instant, with translation, in which the details given by the correspondent of the Daily News are confirmed. By this dispatch it seems the disease has been developing for some four weeks, and has spread through several villages, whose inhabitants are accustomed to eat raw sausage meat. All who have eaten pork in this form have died, and many are sick who have eaten probably imperfectly cooked meat and sausages from the infected pigs. The butcher who killed the swine, and the inspector, and their families, are sick. There seems to be no decline as yet in the disease, the horror of which is said to surpass conception. The local authorities are taking the expense of medical treatment upon themselves. That it is genuine trichinosis is shown by examining the flesh of the deceased.

These facts are interesting as showing that the ordinance of the Empire discriminating against American pork, while admitting Russian, Hungarian, or French pork, was not calculated to accomplish its avowed object, viz, the prevention of disease and death from trichinosis. There is no evidence that American pork is worse than that furnished by other countries, and hence no ground for discrimination against it. The danger comes at least equally from other quarters, viz, from German pork, or the pork of the neighboring countries. This is already demonstrated by the facts above given, for American pork can not be accused of being the cause of these present disasters. If this disease is caused by Ger-

man pork the claim in Herr Von Eisendecher's note of May 2, 1883, to the honorable Secretary of State is not justified, viz:

> Now, as Germany, by its strict and vigorously enforced legislation, *affords the same protection to its people at home against all dangers from German cattle and hogs*, it can not possibly treat the foreign producers better than its own.

If the disease comes from foreign hogs, except American, allowed still to be freely imported into Germany, the measure prohibiting our products was not only discriminating against the United States, but ineffectual. In any view the whole subject needs reconsideration by Germany.

I have, etc.,

A. A. SARGENT.

[Inclosure in No. 204.—Extract from Berliner Tageblatt of October 17, 1883.—Translation.]

ERMESLEBEN, NEAR HALBERSTADT.

The symptoms of trichinosis of which we have already made mention first made their appearance about four weeks ago in Ermesleben, where the pig or pigs were killed. About two hundred persons lie ill there, of whom fourteen have already died. Then followed Nienhagen, a small way-station near by, where about eighty persons have been attacked, none of whom have died as yet. Further, the disease appeared in Gröningen, Quenstadt, Schwanstedt, and Wegeleben. In all about three hundred persons suffer from it, of whom seventeen have died. Throughout the region the habit of eating (raw) chopped pork (so-called sausage meat) predominates, especially among the laboring class. All who have eaten of it in this shape die. But those, too, who have eaten it boiled, or as sausages—yes, as is asserted, even as lard, have been severely attacked with the malady, although their cases are not so hopeless. There does not seem to be a decline in the epidemic, and according to the opinion of the attending doctors, 50 per cent. of the infected die. Other reports estimate the mortality at 20 per cent. May the Almighty prevent this, for the horror of this malady surpasses all conception. In one family five persons, and in another seven, even, have been attacked. In one family four persons died. Even the butcher who sold the meat, and the inspector of the meat, together with their families, are sick. The former has already lost his mother, and there is little hope for himself. The parish authorities have taken very laudable steps to alleviate the distress. In Ermesleben the local authorities have taken the expenses of medical treatment, etc. upon themselves. and Deesdorf immediately granted 1,000 marks for that purpose. Those that die are all young, vigorous persons, and in most cases fathers or mothers of families.

In a portion taken from a female corpse for dissection, seventeen trichinæ, freed from the capsules, were easily discernible. Upon whom the blame falls, or whose negligence caused this disaster, will probably never appear, since, as already mentioned, the butcher as well as the inspector of the meat, a barber, have both been attacked by the disease.

No. 104.

Mr. Sargent to Mr. Frelinghuysen.

No. 205.] LEGATION OF THE UNITED STATES.
Berlin, October 22, 1883. (Received November 10.)

SIR: I have the honor to acknowledge the receipt last night of your telegram, reading as follows: [See *ante*, No. 102.] I have to-day communicated a copy of the above telegram to Mr. W. C. Fox, consul at Brunswick, with instructions to carefully and promptly execute it. I will send his report as soon as it is received. A copy of my letter to him is herewith inclosed.

I have, &c.,

A. A. SARGENT.

[Inclosure in No. 205.]

Mr. Sargent to Mr. Fox.

LEGATION OF THE UNITED STATES,
Berlin, October 21, 1883.

SIR: Late last night I received a telegram from the honorable Secretary of State, which reads as follows: [See *ante*, No. 102.] The cases of trichinosis referred to in the above are reported to have developed first about four weeks ago at Ermesleben, near Halberstadt, in your immediate neighborhood, and to have taken formidable dimensions there, so that by various accounts from fourteen to fifty persons have already died and two hundred persons now lie ill. The disease has also appeared at Gröningen, Quenstadt, Schwanstedt, and Wegeleben, in the same neighborhood, so that in all, it is stated, three hundred persons have suffered from it. The Department desires information to be at once furnished (for the use of the commission of inquiry into the general subject of American rearing and packing pork) as to the origin of this disease in the localities in question. Where were the pigs raised which were consumed by the sufferers; in what form was the pork eaten, raw or cooked? In short, all facts obtainable bearing upon the origin of this disease are wished.

As your consular district embraces these localities, you will please make immediate inquiry as to these points and any other bearing on the subject which you may deem useful, as to the extent of the epidemic: for instance, the number of persons affected, the number of deaths, and action of the authorities in view of the emergency, &c. Also, please inform me if any American pork now comes into your district, and if there is any reason for ascribing this visitation to American pork. I will transmit your report to the Department.

I will ask you to give immediate and personal attention to this matter by making inquiries on the spot of municipal officers, physicians, and others able and willing to inform you. I am aware that you can not take testimony under oath in such cases; but you can undoubtedly gather much and valuable information, and your acquaintance with the German language and public experience peculiarly fit you for this work required by the Department. I have no doubt that the honorable Secretary will allow you for any necessary expenses incurred in executing his order.

I have, &c.,

A. A. SARGENT.

No. 105.

Mr. Sargent to Mr. Frelinghuysen.

[Extract.]

No. 208.] LEGATION OF THE UNITED STATES,
Berlin, October 26, 1883. (Received November 12.)

SIR: I am now able to transmit the able report of Mr. W. C. Fox, consul at Brunswick, made in response to my request of the 21st instant, in obedience to your telegraphic instruction received here on the night of the 20th.

Mr. Fox intelligently followed the directions given to him, and was furnished every facility by the local authorities, whose courtesy towards him was most marked.

I refer the Department to his inclosed report for a full statement of the origin, nature, and extent of the disease. It may be briefly stated that the fully-ascertained cause of the epidemic was the consumption, mostly in an entirely raw and partly in a partially raw condition, of the flesh of three hogs raised in the vicinity, mixed with that of a Hungarian hog. The extraordinary spread of the disease, through five villages in a circuit of two miles, occurred because the potato harvest was in progress, and it was customary for the people to eat raw meat and bread in the fields at such times instead of spending time to go to and return from their homes. The inspection is alleged by the inspector and butcher to have been made in accordance with the law, though the

record required by law was not properly kept. The inspector was the village barber, the person habitually employed in Germany for such inspections, who passes an examination as to his fitness for the task. But the three preparations made for microscopic inspection, under the law are not sufficient to give safe results, as trichinæ are sometimes found only after thirty or forty trials. The only safeguard of the consumer against the disease is thorough cooking, and this is ample.

The whole number of cases so far is about 430, of which 36 have been fatal and 19 more probably will be fatal.

I learn from another source, outside of this report of Mr. Fox, from an eye-witness who is fully reliable, that the scenes at Ermesleben are distressing in the highest degree. My informant entered one house where the grandmother, father, and son lay dead, and a daughter, about eighteen years of age, lay sick. She is the only one of the family left, and may recover. There are about 700 inhabitants in the village, living in about 120 houses. There are 267 sick in 85 houses. Some of the people are in want, but the community is rich, some of the peasants being worth $200,000 apiece. There is a large kitchen where food is prepared for all the sick, for rich and poor alike.

The sickness is accompanied by extreme exhaustion. Swollen extremities force the patients to remain perfectly still for weeks, unless relieved from suffering by death, which is caused directly by suffocation.

These sad scenes lead to several conclusions:

1st. American pork is exonerated from the suspicion of being the cause of this disaster, and its prohibition by Germany upon the theory that it is more harmful than other pork is unadvised. * * *

2d. The inspection laws of Germany are totally inadequate to prevent such calamities so long as the people indulge the habit, which seems to Americans nauseous, of eating pork raw.

3d. This epidemic is a terrible warning to Germany to abstain from eating raw pork. In the language of Professor Hertwieg to the convention of butchers of Berlin, in 1865, "You know what you have to do in your kitchens, and if you do it properly we have no need of inspection."

The constant danger from native pork eaten in a raw state is shown by the results following the prospect of local rewards given for the detection of trichinæ. I translate the two following anouncements from a recent number of the Halberstädter Intelligenzblatt, published in the infected neighborhood, showing not only that the domestic article is highly dangerous, but that the inspection contemplated by the law is insufficient:

QUEDLINBURG, *October* 14.

A reward of 30 marks of public money has been awarded to Inspector Reder, at Gr. Schierstedt, for the discovery of trichinæ in a hog examined by him.

The magistrate of Quedlinburg has awarded a reward of 15 marks to the inspector of meat, Julius Yrem, for the discovery of trichinæ in a pig slaughtered on the 29th ultimo.

An article published last spring in a newspaper of Berlin, which is usually supposed to express official ideas, held to the view that the prohibitory decree was proper, because a government must recognize in its acts the tastes of its people; that Germans like to eat pork raw, and hence the fact that well-cooked pork is safe and uncooked pork dangerous does not make any difference; the Government will keep out the American article because it is dangerous in a raw state. The discussion of these events at Ermesleben in the German papers has been quite restricted, and it seems to me there has not been much disposition to draw the natural inferences, viz, that the eating of raw pork of all nationalities should cease. * * *

I have thanked Mr. Fox for his interesting report, and will forward to the Department the official statement of the local authorities to which he alludes as soon as I receive it, and will also have inquiries made as to any other neighborhood in which I may observe the disease stated to be prevalent.

I have, etc.,

A. A. SARGENT.

[Inclosure in No. 208.]

Consul Fox to Mr. Sargent.

UNITED STATES CONSULATE,
Brunswick, October 25, 1883.

SIR: In compliance with your instructions I visited the villages of Ermesleben and Deesdorf, in this consular district, on October 23, and have now the honor to make the following report upon the trichina epidemic prevailing in that vicinity:

Ermesleben, the place where the disease has taken most formidable dimensions, is situated near the Harz Mountains, about five English miles from the city of Halberstadt, in the province of Saxony. It embraces in its complex some of the most fertile soil and is one of the most prosperous localities in the Prussian Kingdom.

The scourge now raging there has awakened not only the heartfelt sympathy of all, but the liveliest interest in medical circles, and the locality is visited daily by physicians from abroad and others interested in obtaining scientific information in regard to it. It has assumed such proportions that it is absolutely impossible for the resident physicians to attend to all the cases. Under the direction of privy counsellor, Prof. Dr. Weber, of Halle, Mr. Wagner, a student of medicine, is on the spot ministering to the wants of the sick and taking notes for the purpose of future publication. To this gentleman, as well as to Mr. Pastor Greiling, who is also unceasing in his attentions to the sufferers, and to Mr. Amtmann Heine, magistrate, of the village, I am indebted for many courtesies shown, as well as for information in regard to and opportunity to personally see many of the patients. The sickness was first noticed in Ermesleben about September 16. Several persons were taken suddenly ill with nausea and acute diarrhea. Medical aid was obtained forthwith, and it was first thought that a cholera epidemic had broken out (*cholera nostras*), until other symptoms—swelling of the eyes, face, and extremities, combined with high fever—showed that it was undoubtedly trichinosis. The disease spread rapidly, and up to date 433 cases have been recorded; 36 have been fatal, and upwards of 19 will undoubtedly prove so, as follows:

Places.	Cases.	Deaths.	Probably die.
Ermesleben	267	27	14
Nienhagen	80	None.	?
Gröningen (Kloster)	10	2	!
Deesdorf	40	7	5
	397	36	19
	433		

In Nienhagen and Gröningen the cases are much lighter than in Ermesleben, and in all probability the patients will all recover. Several cases are reported to exist in Wegeleben and Köthhof, though not over five in all. All of the infected villages lie within a circuit of about two English miles. I made Ermesleben and Deesdorf the basis of my investigation, and was informed by the gentlemen with whom I conversed upon the subject that I could learn nothing of further interest in the other places, as all the parties competent to give me information were in Ermesleben at the time. When it became apparent that the disease was trichinosis the local authorities immediately instituted a thorough investigation in the endeavor to locate its origin. It appears that on or about the 12th and 14th of September four swine were butchered; the meat of all was mixed and sold to the inhabitants of the infected districts. Three of the pigs were the so-called *landschwein* (common kind reared in the vicinity), the other was a *Baguner* (Hungarian). The fact has been established be-

yond all dispute that in all the cases the patients had eaten the meat *raw*, either in the form of *Klumpfleisch* (raw chopped meat), or in the form of *Rothwurst* (blood sausage). This latter article is said to be cooked, but (my informant, Mr. Pastor Greiling, assured me) so slightly as to have no effect whatever upon the trichinæ germs. The custom of eating raw swine's meat is prevalent in the neighborhood, and the first trichinæ epidemic occurred in 1865, though it was not so disastrous as the one now raging. The inhabitants claimed then, as now, that the swine were not properly inspected. The country folk have the idea that the examination, when conducted according to law, gives them ample security. Dr. Wagner maintained to me, however, that this is an erroneous supposition, and that the present law is very defective. The law requires the inspector to make at least three preparations for microscopic examination, and, as a rule, he rarely makes more. It is asserted, however, that experiment has proved that the trichinæ are sometimes found only after the thirtieth or fortieth trial respectively. In 1865 Professor Hertwieg, in an address delivered before a convention of Berlin butchers, said, "You know what you have to do in your kitchen, and if you do it properly we have no need for inspection."

I think that the whole case is here stated in a nut-shell, and Ermesleben affords additional evidence of the truth of the statement. Mr. Amtmann Heine, leaseholder of the Ermesleben estates, together with his family, partook of the meat in cooked form. None of them have suffered in the least. One of the kitchen maids, however, simply tasted of the raw meat and is ill. The village tavern keeper and his family also ate of the cooked meat and are well and hearty. His little daughter ate some of it raw at a neighbor's home and became slightly infected. The sworn official inspector, who is, by the way, the village barber in Ermesleben, and the butcher, have been held to answer, and in the preliminary examination the charges of manslaughter, infliction of bodily injury, and negligence in performance of duty have been preferred.

Under the law the butcher is required to notify the inspector when he has slaughtered a pig. The inspection is then made, which consists simply in making preparations for microscopic examination, as before stated; the inspector then certifies to the facts as they may appear to him. If he declares the animal to be clean, its meat can be sold for consumption. The butcher, as well as the inspector, is required to keep a list of all swine slaughtered and inspected. This list is at all times open to the revision of the authorities. In the case in question it appears that this list was not kept, or, if kept at all, so imperfectly as to be wholly worthless as evidence. The delinquents made an effort to put it in order, were detected, and finally acknowledged it. They nevertheless earnestly maintained that the inspection was made according to law. The parties as well as their family are all sick; several members have died, and others are at the point of death. A circumstance which in a measure explains how it happened that the epidemic assumed such formidable proportions in Ermesleben is the fact that it was the time of the potato harvest, and the whole village, young and old, men, women, and children, were at work in the potato fields. At such times it is the custom not to cook a midday meal, but, in order to save the time which would otherwise be consumed in going and coming, to take a simple repast composed of raw meat and bread. As a natural consequence the sickness has caused great consternation in the community, and the people have become doubly careful. As a result, according to the Halberstädter Intelligenzblatt, several infected swine have been discovered. Mr. Meinecke, a veterinary surgeon in Derenburg, succeeded in finding one, and in his report makes the following suggestions:

1. In order to secure thorough inspection to offer a high premium for every infected hog found.
2. Not to eat the raw meat.
3. To adopt measures to prevent the swine becoming infected.

In conclusion it is hardly necessary for me to mention that the local authorities as well as private charity are doing all that human power can do to relieve the present distress. I can not, however, refrain, in expressing my sincere thanks to Pastor Greiling and Mr. Wagner, to refer to their untiring energy and self-sacrifice of personal interests, in the work which they have on hand. Mr. Wagner is preparing an exhaustive report, which he has promised to send me when completed, and I hope to be able to transmit same to you at an early day. While we certainly deeply sympathize with this sadly afflicted community, it must nevertheless be the source of peculiar satisfaction to our countrymen to know that the malady was not caused by American meats. In fact, it has not been even intimated that such a thing was possible, and there is no evidence that American pork has ever been used there at all.

I have, etc.,

WILLIAM C. FOX,
United States Consul.

No. 106.

Mr. Sargent to Mr. Frelinghuysen.

No. 213.] LEGATION OF THE UNITED STATES,
Berlin, November 1, 1883. (Received November 20.)

SIR: Referring to previous correspondence on the subject of trichinosis, and in particular to my dispatch No. 208, of October 28 last, with which I inclose the report of Consul Fox on the outbreak of the disease at Ermesleben and other places in the vicinity, I have the honor to communicate in translation an announcement reporting the progress of the disease at those places, which I take from the National Gaeztte of this city of the 1st instant:

In the last few days two more persons have died of the trichinosis in the neighboring village of Ermesleben. This makes the number of persons who have died there 30, and in the vicinity 9; altogether, 39. Unfortunately 270 persons are still prostrated by the terrible disease, among them several who are severely ill, and whose death is daily expected. As the physicians have recommended as the best diet strong bouillon and wine, many of the sufferers being unable to swallow solid nourishment on account of the swollen condition of their throats, the community continues to cook and provide for all in common. Some 60 pounds of good sound beef are required daily in order to comply with the directions of the physicians.

The assistance required from and supported by the community has thus far amounted to about 900 marks weekly. A writer to the Magdeburg Gazette says that this community, which is not without means, and which enjoys the enviable position of having no local poor to provide for, has for some five weeks and until now been able to carry on unaided this work of love, but that it now needs the assistance of charitable people.

It will be seen from the above that the number of the sufferers, and also the number of deaths from the disease, have increased since the date of the report of Consul Fox 267 to 270 and from 36 to 39, respectively, while several more fatal terminations are anticipated.

Another outbreak of the trichinosis, though of a far milder character, has occurred at Zechin and neighboring villages situated in the vicinity of Frankfort-on-the-Oder, in Prussia. A Berlin sheet, the Neueste Nachrichten, of the 25th ultimo, makes the following announcement:

The trichinosis has lately assumed most serious dimensions in spite of all legal and administrative measures. At Zechin, in the circuit Letschin, the disease has appeared in thirty families. In Letschin two persons have been attacked; at Vossberg eight; other persons are reported as attacked at Sydowswiese, Friedrichsan, Golzow, and also in the so-called Bush-villages (Gericksberg, Lemaunshösel, Bayersberg) and elsewhere. It is hard to say where the outbreak may end, since the supposed diseased meat, worked up into garlic sausages, has been disseminated far and wide. The persons attacked at Zechin assert that they bought and ate about two weeks ago pigs' flesh from a dealer at that place. This dealer and his son are among the persons attacked.

Within a brief period after the above publication it was reported that the disease at Zechin was of a mild type and that it was believed by the physicians that all the patients would recover; also that the investigation had not disclosed the source of the meat causing the disease, and that no facts had appeared fastening the sale of the diseased meat upon the dealer at Zechin.

I shall carefully watch for any report of results that may be reached in the search for the origin of this outbreak, and cause an investigation to be made on the spot, if the expenditure seems warranted, and report thereon. In the mean time it would seem safe to assume that the blame can not attach to American pork so long after prohibition of its importation into the country.

I have, etc.,

A. A. SARGENT.

No. 107.

Mr. Sargent to Mr. Frelinghuysen.

No. 214.] LEGATION OF THE UNITED STATES,
Berlin, November 12, 1883. (Received November 26.)

SIR: Referring to the subject of trichinosis at Ermesleben, I have the honor to transmit the latest news from that place of the progress and conditions of the disease in the following translated excerpts from the local papers:

HALBERSTADT.—Yesterday and day before there were five more deaths from trichinosis in the neighboring village of Ermesleben, so that the total number of persons of every age who have succumbed to this terrible disease is 41. In the surrounding villages 9 have died to date. The distress is daily increasing. It is, however, gratifying that the call for assistance is meeting with such hearty response. The collection opened by Dölle's newspaper of this place already shows receipts up to nearly 600 marks. It seems striking that just at this time trichinæ should be so frequently discovered. Among others, Mr. Meinicke, veterinary surgeon in our neighboring town of Derenburg, Meat Inspector Plettner, of Wernigerod, etc., have lately found swine infected with trichinæ. Notwithstanding the fact that the discovery of trichinæ in swine is of so frequent occurrence, the insurance, which costs from 30 pfennige to 50 pfennige per pig, is generally neglected. We have positive information that a whole family in Gröningen have been taken sick with trichinosis, happily not dangerously, from eating of pig which they had themselves slaughtered and inspected. A second inspection after several weeks had elapsed showed the pig to be slightly infected.

The fact is important that a family has been stricken down after eating pork which had been especially killed and inspected by itself, as the opinion prevails that such special inspection is a sure guarantee against trichinosis.

The same paper, of the 7th instant, has the following:

HALBERSTADT, *November* 5.—To-day Mr. E. Bodenstein, meat inspector of this city again discovered trichinæ in a pig slaughtered by a local butcher. We are informed by experts that the trichinæ are found to exist chiefly in the lights and diaphragm of infected swine, but that the examination of these parts is generally omitted. Trichinæ are found in almost equal numbers in the diaphragm and the so-called tenderloin; in less numbers, however, in the hams. It is nevertheless generally believed, and the idea is prevalent, that the chief seat of the trichinæ is the hard muscles and hams. A thorough examination by expert meat inspectors is absolutely necessary.

It will be observed that inspection, so often fallacious, is still recommended, instead of cooking or even salting, which probably destroys the germs.

By an item in the Berlin Tageblatt, of yesterday, I learned that during the past month of October there were discoverd at the municipal meat inspector's office at the central slaughter-house, at Berlin, where all cattle are slaughtered, twenty-two cases of trichinæ and one hundred and twenty-seven measly swine. These were seized by the police and taken to the fiscal rendering house for destruction, or for other than food purposes.

I have, etc., A. A. SARGENT.

No. 108.

Mr. Frelinghuysen to Mr. Sargent.

No. 169.] DEPARTMENT OF STATE,
Washington, November 27, 1883.

SIR: Acknowledging the receipt of your dispatch No. 208, of the 26th ultimo, I have to thank you for the very instructive report which you obtained with commendable promptness for the use of this Department in relation to the outbreak of trichinosis at Ermesleben, in Germany.

I am, etc., FRED'K T. FRELINGHUYSEN.

109.

Mr. Sargent to Mr. Frelinghuysen.

No. 218.] LEGATION OF THE UNITED STATES,
Berlin, December 1, 1883. (Received December 17.)

SIR: I have the honor to inform you that, in consequence of notices which appeared in the daily papers that an outbreak of trichinosis had occurred at Thorn, a city in West Prussia, of 70,000 inhabitants, I wrote to Mr. Peter Collas, our consular agent at Danzig, to furnish me with such particulars as he might be able to obtain in regard to the reported epidemic.

The following is one of the notices referred to:

THORN, *November* 20.—It is confirmed that about fifty persons have been attacked by trichinosis here; up to Saturday, twenty-one cases were authenticated by the district physician, and since then many new cases have been reported to the police. A meat shop, in which infected sausages were discovered, was closed on Saturday, but after an inspection of the remaining wares, was again opened. The owner of the shop had received about 230 pounds of meat from Culmsee, through which the dreadful disease seems to have been brought hither, as previous to this several persons had been attacked by trichinosis at Culmsee. By order of the commander of this place, the soldiers of the garrison are forbidden to purchase sausages or raw ham in the meat shops here.

I herewith inclose a copy of the reply received from Mr. Collas, with a copy and translation of the letter from the editor of the Thorn newspaper, from whom his information was received, which confirms the above report. It seems that the pork causing the mischief is of native production.

I have, etc.,

A. A. SARGENT.

[Inclosure 1 in No. 218.]

Mr. Collas to Mr. Sargent.

UNITED STATES CONSULAR AGENCY,
Danzig, November 30, 1883.

SIR: In consequence of your request, I at once made inquiries respecting the trichinosis at Thorn, where I find that about fifty cases, more or less serious, have occurred, arising from the enjoyment of sausages manufactured from pork sent hither from Culmsee, a place about 20 kilometers distant, the meat being native production. It is not quite clear whether the same was examined in the usual manner before going into consumption, but this is under investigation at present by the official authorities, and about which I shall endeavor to obtain the result and information later on.

Inclosed the note from which the foregoing is derived.

I remain, etc.,

PETER COLLAS,
United States Consular Agent.

[Inclosure 2 in No. 218.—Translation.]

Mr. Queschede to Mr. Guldzniski.

THORN, *November* 23, 1883.

In reply to your esteemed inquiry of yesterday, we respectfully inform you that, according to the researches made by us, about fifty cases of trichinosis have occurred. The disease has been caused by the consumption of sausage, which was made from inland pork. This pork is said to have been brought here from Culmsee, but the dealer in question denies this. The investigation already instituted by the authorities will develop the facts. There has as yet been no question made regarding *foreign* pork.

Respectfully,

GUSTAV QUESCHEDE,
Editor Thorner Ostdeutsche Zeitung

No. 110.

Mr. Frelinghuysen to Mr. Sargent.

No. 177.] DEPARTMENT OF STATE,
Washington, December 26, 1883.

SIR: Your dispatch, No. 218, of the 1st instant, concerning the outbreak of trichinosis at Thorn, in West Prussia, has been read with interest.

Adding that the Department approves your course in promptly instituting inquiries into the matter,

I am, &c.,

FRED'K T. FRELINGHUYSEN.

GREECE.

No. 111.

Mr. Schuyler to Mr. Frelinghuysen.

No. 8.] LEGATION OF THE UNITED STATES,
Athens, February 10, 1883. (Received March 5.)

SIR: I received a few days ago a circular of the minister of the interior, dated January 23, 1883, addressed to the provincial authorities of the Kingdom and to the bureau of health of Piræus, with reference to the importation of cattle from various eastern countries. The second paragraph, however, of the circular renewed the prohibition against the importation of hams, sausages, and lard coming from America, either directly or indirectly. I inclose a copy and translation of this circular.

On his first reception day I inquired of Mr. Tricoupis whether the Government had any additional reasons for prohibiting the importation of hams, etc., from the United States, adding that I thought that the results of the investigations undertaken by the order of our Government had sufficiently proved that there was no danger to be expected from such importations. Mr. Tricoupis said that he was ignorant of the causes which had led to the insertion of the paragraph referred to, as, in his capacity of minister of the interior, he had simply published a circular prepared by the sanitary authorities of his department; that if he had noticed the passage he would have inquired, because he remembered that Mr. Botassi, the Greek consul-general at New York, had made a report in which he stated that the reports about disease of swine, etc., in America, had been greatly exaggerated. He promised me, therefore, to make further inquiries, and, without binding himself, gave me to understand that if the result of his inquiries proved satisfactory, the prohibition would be withdrawn.

I have, etc.,

EUGENE SCHUYLER.

[Inclosure in No. 8.—Translation.]

CIRCULAR PROHIBITING IMPORTATION OF AMERICAN PORK.

ATHENS, *January* 11, 1883.

The Ministry of the Interior to the Nomarchs and Eparchs of the Kingdom and to the Bureau of Health of Piræus.

According to the orders which you have already received, cows and buffaloes coming from Russia, Asia Minor, Syria, Egypt, Thrace, Valona, and Rahova in Roumania, on account of the epizoöty raging in these countries, are only allowed to be imported by way of Syra, Corfu, and Piræus, and after a previous quarantine. With regard to raw cow and buffalo hides of the same origin, their importation is only permitted by Syra and Corfu, and with all the prescribed sanitary precautions, while the importation of other products of these animals, such as bones, intestines, etc., is absolutely forbidden.

By the present circular we renew to you these orders, and also those concerning the prohibition to importin to Greece, hams, sausages, lard, etc., coming directly or indirectly from America, and we order you to see that these orders are strictly executed by the sanitary authorities of your jurisdiction.

On the recommendation of the medical council, and in view of the epizoöty existing in Thrace and at Valona, we also forbid the importation of cows and buffaloes coming from any part of Turkey in Europe, by any other way than Syra, Corfu, and Piræus, and until after a previous quarantine of nine days, including the days of the passage. We also forbid the importation into Greece of raw cow hides of the same origin, except by way of Syra or Corfu, and after the observance of the sanitary measures prescribed by the regulations. The importation of dried and salted cow hides is not prohibited.

You will communicate the contents of this circular to the sanitary authorities of your jurisdiction.

The minister:

CH. TRICOUPIS.

No. 112.

Mr. Frelinghuysen to Mr. Schuyler.

No. 20.] DEPARTMENT OF STATE,
Washington, March 9, 1883.

SIR: I have to acknowledge your No. 8 (Greek diplomatic series), of the 10th ultimo, in regard to the renewal of the prohibition against American pork, in which you state that you had a conversation with the minister of foreign affairs, in which he said that inquiry would be made in the matter. It is trusted that the hopes you express of the withdrawal of the obnoxious provision will be realized.

I am, etc.,

FRED'K T. FRELINGHUYSEN.

No. 113.

Mr. Schuyler to Mr. Frelinghuysen.

No. 29.] LEGATION OF THE UNITED STATES,
Athens, May 17, 1883. (Received June 4.)

SIR: Referring to my dispatch No. 8, dated February 10, 1883, on the subject of the prohibition of the importation of American pork into Greece, I have the honor to inform you that I yesterday had a conversation on the subject with Mr. Tricoupis, the president of the council of ministers.

He stated to me that in consequence of my previous representation, a circular had been issued to all the representatives of the Greek Government in Europe, requesting them to ascertain exactly the action of the Governments to which they are accredited on the subject; and that a telegram had also been sent to the consul-general of Greece at New York, requesting an exact report on the health of American swine and the quality of American pork and lard. He thought that answers would soon be received, and that within a month the Hellenic Government would be sufficiently well informed to be able to take action in the matter.

I have, etc.,

EUGENE SCHUYLER.

No. 114.

Mr. Davis to Mr. Schuyler.

[Extract.]

No. 33.] DEPARTMENT OF STATE,
Washington, May 28, 1883.

SIR: In a dispatch from Berlin, dated the 4th instant, Mr. Sargent remarks as follows:

> The London Times correspondent on the 1st instant says:
> Imitating the action of the German Federal Council, the Greek Government has, from sanitary considerations, forbidden the importation of all sorts of American pig flesh.
> * * * * * * *

Information of this action of the Government of Greece was duly conveyed in your No. 8 (Greek diplomatic series), of February 10 last, and of your conversation at the time with the minister of foreign affairs.

* * * * * * *

Aside from the assurance of Mr. Botassi, the Greek consul-general at New York, that the reports about disease of swine, etc., in America had been greatly exaggerated, a modification of the circular might well be asked upon the consideration which the subject has received in other directions.

Thorough scientific scrutiny and extensive observation at different periods and by various earnest and competent individuals have failed to establish that American pork is oftener or more fully impregnated than that coming from other regions, or that the serious maladies which the consumption of the diseased hog flesh may occasion are, as a fact, prevalent in any country; and when is considered the immense pork products of this country which have annually been distributed and consumed, this conspicuous freedom from the dreaded disease should itself relieve the United States from these unjust and unwarrantable charges.

This Government will yield to no other in the sincere intention of treating the public health as of paramount concern, and it would be the first to sacrifice any commercial interest fairly shown to be detrimental to the general individual comfort. In this spirit the Department, upon the first agitation of the subject, dispatched a skilled officer to the principal raising and packing districts here to obtain, for its guidance, a careful and candid investigation of the subject. His conclusions, which you will find in the inclosed pamphlet,* strongly developed the purity

*See House Ex. Doc. 209, Forty-seventh Congress, first session, page 179.

of this class of exports and confirmed the previous justifiable opinion that all contrary assertions were exaggerated and without sufficient foundation.

The further inspections which have occurred abroad have all tended to the same conclusion, and have exhibited an unanimity in this, that pork can safely be used if cooked, even when in rare instances containing trichinæ, and that its noxious effects have only been observed among those who consume it in the raw state. As to the cholera, which has served to create such marked apprehension abroad, it is well ascertained that this disease attacks mostly the young swine—here known as "pigs"—whose flesh can never be utilized by the packers, and that whenever its victim is a mature swine, here known as "hog," the decomposition is so speedy as to render it impossible to treat it for any commercial use whatever.

In the face of these considerations this Government does not expect a persistent adherence to the prohibitory policy which has already injured our trade and depreciated our products, and it can not observe without earnest protest the announcement, at this late stage, of the determination of any Government to enter upon the policy which has so unjustly affected a legitimate and valuable trade.

It is not to be overlooked that, so far as Greece is concerned, the direct importation, at least, of American pork is very insignificant; that it is not understood that a single instance of disease from its use has been noted there, and therefore the present acceptance by that Government of the policy which has already borne hard upon the commerce of our citizens with other countries would groundlessly throw the weight of her influence in favor of a harsh and unjust discrimination against American commerce.

It is hoped that you will take early occasion to endeavor to obtain from the minister a recession of the objectionable restrictions, informing him of the uncordial attitude to an American interest which the present position of Greece necessarily presents.

* * * * * * *

I am, etc.,

JOHN DAVIS,
Acting Secretary.

No. 115.

Mr. Schuyler to Mr. Frelinghuysen.

No. 31.] LEGATION OF THE UNITED STATES,
Athens, July 25, 1883. (Received August 18.)

SIR: I have the honor to acknowledge the receipt of your dispatch No. 33, dated May 28, with reference to the prohibition by the Greek Government of American pork. I have not failed to give this subject my earnest attention, but I have not yet obtained the exact replies to the circulars sent out by the Greek Government, as mentioned in my dispatch No. 29, dated May 17.

I do not despair of obtaining a modification of the order in question.

It must be observed, however, that southern peoples are very susceptible to anything that concerns public health, and although almost no pork is imported into Greece from any country, yet the fact that such importation has been prohibited or restricted in other countries would

be a sufficient reason in the minds of many for a similar restriction here without the necessity of suggestions from outside to that effect. This susceptibility may be particularly observed now, when a quarantine of twenty-one days has been imposed on account of the cholera in Egypt. As the quarantine in Turkey on similar vessels is only ten days, it is proposed to impose a quarantine of eleven days on all vessels coming from Constantinople.

In the mean time I respectfully ask you to inform me briefly as to the status of American pork *in all the other countries of Europe*, whether freely admitted, with restrictions, or entirely prohibited. I have some general knowledge of the subject, but do not know positively the present state of the case, except as regards Germany and Austria.

I shall also be glad to receive several more copies of the pamphlet entitled "American Pork," inclosed in your No. 33. If there is a translation in French it would be more useful for distribution.

As concerns the prohibition of pork in Roumania, of which I informed you by my dispatch No. 86, dated September 22, 1881, the case is different, and I do not consider it possible to obtain any modification whatever. The fact is that the sanitary and veterinary regulations between Austria-Hungary and Roumania are very severe and are enforced on the part of the Hungarian Government with great vigor on very slight pretexts. Roumania exports pigs and pork, and does not generally import them, and unless it maintain the restrictions against the pig products of other countries its exportation to Austria-Hungary will be forbidden.

I have, etc.,

EUGENE SCHUYLER.

No. 116.

Mr. Frelinghuysen to Mr. Schuyler.

No. 5.] DEPARTMENT OF STATE,
Washington, September 18, 1883.

SIR: Acknowledging the receipt of your No. 31 (Greek diplomatic series), of the 25th July, I have to say that several copies of the pamphlet to which you refer, viz, "American Pork, &c., 1881," published by this Department, will be sent you at once, under separate cover. This pamphlet was translated into French in 1881, at the American legation, Paris; and I trust that on written application to Minister Morton you may be able to procure a copy.

In response to your query as to the present status of the admission of American pork at European ports, I refer you to House Executive Document No. 209, Forty-seventh Congress, first session; and have to add that according to No. 333 (April 13, 1883) of Mr. Morton, the French exclusion of American pork (owing to the pressure of certain French packers, evidently) is still maintained. According to No. 41 of Mr. Heap (August 10, 1881) Turkey was at that time still disinclined to remove the prohibition there declared; and it seems that we have no later advices from Constantinople on the subject. A like attitude was maintained by Portugal as late as July 25, 1881, since which period the Department appears to be without further information in this regard.

The attitude of Switzerland, as respects the introduction there of our pork products is less intelligent than that of Belgium. (See pamphlet.) The latest report on the subject seems to be contained in dispatch No.

420 of Mr. Fish, dated July 15, 1881. It appears by No. 40 of Mr. Foster, of July 23 last, that Spain has not prohibited the importation of American pork, as reported, but has only ordered inspection. It is apparent from dispatch No. 106, of April 30, 1881, of our minister at Stockholm, and from No. 15, of April 28 last, our diplomatic representative at Copenhagen, that our pork trade with Denmark and with Sweden and Norway will not easily be interrupted, and it is, doubtless, safe to say that our trade in pork with countries of Europe, aside from those named above (some of which exclude our pork and some of which do not), and Roumania, will continue as heretofore.

I am, &c.,

FRED'K T. FRELINGHUYSEN.

No. 117.

Mr. Schuyler to Mr. Frelinghuysen.

[Extract.]

No. 42.] LEGATION OF THE UNITED STATES,
Athens, October 19, 1883. (Received November 7.)

SIR: I have the honor to acknowledge the receipt of your dispatch No. 5, dated September 18, 1883, relative to the present status of the admission of American pork at European ports, as also of nine copies of the pamphlet on American pork, six copies of a French translation of the same through the American legation at Paris, and a copy of House Executive Document No. 209, Forty-seventh Congress, first session.

Referring to my dispatches No. 8, dated February 10, No. 29, dated May 7, and No. 31, dated July 25, I have further to report my action on the subject.

About April 20, after Mr. Tricoupis had given up the foreign office and Mr. Contostavlo had been appointed minister of foreign affairs, I received a circular on the importation of pork, dated April 7–19, of which I inclose a copy and a translation. I immediately went to see Mr. Contostavlo, and expressed my regret that an additional circular should be issued, when the question of the prohibition of pork was under discussion between the two Governments in consequence of the circular of January 11. He professed his entire ignorance of the matter, as he had just entered office, and promised inquiry.

* * * * * * *

As the result of several consultations with the prime minister, the minister of foreign affairs, and the minister of the interior, the question was twice sent back to the medical council, and on each occasion this body, composed of three physicians practicing in Athens, at the head of which is Dr. Soutsos, the chief medical officer of the army, refused to rescind the action which it had already taken. The reason given was that the importation of pork had been prohibited in France, and as a southern people like the Greek was especially susceptible to anything which bore upon the health of the population, the medical council had considered it necessary to follow this precedent. * * *

When the medical council had twice refused to revise their action, I considered it my duty to bring to the notice of the authorities the fact that their action in the case was contrary to the provisions of Article

VIII, of our treaty with Greece of 1837. Mr. Contostavlo said off-hand, that sanitary considerations took precedence of all others. I replied that this could only be the case where they were mentioned in the treaty; that there was often a provision in treaties that prohibitions applying to a single country might be made where sanitary measures warranted it; but that without such a provision I could not admit its propriety, especially as in the treaty of 1837, the article about quarantine (Article XV) showed that sanitary questions had been considered by the negotiators. * * *

After receiving your dispatch No. 5, dated September 18, I addressed to Mr. Contostavlo a note on the subject, dated October 17, a copy of which I herewith inclose, marked 3, and of which I trust that you will approve.

I have, &c.,

EUGENE SCHUYLER.

[Inclosure 1 in No. 42.—Translation.]

Circular of the Minister of Foreign Affairs.

MINISTRY OF FOREIGN AFFAIRS,
Athens, April 7–19, 1883.

The minister of foreign affairs has the honor to inform the legation of the United States of America that, upon the advice of the medical council of Athens, the department of the interior has just forbidden the import into Greece of hams, sausages, lard, and other pork products coming from America, because of the trichinosis with which pigs in that country are attacked.

The import of similar products coming from other countries will only be allowed on a certificate from the sanitary authorities of the country certified to by the competent Hellenic consul, stating that the above malady does not exist in the country from which these products come.

Mr. Contostavlo has, &c.

[Inclosure 2 in No. 42.]

Mr. Schuyler to Mr. Contastavlo.

LEGATION OF THE UNITED STATES,
Athens, October 5–17, 1883.

Mr. MINISTER: After the conversations which I had the honor to have with your excellency on the subject of the prohibition, by the Hellenic Government, of hams, sausages, lard, and other products of pork imported from the United States, I had hoped that the medical council would revise its decision. I thank you sincerely for having on two different occasions called the attention of the medical council to this subject, and I greatly regret that it has seen fit to maintain its former decision.

The council has apparently not taken into consideration the statements with regard to the manufacture of pork and proving the absence of disease in the United States, as set forth in the official report, of which I had the honor to give you a copy, and of which I now inclose three copies in a French translation. It would appear, too, from what your excellency told me, that the medical council has not examined this question for itself nor has even ever seen and inspected pork products of American origin, but has based its decision upon the action of certain other Governments, which, in order to encourage the production of salt pork at home, have, under the pretext of sanitary measures, prohibited its importation from the United States. As you are aware, Mr. Minister, not all Governments have taken the same course of action, and I may cite especially Great Britain and Belgium, in which countries American pork is largely consumed without injurious effect upon the health of the population. This deference on the part of the medical council to the action of certain other Governments is the more astonishing, as I am informed that the Hellenic consul-general at New York has officially reported that the accounts of disease among American hogs have been greatly exaggerated, yet no consideration seems to be given to his statements, and American pork is absolutely prohibited, while pork is allowed to be imported from other countries on the consul's certificate.

The medical council has apparently overlooked the fact that the difference of treatment which it establishes for the importation of pork is in direct contravention of Article VIII of the treaty betwen the United States and Greece of December 10–22, 1837. This article provides that there shall not be established in Greece on the products of the soil or of the industry of the United States any prohibition or restriction of importation unless such prohibition or restriction be also established upon articles of like nature coming from other countries.

As I am sure that His Majesty's Government has no intention of even seeming in any way to act contrary to the provisions of the treaty, I have no doubt that your excellency will at once call the attention of the medical council to this point, and provide that the pork products of the United States receive the same treatment as similar products of other countries.

I seize, &c.,

EUGENE SCHUYLER.

No. 118.

Mr. Schuyler to Mr. Frelinghuysen.

No. 52.] LEGATION OF THE UNITED STATES,
Athens, December 8, 1883. (Received December 27.)

SIR: Referring to my dispatch No. 42, dated October 19, on the subject of the prohibition of American pork in Greece, I have the honor to inclose herewith a copy and translation of a note I have just received from the minister of foreign affairs, which promises a new examination of the affair. The reference to information asked for at Berlin is probably called out by the fact that various statements have recently been published in the Greek newspapers about an outbreak of trichinosis in Germany.

I have, &c.,

EUGENE SCHUYLER.

[Inclosure in No. 52.—Translation.]

Mr. Contastavlo to Mr Schuyler.

MINISTRY OF FOREIGN AFFAIRS,
Athens, November 23–*December* 5, 1883.

Mr. MINISTER: The department of the interior, whose attention I hastened to draw to your note of October 5–17, respecting the prohibition of the importation of American pork into Greece, has just informed me that before revising the dispositions already made on this subject on the advice of the medical council of Athens, it required new and fuller information, which it has desired me to ask of our consul-general at New York and of the King's legation at Berlin.

I have just asked for this information, and I will not fail to duly communicate to you the decision which the ministry of the interior may think proper to make on the subject, as soon as this information has been received.

Please accept, &c.,

CONTASTAVLO.

No. 119.

Mr. Frelinghuysen to Mr. Schuyler.

No. 48.] DEPARTMENT OF STATE,
Washington, December 19, 1883.

SIR: I have to acknowledge the receipt of your Nos. 46 to 49 (Greek diplomatic series).

Approving your course touching the question of restriction placed on the introduction of American pork at the ports of Greece, as set forth in your No. 42.

I am, &c.,

FRED'K T. FRELINGHUYSEN.

THE NETHERLANDS.

No. 120.

Mr. Eckstein to Mr. Davis.

No. 261.] UNITED STATES CONSULATE,
Amsterdam, January 11, 1883. (Received January 27.)

SIR: I have the honor herewith to inclose a translation of certain extracts from a report made to the minister of the interior of The Netherlands, of an investigation as to the occurrence of trichinæ in pork imported from the United States.

I am, &c.,

D. ECKSTEIN,
United States Consul.

[Inclosure in No. 261.]

AMERICAN PORK IN HOLLAND.

As the agitation in Europe respecting American pork has not yet subsided, and shows even far greater vitality than trichina ever did, and as it appears that even Germany is about to be allied to France in making war upon the American hog product by prohibiting its importation, I concluded to bring to your knowledge what recently took place in this country with reference to this matter.

By the order and under the supervision of the minister of the interior an investigation was made as to the occurrence of trichinæ in pork imported from the United States.

The investigators made a report on the subject to the Government, which was published in the Staats Courant (official journal) in November last, but it did not come under my notice until a few days ago.

I should have liked to have furnished the Department with a translated copy of the entire report, but as it is very lengthy, and I can not manage to get it properly translated within any reasonable time, I subjoin hereto only the introductory remarks, the result of certain experiments made, and the conclusions reached by the investigators, viz:

"Acting upon a suggestion made by the board of inspectors for the sanitary supervision of the state, to institute an inquiry on an extensive scale, as to the occurrence of trichinæ in American pork, and as to the danger thereby incurred, the minister for the home department had, in the latter end of the year 1881, instructed the sanitary inspector for the province of South Holland to suggest in what manner such an inquiry might be held as to the pork imported at Rotterdam from America.

"The mode of inquiry accordingly proposed by the latter met with the approval of the minister, and it was thereupon determined that the investigation was to be held, under the supervision of the undersigned, by a few persons qualified for that purpose, who had offered their services, and who were to pursue their labors according to rules fixed uniformly for all.

"These investigators were Dr. F. I. Dupont, who had moreover taken upon himself to conduct the whole of the inquiry at Rotterdam; Dr. W. Nolen, Dr. H. I. Feth, professor of natural history at the higher burgherschool in Rotterdam; Mr. W. A. L. Legebeke, municipal apothecary, and three young ladies (one of whom has a diploma entitling her to teach natural history at middle-class schools) who have given most satisfactory proofs of their ability in using the microscope and in detecting trichinæ.

"In order to have sufficient certainty that the investigation of all the samples would be effected according to the same rules, full instructions were framed for the guidance of the investigators, with which they all bound themselves to comply."

Succeeding the above preliminary remarks comes a recital of the rules in accordance with which the inspections had to be and were made, and a full description of the labor performed by the investigators.

The investigations continued over a period of several months, during which eighteen hundred samples of American pork, bacon, and ham were thoroughly and closely examined and inspected, resulting in the discovery of trichinæ in thirty-three of the samples.

The report then closes as follows:

"The proofs that were taken have led to the following results, viz:

"With boiled pork, containing trichinæ, were fed: one young pig and two rats, all three with negative results.

"With raw American pork, containing trichinæ, taken from pieces sent to the investigators, were fed: two young pigs, one young rabbit, and four dogs of about two years old. A careful examination led to the conclusion that all these animals, killed at various periods, did not suffer, or had not suffered in any way from trichinous disease.

"Although the investigations and tests in a matter of this nature can never be sufficiently numerous to give claim to a scientific infallible conclusion, yet we consider that from the inquiry that has been held we may safely draw the following conclusions:

"Among the pieces of American pork there are many that are more or less infected with trichinæ. Nearly 2 per cent. of the pieces examined were trichinous.

"Notwithstanding the extensive consumption of American trichinous pork in the Netherlands, and more especially at Rotterdam, the trichinous disease has hitherto not been detected there. More than 6,000,000 kilograms of pork were imported from America in 1881 at Rotterdam alone.

"It is possible that the habit of the Dutch people of always either boiling or roasting the said meat may greatly contribute to this result. Yet it is probably not always boiled or roasted so long as to secure that the trichinæ in the innermost parts of a large piece are infallibly killed.

"Proofs taken with animals by feeding them with boiled and raw American trichinous pork have shown that it was eaten by them without any injurious effects.

"We have, therefore, every reason to presume that the strong pickling and smoking of the said meat has such an influence on the life of the trichinæ that during the many weeks or months that elapse between the slaughtering of the trichinous animals in America and the consumption of the meat in this country, they lose all vitality.

"It has not appeared that the salted and smoked pork, as it is brought into the market from America, exposes consumers in this country to any danger from trichinous disease.

"We propose, at a later period, to report to your excellency on the proofs that are still being taken.

"In conclusion we take the liberty to point to the expediency of causing an investigation to be instituted on an extensive scale as to the occurrence of trichinæ in native pigs, for which purpose a good opportunity will present itself as soon as the public slaughter-house at Rotterdam shall come into use."

SPAIN.

No. 121.

Mr. Fairchild to Mr. Blaine.

No. 176.] LEGATION OF THE UNITED STATES,
Madrid, July 16, 1881. (Received August 4.)

SIR: I have the honor to acknowledge the reception of your instruction No. 144, transmitting copies of the report recently made by an officer of the Department of State relative to the late rumors as to the alleged unhealthfulness of American pork.

In accordance with the instructions therein contained I have addressed a note upon the subject to the minister of state, and at the same time transmitted several copies of the report in question. A copy of my note is herewith inclosed.

As your instruction was very naturally based upon the supposition that the admission of American pork into Spain was still prohibited, it is necessary that I should make the following explanation:

When the question of the prohibition of American pork in France was occupying the attention of the Department and the legation at

Paris, General Noyes wrote to me asking to be informed as to what measures, if any, had been taken by the Spanish Government in regard to the entry of that article of our produce into Spain. I at once examined the question and found that the royal order of the 28th of February, 1880, prohibiting the admission of American pork into Spain had been annulled by royal order dated the 10th July, of the same year, and that that article would thereafter be admitted on complying with with certain conditions prescribed therein. A copy of this order was sent to General Noyes.

I regret exceedingly that the royal order of 10th July, above referred to, entirely escaped my notice at the time of its issuance and publication, thus preventing my sending, as I certainly should have done, a copy to the Department. I now send a copy and translation of it that you may the better see upon what conditions American pork is now permitted to enter Spain. Those conditions, I have no doubt, will appear to you as they do to me, just and proper, and to which no reasonable objection can be made by the dealers in and shippers of that important article of our produce, as it has always been their wish that the article should be subjected to the most severe inspection, knowing full well that it would more than stand the test and comparison with that of any other country.

I shall avail myself of every opportunity to give publicity to the report by distributing it among those interested.

I have, etc.,

LUCIUS FAIRCHILD.

[Inclosure 1 in No. 176.]

Mr. Fairchild to Minister of State.

MADRID, *July* 15, 1881.

EXCELLENCY: In view of the disastrous effects produced throughout Europe by the reports of the alleged unhealthfulness of American pork, shipped to foreign countries, an officer of the Department of State at Washington was recently detailed to make a most searching and impartial investigation concerning the truth or untruth of such reports.

The officer in question, after having visited the cities of Chicago and Cincinnati, the two great pork centers, and where are situated and in daily operation the largest pork-slaughtering establishments in the United States, has lately submitted the result of his impartial investigation to the Secretary of State in a report, copies of which I beg to hand your excellency herewith.

The report not only clearly and fully proves that there was not the slightest foundation for the alarming reports set afloat, but also as clearly shows how impossible it is, owing to the severe inspection to which the pork is subjected, whether alive or dead, for unhealthful pork to reach either the home or the foreign markets. For your excellency's further information, and for greater convenience, I beg to refer to the conclusions arrived at on page 14 of the report above mentioned.

I do not know how I can better illustrate to your excellency the entire good faith with which my Government ordered the inspection to be made, than by quoting the following paragraph from the instructions sent to me by the Secretary of State, in transmitting the report above referred to:

"This investigation was forced upon the Government by the disastrous effects produced abroad by those rumors, and by the action of several European Governments in stringently restricting or prohibiting the importation of swine products from this country. It was undertaken in the most impartial spirit and with full recognition of the weighty responsibility which would rest upon this Government should the prevalent rumors be substantiated. Had it been found that this great American industry was the means of disseminating disease and death abroad, no admission could have been too frank or prompt, and no repressive measures too urgent to vindicate our national good faith.

"As it is, the result goes beyond our most sanguine expectations in proving the baselessness of the statements which have unhappily wrought such injury upon one of our most widely spread and valuable branches of foreign commerce."

I may add that the information contained in the report herewith inclosed is only sent to your excellency to bear out the wise and just decision arrived at in the royal order of the 10th July, 1880, rescinding that of February 28, of the same year, and permitting the entry into Spain of pork and lard, proceeding from the United States, on certain conditions prescribed therein. This laudable action of His Catholic Majesty's Government can not be too highly commended.

I may also refer your excellency to the action of the Government of His Majesty the King of Belgium (on pages 15 and 16 of the report in question), which, disregarding the popular clamor and prejudice, and examining the question fairly upon its merits, reached some time since the conclusion, to which the Government of the United States is also irresistibly led, that of the widely-spread food staple of the world's commerce, none is grown, packed, and exported under conditions more calculated to assure safety and wholesomeness than the pork product of America.

I have inclosed to your excellency several copies of the report referred to, not doubting that your excellency will, in the interest of the dealers in and consumers of American pork in Spain, desire to give publicity to the facts therein contained.

I avail, etc.,

LUCIUS FAIRCHILD.

[Inclosure 2 in No. 176.—Translation.]

Minister of the Interior to Minister of Hacienda.

EXCELLENCY: An account having been given to His Majesty of the applications made by various merchants and industrials of Valladolid, Cartagena, Santander, and of Madrid, soliciting the derogation of the royal order of February 28, ultimo, which prohibited the introduction into Spain of pork and pork grease, proceeding from the United States of America and Germany, and the grounds upon which their petitions were based having been attentively examined; and whereas the observance of said royal degree has brought about a remarkable rise in the price of the alimentary substance above referred to; and whereas in the fusion (melting) of the greases no trichinæ are found to exist, and as it is easily recognized with the microscope in the lean parts of pork, as in other meats; and as the same examination when made of the greases obtained by pressure does not give the assurance that they are free from the said parasite; and

Considering that the rise experienced in the prices of pork and pork grease shows the insufficiency of the national production to meet public consumption, and deprives the poorer class of a most necessary food; and considering how difficult it is to avoid fraud, on account of the impossibility or proving the country of production when they come from non-prohibited places; and considering that a guarantee must be given to public health, without injuring the interests of commerce, His Majesty the King, having heard the opinion of the royal board of health, has deigned to decree as follows:

1. The royal order of 28th February, ultimo, which prohibits the introduction of pork and pork grease proceeding from the United States of America and Germany is annulled.

2. Only the prohibition regarding the greases coming from the United States which have not been obtained through melting will continue in force.

3. All meats which may be introduced shall be subjected to a scrupulous and microscopic inspection, and all that which contains trichinæ, or is injurious to health, shall be destroyed.

4. The inspection shall be made by a farrier of superior category appointed by the *gobernador* of the province, and paid by the importers in accordance with the following tariff.

5. The introduction of said meats and greases shall only be effected through the first-class customs.

6. The foregoing provisions will be applied to meats and greases already imported and pending clearance at the custom-houses.

By royal order I communicate this to your excellency for your information, and in order that the necessary orders to the above effect may be given by the ministry under your worthy charge.

God guard your excellency many years.

FRANCISCO ROMERO ROBLEDO.

MADRID, *July* 10, 1880.

Tariff for the payment of fees for the inspection of pork which may be imported from the United States of America and Germany: For each case containing from 80 to 100 hams, 2 pesetas; for each case containing from 250 to 300 shoulders, feet, legs, or tongues, 2 pesetas 50 centimes; for each case of bacon (containing muscular fiber) of from 20 to 30 pieces, 1 peseta 50 centimes.

Approved by me.

ROMERO.

MADRID, *July* 10, 1880.

No. 122.

Mr. Marston to Mr. Davis.

[Telegram.]

MALAGA, *February* 18, 1882.

No trichinæ found in American pork in Malaga as reported.

MARSTON,
Consul.

No. 123.

Mr. Marston to Mr. Davis.

No. 76.] UNITED STATES CONSULATE,
Malaga, Spain, February 14, 1883. (Received March 5.)

SIR: I have the honor to report the appearance in Malaga of the much dreaded trichinæ, and I herewith inclose copy of an official bulletin issued yesterday by the civil governor of the province, cautioning the public against the use of pork, ham, sausage, etc., and providing such preventives as will arrest the further spread of the malady. About twenty persons are now suffering from this affliction (seven in one house), and one person has died from its effects. From the investigation that I have made thus far, it appears that some of those who are afflicted have eaten *longaniza*, or sausage brought from Galena in the district of Seville, and it is claimed that one case has been traced to a person having eaten ham said to have been imported from the United States; but of this there is no certainty; in fact, I question whether any proof exists as to where the ham came from. I am investigating the subject, however, and will report the origin if possible.

The *longaniza* or sausage is made from raw fresh pork, and is intended to be cooked before being eaten. Therefore it is not possible that the pork used in making the sausage came from the United States, but is home production.

I am, &c.,

H. C. MARSTON,
Consul.

[Inclosure in 76.—Official bulletin extra of the province of Malaga.—Translation.]

CIVIL GOVERNMENT.

MALAGA, *February* 11, 1883.

The terrible malady which has caused such ravages in Germany and other countries, and which is known by the name of trichinosis, being caused by the presence of a microscopic parasite in the flesh of swine, has appeared at Malaga among persons who have eaten of that flesh, and more than twenty individuals are now affected with the disease.

The provincial board of health and the medical society have ascertained by microscopic analysis that sausages and pork sold in the market contain the germ of the disease.

In view of this fact, and having heard the opinion of the provincial board of health, I have resolved, among other measures, to warn the public of the great risk which attends the eating of pork in all its forms, unless it has been boiled or fried sufficiently to destroy the germ of the disease; for this purpose the pork or sausage should be cut or slit in many places, in order that the center may be exposed to a temperature ex-

ceeding at least seventy degrees Centigrade. It must be remembered that trichinæ are so tenacious of life that they are not destroyed by putrefaction, salting, smoking, or pickling. I have further ordered that all pork, lard, and sausages in Malaga shall be carefully examined by a scientific commission appointed for the purpose, and in order that the public may more easily enjoy the benefit thereof, the authorities have procured two microscopes, one at the slaughter-house, and the other in the market-place, where experts will be found ready to examine, by aid of the microscope, free of charge, all meats and sausages that may be presented to them.

TEODORO BARÓ,
Governor.

No. 124.

Mr. Marston to Mr. Davis.

No. 77.] UNITED STATES CONSULATE,
Malaga, Spain, February 19, 1883. (Received March 10.)

SIR: I have the honor to continue my report upon trichinæ in Malaga, which was the subject of my dispatch No. 76, under date of February 14, 1883. Since writing that dispatch I have obtained a copy of a telegram forwarded by the Governor of Malaga to the Spanish Government at Madrid. As the civil governor distinctly says in that dispatch that one person had acquired the malady through eating ham imported from America, I immediately addressed his excellency a communication, under date of the 15th instant, and his reply, dated the 17th instant, reached me on Sunday morning, the 18th instant. You will see that he now declares that *no proof exists* that any American ham or pork has been found affected with trichinæ. On receipt of the governor's letter, on the 18th instant, and knowing that the Society of Natural and Physical Sciences had made microscopic inspection of all meats in Malaga which the authorities had suspected, I addressed the president of that society, and received his official reply the same day.

Early Sunday morning, the 18th February, I was applied to for information upon the subject of trichinæ, by parties who had received telegrams from England, asking whether twenty persons had died in Malaga, as reported by telegraph from Madrid. This convinced me that the alarm was widespread and gravely detrimental to American interests, and I felt justified in telegraphing to your Department. Especially did I feel authorized so to do, with the official letter of the civil governor in my possession, as well as that of the president of the society, to whom all suspected meats had been referred. I also made it my business to see that answers to the telegrams from England were sent in accordance with the facts, although I fear that grave injury has resulted from the false reports in circulation, yet prompt denial will allay, to some extent, the excitement caused. Previous to the breaking out of the trichinæ in Malaga, every store where meats were sold had a large supply of American hams; whereas the day following the publication of the governor's report to Madrid not an American ham could be found in Malaga. They had all suddenly changed into English hams. There are now about twenty-five persons suffering from trichinosis in Malaga, and three have died.

Hoping this report will meet with your approval, I am, etc.,

H. C. MARSTON,
Consul.

[Inclosure 1 in No. 77.—Telegram.—Translation.]

Governor of Malaga to the Spanish Government.

Several cases of trichinosis have occurred at this capital, there being four persons in a single house who are affected with the disease, two of them dangerously so. Three, moreover, have symptoms of the disease, and in another house one. We have also learned that two other persons have been attacked. I at once convoked the board of health, and suitable measures have been adopted to check the disease. The cause of the sickness in the seven persons first referred to was the eating of sausages from Galena, in Cadiz, to the governor of which province I have reported by telegraph what has taken place; and the eighth was attacked in consequence of having eaten ham imported from America. The meat, upon examination with a microscope, by experts, was found to contain trichinæ.

[Inclosure 2 in No. 77.]

Mr. Marston to the Governor of Malaga.

UNITED STATES CONSULATE,
Malaga, February 15, 1883.

SIR: I have the honor to address your excellency upon the subject of the appearance of trichinæ in Malaga. May I beg, in pursuance of my duty as American consul at this place, that you will furnish me with whatever knowledge you possess, that the hams eaten by one or more of the sufferers was imported from the United States, as contained in the published dispatch sent by your excellency officially to Madrid?

I have, etc.,

H. C. MARSTON,
Consul.

[Inclosure 3 in No. 77.—Translation.]

The Governor of Malaga to Mr. Marston.

MALAGA, *February* 17, 1883.

SIR: I have the honor to reply to your polite communication of the 15th instant, and to inform you that I have reported to the Government that the cases of trichinosis that had occurred in this capital were due, according to intelligence received, to the eating of pork imported from the nation which you so worthily represent in this city. These reports were afterwards not confirmed, but it is certain that the pork which originated the cases in question was not the fresh meat of hogs slaughtered in this city. This is all I have to communicate in reply to your polite note.

God guard you for many years.

TEODORO BARO,
Civil Governor.

[Inclosure 4 in No. 77.]

Mr. Marston to the president of the Society of Natural and Physical Sciences.

UNITED STATES CONSULATE,
Malaga, February 18, 1883.

SIR: I have the honor to communicate with you upon the subject of trichinæ in Malaga. I understand that your society have examined all samples of ham, pork, *longaniza*, etc., which the authorities of Malaga have suspected as being affected with trichinæ. Have any trichinæ been detected in any hams or pork reported to have been imported from the United States? Your answer to this inquiry will greatly oblige, etc.,

H. C. MARSTON,
Consul.

[Inclosure 5 in No. 77.—Translation.]

Mr. Orneta to Mr. Marston.

SOCIETY OF PHYSICAL AND NATURAL SCIENCES OF MALAGA,
OLD COLLEGE OF SAN TELMO,
Malaga, February 18, 1883.

I have received your communication of this date, and I have the honor to inform you that *trichina spiralis* has been detected by this society in sausage of whose origin we are ignorant. In the other cases in which swine's flesh was examined we have as yet been unable to establish its existence.

May God preserve your life for many years.

DOMO DE ORNETA,
President.
A. PROLONGO,
Secretary.

No. 125.

Mr. Marston to Mr. Davis.

No. 78.] UNITED STATES CONSULATE,
Malaga, February 24, 1883. (Received March 13.)

SIR: I have the honor to continue my report upon trichinæ in Malaga, which was the subject of my dispatches Nos. 76 and 77. I was so indignant at the declaration that trichinæ had originated in American hams without any proof thereof that I induced the authorities here to make all possible efforts to trace the origin, happily with success, as you will see by the inclosed paragraph which appeared in this morning's paper. Happily we have a civil governor whose administration is an honorable and just one.

I am, etc.,

H. C. MARSTON,
Consul.

[Inclosure in No. 78.—Extract from Malaga newspaper.—Translation.]

It appears from a telegram received by the governor of Malaga from the governor of Seville that José Diaz, a sausage vender at Galena, brought to this city the sausage containing trichinæ, which has caused all the sickness and alarm here. Various examinations have been made of pork at Galena, in some of which trichinæ have been found. The pork thus affected has been burned, and the authorities have issued stringent orders with a view to preventing the spread of the disease; they have, moreover, reported the matter to the General Government.

No. 126.

Mr. Reed to Mr. Frelinghuysen.

No. 173.] LEGATION OF THE UNITED STATES,
Madrid, February, 28, 1883. (Received March 17.)

SIR: Some days since I saw in the Madrid papers that several cases of trichinosis had occurred at Malaga, some of which it was alleged had been caused by the eating of raw ham proceeding from the United States.

At about the same time I received a dispatch from Mr. Marston, our consul at Malaga, dated the 18th instant, informing me of his action in

the matter, and inclosing a copy of his telegram and of his dispatch upon the subject to the Department, dated the 14th instant.

In view of the very worthy and prompt action of Mr. Marston I did not deem it necessary for me to act here, but seeing in the papers of Saturday last that some of the persons attacked had died, and that the authorities at Malaga had under consideration the propriety of recommending the issuance of an order preventing the further importation of pork from the United States, and knowing how difficult it would be if the order was once issued to have it rescinded, I deemed it my duty to do what I properly could to prevent any such order from being issued. With this object in view I at once proceeded to the director general of health, etc. (under the direction of the ministry of gobernacion), and not finding the director general in, asked to see the next officer in charge. This gentleman received me very courteously, and after explaining the object of my visit, he advised me to write an unofficial note to the minister of gobernacion upon the subject assuring me at the same time that it would receive prompt attention. This I did on Monday the 26th instant, inclosing for his further information two copies of the report on "American pork," made by Mr. Scanlan in 1881, under the direction of the Department of State. I beg to inclose a copy and translation of my note.

Last evening I received the reply of the minister of gobernacion (a copy and translation of which I also beg to inclose herewith), expressing thanks for the copies of the report, and informing me that up to the present time it had not been decided to introduce any changes whatever in regard to the sanitary formalities established for the introduction into Spain of pork proceeding from the United States, and adding that he proposed to make a careful study of the report which I sent him.

I feel quite certain that no order will be issued preventing the further importation of American pork. I am strengthened in this belief by the reception to-day of another dispatch from Mr. Marston, dated the 24th instant, inclosing a copy of a paragraph taken that morning from a Malaga paper stating that it had been ascertained that the cases of trichinosis were caused by the eating of *longanizas* (a kind of sausage), prepared by one José Diaz, of Galena, and that the pork or meats in his possession in which trichinæ were found had been burned, and strict orders given to prevent a recurrence of the evil.

I shall continue, however, to keep a careful watch, and should I have occasion so to do will make every effort to prevent any action by the authorities here detrimental to the introduction into Spain of this important article of our produce.

In closing this dispatch I beg to strongly commend the course pursued by Mr. Marston.

I have, etc.,

DWIGHT T. REED.

[Inclosure 1 in No. 173.—Translation.]

Mr. Reed to the Minister of Gobernacion.

LEGATION OF THE UNITED STATES,
Madrid, February 26, 1883.

SIR: According to the newspapers it appears that there has lately occurred at Malaga several cases of trichinosis, some of which, it is alleged, were caused by eating ham imported from the United States, and that in consequence of this the authorities have under consideration the propriety of recommending the prohibition of further importation of pork, hams, &c., from that country.

In view of the above-mentioned statement I deem it my duty to inclose for your excellency's information two copies of a report giving the result of an investigation made in 1881, under the direction of the Department of State of the United States, in regard to American pork. The report explains very clearly how American swine is fattened, slaughtered, and prepared for the market, and how very impossible it is for the pork, hams, &c., to contain trichinæ.

While I know nothing in regard to the cases of trichinosis referred to, or of the intentions of the Government in regard to the matter further than what I have seen in the newspapers, my object in writing this note is to request, unofficially, your excellency's powerful aid in preventing the issuance of any order which would prohibit the importation into Spain of American pork, hams, &c.

Begging that your excellency will give the matter your early consideration, I avail, &c.

DWIGHT T. REED,
Chargé d'Affaires ad int.

[Inclosure 2 in No. 173.]

Mr. Gallou to Mr. Reed.

MINISTRY OF GOBERNACION,
February 27, 1883.

SIR: I have received with much pleasure your polite letter dated 26th instant, and the two pamphlets which accompanied it.

I give to you my best thanks for your kindness, and I am able to state to you that up to the present moment it has not been decided to introduce any change in the sanitary formalities established for the introduction of pork proceeding from the nation you so worthily represent in this court.

I propose to make a careful study of said report; and, renewing my thanks, I am, &c.,

PIO GALLOU.

No. 127.

Mr. Davis to Mr. Marston.

No. 41.]

DEPARTMENT OF STATE,
Washington, March 7, 1883.

SIR: I have to acknowledge the receipt of your dispatch No. 76, dated the 14th ultimo, reporting the appearance of trichinæ in sausage, pork, and ham at Malaga, which has seriously affected a number of consumers. In reply you are requested to keep the Department fully informed on the subject. Our experience elsewhere leads us to the conviction that the trichinæ are not to be attributed to the American products, but are usually the result of eating the native pork uncooked. There is as yet no reason to believe that a different result will be found in Malaga. Your further report is awaited with interest.

I am, &c.,

JOHN DAVIS,
Assistant Secretary.

No. 128.

Mr. Badeau to Mr. Davis.

[Telegram.]

HAVANA, *April* 5, 1883.

Authorities have to-day ordered all hog's lard coming from United States to Cuba to be examined before landing.

BADEAU.

No. 129.

Mr. Badeau to Mr. Davis.

No. 98.] CONSULATE-GENERAL OF THE UNITED STATES,
Havana, April 5, 1883. (Received April 10.)

SIR: I have the honor to forward herewith an order of the governor-general, with translation, dated April 1, but published this day, relative to the inspection of hog's lard coming from the United States.

I am, &c.,

ADAM BADEAU,
Consul-General.

[Inclosure in No. 98.—Translation.]

ORDER OF THE GOVERNOR-GENERAL.

GOVERNMENT-GENERAL OF THE ISLAND OF CUBA. BUREAU, HEALTH.

HAVANA, *April* 1, 1883.

On this date is communicated to the civil governor of the island the following:

In view of the statements made to this central government by the Spanish consul at New York in regard to the bad hygienic condition of a certain class of hog's lard, which, with different marks, is imported into this island from the United States of America, and in view also of the result of the analysis made by the subdelegate of pharmacy of this capital of the sample of said grease forwarded by the said consular officer, the governor-general, by decree of this date, has been pleased to order that the hog's lard of said origin, of every class of mark, arriving at the ports of this island, whether coming in tierces or any other wooden vessel whatsoever, shall be inspected by the boarding physicians before being conveyed to the respective custom-houses; and you are directed to order what is necessary, so that this duty may be performed with the celerity, exactness, and care which everything relative to the public health demands.

At the same time his excellency has ordered that upon the publication in the official bulletin of this province of the aforesaid result you recommend to the local authorities and board of health the greatest watchfulness over the establishments from which the above-mentioned articles issued, in order to prevent the sale of the same in improper condition for consumption for the food of families.

This order of his excellency is published in the Official Gazette for general information.

M. DIAZ DE LA QUINTANA.

No. 130.

Mr. Badeau to Mr. Davis.

No. 105.] CONSULATE-GENERAL OF THE UNITED STATES,
Havana, April 10, 1883. (Received April 17.)

SIR: Referring to my dispatches Nos. 98 and 101, of April 5 and 7, respectively, I have the honor to state that immediately upon the appearance of the order relative to the inspection of American hog's lard, of which a copy was forwarded with my No. 98, I addressed a communication to the governor-general, requesting a copy of the communication of the Spanish consul at New York, and of the report of the subdelegate of pharmacy of this city, or any other information on which the said order was based; but I received from his excellency a

reply declining to accede to my request, on the ground that the documents in question could be forwarded only to the Government of the King, *No puedo facilitarlos mas que al Gobierno de S. M. el Rey.*

I have, etc.,

ADAM BADEAU,
Consul-General.

No. 131.

Mr. Frelinghuysen to Mr. Reed.

No. 150.] DEPARTMENT OF STATE,
Washington, April 12, 1883.

SIR: Your No. 173 of the 25th of February last, in regard to the case of trichinosis at Malaga, which it was alleged was produced by eating American pork, and inclosing a copy of your note to the minister of gobernacion on the subject, and of his reply thereto, has been received.

It is probable that all the cases of alleged trichinosis from eating American pork, which are sporadically reported in Europe from time to time would, if properly examined, prove to be as groudless as in the present instance.

Your action is approved, although it is to borne in mind that it is irregular to correspond, even unofficially, with the branches of the Spanish Government other than the foreign office.

It is deemed proper that you should watch this matter carefully, and be prepared to address a note to the minister of state, immediately on the appearance of any agitation hostile to American pork in Spain.

Consul Marston's vigilance will be commended.

I am, etc.,

FRED'K T. FRELINGHUYSEN.

No. 132.

Mr. Davis to Mr. Badeau.

No. 40.] DEPARTMENT OF STATE,
Washington, April 18, 1883.

SIR: Your dispatch of the 5th instant, No. 98, has been received, inclosing a copy of the recent order of the governor-general of Cuba in relation to the inspection of hog's lard imported into Cuba from the United States.

The reason assigned for the promulgation of the order in question, as stated by the governor, is that he has received certain information from the Spanish consul at New York to the effect that lard of a bad quality and dangerous to the health of its consumers is shipped from the latter port to Havana and other ports in Cuba, and that the inspection and supervision over such shipments provided for by the order in question are rendered necessary in the interest of the public health. To an order or regulation inspired by such high public motives no objection can with propriety be opposed. The right of every Government to adopt such a precautionary measures for the safety of its subjects and the preservation of the public health is a sovereign prerogative which this Govern-

ment would be the last to question. It is only when in practice such a measure may be shown to be an international discrimination against citizens of the United States that these citizens would have a right to complain, and that this Government might feel it its duty to remonstrate. There are vast regions of North America outside the Territories of the United States where hog raising is prosecuted extensively, much of the lard product of which, it may be presumed, finds its way to Cuba, and which certainly would seek that market should lard from the United States be practically excluded. It is only deemed necessary at present to instruct you to observe closely and diligently the operation of the order and the practice under it, and to report to the Department without delay any case which, upon examination of the facts, you may be led to believe forms just grounds for complaint. It is believed, however, that impure lard is not exported from the United States, and it is not impossible that through a misunderstanding of trade classification the statements of the consul-general were based upon samples of "grease," which is always plainly marked, and can not be mistaken or used for lard. It is hoped that you will make further inquiries as to the reason for the order and as to the samples on which it was based, that the Department may be fully informed on the subject. A copy of a report made after an investigation of this subject in 1881, by order of this Department, is inclosed for your information.*

I am, etc.,

JOHN DAVIS,
Assistant Secretary.

No. 133.

Mr. Frelinghuysen to Mr. Reed.

No. 159.] DEPARTMENT OF STATE,
Washington, May 3, 1883.

SIR: I inclose a copy of an order (translation) of the governor-general of Cuba, of April 1, 1883, touching the inspection of hog's lard coming to that island from the United States, and of a telegram from our consul-general there, with regard to a later order, requiring the inspection to be made before landing. I also inclose a copy of Mr. Badeau's No. 105 on the subject.† The purpose of this instruction is to procure for communication to the consul-general copies of the papers mentioned in dispatch No. 105, not obtainable from the local government.

I am, etc.,

FRED'K T. FRELINGHUYSEN.

No. 134.

Mr. Marston to Mr. Davis.

No. 86.] UNITED STATES CONSULATE,
Malaga, May 9, 1883. (Received May 29).

SIR: I have the honor to communicate again with your Department upon the subject of trichinæ found in a shoulder of bacon on the 11th ultimo, in Malaga.

---

* See House Ex. Doc. 209, Forty-seventh Congress, first session, page 179.
† See *ante* for inclosures in this instruction.

I investigated the case at the time, but I have awaited the official report, which only reached me on yesterday, from the president of the Society of Natural and Physical Sciences in this city, to whom the whole case was referred for examination and report. This bacon has been traced as coming from Manchester, England, and the English consul in Malaga has forwarded also a copy of the inclosed communication to the British foreign office. The results, if any, I will communicate forthwith. Fortunately this piece of bacon was sent for examination to the society before any one had eaten of it.

I am, etc.,

H. C. MARSTON,
United States Consul.

[Inclosure in No. 86.—Translation.]

Report of the president of the Society of Natural and Physical Sciences.

SOCIETY OF NATURAL AND PHYSICAL SCIENCES OF MALAGA,
OLD COLLEGE OF SAN TELMO,
Malaga, May 6, 1883.

As I am aware of the interest which you have taken in the trichinæ case in Malaga, especially since the existence of trichinæ was discovered in a ham by this society, I have the honor to lay before you a report which I have received from the first alcalde of this capital, in reply to my communications, which report is as follows:

"As soon as I received your esteemed communication of the 11th instant, informing me that the ham presented for inspection by Don José Aleanza to the society over which you so worthily preside, contained encysted trichinæ, I ordered that measures should be taken to discover the origin of said ham, and that the hams in the establishment from which it was procured should be seized for inspection.

"So efficient were the steps taken by the board of health in pursuance of my instructions, that it was proved that the ham in question had been sold at the fresh and salt meat market of Don Antonio Baro Guerrero, No. 17, Five Ball alley. Mr. Guerrero was summoned to appear before me, and the following instrument was drawn up: In the city of Malaga, on the 12th day of April, one thousand eight hundred and eighty-three, it being about 3 o'clock in the afternoon, Don Antonio Baro Guerrero, having been duly summoned, appeared before the constitutional alcalde of this city, the said Guerrero being an inhabitant of this city, residing at No. 17 Five Ball alley, where he keeps an establishment for the sale of fresh and salt meat, and being requested to state whether it was true that the ham presented by Don José Aleanza for inspection to the Academy of Physical and Natural Sciences was bought by the said Aleanza at his establishment, he said that the ham in question was, indeed, purchased by Mr. Aleanza at his establishment, it having been one of a lot which he had received on the 6th of February last from the firm of Leverhus, Husk & Co., of Manchester, by the steamer *Manuela*, of which he produced the invoice and bill of lading.

"The invoice having been examined, he was requested to explain the difference between the 492 kilograms named in the invoice and the 60 or 80 kilograms which were approximately the weight of the five hams seized by the commission at his aforesaid establishment; whereupon he said that the difference was owing to the fact that he had sold these hams to various unknown persons, but that he had thus far heard of no accident resulting from the consumption therof. No further proceedings took place, and the parties concerned signed their names, to which I, the secretary, certify. Carlos Davila, L. Castilla, Anto. Baro, José Ma. Lopes. I communicate to you the foregoing for your information and in reply to your communication of the 17th instant, and I must, at the same time, inform you that, according to a communication received from the president of the board of health, of the 18th instant, the four remaining hams which were found belonging to the lot in which Mr. Baro received the ham sold to Don José Aleaza were carefully examined with the aid of a microscope by Drs. Inocente Martinez and Candido Solas, and that nothing was found in them indicating the existence of trichinæ, in consequence of which the aforesaid gentlemen being fully satisfied of their wholesome character, they were returned to their owner."

I have the honor to communicate to you the foregoing for your information.

God guard you many years.

DOMO. DE ORNETA,
President.

No. 135.

Mr. Badeau to Mr. Davis.

No. 147.] CONSULATE-GENERAL OF THE UNITED STATES,
Havana, May 25, 1883. (Received May 31.)

SIR: Referring to your dispatch of April 18th instant, I have the honor to report that immediately upon its receipt I addressed the governor-general in compliance with your orders, making further inquiries as to reason for his order relative to the inspection of hog's lard imported into Cuba from the United States, and have this day received a reply, a copy of which, with translation is inclosed.

I am, &c.,

ADAM BADEAU.
Consul-General.

[Inclosure with dispatch No. 147.—Translation.]

Letter from governor-general of Havana to Consul-General Badeau.

In answer to your honor's official letter of last month relative to the motives on which the order for the inspection of lard imported into this island from the United States is based, I have the honor to inform your honor, by order of his excellency the governor-general, that in the circular decree of this Government, dated 1st of April ultimo, published in the Official Gazette of the 4th of said month, the reasons for ordering said inspection are clearly expressed; and nothing has since occurred in the matter worthy of mention; informing your honor that if the Government of the United States wishes to become thoroughly acquainted with the particulars relative to the inspection of lard, it can, if thought convenient, address itself to his excellency the Spanish minister at Washington, who has detailed information of what in substance is declared in the aforesaid circular of April 1.

All of which, by his excellency's orders, I have the honor to communicate to your honor for your information.

May God preserve your honor many years.

Havana, May 19, 1883.

No. 136.

Mr. Marston to Mr. Davis.

No. 88.] UNITED STATES CONSULATE,
Malaga, Spain, June 8, 1883. (Received June 26.)

SIR: I have now the honor to further communicate with your Department upon the subject of my dispatch No. 86, under date of May 9 last.

In reply to the report made at the time by Her Britannic Majesty's consul here, the British foreign office has now forwarded to that office a communication from the firm in Manchester who purchased the "shoulder" in question and shipped it to Malaga.

It is obviously a very obscure report, not shedding much light upon the origin of the meat, "Higgins, the curer in America," being about as authentic as Jones or Smith would be.

I am, &c.,

H. C. MARSTON,
United States Consul.

[Inclosure in No. 88.]

Leverhus, Husk & Co., to the clerk of the council, veterinary department.

1 AND 3 LEMINGTON PLACE,
Princess street, Manchester, May 17, 1883.

SIR: In reply to your inquiry [of the] 16th instant, we beg to say that the shoulders in question were bought by us as sound meat in Liverpool, through our brokers, as "American" shoulders, and the boxes were branded with the name of Higgins, which we believe is a curer in America.

LEVERHUS, HUSK & CO.

No. 137.

Mr. Frelinghuysen to Mr. Barca.

DEPARTMENT OF STATE,
Washington, June 14, 1883.

SIR: I have the honor to inclose a copy of an instruction (No. 40) of this department to Consul-General Badeau, at Havana, touching an order of the governor-general of Cuba, in relation to the inspection of hog's lard imported from this country into that island, also a copy of the governor-general's note of May 19 last in the case.* Asking that you will kindly give me such information as you can as to the necessity of this inspection,

I beg, etc., FRED'K T. FRELINGHUYSEN.

No. 138.

Mr. Barca to Mr. Frelinghuysen.

LEGATION OF SPAIN AT WASHINGTON,
Washington, June 20, 1883. (Received June 21.)

The undersigned, envoy extraordinary and minister plenipotentiary of His Majesty the King of Spain, has had the honor to receive the note of the 14th instant, whereby the honorable Secretary of State, in transmitting to him a copy of the instruction (No. 40) sent to Mr. Badeau, United States consul-general at Havana, relative to the order issued by the governor-general of Cuba, for the examination of hog's lard imported from the United States, and of the note of the aforesaid governor-general of the 19th ultimo, relative to the same matter, was pleased to ask him for information concerning the causes which had rendered such an examination necessary.

The undersigned hastens to inform the honorable Secretary of State that the measure in question was adopted because a number of American citizens, merchants in good standing, had made complaint to the consul-general of Spain in New York that a certain house was exporting adulterated lard which was injurious to health to the island of Cuba, and that honest dealers were unable to compete with the shippers of that article. An order was consequently issued that samples of the lard complained of should be examined by competent experts, which examination showed that the said lard did, indeed, contain ingredients in-

* See *ante* for inclosures in this note.

jurious to public health. The governor-general, therefore, in the exercise of his rights and in the fulfillment of his duty, ordered that hogs' lard from the United States should be inspected.

The undersigned takes pleasure in informing the honorable Secretary of State that the adoption of the measure in question implies no intention to establish any discrimination between goods from the United States and those of any other friendly nation, nor any intention to establish discriminating measures calculated to check the development of commerce between the United States and Cuba. The object of the captain-general of Cuba in issuing the order which gave rise to the complaint of the American consul-general was, to the knowledge of the undersigned, to take such precautions as are required by a due regard for public health in a tropical country during the summer months, and to protect honest merchants in accordance with their own request.

The undersigned, hoping that the foregoing explanations will fully satisfy the honorable Secretary of State, avails, etc.,

FRANCISCO BARCA.

No. 139.

Mr. Frelinghuysen to Mr. Barca.

DEPARTMENT OF STATE,
Washington, July 29, 1883.

SIR: I have the honor to acknowledge the receipt of your note of the 20th instant, apprising the Department of the fact that the late order of the governor-general of Cuba touching inspection there of hog's lard from the United States originated in a complaint to the consul-general of Spain at New York from certain American merchants that a certain house was exporting adulterated lard and that honest dealers were unable to compete with the shippers of that article.

Thanking you for your very kind reply to the inquiry of the Department of the 14th instant,

I beg, &c.,

FRED'K T. FRELINGHUYSEN.

No. 140.

Mr. Foster to Mr. Frelinghuysen.

No. 40.] LEGATION OF THE UNITED STATES,
Madrid, July 23, 1883. (Received August 9.)

Sir: On the 19th instant the newspapers of this capital announced that on account of the appearance of cases of trichinosis at Malaga the Spanish Government had, upon the advice of the royal board of health decided to prohibit the importation of American and German pork products.

On the same day I called upon the minister of state and asked him if he could give me any information as to the correctness of this report. He answered that he had heard nothing of it, but recommended me to call upon his colleague, the minister of the interior (*gobernacion*), which I did on the same day. In the absence of that minister the subsecre-

tary received me, who, in reply to my inquiries, stated that the royal board of health had recommended the prohibition referred to, but the minister of the interior had decided that it was only necessary to enjoin the enforcement of the royal order of July 10, 1880, which prescribed an inspection of pork and lard proceeding from the United States and Germany, and their destruction when found to contain trichinæ. A copy and translation of the royal order of July 10, 1880, was sent to the Department with Mr. Fairchild's No. 176, of July 16, 1881.

I improved the opportunity of my visit to explain somewhat in detail to the subsecretary and to the chief of the sanitary bureau who was present, the results of the investigations made under the direction of the Department of State as contained in Mr. Scanlan's report of 1881 (a copy of which had been left at the ministry by Mr. Reed some months ago), and the importance of this industry to our country. I was assured that the exclusion of American pork was not contemplated by that ministry, but only a reasonable inspection in view of the reported appearance of the disease at Malaga.

You will see by reference to Mr. Reed's dispatch, No. 173, of February 28th last, that a similar report affecting American pork was started at Malaga at that time, but upon investigation it was found that the disease did not originate from the use of pork proceeding from the United States, but from Spain itself. Information will be asked of the consul as to the cause of the recent alarm, and his report will be sent to you.

In view of the fact that telegrams from Madrid have appeared in the European press giving a false report of the action of the Spanish Government, I deemed it proper in the interest of our exporters to send you a telegram this morning, as follows:

Importation of American pork not prohibited in Spain as telegraphed to foreign press. Only inspection required as reported in Fairchild's number one seventy-six.

I am, etc.,

J. W. FOSTER.

No. 141.

Mr. Foster to Mr. Frelinghuysen.

No. 43.]

LEGATION OF THE UNITED STATES,
Madrid, July 23, 1883. (Received August 9.)

SIR: Referring to your instruction No. 159, of May 3 last, to Mr. Reed, and his dispatch No. 235, of June 5, relative to lard or pork inspection in Cuba, I now transmit a further note from the minister of state, dated the 19th ultimo, in which he says that information has been asked of the governor-general of Cuba, with the object of communicating the same to this legation, but the minister adds that the measure adopted by the governor-general was in accordance with precautions telegraphed on the 25th of February last by the ministry of ultramar.

In acknowledging receipt of the minister's note on the 21st ultimo, I suggested that you would be gratified to be informed of the reports or information which led to the action of the ministry of ultramar, and the character of the instructions given to the authorities of Cuba.

A translation of the minister's note and a copy of my reply are herewith inclosed. I have delayed their transmission to date in the hope that I might receive a further reply touching the information suggested in my note of the 21st ultimo, but it has not come to hand.

I am, etc.,

JOHN W. FOSTER.

[Inclosure 1 in No. 43—Translation.]

Minister of State to Mr. Foster.

MINISTRY OF STATE,
Palace, June 19, 1883.

MY DEAR SIR: In addition to the note to the legation, dated the 1st instant, relative to the documents and other information in regard to the sanitary inspection ordered by the superior authority of the island of Cuba, in all the ports of that island, of pork products (*cecina*) producing from the United States, I have the honor to inform your excellency that before the request referred to may be sent to the respective customs authorities, antecedents have been asked of the governor-general of said island in order to furnish your excellency with the desired information, although I must state that the measure adopted by the governor-general of Cuba in the matter was in accordance with precautions telegraphed on the 25th February last, by the minister of ultramar, to guard against the propagation of trichinæ in pork and lard.

I improve, etc.

The Marquis DE LA VEGA DE ARMIJO.

[Inclosure 2 in No. 43.]

Mr. Foster to Minister of State.

LEGATION OF THE UNITED STATES,
Madrid, June 21, 1883.

EXCELLENCY: I beg to thank your excellency for the note of the 19th instant, by which I am informed that the antecedents of the order regarding pork proceeding from the United States have been asked of the governor-general of Cuba, in order that your excellency may more fully reply to the note of this legation of the 28th May last.

As it would seem, from your excellency's note above referred to, that the measure adopted by the governor-general of Cuba was in accordance with precautions telegraphed on the 25th February last by the ministry of ultramar, I venture to suggest to your excellency that my Government would be highly gratified to be informed of any of the reports, investigations, or information which led to the action of the ministry of ultramar February 25, and the character of the instructions given to the authorities of Cuba, so far as it may be deemed proper by His Catholic Majesty's Government to communicate the information desired.

I gladly avail, etc.,

JOHN W. FOSTER.

No. 142.

Mr. Foster to Mr. Frelinghuysen.

No. 89.] LEGATION OF THE UNITED STATES,
Madrid, October 23, 1883. (Received November 7.)

SIR: Referring to the note of the Spanish minister of state of June 19 last, on the subject of hog's lard, transmitted with my No. 43 of July 23, I now inclose a further note of the 10th instant, from the minister, in which he communicates the reasons of the governor-general of

Cuba for the adoption of the order for the inspection of lard proceeding from the United States. These reasons, it will be seen, are based upon the alleged adulteration of certain named brands of American manufacture.

I am, etc.,

JOHN W. FOSTER.

[Inclosure in No. 89.—Translation.]

The Minister of State to Mr. Foster.

MINISTRY OF STATE,
Palace, October 10, 1883.

EXCELLENCY: In answer to the notes from your legation, dated the 28th of May and 21st of June, last, I had the honor to state to your excellency that information had been asked of the governor-general of Cuba concerning the measures adopted for the inspection and examination of hog's lard coming from the United States.

The said authority has recently informed His Majesty's Government to the effect that hog's lard, marked "Corona," "Irving," "Pavo-real," and "Rosedale," imported to that island, proceeding from the United States, was condemned as injurious to the public health; therefore ordering, as was his duty, that the dispatch of the article mentioned should be suspended in the custom-house until the result of the expert examination which had been ordered to take place should be known.

This having taken place, it appeared that although the aforementioned hog's lard could not be proved notoriously injurious to the health, it was nevertheless an impure and adulterated article, without qualities for sustenance, for which cause the governor-general of Cuba ordered, on the 1st of April, the previous inspection of all lard arriving at the ports of the island proceeding from the United States, which should come in tierces or any other wooden packages, and from this arose the remonstrance of the consul-general of the United States to the aforesaid superior authority, asking for a copy of the accusation and the expert report, to which the governor-general did not think he ought to accede.

The latter adds finally that the examination directed by the order of the 1st of April does not extend to all the lard (*cecina*) which is imported, but only to the lard of American production which comes in wooden packages.

In informing your excellency of the foregoing,

I avail, &c.,

The Marquis DE LA VEGA DE ARMIJO.

SWEDEN AND NORWAY.

No. 143.

Mr. Gade to Mr. Davis.

No. 309.] UNITED STATES CONSULATE,
Christiania, March 3, 1882. (Received March 29.)

SIR: For more than a year no complaints have been heard in this country concerning diseased pork imported from America. The boards of health in the cities continue to examine the pork imported from abroad, but it is evident that only a partial examination of each lot can be made, and that the prescribed examaination is largely a matter of form. On the other hand, some time since trichinæ were found in this district in pork raised in Norway, and several persons were seriously ill from eating it.

Large quantities of American salt meat have, for a number of years, been imported into this country for the use of the mercantile marine, and up to this time there has been general satisfaction with this article.

However, I now see that the board of health in Moss, one our neighboring towns, has lately seized a lot of spoiled American salt meat, and lots of similar quality are said to be reported from other places in this country. The attention of ship-owners is therefore directed to the necessity of closely examining every barrel of American meat. The meat in question, which was sold in America as a prime article, was imported by a firm at this port and seems to have been already refused by dealers at another port before being shipped to Moss.

As most of the American meat imported here arrives over England and other countries, I can not give statistical figures showing the quantities imported from America. But lately it has largely replaced Danish meat, which was formerly in use on the many hundred Norwegian vessels which every spring leave these ports, and it will probably continue in great demand here if the American producers export a sound and wholesome article.

I am, &c.,

GERHARD GADE,
United States Consul.

No. 144.

Mr. Gade to Mr. Davis.

No. 313.] UNITED STATES CONSULATE,
Christiania, April 12, 1882. (Received May 1.)

SIR: Referring to my dispatch No. 309, dated March 3, this year, relating to spoiled American meat imported into this district, I have now the honor to report that I am informed that the meat in question was packed at Kansas City, Mo., by a firm which exports largely of that article.

The importer of the spoiled meat has had a legal survey held of it here and had it also examined by the chemical expert of the police chambers of this city. I beg leave to give subjoined a part of the testimony of the said expert:

> The exterior of the meat examined was found to be fresh, not only in appearance, but in odor, while the interior was found to be more or less damaged, on the inside, in some places so much that the meat formed a slime, which emited a horrible, rotten stink. The reason why, in the very same piece, the outer part was fresh, while the inner was spoiled, is probably to be ascribed to the circumstance, that the pieces were not immersed in the brine immediately after slaughtering, but were previously only "sprinkled with salt," which did not penetrate in sufficient quantity or with sufficient rapidity into the larger pieces to prevent their spoiling.

The expert adds:

> As the brine was fresh and sufficient, the damage can in no case whatever result from the treatment of the meat after it was sent from the packing house.

I am, etc.,

GERHARD GADE,
United States Consul.

SWITZERLAND.

No. 145.

Mr. Byers to Mr. Davis.

No. 285.| UNITED STATES CONSULATE,
Zurich, March 24, 1882. (Received April 2.)

SIR: In my dispatch No. 259* I had the honor to report that the very stringent regulations of this canton as to American meat importations were, as I was informed by the authorities, to be considered as partially suspended. In that dispatch I added, however, that on the least provocation the fright as to American hams would be renewed and the regulations enforced with greater vigor than ever.

A provocation was discovered in the early autumn. Certain hams were imported here from Germany, containing trichinæ. They had been advertised, invoiced, and paid for as "first-class Wesphalian hams" by a firm claiming to deal in the finest Wesphalian hams only. The damaging discovery of trichnæ was no sooner made than certain of the officials, with a part of the press and the native butchers, asserted that the hams were not German but American.

The regulations were enforced again stronger than ever, and in a way that became equivalent to prohibition entirely.

I undertook to point out to the authorities the injustice of the proceeding, and submitted to them numerous reports and results of investigations, both in France and the United States, tending to show the extreme futility of microscopic examinations to protect against existence of trichinæ. I further showed by indisputable evidence that a single case of trichinosis from use of American hams had not yet been discovered in Switzerland. I at the same time had a private examination of the meat that had been seized and an investigation as to its origin. The result was trichinæ were found in abundance, but there was no proof whatever that the hams came from America. On the contrary, there was and is every reason for supposing that the hams were what they were represented to be, viz, "first-class Westphalian hams." It is true, the seller, in his fright, and in his vain desire to get out of the difficulty, pretended that he had been cheating the public, and that these special hams were, after all, American ones pared down and smoked over to resemble the Westphalian. There was, however, no proof of the truth of this afterthought statement; besides, in his invoice, advertisement and letters accompanying invoice (all in my possession), he distinctly declares these hams to be Westphalian.

After my repeated and earnest protests, the authorities at last appointed a special commission to investigate the whole subject of importation of meats, microscopic examination of meats, etc. The result of this investigation is the public circular order of the Government which I inclose.

This order points out the uselessness of microscopic investigations of American or other meats, and fully rescinds the objectionable regulations of 1878, and does wholly away with police examinations of any kind, thus making it possible to import American hams into a city and canton where former regulations had well-nigh destroyed the market.

I am, etc.,

S. H. M. BYERS, *Consul.*

[Incloses circular of the cantonal government, March 11, 1882, in German.]

No. 146.

Mr. Mason to Mr Davis.

No. 146.] UNITED STATES CONSULATE,
Basle, September 25, 1883. (Received October 8.)

SIR: I have the honor to submit herewith a report on the present condition of the importation and traffic in American salted and cured pork in Switzerland, with some allusion to the general aspect of the same question in relation to neighboring European countries.

The fact that the Department of State is reported in printed dispatches as being about to institute an investigation of the conditions of hog-raising and pork-packing in the United States has invested the vexed question of meat imports with new and extraordinary interest, and the inclosed report is respectfully submitted, in the hope that it may be found pertinent to a subject of renewed importance.

It is stated in this report that Germany prohibits the transit of American hog products through the territory of that empire, even when such merchandise is consigned to importers in other countries. In proof of this statement I hereby inclose one original letter and two telegrams, with translations, all of which are addressed to Messrs. Jenny & Kiebiger, meat importers of this city. The telegram, which is official, shows that a shipment of American lard from Antwerp to Basle was stopped at Aix-la-Chapelle, the German frontier, and had to be returned to Antwerp and shipped to Switzerland by a longer route, through France and Belgium. This inexcusable mandate of the German Government is still in force.

Messrs. Fiechter Bros., of Antwerp, to Messrs. Jenny & Kiebiger, of Basle.

FIECHTER BROS., COMMISSION SHIPMENTS, &C.,
Antwerp, May 12, 1883.

We have the honor to inform you that per York City 40 cases of pork meat arrived for your firm, marked J. K. Thirty-six cases, 10,229 kilograms, have been sent to you in railway wagon No. 61,974, *via* Cethur, to be delivered to you at the Badisch railway depot. The remaining four cases shall be sent with our merchandises combined. You will receive the note of our expenses through the branch office of our firm at Basle.

It was impossible for us to have this shipment directed *via* Sarrachen, *the German authorities since recent date prohibiting even the passing through of American meats.*

With high consideration,

FIECHTER BROTHERS.

[Official telegram of service No. 505.]

AIX-LA-CHAPELLE, *June* 25, 1883—8.15 a. m.

To R. and A. FLEBUS, *Antwerp*:

American lard can not pass through Germany.

CHET.

[Telegram No. 549]

ANTWERP, *June* 25, 1883—6.15 p. m. (Received at Basle, 8.2.)

JENNY, *Basle*:

Passing through over German territory prohibited. Send at once instructions.

FLEBUS.

No recent announcement from America has been received in Europe with more general satisfaction than the published report that the Department of State would appoint a commission to investigate thoroughly and report authoritatively upon all the conditions of hog-raising in the United States, and the preparation of the various forms of pork for export.

It is inferred that this action is the first step in a definite policy of resistance to the causeless and wholly unjustified proscription that now

excludes a leading American product from the markets of several European countries which seek by every means to develop and increase the export of their manufactured merchandise to the United States.

The time has long been past when any intelligent person in Europe or America could be deceived by the transparent pretense that American cured meats are impure or more dangerous to health by reason of trichinæ than the best salted and smoked meats of Germany or Austria. No European statesman or journalist, who discusses the question candidly, now denies that the pretended horror of trichinæ is merely a diplomatic display of solicitude for the health of the people, to mask the real economic motive which underlies all these edicts of prohibition.

Were it not true that the importation of American meats, at a normal stage of the market, brings the retail price of a favorite article of food within reach of many thousands of working people who could not otherwise afford such a luxury, and thereby not only makes a serious competition for the European butchers and hog-raisers, but diverts a large and constantly increasing outflow of money to the United States, it would never have been discovered by the economists of Paris, Berlin, and Vienna, that American pork was dangerous or impure.

If European statesmen would say frankly that American meats, being for obvious reasons much cheaper than the European and equally good, would in time destroy or seriously injure the prosperity of their home farmers and meat-venders, and that *therefore* they felt obliged to impose an impost duty upon foreign meats that should balance the unequal cost of production, that would be open, fair, and in accordance with recognized principles of international commerce. But they dare not do this. They shrink from the clamor which would meet any such avowed measure to tax the food of the people. So they invent a theory that American meats are diseased and dangerous, and impose their prohibitory tariff in the form of an edict of absolute prohibition, based upon sanitary grounds. The peasant and artisan are thereby made to pay from 15 to 20 centimes more per pound for the little meat which they eat than they would if American pork were admitted freely, but they are told that this discreet mandate which robs their pockets has been wisely devised by a paternal Government which is anxiously solicitous about their health. Hence the many-sided meat question. But while Germany is carrying her prohibitory policy to the absurd length of forbidding American meats, and even lard, to be carried across her territory by rail in cars sealed in Antwerp for delivery in Switzerland, it is also true that in this country the reputation of those meats and the public demand for them are higher and greater than ever before. From the first agitation of the subject in the winter of 1881–'82, Switzerland has taken an intelligent and well-considered course in respect to the meat *question*. When France suddenly issued a prohibitory decree because a *family* at Crespy, in Valois, had been attacked by trichinosis after eating the raw flesh of a newly-killed pig, the Swiss Government appointed an able and deliberate sanitary commission to ascertain whether any person in Switzerland had ever suffered in like manner from having eaten salted meat imported from the United States. Finding no such instance on record, and having a large working population living upon limited earnings, the Swiss federal Government issued an official circular to all its cantons, reminding them that all pork should be properly cooked before being eaten, and then welcomed to its markets the transatlantic hams and bacon which were excluded by its more powerful neighbors.

While the official investigation is in progress in the United States, the fact deserves to be widely known that here in Switzerland, which is almost the only continental country in which American meats are permitted to be imported and sold on their merits, their reputation is not only higher now than ever before, but they command a preference in this market over similar classes of meats from every other country. Among the many and perfectly palpable proofs of this may be added the experience of a large meat-importing firm in Basle, which supplies not less than fifteen hundred retail dealers in Central Europe.

Three years ago this firm imported large quantities of hams, bacon, lard, and mess pork from the United States. American lard had already a reputation as the best in the market, and that was sold under its proper geographical designation; but the meats, in consequence of what was then a vague and indefinite prejudice, were sold as being of German or Swiss origin. No little trouble and expense were assumed by this firm to maintain the delusion that their meats were all from European sources.

The short corn crop of 1881, and the advance of the prices of hog products in the American market during 1882, made importations from the United States unprofitable, and these Swiss importers were obliged to draw their supplies from Austria. Their customers complained of the deterioration in their goods, which they found, in respect to curing and general excellence, decidedly inferior to those of the preceding year. It was explained to them that the meats which they were now buying and selling were really European, while those of 1881 had been of American origin.

The bountiful corn crop of 1882, and its effects upon the American meat supply, brought the hams and bacon and mess pork from Chicago, St. Louis, Cincinnati, and New York again within the exporting price limits, and to-day the Basle importers have an unprecedented trade, and almost exclusively in American meats. They report that during the period of this controversy about trichinæ and impure meats an extraordinary improvement has taken place in the curing and packing of all grades of meats exported to Europe from the United States. In this respect there was very little to complain of before, but since the quality of their wares has been challenged the American packers have, with characteristic spirit and unanimity, improved their methods and increased their precautions until their product is as a whole unequaled in quality by that of any other country.

The name "American," as applied to this class of provisions, has become, instead of a reproach, its highest recommendation, wherever the facts are known.

I have personally conversed with retail dealers from Aargau and other interior cantons, who say that their trade demands meats cured by the present American method, and that, excepting a limited quantity of the very high-priced Westphalian hams, they can hardly sell any other.

While, therefore, the economic policy of several leading European countries has nominally excluded the hog products of the United States from these markets, the reputation of these products has steadily improved. Considerable quantities of these provisions have, of course, been brought from New York and Boston to Great Britain, and, after repacking to conceal their origin, have been shipped to continental ports. Meat dealers everywhere know the superior merits of American meats, if the statesmen who make laws for them do not. The pending official investigation will, it may be presumed, settle conclusively all

the real facts in respect to this question which may be considered as yet in dispute. If the result of that measure should be the lifting of an embargo which has no motive but selfishness, no justification but prejudice, the result would be an immediate expansion of the European demand for American meats to the extreme limit of the supply. Not only can marketable swine be raised more cheaply in the Western States of America than in European countries, but, for the reason that they are more cleanly and naturally fed, and their flesh more skillfully cured, American meats will command, and must in the end supply, the principal markets of the world.

FRANK H. MASON,
Consul.

TURKEY.

No. 147.

Mr. Wallace to Mr. Frelinghuysen.

No. 96.] LEGATION OF THE UNITED STATES,
Constantinople, June 6, 1882. (Received June 26.)

SIR: A note verbal came to the legation under date of 3d June, containing a sweeping interdiction against salted meats from America, including lards. There is not much direct importation of the prohibited articles; wherefore, besides that reflection, there is consolation in the facts that nearly, if not quite, nine-tenths of the salted meats consumed in Turkey will continue to be the American product under some foreign brand, and that whether first marketed in France, England, or Germany, the original dealer is not likely to be deprived of his profits by proclamations such as is here inclosed and translated.

Construing the circular as one more to the several blows recently aimed at American products in this region, it seemed best to notice it with an immediate protest, a copy of which is also inclosed.

Very respectfully, &c.,

LEW. WALLACE.

[Inclosure 1 in No. 96.—Translation.]

Said Pasha to Mr. Wallace.

SUBLIME PORTE, MINISTRY OF FOREIGN AFFAIRS,
June 3, 1882.

Circular. Note verbal.]

The ministry of foreign affairs has the honor to inform the legation of the United States of America that the measure of interdiction which strikes the introduction of salted pork meats from America is also extended to the ham and lard of the same source, no matter by what way these articles are imported in Turkey.

The imperial ministry begs of the legation of the United States of America to kindly bring what precedes to the knowledge of his citizens.

[Inclosure 2 in No. 96.]

Mr. Wallace to Said Pasha.

UNITED STATES LEGATION,
Constantinople, June 5, 1882.

EXCELLENCY: I beg to acknowledge receipt of the note verbal from the Sublime Porte, dated June 3 instant, in which you have been pleased to inform me that the measure of interdiction against the introduction of salted meats from America is extended to hams and lard, regardless of the form of their importation into Turkey.

Your excellency will pardon an expression of surprise at the action thus indicated, announced, as it is, without a reason given. If reference is had to the treaty between the powers, it appears to me arbitrary in the highest degree. While it continues in its present form it can not but be construed as a discrimination against an important article of American manufacture, and peculiarly in violation of treaty rights, for which reasons it is my duty to earnestly protest against its execution. At the same time to open a way to an accommodation of the points presented, I will esteem it a favor if you will give me the reasons which have induced the Porte to resolve upon the interdiction, and give them to me before execution of the measure is entered upon.

Not impossibly the operative causes may be explained away.

I avail myself, etc.,

LEW. WALLACE.

No. 148.

Mr. Frelinghuysen to Mr. Wallace.

No. 68.] DEPARTMENT OF STATE,
Washington, June 29, 1882.

SIR: Your despatch No. 96, of the 6th instant, inclosing copy of your protest in reply to the note verbal of the Ottoman Government, prohibiting the importation therein of American salt meats, has been received, and your timely action is approved.

I am, etc.,

FRED'K T. FRELINGHUYSEN.

MISCELLANEOUS.

No. 149.

Mr. Frelinghuysen to Mr. Loring, Commissioner of Agriculture, et al.

DEPARTMENT OF STATE,
Washington, July 30, 1883.

SIR: On several occasions during the last few years the importation of hog products from the United States has been restricted, or even entirely prohibited, by the legislation of several foreign states. The grounds of this action are understood to be the alleged prevalence of disease—hog cholera, trichinosis, and the like—among the swine of the United States, and the supposed consequent unfitness of the prepared products for consumption as human food. The consequent legislation, however, has not, in most cases, expressed the motives of the restrictions imposed. The prohibitory decrees of Austria-Hungary and Germany, for instance, unqualifiedly forbid the importation into those countries of the pork products of the United States.

This Government, from the time the intention was first observed abroad to question the healthfulness of the pork products exported from the United States, has made every effort to investigate the truth of the unfavorable statements which came to its knowledge. It was conceived that we were more interested in proving such charges against one of our greatest staples of food, consumed by millions of our people, than could be any foreign country, whose inhabitants are only in comparatively small part consumers of the American products. After exhaustive and impartial investigation of the subject, the conviction was reached by this Government that the premises upon which the above legislation abroad rested were and are unfounded, and that the exported hog products of the United States are in no wise the source of danger to life and health which they are alleged to be. Wide publicity has been given to the results of the investigations undertaken by the Department of State and by the report on trichinæ and trichinosis, prepared by the Marine-Hospital Service, and published by order of Congress in 1881. And efforts have not been spared to induce in the minds of foreign governments a right understanding of the facts of the matter as they are ascertained to exist here. The conviction reached by this Government has not, however, been shared by the foreign governments to whose attention it was brought, and the contemplated prohibitory legislation has been effected, thereby closing important foreign markets to a food product generally used by a large proportion of our people.

It is doubtless one of the first duties of a government to watch over the health of its own community. It is difficult to believe that their restrictive measures arise from any other motive; and if foreign governments, after impartial examination, are satisfied that the pork products of the United States are, as compared with the like products of other countries, unwholesome to a degree which demands their exclusion from use as human food, it behooves this Government to examine this charge; and, if it should be substantiated, to fulfil its duty as the custodian of the public health, by enacting a system of sanitary laws which shall afford for its own citizens as complete a guarantee against the evil effects of consuming the domestic product as the statutes of foreign countries afford for their subjects. The President has therefore determined to name a commission of experts of known probity, impartiality, and competence to make a searching examination on the spot of all the conditions of the hog raising and packing industries of the United States, and to follow by the most practical examination the course of this food staple from the fields and farms to the wharf where it is shipped, or to the shops where it is exposed for domestic consumption.

The matter presents itself to the President with such urgency that he is unwilling to await action by Congress. He believes it of national importance that the results of the investigation he contemplates should be laid before Congress at the opening of the session in December next, in order that, if needful, legislative action may be then taken. It is therefore the President's desire that you will recommend to him the names of two competent persons to be commissioned as the representatives of your Department.

The commission will embrace, in addition, one representative of the New York Chamber of Commerce, one representative of the Chicago Board of Trade, and one gentleman to be chosen by the President, comprising in all five members. As the statutes prohibit the making of any contract involving guarantee of money payment, or the incurment

of any obligation for the eventual repayment of expenses, without the previous assent of Congress, the Executive is unable to promise any positive assurance that the expenses of the commission will be repaid. It is, however, thought that the great importance of the step taken, and the magnitude of the interest at stake, will lead Congress to recognize the justice of reimbursing whatever outlay the commissioners shall have incurred in discharging the important trust confided to them.

I am, etc.,

FRED'K T. FRELINGHUYSEN.

Similar letters to—
The president of the New York Chamber of Commerce;
The president of the Chicago Board of Trade.

No. 150.

Mr. Frelinghuysen to Mr. Loring, Commissioner of Agriculture, et al.

DEPARTMENT OF STATE,
Washington, October 3, 1883.

SIR: During the last few years the importation of hog products from the United States has been restricted, and in some instances entirely prohibited, by the legislation of several foreign countries. The grounds of this action are understood to be the alleged prevalence of disease—hog cholera, trichinosis, and the like—among the swine of this country, and the supposed consequent unfitness of the prepared products for food.

This Government, from the time the intention was observed abroad to question the healthfulness of the pork products exported from the United States, has made efforts to investigate the truth of the unfavorable statements on the subject which came to its knowledge. The result of the investigations so made has been to show that the premises upon which the adverse legislation abroad rests are unfounded, and that the exported hog products of the United States are in no wise the source of danger to health and life they are alleged to be. Although efforts have not been spared to inform foreign governments as to this state of facts, they have not given due weight to the representations which have been made to them on the subject, and consequently prohibitory legislation has been extended in Europe until many important markets there have been closed to the food products in question, of which this country produces a large excess above its own consumption.

Inasmuch as the course which various foreign power shave pursued with regard to this matter involves the charge that American citizens are engaged in the exportation of an unhealthful article of food, and inasmuch as it is believed that the agricultural and commercial interests of this country are now suffering great damage in consequence of misrepresentations as to the character of the hog products of the United States, it has been determined to take measures for such a formal and thorough investigation of the subject as will leave no doubt whatever as to the facts.

To this end you are hereby notified that the President has designated a commission to make a searching examination of all the conditions of the hog raising and packing industries of the United States of America. This commission is constituted as follows: 1. Dr. George B. Loring;

2. Prof. C. F. Chandler; 3. Eliphalet W. Blatchford, esq.; 4. F. D. Curtis, esq.; 5. Prof. E. D. Salmon.

As the statutes prohibit the making of any contract involving guarantee of money payment or the incurment of any obligation for the eventual repayment of expenses without the previous assent of Congress, the President is unable to give any positive assurance that the expenses of the commission will be repaid. It is, however, thought that the magnitude of the interests at stake will lead Congress to recognize the justice of reimbursing whatever outlay the commission may incur in discharging the important trust confided to it.

You are requested to confer with your colleagues with a view to the speedy organization of the commission, that its labors may begin at an early day.

The method of procedure and other details are left to the judgment of the commission, the President desiring simply that it shall proceed in such manner as may seem most advisable to examine into this industry and the allegations as to the healthfulness of the pork products of the United States.

The commission will report the result of its investigation, as soon as practicable, to the Secretary of State, for communication to Congress.

I am, etc.,

FRED'K T. FRELINGHUYSEN.

No. 6.

House Ex. Doc. No. 106, Forty-eighth Congress, First Session.

Message from the President of the United States, transmitting a report from the Secretary of State relative to the importation of the swine products of the United States.

MARCH 1, 1884.—Referred to the Committee on Agriculture and ordered to be printed.

To the House of Representatives:

I transmit herewith for the consideration of Congress a report of the Secretary of State, accompanying a report made by the Commission lately designated by me to examine and report upon the asserted unhealthfulness of the swine products of this country. The views and conclusions of the Commission deserve the most careful consideration of Congress, to the end that, if any path be legitimately open for removing the prohibition which closes important foreign markets to those products, it may be followed and appropriate legislation devised.

I earnestly recommend that Congress provide for reimbursing the expenses incurred by the Commissioners in this praiseworthy service, and I should be glad also if some remunerative recognition of their public-spirited action in accepting the onerous and responsible duties imposed on them were to suggest itself to Congress. At all events, in view of the conflicting theories touching the origin and propagation of trichiniasis and the means of isolating and extirpating it among domestic swine, and considering the important bearing which precise knowledge on these points would have on the commercial aspects of the matter, I recommend provision for special research in this direction.

CHESTER A. ARTHUR.

EXECUTIVE MANSION,
Washington, February 29, 1884.

The PRESIDENT:

In the President's last annual message to the Congress he announced that in view of the action of certain foreign Governments prohibiting importation of the swine products of the United States, because of alleged danger to health from their use, he had deemed it so important to ascertain and promulgate the exact facts that he had designated a Commission of experts to make a thorough investigation of the subject.

The Commission so appointed has now submitted a report to the undersigned, which is herewith laid before the President, for transmission to Congress if in his judgment it be deemed advisable so to do.

The report is thorough and impartial to a degree which can not fail to commend it to public consideration here and abroad. It deals mainly with the two asserted causes of a diseased condition of the prepared

food-products, namely, hog cholera, so called, and trichiniasis. As to the first, it is conclusively shown that the flesh of swine so diseased does not enter the market packed for human food, and it is moreover demonstrable that in no event is the disease communicable to human beings.

As to trichiniasis in swine the report is less conclusive, because less is certainly known of the manner in which the living *trichinæ* or their germs are transmitted. The need of further investigations to determine this point, on which alone can any practicable measure for the extirpation of the disease be based, is very clear. Admitting the fact that a percentage of the animals slaughtered (probably smaller than in the countries of Europe) are more or less infested with *trichinæ*, the Commission points out that the processes and conditions of packing and the lapse of time between the slaughter of the animal and the consumption of the prepared flesh abroad, are found to so diminish the vitality and propagative power of the trichinæ as to make it doubtful whether any of these parasites reach Europe in a living state, or in a condition to develop in the human body.

So far as known, no single authentic instance, resting on competent scientific testimony, can be adduced of a case of trichiniasis in Europe arising from the use of American packed swine products as food, whether eaten raw or cooked. In each instance of outbreak of trichiniasis in Germany, where the habit of eating hog's meat in an uncooked state makes the disease more prevalent than in other countries, the epidemic is not only distinctly traced to the consumption of the flesh of freshly-killed native hogs, but the further significant fact is observed that the virulence of the infection diminishes with the time elapsing between the killing of the animal and the consumption of its flesh, and that an interval of only a few days, especially when the meat is even slightly salted, suffices to reduce the severity of the symptoms below a fatal stage. It may not be irrationally inferred that a still longer interval would wholly remove the danger of infection, even in uncooked meat. Scientific research as to the duration and conditions of propagative vitality of the trichinæ after the death of the animal in which they are found, would appear to be a very necessary step toward a fuller knowl edge of this aspect of the question.

In conclusion the Commissioners say that—

> After carefully studying every circumstance that in any way affects the condition of the American swine, from the hour of their birth to the landing of the cured meat in foreign ports, we are free to say that our exported pork in all its forms is fully equal, perhaps superior, in its freedom from taint of every kind, either from disease or deterioration after slaughtering, to the pork of France or Germany, or any other country in which the hogs are confined within a narrow compass and do not enjoy that free run and pasturage which they get in the hog-growing regions of the United States. There is no general prevalence of disease among swine in any portion of this country. Microscopic examinations show that here, as in all other countries, a small percentage of swine is affected with trichiniasis; probably a smaller percentage than in the countries of Europe. That the occasional presence of trichinæ in our pork is a comparatively unimportant fact is shown by the variety of trichiniasis among human beings, as indicated by the returns from the State and city boards of health. Another very important fact is the almost certain destruction of the trichinæ when present in pork by the curing process before it can be landed in foreign countries. Nevertheless, while we believe that no legitimate grounds exist for the restrictions imposed on the importation of American pork, we are satisfied that microscopic inspection of all pork for export can be secured at the packing houses, if such inspection should be demanded, as we have already fully explained.

There does not seem to be any objection in principle to such inspection whenever it may be required. Foreign commerce is necessarily conducted in conformity with the demands of the local trade, and it is

clearly to the interest of producers to set such wares on a foreign market as will meet with ready and unhampered sale. When a government imposes upon the importation of foreign products conditions no more burdensome or unreasonable than those which weigh upon native products, conformity with those conditions is reasonable and requisite. If home inspection with due certification will open foreign markets for our swine products, it will certainly pay the American exporter to submit to inspection.

It is suggested that the trust expressed in the President's last annual message be repeated, that Congress shall find in the national and international bearings of the matter a sufficient motive for providing for the re-imbursement of the expenses incurred by the Commissioners. It seems but just to also provide some compensation for the time and knowledge thus devoted by them to public interests. It may also be advisable to make an appropriation for setting on foot the investigations suggested by the Commission as to the origin and transmission of trichinæ and the means of isolating and extirpating the disease.

Respectfully submitted.

FRED'K T. FRELINGHUYSEN.

DEPARTMENT OF STATE,
Washington, February 28, 1884.

PART I.

INTRODUCTORY.

Hon. FRED'K T. FRELINGHUYSEN,
Secretary of State:

The Commission appointed by the President to examine into the swine industry of the United States, and into "the allegations as to the healthfulness of the pork products" of this country, beg leave to report. The Commissioners entered upon the work assigned them in accordance with the following letters of instruction:

Mr. Frelinghuysen to Mr. Loring, Commissioner of Agriculture, et al.

DEPARTMENT OF STATE,
Washington, July 30, 1883.

SIR: On several occasions during the last few years the importation of hog products from the United States has been restricted, or even entirely prohibited, by the legislation of several foreign states. The grounds of this action are understood to be the alleged prevalence of disease—hog cholera, trichinosis, and the like– among the swine of the United States, and the supposed consequent unfitness of the prepared products for consumption as human food. The consequent legislation, however, has not, in most cases, expressed the motives of the restrictions imposed. The prohibitory decrees of Austria-Hungary and Germany, for instance, unqualifiedly forbid the importation into those countries of the pork products of the United States.

This Government, from the time the intention was first observed abroad to question the healthfulness of the pork products exported from the United States, has made every effort to investigate the truth of the unfavorable statements which came to its knowledge. It was conceived that we were more interested in proving such charges against one of our greatest staples of food, consumed by millions of our people, than could be any foreign country, whose inhabitants are only in comparatively small part consumers of the American products. After exhaustive and impartial investigation of the subject, the conviction was reached by this Government that the premises upon which the above legislation abroad rested were and are unfounded, and that the exported hog products of the United States are in no wise the source of danger to life and health which they are alleged to be. Wide publicity has been given to the re-

sults of the investigations undertaken by the Department of State and by the report on trichinæ and trichinosis, prepared by the Marine-Hospital Service, and published by order of Congress in 1881. And efforts have not been spared to induce in the minds of foreign governments a right understanding of the facts of the matter as they are ascertained to exist here. The conviction reached by this Government has not, however, been shared by the foreign governments to whose attention it was brought, and the contemplated prohibitory legislation has been effected, thereby closing important foreign markets to a food product generally used by a large proportion of our people.

It is doubtless one of the first duties of government to watch over the health of its own community. It is difficult to believe that their restrictive measures arise from any other motive; and if foreign governments, after impartial examination, are satisfied that the pork products of the United States are, as compared with the like products of other countries, unwholesome to a degree which demands their exclusion from use as human food, it behooves this Government to examine this charge; and, if it should be substantiated, to fulfill its duty as the custodian of the public health, by enacting a system of sanitary laws which shall afford for its own citizens as complete a guarantee against the evil effects of consuming the domestic product as the statutes of foreign countries afford for their subjects. The President has therefore determined to name a commission of experts of known probity, impartiality, and competence, to make a searching examination on the spot of all the conditions of the hog raising and packing industries of the United States, and to follow by the most practical examination the course of this food staple from the fields and farms to the wharf where it is shipped, or to the shops where it is exposed for domestic consumption.

The matter presents itself to the President with such urgency that he is unwilling to await action by Congress. He believes it of national importance that the results of the investigation he contemplates should be laid before Congress at the opening of the session in December next, in order that, if needful, legislative action may be then taken. It is therefore the President's desire that you will recommend to him the names of two competent persons to be commissioned as the representatives of your Department.

The commission will embrace, in addition, one representative of the New York Chamber of Commerce, one representative of the Chicago Board of Trade, and one gentleman to be chosen by the Present, comprising all five members. As the statutes prohibit the making of any contract involving guarantee of money payment, or the incurment of any obligation for the eventual repayment of expenses, without the previous assent of Congress, the Executive is unable to promise any positive assurance that the expenses of the Commission will be repaid. It is, however, thought that the great importance of the step taken and the magnitude of the interest at stake will lead Congress to recognize the justice of reimbursing whatever outlay the commissioners shall have incurred in discharging the important trust confided to them.

I am, etc.,

FRED'K T. FRELINGHUYSEN.

The president of the Chicago Board of Trade.

Mr. Frelinghuysen to Mr. Loring, Commissioner of Agriculture, et al.

DEPARTMENT OF STATE,
Washington, October 3, 1883.

SIR: During the last few years the importation of hog products from the United States has been restricted, and in some instances entirely prohibited, by the legislation of several foreign countries. The grounds of this action are understood to be the alleged prevalence of disease—hog cholera, trichinosis, and the like—among the swine of this country, and the supposed consequent unfitness of the prepared products for food.

This Government, from the time the intention was observed abroad to question the healthfulness of the pork products exported from the United States, has made efforts to investigate the truth of unfavorable statements on the subject which came to its knowledge. The result of the investigations so made has been to show that the premises upon which the adverse legislation abroad rests are unfounded, and that the exported hog products of the United States are in no wise the source of danger to health and life they are alleged to be. Although efforts have not been spared to inform foreign governments as to this state of facts, they have not given due weight to the representations which have been made to them on the subject, and consequently

prohibitory legislation has been extended in Europe, until many important markets there have been closed to the food products in question, of which this country produces a large excess above its own consumption.

Inasmuch as the course which various foreign powers have pursued with regard to this matter involves the charge that American citizens are engaged in the exportation of an unhealthful article of food, and inasmuch as it is believed that the agricultural and commercial interests of this country are now suffering great damage in consequence of misrepresentations as to the character of the hog products of the United States, it has been determined to take measures for such a formal and thorough investigation of the subject as will leave no doubt whatever as to the facts.

To this end you are hereby notified that the President has designated a commission to make a searching examination of all the conditions of the hog raising and packing industries of the United States of America. This commission is constituted as follows: 1. Dr. George B. Loring; 2. Prof. C. F. Chandler; 3. Eliphalet W. Blatchford, esq.; 4. F. D. Curtis, esq.; 5. Prof. E. D. Salmon.

As the statutes prohibit the making of any contract involving guarantee of money payment or the incurment of any obligation for the eventual repayment of expenses without the previous assent of Congress, the President is unable to give any positive assurance that the expenses of the commission will be repaid. It is, however, thought that the magnitude of the interests at stake will lead Congress to recognize the justice of reimbursing whatever outlay the commission may incur in discharging the important trust confided to it.

You are requested to confer with your colleagues with a view to the speedy organization of the commission, that its labors may begin at an early day.

The method of procedure and other details are left to the judgment of the commission, the President desiring simply that it shall proceed in such a manner as may seem most advisable to examine into this industry and the allegations as to the healthfulness of the pork products of the United States.

The commission will report the result of its investigation, as soon as practicable, to the Secretary of State, for communication to Congress.

I am, etc.,

FRED'K T. FRELINGHUYSEN.

Similar letters to—

Eliphalet W. Blatchford, esq., on the part of the Board of Trade of Chicago;

Prof. C. F. Chandler, on the part of the Chamber of Commerce of the State of New York;

F. D. Curtis, of Charlton, N. Y.;

Prof. D. E. Salmon, of the Department of Agriculture, Washington, D. C.

The Commission assembled at the Department of Agriculture in Washington on the 15th of October, 1883, and assigned its work to the various members under the following heads, viz:

I.

1. The origin and history of the hogs which make up the market supply.
2. The conditions under which they are raised and fattened.

II.

1. Transportation of hogs from farms, or when they are fatted to "stock-yards" or packers.
2. Condition of animals on arrival at stock-yards or where they are to be slaughtered and packed.
3. Manner of slaughter and effects on the meat.
4. Treatment of carcass after slaughtering, before cutting up.
5. Curing of meat, the mode and materials used.
6. Packages used for shipment.
7. Storage after packing.
8. Transportation to seaboard.
9. Inspection for home and foreign consumption by General Government, State authority, boards of trade.

III.

1. Extent of trichinæ and trichiniasis in America and Europe.
2. Preventive measures required.
3. Effect of salting or curing upon trichinæ.
4. Effects and extent of other diseases which may exist among hogs.

In performing this duty the packing-houses of the West and in the seaboard cities, and the large swine-breeding sections of the country have been personally examined by the Commission, and an extensive correspondence has been entered into with the packers of pork, the State and municipal authorities who have issued regulations with regard to the trade, and with the transportation companies over whose lines the traffic is conducted, in order to secure all possible information on the subject.

I.

1. *The origin and history of the hogs which make up the market supply.*
2. *The conditions under which they are raised and fattened.*

The raising of swine in the United States of America is an industry so universal that it extends to every farm. The products of the hog—pork, bacon, ham, and lard, or in their manufactured forms—are consumed by all classes. Among the farmers they constitute the chief meat food. The supply for domestic use is obtained partly from the farmers themselves, and partly from the general market, in which the products of every State and section find a sale, and from which foreign countries are supplied. The States which furnish nearly all the pork products which go to foreign markets are Iowa, Illinois, Missouri, Indiana, Ohio, Kansas, Kentucky, Nebraska, Wisconsin, and Tennessee. They are enumerated in the order of their production. Texas, Arkansas, and Michigan, West Virginia, and Minnesota also send to the packing-houses a small amount of the great market supply. The number of hogs in all these States, according to the returns of the Department of Agriculture for 1883, was 31,955,020, while the total number in the United States by the same report was 43,270,086. The Southern States produce a large number of hogs which make superior bacon and hams. Georgia is credited in the annual report of the Department of Agriculture with 1,412,604 hogs; North Carolina, 1,311,821; Alabama, 1,225,534; Mississippi, 1,070,269, and Virginia, 773,864. The hogs from these States are used for domestic consumption.

In the States which supply the hogs for the foreign market, corn is a leading grain production, and it is found that the number of hogs in each State is proportioned to the yield of this staple. The fifteen States mentioned above produced in 1883, 1,301,025,300 bushels of corn.

As indicating the interest in swine-breeding in America, it may be stated that a national swine breeders' association has been formed, in which all the States are represented, which, at its last session held in the city of Chicago, Ill., November 14, 1883, unanimously passed a resolution which was reported by the special committee on sanitary conditions, from which we quote as follows:

> We recommend that laws should be passed in all the States placing all animals thus affected [with cholera] in quarantine, with restrictions and severe penalties in any case of the violation of the law. The disease of trichinosis is practically unknown among the farmers, and we fail to see how corn, the chief food for the hogs which

make up the market supply, can in any possible way be productive of trichinosis. The active efforts of the national administration in endeavoring to obtain a repeal of the embargoes of certain foreign governments against the importation of American pork are highly appreciated, and we would approve of continued efforts, and, as the interests at stake are so great, of radical measures, if necessary, to the extent of a rigid governmental inspection both before the slaughtering of the swine and the packing and foreign shipments of pork products.

BREEDS OF SWINE.

The breeds of hogs in the United States which are the most numerously bred are Poland-China, Berkshire, Essex, Chester-White, Yorkshire, Suffolk, Cheshire, Victoria, Duroc-Jersey, and Guinea. Nearly all of these breeds are represented by a distinctive association, whose members vie with each other in endeavoring to improve and perfect the breed of their choice. The Berkshire, Essex, Yorkshire, and Suffolk varieties are of English origin, the others being American breeds. The white breeds predominate in the Eastern and Middle States. These are Yorkshire, large and small; Suffolk, Cheshire, Victoria, and Chester-White. The last originated in the State of Pennsylvania, and the Cheshire and Victoria in the State of New York. The Duroc-Jersey breed—red hogs—was formed by uniting the two different families, one originating in New York and the other in New Jersey. The Guinea hogs are natives of the South. They are compact in form, exceedingly hardy, and are black-blue and white in color. Ninety per cent. of the hogs which furnish the supply for the packers are of the breed of Poland-China and Berkshire. The Poland-China swine make up the largest proportion of this amount. About 3 per cent. of the hogs which go to the Western stock-yards are white, and about the same number are red or crossed with red, and the remaining 4 per cent. are crosses of white and black and Essex. The Poland-China and Berkshire breeds closely resemble each other, and have the same general characteristics, excepting that the Poland-China are usually larger. Berkshire blood predominates largely in the making up of this breed. Both the Poland-China and the Berkshire are black with white spots, but when dressed the skin is white, with, perhaps, a faint bluish tinge. Both of these breeds are as near perfect as American skill and experience in breeding can make them, and while they have the form of body which gives them great popularity, they also possess the color (nearly black) and skin which fit them for enduring the extremes of our climate.

BREEDING AND FEEDING.

The system of breeding and rearing swine is nearly the same in all the States, with the exception that in the colder latitudes more shelter is provided. Where the climate is milder the hogs are sometimes kept in the forests, and are protected by the underbrush, which breaks the force of the winds. Away from the forests, sheds are provided, or regular houses, and straw for bedding, or the hogs are allowed to sleep around the straw stacks, near the farm buildings. It is manifest that the best hogs should be bred on the farms, not only those suited to the wants of the packer, but possessing as much physical stamina and vital power as possible. It may be suggested here that more nitrogenous food would add to the nutrition of the blood, and give it greater force in building up the system. The crossing of breeds tends to impart greater constitutional vigor than animals have which have been bred for a considerable time in a direct line, and on this account it may be

advisable for the producers of pork to infuse new blood into their herds Fortunately there is no lack in this country of breeds, and such cross-bred hogs can be had without any material change of form or losing the benefits of as good skin and coats of hair. The farmers of the West understand these principles in breeding and are beginning to avail themselves of the means at hand in order to derive the consequent benefits. While it may be for the interest of the pork-producer to fit his hogs for market in the shortest space of time, the same law does not hold good in the rearing of breeding stock. The farmers have learned that they should grow slower, and that the food should be of such a combination as to develop the entire structure of the animal during the period of growth, and not the fatty portions to excess. The hogs in the United States are generally allowed to roam and feed upon grass and clover as their natural food during those months in which pasturage can be continued, and they are fed mainly on corn during the time in which they are to be finished for the market. They are supplied also with an abundance of pure water, and this mode of feeding contributes so entirely to the health of the animals that but a small amount of disease can be found among them. Refuse food is seldom or never used in the great pork-producing regions of the country; this being limited entirely to villages and small farms when the hogs are confined the year through in close quarters. The breeding of swine has always followed the lead of the market, which used to demand larger hogs than are now required. Formerly the largest proportion of the pork was pickled in brine, and in this form, then as now, the heaviest hogs were used. The more modern way of dry-salting the sides and of making more bacon makes the demand now greatest for medium-sized hogs, which will make hams of smaller weight. The pigs of this kind are farrowed in the summer or in the autumn while the mothers are in the fields or in the woods; when in the fields they live, as we have said, upon blue grass or upon clover, as the case may be, supplemented with corn. In the woods or on the river bottoms they subsist on mast (nuts), grass, and roots of various kinds. In order to keep them from roving or getting wild on the bottom ranges, as they are often very extensive, reaching for miles, the hogs are fed corn occasionally, or regularly, if the owner finds it to his advantage to do so. The pigs designed for the next year's market are wintered on corn or mast and corn, and in the spring they are allowed to run in pastures, or they are confined to a feeding lot where there is water, and in which corn is their food. Except the grass and mast, which the hogs have access to in the hog-producing States, their food is Indian corn. The breeding sows are wintered on it, and it is fed to them bountifully while the pigs are suckling and to their offspring. The older hogs, which are wintered on corn, are turned out as early as possible into a pasture lot, as the value of succulent food, together with corn, is well appreciated.

FEEDING OFFAL, ETC.

The statements in regard to feeding offal at slaughter-houses have been greatly exaggerated and convey an erroneous impression. Cases of such feeding are limited to a small fractional per cent .of the number of hogs as compared with the grand total in the country. A few hogs are kept by the butchers in the country towns, which are fed on the offal from their small slaughtering establishments as far as it will suffice for their food. This includes the offal from the sheep, cattle, and hogs which they may kill. These hogs are always slaughtered by their

owners and sold in their own meat stores in the local markets to their customers. In Kentucky and some other States, where whisky and alcohol are distilled from grain, hogs are sometimes fed by the owners of these distilleries on the refuse. The pork so made is soft and never purchased for the foreign market, as it does not cure well and does not make products equal to their standard and brand. When distillery-fed hogs are changed from the refuse of the grain and fed wholly on corn for several weeks before slaughtering, they make excellent pork. This fact is well understood. Butchers can always detect a distillery-fed hog after it has been dressed as well as one fed on mast. The fatty portion of the latter is yellow, and both are more oily than when corn-fed.

SANITARY CONDITIONS.

Not all American farmers have yet learned that hogs are really among the most delicate of farm animals, and that exposure and sudden changes of temperature often seriously affect them. It is a gratifying fact, however, that the sanitary conditions of the hog upon the farms have been greatly improved. Not only warmer quarters are provided, but the important fact is also better known and appreciated of affording them dry beds and sleeping ground. It is getting to be well understood that good water is almost as essential as good food to make healthy animals, and as a result of this knowledge and the gratifying consequence of the experience of those who have tried the experiment, where there are no natural streams or springs to furnish pure water, a resort is being extensively made to wells, with windmills and pumps attached, to procure the needful supply. The better care of the hogs now had and the precautions exercised by farmers to either burn or bury all animals dying from disease has had the most salutary effect in increasing the general healthfulness of swine. The sensational and exaggerated theories and statements both in regard to the propagation of hog cholera and trichinæ on the farms are not in accordance with the facts as hogs are now managed and fed. The disease termed "thumps," which is one of the most fatal, is confined to young pigs, and usually affects them while suckling. It is in no sense contagious, and almost always attacks pigs which are farrowed early while shut up in pens and deprived of exercise. The mortality on this account has been materially reduced by later farrowing to give the advantage of exercise, thus preventing excessive fatness.

SALES AND WEIGHTS.

The largest sales are made during the latter part of autumn and the early part of winter. Sales are also made through the summer or whenever the condition of the hogs is suitable, and the prices acceptable to the owner. The average dressed weight at one year old is about 200 pounds, at eighteen months about 250 pounds. These are the minimum averages. The spring pigs constitute another class of hogs. They make lighter bacon, lighter dry-salted sides, and smaller hams. These pigs are fed, as soon as they are old enough to eat, all the corn they will consume. When eight or ten months of age they are ready to be turned off with an average minimum dressed weight of about 150 pounds. The aggregate number of hogs of all ages now slaughtered annually in the United States is estimated at about 30,000,000, averaging a dressed weight of 175 pounds or 5,250,000,000 pounds of gross product, making a total of cured meats, lard, and other products of 4,725,000,000 pounds. The hogs are sold at the railway stations by live weight, and either driven or transported to the yards of the shipper.

PART II.

II.

1. Transportation of hogs from farms, or where they are fattened, to stock-yards or packers.
2. Condition of animals on arrival at stock-yards or where they are to be slaughtered or packed.
3. The manner of slaughter and the effects on the meat.
4. Treatment of carcass after slaughtering, before cutting up.
5. Curing of meat; the mode and materials used.
6. Packages used for shipment.
7. Storage after packing.
8. Transportation to seaboard.
9. Inspection for home and foreign consumption by General Government, State authority, and boards of trade.

THE TRADE IN HOG PRODUCTS.

The pork trade of the United States has reached enormous proportions, one-half of the world's supply of hogs being now owned and raised in this country.

THE WORLD'S SUPPLY OF SWINE.

The following table, provided by the Department of Agriculture, gives the number of swine reported in the United States in 1883, in the United Kingdom in 1882, and in other countries having 100,000 or more in 1880:

United States	43,270,000	Belgium	602,000
Russia	10,332,000	Australia	567,000
Germany	7,324,000	Denmark	504,000
Austro-Hungary	6,995,000	Sweden	426,000
France	5,891,000	Holland	352,000
Spain	4,352,000	Argentine Republic	342,000
United Kingdom	3,940,000	New Zealand	207,000
Switzerland	2,000,000	Greece	180,000
Italy	1,564,000	Cape of Good Hope	132,000
B. N. A. Provinces	1,419,000	Norway	101,000
Roumania	837,000		
Portugal	717,000	Total	91,964,000

Table showing the estimated total number and total value of each kind of live-stock and the average prices in January, 1883.

[From the Report of the Commissioner of Agriculture for 1883.]

States and Territories.	Hogs.		
	Number.	Average price.	Value.
Maine	71,416	$11.87	$847,708
New Hampshire	54,511	12.13	661,218

Indian Territory	80	1.50	5.00

The following extracts from the recent report of George B. Loring, Commissioner of Agriculture, of date November 10, 1883, presents a valuable array of facts on this subject. The return of cattle, calves, sheep, and horses are included in order to present comparative values.

STOCK STATISTICS.

THE CHICAGO MARKET.

The volume of business in this great stock market is rapidly increasing. There were 1,582,530 cattle, exclusive of calves, received, and 661,521 retained for home consumption or slaughter and cutting, or shipment as dressed beef. In 1870 the difference between receipts and shipments was only 141,255. The receipts and shipments, and home consumption, for seventeen years, are thus presented:

	Cattle.	Calves.	Hogs.	Sheep.	Horses.
Receipts	14, 629, 013	73, 913	66, 334, 665	5 788, 920	149, 778
Shipments	9, 848, 754	43, 694	22, 855, 706	2, 641, 171	133, 655
Total	4 780, 259	30, 219	43, 478, 959	3, 147, 749	16, 123

Of these receipts, 8,892,253, or 61 per cent. of the whole number of cattle, were handled in the last seven years. The increase has been comparatively steady, amounting to nearly half a million since 1876, stimulated by the demand for the packing and canning trade, and more recently the dressed-beef trade. This increase is shown clearly in diagram D, which displays graphically the receipts of seventeen years, and the relative proportions shipped and retained. The proportions, year after year, run in nearly parallel lines until 1876, when the light shading indicating consumption suddenly encroaches on the dark space showing shipments.

The receipts of sheep have doubled in ten years, and the increase in seventeen has been about 200 per cent. Formerly, much the larger proportion were for city consumption; now, while the number retained has greatly increased, the shipments are about half of the aggregate.

The swine receipts have increased with still more wonderful rapidity. As "hogs" and "corn" are in a sense reciprocal terms, the six years of fat corn crops nearly doubled Chicago receipts. So the poor corn year, 1881, reduced the next year's receipts 657,340, as the bad crop of 1874 checked the tendency to increase and made the following year's receipts less by 346,269.

THE FOREIGN TRADE.

While the domestic distribution has been rapidly extending and enlarging the foreign trade in all farm animals has increased, and especially the exportation of sheep and cattle. The cattle exports prior to 1878 were from Southern ports almost entirely. When the transportation to Europe commenced, from Northern ports, the numbers increased rapidly and values enormously.

The following statement exhibits the progress of stock exportation :

Years.	Cattle.		Swine.		Sheep.		Horses.		Mules.	
	Number.	Value.	Number.	Value.	Number.	Value.	Number.	Value.	Number.	Value.

VALUE OF FARM ANIMALS.

The value of farm animals, as reported in the census of 1880, was $1,500,464,609. This includes only stock on farms, exclusive of ranch cattle, sheep, and horses, and stock in towns and villages. The prices have advanced since 1883. The value of stock, as estimated in January, 1883, was as follows:

Stock.	Number.	Average. value.	Value.
Horses	10,838,111	$70.59	$765,041,308
Mules	1,871,079	79.49	148,732,390
Milch cows	13,125,685	30.21	396,557,405
Other cattle	28,046,077	21.80	611,549,109
Sheep	49,237,291	2.53	124,365,835
Swine	43,270,086	6.75	291,951,221

This makes a total value of $2,338,197,268. The numbers are intended to include all animals on farms, ranches, or public lands.

The increase in prices in four years from 1879 the time of lowest depression in twenty years, is very marked. According to the Department returns this advance amounts to 35 per cent for horses, 41 for mules, 39 for milch cows, 41 for other cattle, 22 for sheep, and 112 for swine. Besides the general advance of values incident to a recovery of business prosperity there is a powerful cause at work in the case of swine, the unexampled cheapness of corn in 1879, from consecutive crops of great abundance, and the high prices now prevailing in consequence of poor yields. This increase in values, applied to the census numbers, amounts to $2,174,000,000,

Average price of farm animals.

Previous to 1871 no reliable returns were made of the summer packing; it was, however, very inconsiderable.

Comparative statement of the last ten packing seasons, November 1 to March 1.

Seasons.	No. of hogs.	Average net weight.	Aggregate weight.	Seasons.	No. of hogs.	Average net weight.	Aggregate weight.
1872–'74	5, 462, 700	214. 97	1, 174, 316, 619	1878–'79 ..	7, 475, 648	217. 14	1, 623, 262, 206

Of the 45,000,000 hogs owned in the United States, and which are valued at $300,000,000, from 14,000,000 to 15,000,000 find their way into the trade annually, and are valued at $243,000,000.

The following tables show how the packing business is distributed over the country:

Table showing the distribution of swine in the United States, of all ages, in January, 1883, and 1882.

	Department of Agriculture.	
	1883.	1882.
Ohio	2, 714 112	2, 827, 200

1883	.....	.....	.....	.....	.....	.....	.....	.....	633,503	133,843

The total number of hogs packed during twelve months ending March 1, at fifteen leading places, which pack in both winter and summer seasons, are as follows:

	1882–'83.	1881–'82.	1880–'81.
Chicago	4, 222, 780	5, 100, 484	5, 752, 191
Kansas City	813, 834	800, 928	579, 398
St. Louis	532, 180	556, 379	884, 159
Cincinnati	507, 316	508, 548	632, 981
Milwaukee	405, 510	486, 066	462, 348
Indianapolis	388, 417	406, 894	771, 928
Cedar Rapids	327, 163	350, 900	402, 081
Cleveland	218, 885	337, 738	506, 997
St. Joseph	152, 365	163, 066	126, 000
Louisville	143, 393	161, 007	245, 670
Ottumwa	121, 554	140, 950	123, 206
Omaha	151, 006	133, 781	96, 149
Des Moines	90, 871	112, 270	144, 707
Detroit	99, 155	103, 122	107, 181
Keokuk	60, 446	95, 662	51, 881

With a view of indicating closely the total packing and marketing of hogs in all the sections of the country during the year, we submit the following for twelve months ending March 1, 1883, compared with the preceding year:

	1882–'83.	1881–'82.
Packed in the West	9, 342, 999	10, 551, 449
Packed at Buffalo, Albany, and Troy	268, 734	297, 563
Packed at New Haven, Providence, etc	316, 568	250, 000
Packed on Pacific coast	275, 000	355, 000
Receipts at four seaboard cities	3, 264, 088	3, 371, 810
Aggregate number	13, 467, 389	14, 825, 822
Decrease in 1882–'83	1, 358, 433	.....

The weight and production of the above reported supply of hogs for the year ending March 1 are:

	1882–'83.	1881–'82.
Net weight of hogs.....pounds..	2, 623, 511, 584	2, 839, 239, 457
Decrease	215, 727, 923	.....
Green meats, all kinds .....pounds..	1, 836, 458, 073	1, 987, 467, 620
Decrease	151, 009, 547	.....
Production of lard.....pounds..	421, 513, 211	468, 929, 200
Decrease	47, 415, 989	.....
Tierces of lard.....330 pounds..	1, 277, 313	1, 420, 997
Decrease	143, 684	.....

The seven largest packing centers of the West, with their business for 1882–'83, are as follows:

	Number packed.	Value.
Chicago	4, 222, 780	$69, 148, 000
Kansas City	813, 834	13, 623, 581
Cincinnati	507, 316	*9, 043, 359
St. Louis	532, 180	*8, 207, 313
Milwaukee	405, 510	6, 256, 862
Indianapolis	388, 417	5, 911, 391
Louisville	143, 393	2, 548, 460

* The apparent discrepancy between the number and value of hogs at Cincinnati and St. Louis rises from the larger average weight of the hogs at the former city and the higher prices paid.

The following statement from the report of the Department of Agriculture of November 10, 1883, presents facts of interest showing changes in the movements of hogs to the sea-board-cities, page 285:

In the record for swine the most noticeable change is the remarkable movement to Boston, which is now nearly equal to the aggregate receipts of Philadelphia and Baltimore.

Receipts of hogs at the sea-board cities.

Years.	New York.	Boston.	Philadelphia.	Baltimore.	Total.
	Number.	*Number.*	*Number.*	*Number.*	*Number.*
1869	901,725	167,558	176,200	250,516	1,495,999
1870	889,625	189,330	189,500	300,000	1,568,455

To show the progress made in exportation of products of agriculture in a half century or more, the following figures from the records of the Bureau of Statistics are given, taken from the Report of the Commissioner of Agriculture for 1883, p. 328:

Year ended June 30—	Value of exports of domestic merchandise.	Value of exports of products of domestic agriculture.	Per cent. of products of agriculture.
	Dollars.	*Dollars.*	
1820*	51,683,640	41,657,673	80.60
1830*	58,524,878	48,095,184	82.18
1840*	111,660,561	92,548,067	82.93
1850	134,900,233	108,605,713	80.51
1860	316,242,423	256,560,972	81.14
1870	455,208,341	361,188,483	79.34
1880	823,946,353	683,010,976	82.90
1881	883,925,947	729,650,016	82.55
1882	733,239,732	552,219,819	75.31

* Year ended September 30.

The increase in number of farms, in improved (or tillable) acres, and in the total area of land in farms is thus shown from the records of the national census:

Years.	Number of farms.	Improved.	Total.
		Acres.	*Acres,*
1850	1,449,073	113,032,614	293,560,614
1860	2,044,077	163,110,720	407,212,538
1870	2,659,985	188,921,099	407,735,041
1880	4,008,907	284,771,042	536,081,835

The product of corn is nearly three times as much as in 1849, while the wheat aggregate is more than four times as large. The progress in grain-growing has entirely outstripped the advance in population. It is shown from the census exhibits as follows, though it should be remembered that the corn crop in 1869 was a comparative failure—25 per cent. less than the acreage would have yielded in a good year:

Years.	Corn.	Wheat.
	Bushels.	*Bushels.*
1849	592,071,104	100,485,944
1859	838,792,742	173,104,924
1869	760,944,549	287,745,626
1879	1,754,591,676	459,483,137

The nations most affected by competitive exportation from the United States are Great Britain, France, and Germany. To show the principal American exports to those nations, the following tables have been prepared from Reports of Commerce and Navigation, excluding the minor articles, which might extend the list without enlarging much the volume of quantity or value.

In the past ten years the exports to France have averaged $58,457,124, a trifle more than the imports. The exports to Germany have averaged $57,713,236; the imports, $44,526,702. Great Britain and Ireland (the

"United Kingdom") have been the best customers, buying annually to the value of $374,088,360, and sending in return to the United States goods worth $160,627,212, showing a difference of over $213,000,000 per annum.

An examination of the details of this trade will illustrate the bearing of competition upon the agriculture of these countries:

Years.	Value of all exports.			Value of all imports.		
	Great Britain and Ireland.	France.	Germany.	Great Britain and Ireland.	France.	Germany.
1873	$316, 861, 874	$33, 781, 506	$61, 590, 047	$237, 298, 218	$33, 977, 200	$61, 401, 756
1874	345, 359, 584	42, 964, 311	62, 993, 225	180, 042, 813	51, 691, 896	43, 909, 852

The following statistics from the Report of the Commissioner of Agriculture for the year 1883, p. 352, are necessary to a complete view of this branch of the subject:

The value of agricultural exports of the past year (1883) is greater than those of any previous years except 1880 and 1881. The value of manufactures exported was absolutely greater than that of any previous year. It is a hopeful indication, as the prosperity of the American farmer depends upon that of American producers in other industries, and not upon the prosperity of foreign manufacturers. The following statement of progress in exportation is from the records of the Bureau of Statistics of the Treasury Department:

Years.	Value of exports of domestic merchandise.	Value of exports of products of domestic agriculture.	Value of exports of merchandise other than products of domestic agriculture.	Per cent of products of agriculture.
1820*	$51, 683, 640	$41, 657, 673	$10, 025, 967	80. 60
1830*	58, 524. 878	48, 095, 184	10, 429, 694	82. 18
1840*	111, 660, 561	92, 548, 067	19, 112, 494	82. 93

Total value of exports of agricultural products	552,219,819	619,269,449

VALUE OF THE CORN CROP OF THE UNITED STATES.

The importance of this subject will be apparent if we look at it from another stand-point, viz, the value of our corn crop.

The following table from the Report of the Commissioner of Agriculture of 1881–'82, p. 580, presents the annual estimates of acreage, product, and value for a series of years. The abnormal extraordinary increase of recent years made it difficult to keep pace with advancing production, as is shown by the record for 1879, which is widely at variance with the census returns for that year. In other crops the difference is usually slight between the two records, but in the corn estimate it is evident that the Department figures are quite too low. The table should be studied in connection with the variable character of the

seasons, and with the prices per bushel, as they will in the main bear close scrutiny and afford reliable evidence of comparative accuracy.

Calendar years.	Total production.	Total area of crop.	Total value of crop.	Average value per bushel.	Average yield per acre.	Average value of yield per acre.
	Bushels.	*Acres.*		*Cents.*	*Bushels.*	
1871	991, 898, 000	34, 091, 137	$478, 275, 900	48. 2	29. 1	$14. 02

In order to present the comparative value of the corn crop, the following table is presented, showing the corn crop of the United States for the years 1882 and 1881. This presents the estimate of the United States Agricultural Department of the product of corn grown in the United States in 1882, and the final estimate for the same crop harvested in 1881:

States.	1882.			1881.		
	Wheat.	Corn.	Oats.	Wheat.	Corn.	Oats.
Maine	512,100	904,000	1,776,750	617,000	1,064,000	2,369,000

The following statistics regarding the consumption and distribution of corn and wheat—the latter being included in this report for purposes of comparison—is of value in the investigation of this part of the subject, and is taken from the Report of the Commissioner of Agriculture for 1883, page 310:

CONSUMPTION AND DISTRIBUTION OF CORN AND WHEAT.

For two years past efforts have been made for the first time to ascertain approximately the consumption of the corn and wheat supply of the year on the first day of March. The purpose is to show the rate of distribution, and to indicate the extent of consumption at that date. The result is exceedingly interesting and valuable. It reveals facts so numerous, so various, and local conditions of consumption so peculiar and diverse as to prove practically a revelation to local agricultural writers and to commercial editors. This is especially the case as to corn. Among the points presented are—

1. That the average stock of corn on hand at this date in a series of years is one-third, two-thirds having been consumed on the farm or shipped away.

2. That nearly five-sixths of the corn shipped from the county where grown goes from seven States, known as the corn surplus States; and most of the remainder from Kentucky and Tennessee.

3. That 44 per cent. of the corn is fed to cattle and swine (for meat-making) in the counties where grown; 28 per cent. is fed to work animals in the operations of the farm, and 8 per cent. used as human food. Most of the 20 per cent. shipped from the counties are also used in the East and South for the various purposes above named. This would make the distribution nearly—

	Per cent.
For feeding for meat	50
For feeding for work	30
For human food	9
For exportation	5
For spirits, glucose, starch, seed, and waste	6

4. That in the South about half is used for work-animals and a fourth for meat while in the West half goes for making meat and one fifth for farm work.

5. That the above diversities as to use in home consumption make large difference in the time of consumption. In the South, 43.5 per cent. remained on hand March 1, because of the large crop, and its required use for five months of spring and summer plowing.

The smaller former average in the South, 35.9 per cent., is not because of a change in the usage as to consumption, but because the smaller former supply was earlier exhausted, and purchases from the West large after that date. In the West only a third remained on hand, because the heaviest feeding comes in autumn and early winter.

CORN.

Proportion on hand March 1.—The returns of March 1, 1883, showed that about 36 per cent. of the crop still remained in the hands of the growers, or about 558,000,000 bushels of 1,617,000,000 bushels representing the crop of 1882. Nearly two-thirds of this amount was in the Western States, and about three-tenths in the Southern States.

Comparing with an average of five preceding years, one of which (1881) was a year of great scarcity, we find that New England had less than that average; the Middle States, 37.4 per cent., the average being 36.7; the Southern States, 43.5 per cent., instead of 35.9; the Western States only a fraction more than such average, or 33.8 per cent., in place of 32.9 per cent; the Pacific coast, 25.1, the average being 24.5 per cent.; and the Territories, 35 per cent., a very large increase, due, to the development of corn culture in Dakota. The following statement shows these percentages and the quantities they represent:

Sections.	Production.	Stock on hand March 1, 1883.		Average per cent. for five years.
	Bushels.	Per cent.	Bushels.	
New England	6,376,300	29.8	1,898,701	32.6
Middle	78,585,700	37.4	29,397,288	36.7
Southern	394,695,300	43.5	171,551,062	35.9
Western	1,127,934,500	33.8	381,600,606	32.9
Pacific	2,920,900	25.1	741,908	24.5
Nevada, Colorado, and Territories	6,512,400	35.0	2,282,552	25.5
Total	1,617,025,100	36.3	587,472,117	33.7

It is seen that the only stocks contributing appreciably to the aggregate are those of the West, South, and the Middle States. The statement by States and Territories is as follows:

States.	Product in 1882.	Stock on hand March 1, 1883.		Per cent. for five years.

The largest proportions on hand are those of the Southern States. This is in accordance with intelligent expectation, not because there is any surplus for shipment, nor because more is consumed than in the West. On the contrary, the requirements of that region are far smaller than of the States where pork and beef are made. The larger portion is used for feeding the horses and mules employed so constantly in plowing during the spring and early summer. Pork is not made for shipment, and only a partial supply for home consumption, from mast, and the run of the pea field, and a limited supply of corn towards killing time. These conditions are reflected in the results of this inquiry, showing a great contrast with Western practice.

Consumption.—Inquiry was made as to proportions used for specific purposes, to illustrate the rural economy of different sections of the country, under the following heads, viz: (A) human food; (B) feed for work animals; (C) feed for cattle and swine; (D) shipped out of country where produced.

In the first inquiry the percentage would be expected to vary from two causes—the amount produced per capita, and the comparative use of maize for human food, which differs greatly in the different States. In New England its use is quite limited, and not confined to the home product; but very little is grown, so that the percentage is larger, though the quantity is not. In the South the quantity is greater, but less than in the West, so that 16 per cent. is required in the former, and but 5 in the latter States, though the aggregate Southern requirement is not very greatly in excess of Western, 63,000,000 bushels against 56,000,000 bushels. The quantity of native corn reported as used for food in the South is 4.6 bushels per capita; in the West, nearly 3 bushels. In the Middle States, and in New England, the native supply is supplemented by corn from other States, increasing the consumption as reported; the population is largely in cities and towns, and the rural population small. The total reported as used for food in the country, of nearly 130,000,000 bushels, may probably be increased by 20,000,000 more from the column which reports corn "shipped out of the county" in which it is grown, making an aggregate of 150,000,000 bushels or nearly three bushels per capita. This is very unequally distributed, some communities *using twice* this average, and others a scarcely appreciable quantity.

In the use of corn for feed of work animals is seen a marked difference between Western and Southern usages and rural methods. The per cent. of corn used for this purpose in the Southern States is placed at 47.2. As the supplies brought from the West are almost entirely used for work animals or human food the real proportion of corn consumption is fully one-half for such feeding. In the West it is one-fifth, or 20.9 per cent. Yet the quantity used is 235,000,000 bushels. The larger relative use of corn for work animals in the South is due to the fact that plowing is almost continuous from March to July, inclusive; that more horses and mules are required in proportion to work done, and corn is the principal feed. In the West there is less cultivation, wheat taking the place of cotton, and requiring no culture after planting, while horses feed upon hay as well as corn, and use oats much more extensively than in the South. Everything in crop and cultivation, in work and rations of ani-

mals, conspires to widen the relative requirement of corn for work animals of these two belts of States.

The consolidation of returns makes the proportion used for feeding work animals 28 per cent. Taking into account receipts from beyond county (and State) lines the proportion may be stated at 30 per cent.

The third branch of consumption relates to meat production. It also includes, to a limited extent, milk production. Beef, pork, and mutton all require an increasing proportion of corn, supplementary to grass products and rougher forage in summer droughts and winter severities, especially in the finishing process. Eggs and poultry demand a share of the maize supply. Half of the crop in the West appears to be used as feed for cattle, sheep, and swine. Applying the percentage to the present crop, the grand volume of 557,000,000 bushels is indicated. As only one-fourth is shipped from counties where grown, and little more than one-fifth can be traced to Chicago, Toledo, New York, and all other distant markets, it is evident that the other fourth is ample for working animals and home food. When we recount the various uses of corn in every stage of cattle life, and for ripening 12,000,000 swine (more or less) for the packing trade, and some millions more for farmers' use, and a further requirement for sheep and poultry, it would seem that 50 per cent. of the Western crop might be used for these purposes. The use of corn for spirits has not been mentioned, because it is usually only about 1 per cent. of the crop. Seed requires not more than 1 per cent. In this calculation it is proper to say that the entire crop is accounted for. Yet it should be remembered that the farmers' cribs were bare of corn at the beginning of the year, and that they will not be so thoroughly exhausted at its end. However short the stock may be which Chicago is able to drain, there will be scattered through twenty States many million bushels more than existed there at the beginning of the year. The actual consumption (excluding exportation, seed, etc.) will not much exceed 1,450,000 bushels. This is more than an average consumption, even of recent years, but with rapidly increasing population, a large export demand, and the necessity for beef of earlier maturity and better quality, it will not be too large a quantity for the future.

Shipped from the country.—As the returns were made by counties, theportion shipped does not necessarily mean shipped to the sea-board or beyond State lines. It must include, however, all such shipments. The aggregate of this branch of the inquiry is about 330,000,000 bushels, which is ample to account for exportation, eastern and southern shipments, and leave a margin for shipments short distances for local supply of towns and cities, and the requirements of neighboring feeders. Seven-eighths of this county surplus is in the West. The largest quantity is in Illinois; and Kansas, Iowa, and Missouri follow in order. Iowa's portion is greatly reduced by the very poor crop of last year. Kentucky and Tennessee have a much larger surplus than usual.

The statement of this division of local consumption, according to specific uses, is thus made:

Sections.	Human food.		Feed for work-animals.		Feed for cattle and swine.		Shipped from county.	
	Pr.ct.	Bushels.	Pr.ct.	Bushels.	Pr.ct.	Bushels.	Pr.ct.	Bushels.
New England	14	894,089	29.4	1,873,651	54.2	3,457,579	2.4	150,981
Middle	9.2	7,224,526	32.7	25,755,430	47.3	37,144,801	10.8	8,460,943

Allowing for the export reserve, and for a moderate filling of the usual stocks held over (which were so depleted last year), and for the requisite conversion of corn into spirits, glucose, starch, and the seed for sixty-five million acres or more to be planted, the actual consumption of the year for man and beast may thus be stated, after distribution of the remnant of the county surplus not required for the miscellaneous uses indicated above:

	Bushels.
For human food	150,000,000
For feed of work-animals	520,000,000
For feed for meat-producing animals	780,000,000
Total	1,450,000,000
Leaving for export, seed, spirits, and surplus	167,025,100

The returns by States are as follows:

States.	Human food.		Food for work-animals.		Food for cattle and swine.		Shipped from county.

THE CORN-SURPLUS STATES.

Practically we have only to consider the surplus-corn States in an inquiry concerning the corn of commerce or current and prospective prices. Commercial prices are made by the production of seven States. In addition to these Kentucky and Tennessee usually add something to this surplus, ordinarily not enough to affect prices. In two of these seven, Illinois and Iowa, the crop of 1882 was not much superior to that of 1881, and the available supply of the present year actually less than that of last year, which had a larger stock left over from the previous year's supply. The local prices in those States are, therefore, comparatively high. The following statement shows the proportion and quantity on hand in those States March 1, 1883:

States.	Crop.	Stock.	Per cent.
	Bushels.	*Bushels.*	
Ohio	93, 319, 200	27, 062, 568	29
Indiana	107, 484, 300	38, 694, 348	36
Illinois	182, 336, 900	67, 464, 653	37
Iowa	175, 487, 600	52, 646, 280	30
Missouri	170, 037, 000	51, 011, 100	30
Kansas	144, 452, 600	47, 669, 358	33
Nebraska	82, 478, 200	35, 465, 626	43
Total	955, 595, 800	320, 013, 933	33

The proportion of Illinois on hand at this date is ordinarily much larger than that of other States. In 1881 it was 45 per cent., or 35,000,000 to 40,000,000 bushels more than the present remainder. The percentage is about the same as that of 1882. Iowa has a smaller proportion on hand than last year, and less than half the number of bushels remaining on the 1st of March, 1881. The comparison of the stock on hand in the seven States is, in round numbers, as follows:

	Bushels.
March 1, 1883	320,000,000
March 1, 1882	200,000,000
March 1, 1881	413,000,000

PORK TRADE AT THE PACKING CENTERS.

Nearly one-third of all the hogs which go into the trade of this country are packed at Chicago, therefore a thorough study has been made of all that pertains to the handling of hogs for this market from the time they are purchased in the country until the meat is cured, packed, and shipped to the sea-board.

It will not be out of place to present here some carefully prepared statements of the provision business at Chicago:

Receipts and shipments of hogs (at Chicago) for twenty years.

Years.	Received.			Shipped.		
	Alive.	Dressed.	Total.	Alive.	Dressed.	Total.
1864	1,285,871	289,457	1,575,328	561,277	98,115	259,392

A special investigation has also been made of the methods and conditions which obtain at each of the large packing centers of the country; and as our facts for each of these have been drawn from different sources, and the statements carefully compared, it is believed that they are entirely reliable.

The members of the Commission have made a personal inspection of the stock-yards, the principal slaughter-houses, the stock-trains in transit, and as they reach the respective stock-yards. Carefully prepared sets of interrogatories were furnished the railroad companies, the stock-yard corporations, and the packers, which covered instructions to railroad agents, stock contracts, and care of hogs in transit, their care and condition at the stock-yards, and the slaughter, curing, inspection, and packing. The information thus obtained from different parties has been compared and confirmed by careful reports from the officers of the boards of health exercising supervision at the respective districts where are located the stock-yards and packing-houses, and the intelligent inspectors of the humane association. A special agent, familiar with the trade, has also been employed to follow it through all its intricate ramifications. In order to obtain full and trustworthy information on the many important points connected with this subject it has been found necessary to gather the facts from different sources and through various channels, and to confirm and extend our own knowledge thus acquired by the aid of experts who have long been familiar with the various branches of this business.

In all cases the statements of interested parties have been controlled by our own observations or by the investigations of other disinterested persons, and generally by both.

Interrogatories were prepared to cover the respective subjects of investigation, copies of which are inserted with their respective topics.

TRANSPORTATION OF HOGS FROM SHIPPING POINTS TO STOCK-YARDS.

The following interrogatories on railroad transportation were personally presented to the several railroad companies, and information covering the various points of investigation, was, in all cases, fully and cheerfully granted:

1. Are dead hogs ever allowed to be transported?
2. Are diseased hogs allowed to be transported?
3. If transported, to what points are they carried?
4. It has been stated that "hogs which have died of cholera have been shipped to Chicago to be cured and packed." Are you aware of such being the fact?
5. Does the station agent examine hogs as to their condition before receiving them?
6. Has he authority to reject any hogs?

7. Would hogs in following condition, ordinarily, be received for transportation?
   a. Diseased.
   b. Bruised.
   c. Over-fatigued, feverish.
   d. Piggy (pregnant) sows.
   e. Hogs evidently needing food or water.
8. What is the rule as to the number of hogs to be loaded into a car?
9. What is the nature of the bill of lading given? Please give blank form.
10. Is the condition of the hogs usually specified in bill of lading?
11. Do your railroad regulations compel your employés to look after the hogs in transit?
12. What care do hogs have while in transit?
13. Does the owner or shipper accompany the hogs?
14. What are the regulations regarding this?
15. What examinations of the hogs are made in transit, for injury, bruising, smothering, and death?
16. What food is given them?
17. How frequent?
18. Of what quality?
19. How much?
20. What care is taken as to condition or quality of water given?
21. How often are they watered?
22. What quantity is given?
23. Is water ever used for cooling the hogs?
24. Under what circumstances, and what regulations and arrangements have yon therefor?
25. What is the ordinary length of journey allowed?
26. How are the cars prepared for transporting hogs?
27. How often are the cars cleansed?
28. How are they cleansed?
29. Is any special care taken to disinfect cars in which diseased hogs have been carried?

The important relations which the railroads bear to the subject under investigation will appear from the following statement from page 284 of the recent Report of the Department Agriculture, dated November 10, 1883:

The Chicago, Burlington and Quincy Railroad transported about one-third of the cattle to Chicago. It runs through a corn belt, perhaps unsurpassed in the United States, which continues to maintain its superiority as a source of cattle supply. The Chicago and Northwestern still maintains second rank as a feeder to the great cattle mart. Chicago, Rock Island and Pacific is third, and Chicago and Alton fourth, as in the previous year, while the Wabash has changed places with the Milwaukee and Saint Paul during the last year. The receipts come by the following routes:

Total receipts by railway lines for 1882.

Roads.	Cattle.	Calves.	Hogs.	Sheep.	Horses.

SHIPMENTS EASTWARD.

The shipments eastward have augmented more rapidly than population. Philadelphia has made the largest relative gain in cattle, though the absolute increase in numbers is, of course, made by New York. The receipts of veals in New York have increased from 91,529 in 1869 to 190,582 in 1882.

The New York Produce Exchange record of these shipments is as follows:

In the record for swine the most noticeable change is the remarkable movement to Boston, which is now nearly equal to the aggregate receipts of Philadelphia and Baltimore.

Receipts of hogs at the seaboard cities.

Years.	New York.	Boston.	Philadelphia.	Baltimore.	Total.

1882	1,366,848	816,535	186,800	268,811	2,638,994

Hogs for the trade are gathered together at the various shipping points on the railway lines. When loaded into the cars if any have died from any cause while awaiting shipment, which seldom occurs, the dead animals are placed in the cars and the railroad agent notes on the way-bill the number of "live" and the number of "dead hogs." Some railroad companies state that such dead hogs would not be carried by them; others would carry them only to points where there are offal-rendering establishments. We have been unable to learn, after careful investigation, of any shipment of hogs which have died from disease to any of the cities where hogs are packed, or even from country districts to city offal-rendering works. Some roads, however, provide for the transportation of hogs which have died from disease, provided they are solidly frozen.

We herewith append the "Classification on dead hogs," in use by the Chicago and Northwestern Railway Company.

By this classification less than car load lots of dead hogs are placed in third-class, the same as in the case of live hogs; but in car-load lots live hogs go in class four, while car-load lots of 20,000 pounds dead hogs are placed in Class C. The difference in rates may be understood by the following example: Between Huron (Dakota) and Chicago the rate for class three is 90 cents per hundred, for class four 70 cents, and for C 35 cents.

In connection with the classification on hogs that have died from disease it may be desirable, for general information, to give the special rates on live hogs from Western to principal Eastern points. They are made on car-load lots, either ordinary or refrigerator cars, in the latter case the through rates being five cents higher per hundred pounds. The minimum weight of hogs per car-load by the Baltimore and Ohio classification is 22,000 pounds per double-decked car and 16,000 pounds per single-decked car. The winter rates (December) of this company are as follows:

Articles.	To Baltimore from—				To Philadelphia from—			
	Chicago.	Milford Junction.	Sandusky.	Newark.	Chicago.	Milford Junction.	Sandusky.	Newark.
Hogs:								
Dressed, refrigerator cars, O. R....per 100 lbs.	66	64	52	49½	67	65	53	50½
Dressed, ordinary cars .....do....	61	59	47	44½	62	60	48	45½

Articles.	To New York from—				To Boston from—			
	Chicago.	Milford Junction.	Sandusky.	Newark.	Chicago.	Milford Junction.	Sandusky.	Newark.
Hogs:								
Dressed, refrigerator cars, O. R....per 100 lbs.	69	67	55	52½	74	72	60	57½
Dressed, ordidary cars.....do....	64	62	50	47½	69	67	55	52½

The Pennsylvania Company's rates for December are as follows:

Articles.	Chicago to--					East Saint Louis to—				
	Boston.	New York.	Philadelphia.	Baltimore.	Washington.	Boston.	New York.	Philadelphia.	Baltimore.	Washington.
Hogs:										
Dressed, common cars, O. R., C. L.....per 100 lbs.	64	64	62	61	61	74	74	72	71	71
Dressed, common cars, O. R., L. C. L.....per 100 lbs.	64	64	62	61	61	74	74	72	71	71

O. R.—Owner's risk; C. L.—Car-load; L. C. L.—Less than car-load.

In inserting these and other tables the Commission have deemed it important that all regulations relating to transportation of animals, to the health of the community, should be laid before the public in condensed and available form.

1882—G. F. D. No. 398.

CHICAGO AND NORTHWESTERN RAILWAY COMPANY,
GENERAL FREIGHT DEPARTMENT,
Chicago, December 14, 1882.

To Agents:

The following will be the classification on dead hogs:

Hogs that have died from disease, when frozen solid ..... Third class.
In car-loads of 20,000 pounds..... Class C.

Do not receive them for shipment unless frozen solid.

WILLIAM S. MELLEN,
General Freight Agent.

HENRY C. WICKER,
Freight Traffic Manager.

(Fill up this form and return it at once. Do not wait to be asked for it.)

1882.—G. F. D. No. 398.

—— Station, No. —, ——— —, 1882.
Received copy of G. F. D. No. 398, dated December 14, 1882.

—— ——, *Agent.*

To WILLIAM S. MELLEN,
General Freight Agent, C. & N. W. R'y, Chicago.

Where hogs have died in considerable numbers, as they have sometimes done in country districts from swine plague, etc., they are either disposed of to be "rendered as offal" in the locality or are buried. Diseased hogs offered for shipment, if discovered, would be refused by some transportation companies. As a matter of fact hogs in such condition are seldom offered for shipment, as they would be nearly certain to die before reaching the end of the route, and would cause the whole lot to be looked upon with suspicion and greatly reduce the amount realized from them. While, therefore, it is probable that hogs in the first stages of disease might be and possibly at times are shipped in railway lines, it must seldom occur, for the reason it does not pay. The animal would be either dead or too obviously sick to deceive buyers, even before it reached the city stock-yards.

The following question, being No. 4 of the interrogatories in the foregoing list, has been asked of the several railroad companies, agents of the humane societies, and boards of health, and employés of the stock-yards, viz:

It has been stated that "hogs, having died of cholera, have been shipped to Chicago to be cured and packed." Are you aware of such being the fact?

This question has uniformly been answered in the negative. The skin and flesh of such hogs is very much discolored; and if slaughtered and attempted to be cured the meat from them would be easily and at once detected. Our special agent, inspectors of the humane and health boards, and the packers, deem it impossible for such animals to be slaughtered. The flesh would not cure without that incipient putrefaction taking place which produces what is known in the trade as "sour meat."

As a rule the station agents of the different railroads do not examine hogs for diseases, bruises, etc., before receiving them for transportation; if discovered, however, they have specific instructions to reject them for these causes. The quality and condition of the hogs and number to be loaded into the car are left almost exclusively to the judgment of the shipper, who is generally the owner of the hogs, subject to the rules of the railroad companies. The number shipped in a car varies with the size of the hogs, and also of the car, from 45 to 70 head; but

as a rule is from 50 to 65. The condition of the hogs is not clearly specified in the bill of lading, and if the shipper or his agents accompany the stock, the care of this is not assumed by the railroad employés. On some roads the shipper seldom avails himself of the privilege granted by all railway companies of allowing transportation for one man to accompany every two cars of stock. On other roads the shipper usually accompanies the animals and cares for them. Some companies instruct their employés to be particular in examining the hogs when stops are made; but such is not true of all the roads.

There are here inserted the ordinary forms of "live-stock contracts" in use by the several railroads in this country.

[Form 1134—8—'83—100M.]

THE MISSOURI PACIFIC RAILWAY COMPANY AND LEASED AND OPERATED LINES.

Rules and regulations for the transportation of live stock.

No station agent of this company has any power or authority to bind this company in regard to the shipment of live stock except by written contract in the following form; neither has such agent any power or authority to contract to have cars at his or any other station for the shipment of live stock at any given or named date, or to agree to furnish, under any circumstances, any particular class or kind of cars.

Live stock of all kinds at the following estimated weights, first-class rates: One horse, mule, or horned animal, 2,000 pounds; two horses, mules, or horned animals, 3,500 pounds; three horses, mules, or horned animals, 5,000 pounds; each additional animal to be rated at 1,500 pounds; jacks or stallions, 4,000 pounds each; calves, hogs, and sheep, each 300 pounds.

In case the owner or consignor agrees to save the Missouri Pacific Railway Company from liability for any or all the causes enumerated in the following contract, and also agrees to load, unload, feed, water, and attend to the stock himself, &c., as specified therein, the rates agreed upon and specified in the contract will be given.

The said The Missouri Pacific Railway Company, as aforesaid, will not assume any liability over the actual value, but in no case exceeding one hundred dollars per head on horses and valuable live-stock, except by special agreement.

For the purpose of taking care of the stock, *the owner* or men in charge, in proportion to the number of cars as indorsed hereon, will be passed on the train with it, and all persons thus passed are at their own risk of any personal injury whatever, and will agree to sign release to that effect indorsed on contract.

....	....	....	....

Live-stock contract executed at ——— *Station,* ——— —, 188—.

This agreement, made between the Missouri Pacific Railway Company of the first part, and ——— ——— of the second part, witnesseth:

That whereas the Missouri Pacific Railway Company transports live stock as per above rules and regulations, all of which are hereby made a part of this contract by mutual agreement between the parties hereto; now, therefore, for the considerations and the mutual covenants and conditions herein contained, the said first party will transport for the said second party live stock, and the persons in charge thereof as hereinafter provided, from ——— station, to ——— station, at the rate of ——— per ———, the same being a special rate, lower than the regular rates, or a rate mutually agreed upon between the parties hereto, for and in consideration of which, the said second party hereby covenants and agrees as follows:

First. That he hereby releases the party of the first part from the liability of a common carrier in the transportation of said stock, and agrees that such liability shall be only that of a mere forwarder, or private carrier for hire, and also hereby agrees to waive and release, and does hereby release said first party from any and all liability for or on account of any delay in shipping said stock after the delivery thereof to its agent, and from any delay in receiving the same after being tendered to its agent.

In order to avoid misunderstanding, shippers are respectfully requested to read this contract.

No. of cars.	Initials.	Way-bill. Series.	Way-bill. No.

Second. That said second party hereby agrees to accept, and does accept, for the transportation of his said stock, the cars tendered him by the said first party, and agrees that he will see that they are in good and safe condition, and that they are securely fastened so as to prevent the escape of said stock therefrom, and that he will not hold said first party responsible for any loss or damage which may result from neglect or failure on his part, or of his agents or employés, to do so; and also agrees to assume, and does hereby assume, all risks of injury or loss to his stock because of any defect in said cars, of their being wild, unruly, weak, or maiming each other or themselves, or of heat, suffocation, or other results of being crowded in the cars, or of being injured or destroyed by fire on any account whatever, and especially because of burning hay, straw, or other materials used for bedding the cars, or feeding the stock, or for any other purpose.

Third. That, at his own risk and expense, he is to take care of, feed, water, and attend to said stock, while the same may be in the stock-yards of the said first party, or elsewhere, awaiting shipment, and while the same is being loaded, transported, unloaded and reloaded, and to load and unload, and reload the same at feeding and transfer points, and wherever the same may be unloaded and reloaded, for any purpose whatever, and hereby covenants and agrees to hold said first party harmless on account of any and all losses or damages to his said stock while being so in his charge, and so cared for, and attended to, by him or his agents or employés, as aforesaid.

Fourth. That he, the said second party, for the considerations aforesaid, hereby assumes, and releases said first party from all risks of injury or loss which may be sustained by reason of any delay in the transportation of his said stock, caused by any mob, strike, threatened or actual violence to persons or property, from any source, failure of machinery or cars, injury to track or yards, storms, floods, escape or robbery of any of said stock, overloading cars, fright of animals, or crowding one upon another, or any and all causes, except the gross negligence of the said first party.

Fifth. That in all cases, when said first party shall furnish, for the accommodation of said second party, laborers to assist in loading or unloading his stock, they shall be entirely subject to his orders and deemed his own employés while so engaged; and he hereby agrees to hold said first party harmless on account of their acts.

Sixth. That for the considerations aforesaid, said second party further expressly agrees that, as a condition precedent to his right to any damages for any loss or injury to his said stock during the transportation thereof or previous to loading thereof for shipment, he will give notice, in writing, verified by affidavit, of his claim therefor, to some general officer of said first party or to its nearest station agent, before said stock is removed from the point of shipment or from the place of destination, and before such stock is mingled with other stock, within one day after the delivery of such stock at its point of destination, and before the same shall have been removed, slaughtered, or intermingled with other stock, to the end that such claim may be fully and fairly investigated, and that a failure to fully comply with the terms of this clause shall be a complete bar to any recovery of any and all such claims.

Seventh. The said second party further agrees, for the consideration aforesaid, that in case of total loss of any of his said stock for any cause for which the said first party will be liable to pay for the same, the actual cash value at the time and place of shipment, but in no case to exceed one hundred dollars per head, shall be taken and deemed as a full compensation therefor, and in case of injury or partial loss the amount or damages claimed shall not exceed the same proportion.

Eighth. That this contract does not entitle the holder thereof, or any other person, to ride on any train except for the purposes and in accordance with the rules and instructions printed on the back hereof, all of which are hereby expressly accepted and agreed to be made a part of this contract.

Ninth. This contract does not entitle the holder or other parties to ride in the cars of any train, except the train in which his stock, referred to herein, is drawn or taken.

Neither does it entitle him (and the party of the second part named in this contract so expressly stipulates, admits, and agrees) to return passage from ——— to ——— unless the said contract is presented within 15 days from the date hereof to the properly authorized agent of this company for return pass, which pass, when obtained, shall be used by those only whose names are written herein within 24 hours after the date and hour issued. Nor does it entitle any person except the party of the second part and parties who accompany him in charge of said stock, for the purpose of assisting him in taking care of the same as specified in and upon this contract (and does not include women, infants, or other persons unable to do and perform the services required, as expressed in this contract), to such return passage within the said 15 days; the object, purpose, and intent of the return pass being to enable the said party of the second part hereto, or his men in charge, as expressed in contract, and no other person to return to ——— thereon, at any time within 15 days from date hereof, and not thereafter.

Tenth. For the considerations aforesaid, the said second party hereby further agrees that the said persons in charge of said stock under this contract shall remain in the caboose-car attached to the train while the same is in motion, and that whenever such persons shall leave the caboose-car, or pass over or along the cars or track, they shall do so at their own risk of personal injury from every cause whatever, and that the said first party shall not be required to stop or start its caboose-cars from depots or platforms, or to furnish lights for the accommodation or safety of said persons.

Eleventh. In consideration of the rates herein named, and the aforesaid covenants, the shipper hereby releases and does waive and bar any and all cause of action for damages that has accrued to him by any written or verbal contract prior to the execution hereof.

Twelfth. And it is further stipulated and agreed between the parties hereto that in case the live stock mentioned herein is to be transported over the road or roads of any other railroad company the said party of the first part shall be released from liability of every kind after said live stock shall have left its road; and the party of the second part hereby so expressly stipulates and agrees; the understanding of both parties hereto being that the party of the first part shall not be held or deemed liable for anything beyond the line of the Missouri Pacific Railway Company, excepting to protect the through rate of freight named herein.

Thirteenth. *No person, other than the owner of the stock shipped, or his duly authorized agent in the name of the owner shall be allowed to sign this contract.*

Fourteenth. *The evidence that the said second party, after fully understanding and accepting all the terms, covenants, and conditions of this contract, including the printed rules and regulations at its head and on the back thereof, and that they all constitute a part hereof, fully assents to each and all of the same, is his signature hereto.*

——— ———, *Agent,*
for the ——— Railway Company.

Witness,
——— ———.

——— ———, *Shipper.*

To be other than either of the contractors.

[Form 123.]

WABASH, SAINT LOUIS AND PACIFIC RAILWAY COMPANY.

LIVE STOCK CONTRACT.

Rules and regulations for the transportation of live stock.

Live-stock in quantities less than a full car-load, will be rated as follows:

One horse, mule, or horned animal	2,000 pounds, first-class.
Two horses, mules, or horned animals	3,500 pounds, first-class.
Three horses, mules, or horned animals	5,000 pounds, first-class.
Each additional horse, mule, or horned animal	1,000 pounds, first-class.
Stallions (be sure and take release)	4,000 pounds, first-class.
Calves, though in no case less than 75 cts. each	ea. 500 pounds, once and half first-class.
Sheep, though in no case less than 75 cts. each	ea. 200 pounds, once and half first-class.
Pigs and store hogs, actual weight	once and half first-class.

This line will not assume any liability over one hundred dollars on horses and valuable live stock, except by special agreement.

Agents are not allowed to receive and ship such valuable horse or other animal until a proper contract or release is signed by the owner or shipper thereof.

When live stock is shipped, the owner or his agent is to feed, water, and take care of his stock, at his own expense and risk, and is to assume all risk of injury or dam-

age that the animals may do to themselves or each other, or which may arise from delay of trains.

Stock will only be taken by the car-load at the prices fixed under the table of "special rates," when a contract is executed by the station agent and shipper, to be loaded and unloaded, watered and fed by the owner, and at his risk in all respects, except as specified in form of contract on receipt below.

Shippers in charge of stock will be passed on freight trains, on stock contract as follows:

One (1) man for two (2) or three (3) cars; two (2) men for four (4) to seven (7) cars, and three (3) men for eight (8) cars or more, which is the maximum number that will be passed with stock for one owner. All persons thus passed are at their own risk of personal injury from any cause whatever.

Men in charge of stock will not be allowed to ride on passenger trains on their stock contract.

Mixed shipments of stock will not be allowed except by special authority of the general freight agent.

Agents of the company are not authorized to agree to forward live stock to be delivered at any specific time, nor are they authorized to agree to furnish cars for shippers to load at any stated time; they will make requisition on train master for cars in the order in which shippers have applied for them, and when cars are received, will distribute them in like manner.

Agents will ask train master for instructions as to when, and for what train, stock should be loaded, and will not allow shippers to load their stock until such instructions have been received.

Stock pens, at stations on the line, are provided for the use and convenience of live stock shippers; but it must be distinctly understood that the company does not assume any liability for live stock while remaining in such pens; and no agent of the company will receipt for, or in any way acknowledge the receipt of live stock while in the pens, and will not execute contract until stock is loaded.

No. of cars.	
	This agreement, made this —— day of ——— A. D. 18—, between the "Wabash, Saint Louis and Pacific Railway Company," party of the first part, and ——— ———, witnesseth:
———	That the party of the first part will, in consideration of the agreement herein contained, forward to the party of the second part, ——— men and the following freight, to wit: ——— from ——— to ———, at the rate of ———
.....	per ———, which is a reduced rate expressly agreed upon between the parties hereto, and in consideration of which rate the party of the second part stipulates and agrees as follows: *First.* The party of the second part agree to take
.....	care of said freight while the same is being transported, and load and unload the same at his or their own risk and expense. *Second.* The party of the
.....	second part expressly agrees that neither the party of the first part nor any connecting line or lines over which said freight may pass, shall be responsible for any loss, damage, or injury which may happen to said freight, or be
.....	sustained by it, while being loaded, forwarded, or unloaded. *Third.* The party of the second part agrees that as soon as said live stock is placed in said
.....	cars he will see that the doors and openings in said cars are closed and so fastened, and afterwards kept so closed and fastened, as to prevent the escape
.....	of said stock therefrom, and the party of the second part in consideration of this agreement, hereby releases the party of the first part and all connecting
.....	lines from all claims for damage or loss sustained by the party of the second part in consequence of the escape of any of said live stock through the doors
.....	and openings in said cars. *Fourth.* It is agreed that neither the party of the first part nor any connecting line shall be responsible for any damage or in-
.....	jury sustained by said live stock from suffocation while in said cars, or for any injury caused by overloading cars, or from fright of animals, or from the
.....	crowding of one upon or against another. *Fifth.* It is agreed that neither the party of the first part nor any connecting line shall be responsible for any
.....	delay caused by storm, failure of machinery or cars, or from obstructions of track from any cause, or for any injury caused by fire from any cause what-
.....	ever. *Sixth.* In consideration of this agreement the party of the second part hereby releases the party of the first part and connecting lines from all
.....	claims for damage that may be occasioned by the burning of hay, straw, or other material placed in said car or cars for the purpose of feeding or bedding
	said stock. *Seventh.* The party of the second part, in consideration of the rate named in this contract, further agrees to water and feed said stock at his or their own risk and expense while the same is in the cars of said first party or connecting lines, and in the event of any unusual delay or detention of

said live stock while on said trip from any cause whatever, the party of the second part agrees to accept as full compensation for all loss or damage sustained in consequence of such delay, the amount actually expended by him or them in the purchase of food and water for the stock aforesaid. *Eighth.* The party of the second part hereby agrees to assume all risk of injury or damage to, or escape of the live stock aforesaid, which may happen to it while in the stock-yards of the said first party awaiting shipment at any point on any line of railroad owned or operated by it. *Ninth.* It is hereby further agreed by and between the parties hereto, that the party of the first part and the connecting lines over which said freight may pass, shall be deemed merely forwarders, and they shall only be responsible for such injuries to said live stock as may be caused by gross negligence. *Tenth.* In consideration of the rate aforesaid it is further agreed that no claim for damages which may accrue to the party of the second part under this contract, shall be allowed or paid by the party of the first part, or sued for in any court, by the party of the second part, unless a claim for such loss or damage shall be made in writing, verified by the affidavit of the party of the second part or his or their agent, and delivered to the general freight agent of the party of the first part at his office, in the city of St. Louis, within five (5) days from the time said stock is removed from said cars; and it is also agreed that if any loss or damage occurs upon a connecting line, then such line shall not be liable unless a claim shall be made in like manner, and delivered in like time, to some officer or general agent of the line on which the loss or injury occurs, but it is expressly agreed between the parties hereto that said first party shall not be responsible for any damage or injury to, or loss or detention of said live stock after the same shall have left the line of railroad operated by said first party, and that all responsibility of said first party under this contract shall cease after said live stock shall have been delivered to a connecting line to be forwarded to its destination. *Eleventh.* It is agreed that neither the party of the first part, nor any connecting line, shall be liable for more than the sum of one hundred dollars on account of the loss or injury of any one horse or other animal received or carried by the party of the first part under this contract. The party of the second part further agrees to release, and does hereby release the party of the first part and connecting lines, from all claims for damage or injury to, or loss of said live stock, from any defects in the doors of said cars or their fastenings, and also from any injury to said stock, caused from defects in the slats on said cars, or from the manner in which said slats are placed on said cars, and from all injuries which said stock may sustain from kicking or goring each other while in said cars, or from kicking their feet through the slats or sides of said cars. It is further agreed that the person or persons accompanying said stock under this contract to take care of the same, shall be inside the caboose car attached to the train whenever said train or caboose car shall be in motion, and that whenever such person or persons shall leave the cabosse or pass over or along the cars or track of said first party or connecting lines they shall do so at their own risk of personal injury from every cause whatever, and neither the party of the first part nor connecting lines shall be required to stop or start its trains or caboose cars at or from depots or platforms or furnish lights for the accommodation or safety of the persons accompanying said stock to take care of the same under this contract.

OFFICE OF FREIGHT TRAFFIC MANAGER.

CIRCULAR NO. 20.

Rules for passing men in charge of shipments of live stock.

ST. LOUIS, *December* 28, 1883.

To Agents:

The following rules will govern the transportation of men in charge of and accompanying live stock shipped under contract over the lines within this system. No person will be allowed to go free with less than two cars in one shipment from one consignor to one consignee. One person may be allowed to go free with two or three cars; two persons with four to seven cars, and three persons with eight cars or more in one shipment. One person only will be allowed with any number of cars of hogs or sheep.

RETURNING.

No return pass will be given for less than two cars in one shipment from one consignor to one consignee. One man may return free for two or three cars, two men for four, five, six, or seven, and three men for eight cars or more in one shipment. Only one return pass will be given for two or more cars of hogs or sheep. These rules will not apply on shipments between points governed by the Southwestern Railway, Iowa Trunk Line, or Colorado Traffic Associations.

This cancels all previous instructions.

CIRCULAR NO. 90.

Transportation of stock.

ATCHISON, KANS., *December* 22, 1883.

To Agents and Conductors:

You will give your personal attention to the handling of live stock, both at stations and while in transit.

Agents are requested to see, personally, to loading stock at their respective stations; to examine all cars before and after loading, and know, from personal examination, that cars are in good condition, and that doors are securely fastened and sealed on both corners or side of each door as soon as cars are loaded.

Conductors are required to notice condition of stock when taken into train and while in transit; to see, personally, to watering same when the weather requires; and know, from a personal examination, that all doors are securely fastened and sealed. In all cases where seals are not perfect make special report to this office, giving car number and station billed from, keeping record of such report in your book for future reference.

37.

CHICAGO AND NORTHWESTERN RAILWAY COMPANY.

Live-stock contract.

Live stock in full car-loads will be way-billed as follows:

Horses, mules, and cattle	20,000 pounds per car.
Hogs	16,000 pounds per car.
Sheep and calves	12,000 pounds per car.

Less than car-loads at rates and weights given in classifications.

No liability will be assumed on horses or valuable live stock for more than one hundred dollars per head, unless by special agreement noted hereon, and agents are not permitted to receive or ship such valuable animals until a proper contract or release is signed by the owner or shipper thereof. And it is agreed between the owner and shipper of these animals and the said railway company, that in case of accident, resulting in injury to said animals, the value thereof shall in no case be estimated at more than one hundred dollars for each animal so injured.

Shipments of live stock in car-loads, or less than car-loads, will only be taken at the rates named herein, after this contract or agreement shall have been signed by the company's station agent and the owner or shipper, by which it is agreed and understood that such owner or shipper shall load, feed, water, and take care of such stock at his own expense and risk, and will assume all risk of injury or damage that the animals may do to themselves, or each other, or which may arise by delay of trains.

Different kinds of live stock must not be loaded together in the same car (except as provided for in classifications or by special instructions). Agents are not authorized to agree to forward live stock to be delivered at any specific time.

Persons in charge of live stock will be passed on the trains with, and to take care of it as follows: One man with two or three cars; two men with four to seven cars; three men with eight cars, which is the maximum number that will be passed for one owner. No return passes will be given on account of shipments of stock-cattle westbound.

No person will be passed with one car of live stock, except that one car of horses, mules, or emigrant movables containing live stock will entitle the owner, or man in charge, to pass one way on the same train to take care of it, but these are the only two instances in which a conductor is authorized to pass any one with a single carload. Parties so passed must accompany the stock on the same train.

Agents will permit only the signatures of owners or *bona fide* employés, who accompany the stock, to be entered on back of contract, without regard to passes allowed by number of cars, and run a pen through remaining lines.

Such entry of persons in charge, and certificate of billing agent to that effect, will be the authority for conductors to pass them with the stock.

All persons are thus passed only at their own risk of personal injury from whatever cause.

WILLIAM S. MELLEN,
General Freight Agent.

HENRY C. WICKER,
Freight Traffic Manager.

FREIGHT OFFICE,
CHICAGO AND NORTHWESTERN RAILWAY COMPANY,
——— *Station*, ———— —, 188–.

Received of ——— ———, to be delivered at ——— Station, at special rates, being—

——— dollars per car for horses or mules.
——— dollars per car for cattle or hogs.
——— dollars per car for sheep.

In consideration of which, and for other valuable considerations, it is hereby mutually agreed that said company shall not be liable for loss by jumping from the cars, delay of trains not caused by negligence as aforesaid, or any damage said property may sustain, except such as may result from a collision of the train with other trains, or when the cars are thrown from the track in course of transportation, and in this case the company upon whose road the accident, loss, or damage shall occur, shall be liable therefor, and no suit shall be brought, or claim made, against any other company forming a part of the route, for such loss or damage (it being expressly understood and agreed that the responsibility of this railway company shall cease upon delivery of said property to its connecting line, unless otherwise agreed to in writing, and signed by the respective parties hereto), and that the rules and regulations printed above are an essential part of this contract.

Owner.

(Across the face:) Read this contract.

[Form 282.]

Live-stock contract.

Non-enumerative live stock, of all kinds, not shipped under contract, will be charged first-class rates.

Enumerative live stock, in quantities less than car-loads, will be charged as follows: One horse (except stallions), mule, or horned animal, 2,000 pounds each; two animals, 3,500 pounds; three animals, 5,000 pounds; each additional animal, 1,000 pounds, first-class rates; stallions or jacks, 4,000 pounds each, first-class rates; colts, when with their dam, 500 pounds each, first-class rates.

Live hogs, calves, and sheep, in boxes, actual weight, once and a half first class; loose, for any distance, calves, 500 pounds, hogs and sheep, 200 pounds each, once and a half first class; but not less than 75 cents each for any distance; if no partition in car, or not otherwise secured, at car-load rates, of price fixed under the table of "Special rates."

At the above rates, the owner is to feed, water, and take care of his stock at his own expense and risk, and if he fails so to do, the company may, without notice, do the same if it thinks proper, and charge the expense as additional freight; and the owner is also to assume all risk of injury or damage that the animals may do to themselves or to each other, or which may arise from delay of trains.

Two or three cars will entitle the owner or driver to pass on the train with the stock, to take care of it. Four to seven cars inclusive (one owner), two men in charge, eight cars or more, three men in charge, to pass on stock train, which is the maximum number that will be passed on any train from one consignor or party. All persons thus passed are at their own risk of personal injury from any cause whatever. On shipments of hogs, only one man will be passed with any number of cars.

No passes will be granted on shipment of single cars.

The company reserves the right of refusing, at the discretion of their agents, passes to any parties accompanying stock, without regard to quantity shipped.

No agent is authorized to make an agreement for the shipment of live stock, fresh provisions, or slaughtered hogs at any particular time. Due diligence will be observed in sending them forward.

No. of cars.

CHICAGO AND ALTON RAILWAY COMPANY.

——— *Station*, ——— —, 188-.

Memorandum of an agreement, made and concluded this day, by and between the Chicago and Alton Railroad Company, of the first part, by the station agent at the above-named station, and ——— ——— of the second part, witnesseth:

That, whereas the said Chicago and Alton Railroad Company transport cattle, hogs, horses, pigs, sheep, lambs, calves, or other live stock, only as per tariff in use at this date for stock, per car-load, or when taken less than car-loads, as per special rates published on the tariff of prices.

Now, in consideration that the said party of the first par will ransport for the party of the second part such live stock at the rate of ——— dollars per car-load, or —— cents per 100 pounds, and advanced charges ——— and other valuable considerations, the said party of the second part does hereby agree to take the risk of injuries which the animals, or either of th m, may receive in consequence of any of them being wild, unruly, weak, escaping, or maiming each other, or from delays, or in consequence of heat, suffocation, or other ill effects of being crowded in the cars, or on account of being injured by the burning of hay, straw, or any other material used by the owner for feeding stock or otherwise, and for any damage occasioned thereby, and also, all risks for damages which may be sustained by reason of any delay in such transportation, and that he will see to it that the cattle, &c., are securely placed in the cars furnished, and that the cars are properly and safely fastened, so as to prevent the escape of the live stock therefrom.

And it is further agreed between the parties, that the first party shall in no case be held liable for damages to stock shipped under this contract, in a greater sum than $100 for each horse, $75 for each bull, cow, or ox, $25 for each sheep, calf, or other animal.

And it is further mutually agreed that should loss or damage of any kind occur to the property, or any part thereof, specified in this agreement, while such property is in the possession of said first party under this agreement, said second party shall, within five days after such loss or damage has oc-

curred, make out and send to the general freight agent of said first party a written statement of his claim for damages, if said second party shall have any such claim; and unless such written statement is so made and sent within said period of five days, the amount of such loss or damage, or any part thereof, shall not be payable or recoverable, and a suit thereupon shall be forever barred, and the party of the second part hereby so expressly stipulates and agrees.

And it is further mutually agreed that any suit or action against said first party for the recovery of any claim by virtue of this agreement for loss or damage to the property, or any part thereof herein specified, shall be commenced within sixty days next after such loss or damage shall have occurred, or be thereafter forever barred; and should any suit or action be commenced against said first party after the expiration of the aforesaid sixty days, the lapse of time shall be taken and deemed as conclusive evidence against the validity of such claim, any statute of limitation to the contrary notwithstanding, and the party of the second part hereby so expressly stipulates and agrees.

And it is further agreed that the said party of the second part is to load and unload said stock at his own risk, the Chicago and Alton Railroad Company furnishing laborers to assist, who will be subject to the order of the owner or the agent while in that service; and that the said party of the second part will assume all risk for damage or injury to, or escape of, the live stock, which may happen to them while in the stock-yards awaiting shipment. And that the said second party will assume the charge of feed and water, and take care of the stock enumerated herein, at his own expense and risk while the same is in the stock-yards of the first party awaiting shipment on board the cars.

And it is further agreed between the parties hereto that the person or persons riding free, to take charge of the stock, do so at their own risk of personal injury, from whatever cause, and that the said person or persons shall sign the indorsement on the back of this agreement.

And it is further stipulated and agreed between the parties hereto that in case the live-stock mentioned herein is to be transported over the road or roads of any other railroad company, the said party of the first part shall be released from liability of every kind after said live stock shall have left its road; and the party of the second part hereby so expressly stipulates and agrees; the understanding of both parties hereto being that the party of the first part shall not be held or deemed liable for anything beyond the line of the Chicago and Alton Railroad Company, excepting to protect the through rate of freight named herein.

And this agreement further witnesseth, that the said party of the second part has this day delivered to said Chicago and Alton Railroad Company ——— ——— to be transported to ——— station on the conditions above expressed.

———, ———,
Station Agent.

Agents will enter the names of parties entitled to passes on the back of this contract. If presented by other than person named, conductor will collect fare.

CARE OF HOGS IN TRANSIT.

When the transit requires more than one day the hogs are fed at intervals of 16 to 36 hours, always receiving corn of good quality, at the rate of 2 to 4 bushels to each car-load. They are watered at the same time with as much good, fresh water from the company's tank as they will drink. A careful examination shows that the water given the stock transported on the railroads is of good quality, being taken from the tanks from which the locomotives are supplied, for which purpose the purest quality is secured. The corn supplied is invariably of good quality.

During hot weather the hogs on all roads are cooled with water, for which purpose there are special arrangements at their tanks by which as much as 50 barrels per minute is poured over them as the train moves

slowly past. The maximum distances that hogs are carried varies with different roads from 150 to 500 miles, the time required being usually less than 30 hours.

The cars are not always as clean as they should be when the hogs are loaded into them; in warm weather they are not bedded but have simply a layer of sand sprinkled over the floor, but in winter they are bedded with saw-dust, straw, or hay.

Sufficient care is not given to cleaning the cars; with most companies the rule is to remove the filth at the end of each trip. In no case is any special disinfection practiced with cars on which diseased animals may have been shipped.

The following letter from C. H. Chappell, esq., general manager of the Chicago and Alton Railroad Company, in reply to interrogations (copy of which are given above) addressed to him, regarding the transportation of hogs and their care in transit, is here given:

CHICAGO AND ALTON RAILROAD COMPANY,
GENERAL MANAGER'S OFFICE,
Chicago, January 24, 1884.

E. W. BLATCHFORD, Esq.,
American Pork Commission:

DEAR SIR: Your questions respecting the regulations governing the transportation of hogs on the Chicago and Alton Railroad will be answered as numbered, and in the order asked.

1st question. The company does transport dressed hogs, and I suppose the company will transport dead hogs for short distances to rendering establishments. The company has no tariff rate for such transportation, and if such transportation is desired it will be furnished upon special contract, having in view the circumstances, but no such hogs are ever transported to market, or under circumstances which can in any way affect the hog product of the country. It not unfrequently happens that one or more hogs die in transit to market, and such hogs are uniformly sent to a rendering establishment. For this purpose cars of this company may be employed, but, in fact, I am not aware that they have ever been so employed.

2d question. The company never transports hogs or any other animals apparently having a contagious or infectious disease. Neither this company nor any other, to my knowledge, has an inspector to determine whether animals are diseased or not, but if apparently infected with a contagious or infectious disease the agent would, as a matter of course, reject them.

3d question. The company would carry them to rendering establishments only.

4th question. The Chicago and Alton Railroad Company has not transported any hogs that have died of cholera to Chicago or any other market.

5th question. The station agent assists the shipper to pen and load his hogs, and would notice anything unusual in their condition before receiving them.

6th question. He has authority to observe the law of the land, which I understand requires him not to be instrumental in spreading contagious or infectious diseases.

7th question. Shippers load their own hogs into cars furnished to them for that purpose. The company does not inspect hogs, any further than to know that they are not diseased, and are in fit condition for transportation. The company is supposed to receive hogs for transportation in good order. As common carriers the company considers it is not at liberty to spread infect ous or contagious diseases, and, as a matter of self-protection, it does not take property which, in the exercise of reasonable judgment, will perish in transit. Hogs are frequently driven long distances to a shipping station. If they are heavy with fat, they will arrive over-fatigued and feverish. If loaded into a car and cooled frequently with water thrown from a hose, their condition will improve in transit. As a common carrier, the company would not be protected in refusing hogs in this condition, as shippers under their live stock contracts with this company assume all risks of loss or damage, except that for which employés of this company may be responsible. It is for their interest to provide all needed food and water.

8th question. Hogs vary so much in size that no fixed rule can be profitably enforced. If a car is crowded the shipper is notified that they will not ride well, and he must take out some before starting.

9th question. Please see contract with this.

[Extracts from special instructions to agents and conductors of the Chicago and Alton Railroad.]

57. Before loading live stock, examine the cars and see that the cross-bars and doors are in proper order. Count the stock as it is being loaded, so as to know the number of animals loaded into each car. While our rules require the owner to load and unload his stock, agents will render all the assistance they can, consistent with their other duties. See that the cross-bars are in their proper places and the doors securely fastened before the cars leave the station. Agents will not allow hogs or sheep to be loaded in the same car with cattle or horses. This is imperative.

72. In way-billing live stock, be particular to note on the way-bill the number of animals in the car; also note the kind of stock (whether horses, cattle, hogs, or sheep). If fine or blooded stock, note on the face of the way-bill, "Company released from liability above the value of common stock," as per stipulation in the live-stock contract.

10 M. 10-26-83.

[Form 282.]

Live-stock contract.

Non-enumerative live stock of all kinds, not shipped under contract, will be charged first-class rates.

Enumerative live stock, in quantities less than car-loads, will be charged as follows: One horse (except stallions), mule, or horned animal, 2,000 lbs. each; two animals, 3,500 lbs.; three animals, 5,000 lbs.; each additional animal, 1,000 lbs., first-class rates; stallions or jacks, 4,000 lbs. each, first-class rates; colts, when with their dam, 500 lbs. each, first-class rates.

Live hogs, calves, and sheep, in boxes, actual weight, once and a half first-class; loose, for any distance, calves, 500 lbs., hogs and sheep, 200 lbs. each, once and a half first-class; but not less than 75 cents each for any distance; if no partition in car, or not otherwise secured, at car-load rates of price fixed under the table of "special rates."

At the above rates the owner is to feed, water, and take care of his stock at his own expense and risk, and if he fails so to do, the company may, without notice, do the same if it thinks proper, and charge the expense as additional freight; and the owner is also to assume all risk of injury or damage that the animals may do to themselves or to each other, or which may arise from delay of trains.

Two or three cars will entitle the owner or driver to pass on the train with the stock to take care of it. Four to seven cars, inclusive (one owner), two men in charge, eight cars or more, three men in charge, to pass on stock train, which is the maximum number that will be passed on any train from one consignor or party. All persons thus passed are at their own risk of personal injury from any cause whatever. On shipments of hogs only one man will be passed with any number of cars.

No passes will be granted on shipment of single cars.

The company reserves the right of refusing, at the discretion of their agents, passes to any parties accompanying stock, without regard to quantity shipped.

No agent is authorized to make an agreement for the shipment of live stock, fresh provisions, or slaughtered hogs at any particular time. Due diligence will be observed in sending them forward.

No. of cars.

CHICAGO AND ALTON RAILROAD COMPANY,
——— *Station*, ———, 188–.

——— Memorandum of an agreement made and concluded this day, by and between the Chicago and Alton Railroad Company, of the first part, by the station agent at the above-named station, and ——— ———, of the second part, witnesseth:

That whereas the said Chicago and Alton Railroad Company transport cattle, hogs, horses, pigs, sheep, lambs, calves, or other live stock only as per ——— tariff in use at this date for stock, per car load, or when taken less than car loads as per special rates, published on the tariff of prices.

Now, in consideration that the said party of the first part will transport for the party of the second part such live stock at the rate of ——— dollars per car load, or —— cents per 100 pounds, and advanced charges ——— and other valuable considerations, the said party of the second party does hereby ——— agree to take the risk of injuries which the animals, or either of them, may receive in consequence of any of them being wild, unruly, weak, escaping, or maiming each other, or from delays, or in consequence of heat, suffocation,

or other ill effects of being crowded in the cars, or on account of being injured by the burning of hay, straw, or any other material used by the owner for feeding stock or otherwise, and for any damage occasioned thereby, and also all risks for damages which may be sustained by reason of any delay in such transportation, and that he will see to it that the cattle, etc., are securely placed in the cars furnished, and that the cars are properly and safely fastened, so as to prevent the escape of the live stock therefrom.

And it is further agreed between the parties that the first party shall in no case be held liable for damages to stock shipped under this contract in a greater sum than $100 for each horse; $75 for each bull, cow, or ox; $25 for each sheep, calf, or other animal.

And it is further mutually agreed that should loss or damage of any kind occur to the property, or any part thereof specified in this agreement, while such property is in the possession of said first party under this agreement, said second party shall within five days after such loss or damage has occurred, make out and send to the general freight agent of said first party a written statement of his claim for damages, if said second party shall have any such claim; and unless such written statement is so made and sent within said period of five days, the amount of such loss or damage, or any part thereof, shall not be payable or recoverable, and a suit thereupon shall be forever barred, and the party of the second part hereby so expressly stipulates and agrees.

And it is further mutually agreed that any suit or action against said first party, for the recovery of any claim by virtue of this agreement for loss or damage to the property, or any part thereof herein specified, shall be commenced within sixty days next after such loss or damage shall have occurred or be thereafter forever barred; and should any suit or action be commenced against said first party, after the expiration of the aforesaid sixty days, the lapse of time shall be taken and deemed as conclusive evidence against the validity of such claim, any statute of limitation to the contrary notwithstanding, and the party of the second part hereby so expressly stipulates and agrees.

And it is further agreed that the said party of the second part is to load and unload said stock at his own risk, the Chicago and Alton Railroad Company furnishing laborers to assist, who will be subject to the order of the owner or the agent while in that service; and that the said party of the ond part will assume all risk for damage or injury to, or escape of, the live stock, which may happen to them while in the stock-yards awaiting shipment. And that the said second party will assume the charge of feed and water, and take care of the stock enumerated herein, at his own expense and risk, while the same is in the stock-yards of the first party awaiting shipment on board the cars.

And it is further agreed between the parties hereto, that the person or persons riding free, to take charge of stock, do so at their own risk of personal injury, from whatever cause, and that the said person or persons shall sign the indorsement on the back of this agreement.

And it is further stipulated and agreed between the parties hereto, that in case the live stock mentioned herein is to be transported over the road or roads of any other railroad company, the said party of the first part shall be released from liability of every kind after said live stock shall have left its road; and the party of the second part hereby so expressly stipulates and agrees; the understanding of both parties hereto being that the party of the first part shall not be held or deemed liable for anything beyond the line of the Chicago and Alton Railroad Company, except to protect the through rate of freight named herein.

And this agreement further witnesseth that the said party of the second part has this day delivered to said Chicago and Alton Railroad Company ——— to be transported to ——— station, on the conditions above expressed.

———.

Station Agent.

Agents will enter the names of parties entitled to passes on back of this contract. If presented by other than person named, conductor will collect fare.

10th question. Condition not specified unless there is doubt as to their riding well.

11th question. The regulations of the company require the trainmen in charge of trains transporting hogs to see that they do not suffer from heat, crowding, or lack of food and water.

12th question. They are cooled and watered during warm weather as often as they require it, and food is given to them daily.

13th question. The owner or his agent attends to the loading of the hogs, and in case they are billed to Chicago or East Saint Louis markets the owner or his agent accompanies them. If billed to some eastern point each company generally takes care of the hogs while in transit over its line.

14th question. The owner can go or send them in charge of employés as he may select.

15th question. Each time the train comes to a stop the hogs are looked over to see if they are riding well or need any care.

16th question. Corn in the ear.

17th question. Always daily, often more frequently.

18th question. Good as can be obtained.

19th question. As much as they need.

20th question. The water given comes from the fresh-water lakes of the company, where it is collected from grass-covered lands, and is kept perfectly pure for use in the locomotives of the company.

21st question. Daily in winter; as often as they need it at other seasons.

22d question. As much as they require.

23d question. Water is frequently used for cooling; all of the water stations of this company are fitted for cooling hogs, and as they are but 20 miles apart the conductor can comply with his instructions: "During warm weather cool frequently." As a check on the conductors, he is obliged to note in the billing stations at which he has cooled the hogs.

24th question. The company has fitted two hose connections to each water tank on the line and two large streams are thrown into each car loaded with hogs.

25th question. Twenty-four hours is the limit.

26th question. The floor of each car, in summer, is covered with six inches of clean sand. In winter straw and hay is used.

27th question. At the end of each trip.

28th question. As these cars are used on the return trip for the transportation of many articles that would be damaged by filth, they are thoroughly cleaned.

29th question. Not having transported diseased hogs, we have not disinfected cars.

Yours, truly,

C. H. CHAPPELL,
General Manager Chicago and Alton Railroad.

CONDITION AND TREATMENT OF ANIMALS AT STOCK-YARDS.

To the officers of the stock-yards there were personally presented the following interrogatories, to which full replies were in all cases given, and every possible facility offered for the frequent and thorough personal examinations which have been made:

Interrogatories concerning the receipt, condition, care, and disposition of hogs at the stock-yards, with construction, conveniences, care, and inspection of the yards.

1. Is any examination made, before unloading from cars, to detect diseased or injured hogs?
2. If so, what regulations govern such examination?
3. When does "delivery" by railroad company take place?
4. Are any special instructions given in regard to care in unloading?
5. What is done with hogs found to be sick, diseased, bruised, or crippled?
6. What is done with hogs found smothered?
7. What is done with hogs dead from disease?
8. Are they sold?
9. To whom?
10. For what purpose?
11. Where are they sent?
12. How are they transported?
13. What is done with healthy hogs on their arrival?
14. When are they fed?
15. What kind of food is given them?
16. What quantity?
17. How is it furnished to them?
18. Are they watered?
19. When?
20. How is the water furnished to them?
21. What quantity?

22. In the absence of orders by owners or consignees of hogs, have you any regular tions authorizing the feeding and watering of hogs?
23. How are the hogs cared for in bad weather?
24. How many hogs die in the yards?
25. From what cause?
26. What is done with them?
27. What is done with diseased hogs if discovered in the pens?
28. How are these hogs disposed of?

CONSTRUCTION.

29. How arranged to receive hogs from cars?
30. What is the size of the pens?
31. How are they protected?
32. Are they drained?
33. How can they be cleaned?
34. What are the regulations in regard to keeping the pens clean?
35. What measures are adopted to disinfect pens where diseased hogs have been?
36. Is there any inspection made of the sanitary condition of the yards, or the condition and care of the hogs?
37. If so, under what authority?
38. Is such inspection sufficient and effective to secure the sanitary condition of the premises, and prevent any hogs, diseased or in improper condition, going into food?
39. What is the amount of business done annually?
40. What are your total receipts?
41. What is the average weight of hogs for the year?
42. What is total value of hogs received?
43. Please state what system of supervision is adopted to prevent any diseased hogs going into food, and under what authority such supervision is exercised, whether municipal, State, or the national or local humane society.

ARRIVAL AT STOCK-YARDS.

When the loaded trains draw up to the platforms at the stock-yards "delivery" by the railroad companies takes place. There is no special examination before unloading to detect diseased or injured hogs. There are more or less dead hogs on nearly every train, the most of which have been smothered in transit. The number varies, but will reach from 0.3 to 1 per cent., and such animals are always sent to the offal rendering works. We find no exceptions to this rule. The stock-yard companies being also interested in the offal rendering establishments, are very particular to prevent any dead animals escaping them. The State and municipal boards of health have also men stationed continually in the stock-yards of Chicago, and most other cities to see that no animals unfit for food shall enter into consumption.

The entrances of these stock-yards are at all times carefully guarded, and no animals are allowed to pass through without a ticket, properly signed and certified to, being given up. These tickets specify the animal, its condition, and the exact division and pen from which it has come, or to which it is being driven.

The following is a blank form of the tickets used in the Chicago stock-yards:

DISPOSITION OF DEAD OR INJURED HOGS.

The dead hogs at Chicago are loaded into box cars and sent to the Union Rendering Company's offal establishment at Globe Station. At Kansas City they are sent in a similar manner to the Kansas City Desiccating and Refining Company. At Cincinnati they go to fertilizer companies, and at other points they are disposed of in a similar manner. Such dead animals are cut up, put into tanks, and heated by steam for about eighteen hours, when the grease is drawn and the residuum pressed.

There are several qualities of grease made which in the trade are known as "white," "yellow," and "brown" grease. All qualities of grease are put into old tierces and sold upon their merits. The bulk of this grease is used in the manufacture of lubricating oils, candles, and soap. The remainder of the carcass is manufactured into fertilizers.

At Chicago and other points the animals which are bruised or crippled are carted to slaughter-houses and killed. They are then examined by the city health officer, who decides whether they are fit for food.

If condemned, they are rendered into grease. Such animals, if used for food, generally enter into local consumption. The meat of animals at all feverish is liable to become "sour." Sick hogs are always condemned and tanked with the offal.

DISPOSITION OF HEALTHY HOGS.

The healthy hogs, when unloaded from the cars, are driven across the platform and down a guarded, inclined plane, into the yards. They are then put into covered pens which in most yards are floored. At Chicago the pens allow 500 square feet to each car-load of hogs. At Kansas City they are 18 by 28 feet, and 24 feet square; at Saint Louis they are 16 by 44 feet, and 32 by 44 feet; at Indianapolis they are 30 by 40 feet; and at Cincinnati 24 feet square.

Each pen is furnished with a watering-trough, which at most places is partly covered to prevent hogs from lying in it. The pens are cleaned by a force of men with horse-carts, kept constantly at work, who go over each pen once in one or two weeks. No disinfection is practiced beyond cleaning and occasionally washing out the pens.

CARE OF HOGS IN THE YARD.

The hogs are fed on corn at the request of the owner, or if the owner does not accompany them, they are fed by the stock-yard company. This is seldom neglected, as the corn is furnished by the companies at a price considerably above market rates, and it is to their interest to

see that the animals are properly supplied. If for any reason the animals are not fed within a reasonable time, the agent of the Humane Society has power to order that this be done. As a rule the hogs are fed as soon as yarded, with good sound corn, at the rate of two bushels to a car-load. They are also watered at the same time with a plenty of good, fresh water, which is run into the troughs from hydrants. In winter, men are employed in some yards to keep the hogs from crowding upon and smothering each other. The deaths in the yards are very few, not amounting to more than one in a thousand hogs handled, and these are mostly from overheating, smothering, or accidents.

If sick hogs are discovered in the yards at Chicago, Cincinnati, or Kansas City, the health officer has power to kill them at once. At a few points they are kept in pens by themselves, to await results; or, are sold to farmers at a low price, who buy them on the chance of their recovery. The hogs that die or are killed as above in the yards at once become the property of the offal rendering companies, who pay a nominal price for them, and they are immediately taken to the rendering establishments.

Replies received from the stock-yard companies at Baltimore, Philadelphia, Jersey City, New York, West Albany, Buffalo, and Boston confirm the information obtained in the West as to the condition of the hogs when they arrive, the small mortality in transit (less than 1 per cent.), and the good care of the animals.

SANITARY SUPERVISION.

At Chicago there are both State and city health officers stationed in the yards; at Cincinnati there are city health officers; the Indianapolis yards are visited occasionally by officers of the board of health; at the City of Kansas an officer is stationed at the yards, who has power to kill diseased animals; at St. Louis and East St. Louis there is no effective supervision at present; but one is about being established. At Chicago, Cincinnati, and City of Kansas it is believed that this inspection is sufficient to prevent any diseased animal from being used for food products. At Indianapolis, and particularly at St. Louis, the inspection is not at present sufficient. We have no facts, however, showing that diseased hogs have been packed at any place, though we have made very particular inquiries in this direction; and, from the general opinion among packers that the meat of sick animals can not be cured without "souring;" and the great care exercised by all the packing companies to buy none but good hogs, we have every reason to believe that this has not occurred. At the same time a more rigid inspection at some of these points is greatly to be desired.

To show the care and scrutiny which is exercised in this department in this country by the State and municipal health boards, there are here inserted the following laws and ordinances, with the penalties for their infringement. These include only the reports obtained up to the date of making this report.

ILLINOIS.

City of Quincy, State of Illinois.—Ordinance No. 83.

DUTIES OF SANITARY OFFICER.

SECTION 5. It shall be the duty of the sanitary officer to keep a correct and complete record of the proceedings of the board of health; to issue all permits authorized by the board; to direct and see that the duties of the scavenger are performed as the board shall have provided; to report to the board all nuisances coming under his notice; to examine, at the request of said board, or the mayor, any boat or vessel landing at the harbor in this city, the officers, crew, or passengers of which may be sup-

posed to be affected by any contagious or infectious disease; and in all cases when it shall come to his knowledge that any one is afflicted with small-pox, he shall have placed upon or near the house occupied by such person a written or printed notice, viz, "No admitt: nce—Small-pox here;" and shall perform such other duties as pertains to his office.

POWERS OF BOARD.

SECTION 6. The board of health shall have full power to take all steps and use all means necessary to promote the cleanliness and general health of the city, or any part thereof; to order the abating of all nuisances on public or private property; but this shall not be construed to give the board of health any power to spend money not provided for in the annual appropriation for the health department, unless by special order of the council; to use any measure the board may see fit to adopt to prevent the introduction or spread of any malignant, contagious, or infectious diseases in the city; to enter or permit its officers to enter and examine, with reference to the abatement of any nuisance, all premises and all parts thereof within the city limits, and direct any bedding, clothing, or unsound meat, beef, pork, fish, hides or skins of any kind there found to be destroyed, when dangerous to the health of the inhabitants of this city.

Adopted July 19, 1880.

Ordinance No. 160.

AN ORDINANCE concerning dead animals.

SECTION 1. *Be it ordained by the city council of the city of Quincy,* That every person having within his possession or control, or upon any premises owned or occupied by him, any dead animal not proper for food, and liable to become noxious and detrimental to health if not disposed of as provided in and by section 7 of article 3 of chapter XII of the Revised Ordinances of said city, entitled health department, shall, within three hours after the death of said animal, give notice thereof to the officer in charge of the police station, and such officer shall at once cause notice thereof to be given to the board of health.

SEC. 2. That no person other than the officers of the board of health or department of police, or person or persons thereto authorized by the board of health, by contract or otherwise, shall in any way interfere with such dead animals in or remove the same from, any street or place (unless as provided by section 1); and for the purpose of disposing of or removing any such animal, any person so authorized by the board of health shall be permitted at all times during the day to enter into or upon any premises in said city.

SEC. 3. The Quincy Fertilizing and Rendering Company, or any person, copartnership of persons, or corporation who shall remove the carcass or carcasses of any dead animal or animals not slain for human food, shall give good and satisfactory bond of two thousad dollars as a guarantee that none of the product of any such carcass or carcasses shall be employed or utilized for human food; and that all grease or other products rendered or manufactured or packed for use or transportation, to or from market in the city of Quincy or elsewhere, shall be branded with a burning brand as follows: "Product of dead animals, Quincy, Ills." And no rendering of the aforesaid carcass or carcasses shall be done within the city limits of the city of Quincy.

SEC. 4. Any person violating any of the provisions of this ordinance shall, upon conviction thereof, be fined in a sum not less than twenty-five dollars nor more than one hundred dollars for each and every offense.

Adopted September 17, 1883.

HENRX A DIX,
City Clerk.

Approved September 19, 1883.

Mayor.

IOWA.

Health laws of 1880.

FRAUDULENT LARD.

[Chapter 137, Laws of 1880.]

AN ACT to prevent fraud in the sale of lard in certain cases.

SECTION 1. *Be it enacted by the general assembly of the State of Iowa,* That all persons or associations who shall engage in the business of selling lard rendered from swine that have died of hog cholera or other diseases shall, selling or offering to sell any such lard, plainly stamp, print, or write upon the cask, barrel, or other vessels containing such lard the words "Lard from hogs which have died from disease;" or, if sold without such cask, barrel, or other receptacles, the purchaser shall be informed that the lard is from hogs which have died of disease.

SEC. 2. For a violation of the provisions of the foregoing section the offender shall, on conviction thereof, be punished by a fine of not less than five dollars, nor exceeding one hundred dollars, or imprisonment in the county jail not exceeding thirty days.

Rules and regulations for the government of local boards of health in the State of Iowa.

DISEASED ANIMALS.

RULE 12. No animal affected with an infectious or contagious disease shall be bought, sold, or kept within the jurisdiction of this board. And any animal affected with glanders shall, after notice from this board, be immediately killed, and buried deep, without removing the hide from the carcass.*

RULE 13. No diseased animal, or its flesh, and no decayed, diseased, or unfit meat, fish, vegetables, or fruit; nor diseased, impure, or adulterated milk, nor other impure, diseased, or adulterated article used for food, shall be sold or offered for sale as food.†

WISCONSIN.

[From the city charter of the city of La Crosse, State of Wisconsin, Laws of 1882.]

19th. To establish public markets and make rules and regulations for the conduct and the government of the same; to appoint suitable officers for overseeing and regulating such markets, and to punish and restrain all persons from interrupting or interfering with the due observance of such rules and regulations; to license and regulate butchers' stalls, shops, and stands for the sale of game, poultry, meats, fish, and other provisions, and to regulate the sale or traffic in merchandise in the city of La Crosse as they may see fit, and have power to grant license for the sale or traffic in merchandise on such terms as they may deem proper.

[From the city ordinances of February, 1881.]

SECTION 4. If any person shall expose for sale any emaciated, tainted, measly, or putrid meat, fish, vegetables, or provisions of any kind; or the flesh of any sick or diseased animal which from these or other causes shall be deemed unwholesome, the person so offering them for sale shall forfeit the penalty of five dollars for each offense; and such unwholesome meat or provisions so exposed for sale shall be destroyed by the chief of police without delay.

SECTION 7. Whoever shall kill or cause to be killed for the purpose of sale any calf less than four weeks old, or shall have in his or her possession, with intent to sell the same, the meat of any calf killed when less than four weeks old, shall, upon conviction thereof, be punished by a fine of not less than fifty dollars; and all such meat exposed for sale or kept with intent to make sale thereof, may be seized and destroyed by the board of health, or by the chief of police, or by any policeman or health officer acting under his order.

MINNESOTA.

City of St. Paul, State of Minnesota.

[From the health ordinance of October 17, 1883.]

SEC. 96. That every butcher, grocer, and milk dealer and their agents shall allow the parties authorized by the health officer to freely and fully inspect their cattle and milk, meats, fish, and vegetables held, offered, or intended for sale, and will be expected to answer all reasonable and proper questions asked by such persons relative to the condition thereof, and of the places where such articles may be.

MISSOURI.

[From the act establishing the State Board of Health.]

SEC. 15. That said board of health shall take cognizance of any fatal disease which may be prevalent amongst the domestic animals of this State, and ascertain the nature and causes of such disease, and shall, from time to time, publish the result of their investigations, with suggestions for the proper treatment of such animals as may be affected, and the remedy or remedies therefor.

Approved March 29th, 1883.

KANSAS.

ORDINANCES OF CITY OF KANSAS.

[Compiled and revised in 1883 from ordinance No. 84.]

SEC. VIII. The owner or possessor, or agent of the owner, of any dumb animal which may die in this city, shall, within twelve hours thereafter, cause the same to be removed beyond the city limits, under a penalty of five dollars for every additional twelve hours he shall allow the same to remain in the city, or dispose of the same as otherwise provided for in this ordinance; and no person or persons shall sell, expose, or offer for sale in this city, to be used as food or for culinary purposes, any unwholesome meat, or the flesh of any dead animal that was sick, overheated, or run down by dogs, or trampled upon or injured by any animal or animals, or injured by railroad cars, or otherwise, before the same was butchered or slain, or which died a natural death, or was killed by accident, casualty, or other means than the usual manner of slaying or butchering animals for market or food; nor shall any person or persons sell or offer to sell, to be used as food, any animals while living, which may be sick, or suffering from any of the causes above enumerated, or from any other cause whatever. And it shall be the dnty of any and every owner, or other person interested in any such animal or meat to see that such animal or animals, or meat does not pass into the hands of any person or dealer in meats who will or shall sell, or offer to sell the same for food or culinary purposes, and it shall be the duty of said owner, agent, or person above specified to see to and provide that said animal, animals, or meat above specified, is properly disposed of where and in such manner that said meat or animal will not and shall not be used for food or culinary purposes, and in accordance with the provisions of this ordinance. The sale of any such animal or meat as herein specified, by any person or persons, to a dealer in meats, shall be prima facie evidence in any suit brought for violation of this ordinance against the person so selling the same, and the selling of any such meat by a dealer in meats to any person shall likewise be prima facie evidence against said dealer, in any suit brought for the violation of this ordinance, and any animal or animals heretofore mentioned that has or have died, or been maimed or bruised so as to be unfit for use, shall be turned over to the person appointed by the mayor (which appointment is herein provided for) for such purposes, and it shall be the duty of said party so appointed to see that said animal or animals, or meat passes into proper and safe hands, so that it may not be offered for sale, for food, or for culinary purposes, as herein prohibited, and any owner, agent, or person interested in such meat, animal or animals, shall receive just and sufficient recompense for the same, before such person appointed by the mayor, as provided for herein, shall take, or attempt to take such meat, animal or animals, such price or compensation for the same to be determined by the agreement of the owner or agent of such animal, animals, or meat, and the party appointed by the mayor; otherwise, and upon the failure of both the parties aforesaid, or either of them, to agree upon a price or compensation for such animal, animals, or meat, and the terms of payment therefor, said owner, agent, or person interested in the same, shall immediately cause the same to be removed, as heretofore provided for in this section and ordinance. The mayor shall appoint some suitable person, whose duty it shall be to see that the provisions of this section of this ordinance are carried into effect, and such person shall receive as compensation or remuneration for his services half of each and every fine which may be assessed against any person found guilty of violating the provisions of this section, when the person is arrested and convicted on the complaint of the said person appointed by the mayor. Such person shall hold his office or position until his successor shall have been appointed, or until the mayor shall remove him, and in no case shall the city be liable for anything except as specially herein provided for. Any person or persons violating the provisions of this section shall be deemed guilty of a misdemeanor, and shall, upon conviction, be fined any sum not less than five nor more than one hundred dollars for each offense.

* * * * * * *

SEC. XI. No person shall slaughter any cattle, sheep, swine, or other animals within this city, except it be in a slanghter-house, under a penalty of three dollars or each and every offense, and no person shall erect or maintain any slaughter-house in this city without first obtaining a license therefor from the city council under a penalty of five dollars for every day any house, structure, or building is used for that purpose.

SEC. XII. Whenever any nuisance shall exist, or be found on any premises or elsewhere in this city, the mayor, city marshal, or his deputies, may order the owner or occupant of such premises, or the person occasioning such nuisance, to remove or abate the same; and if the person so notified fail or refuse to remove and abate the same, according to the provisions of this ordinance, then the said officers, or either of

them, may abate or remove the same at the expense of the party so failing or refusing; but if the owner, occupant, or agent of such premises is unknown or can not be found, then the said officers shall remove the same at the expense of the city; provided, however, that nothing in this section shall be so constructed as to conflict with or prevent prosecution under any other section or under this ordinance.

SEC. XIII. That if any person permit any nuisance or substance not hereinbefore mentioned to remain upon his premises, or upon any private or public grounds within this city, or shall be guilty of any violation of any of the provisions of this ordinance, such person shall be guilty of a misdemeanor, and shall, on conviction, be fined not less than one nor more than one hundred dollars.

SEC. XIV. This ordinance to take effect and be in force from and after its passage and publication in the Wyandotte Gazette.

Approved this the 21st day of February, 1878.

ELI TEED, *Mayor.*

Attest:

A. H. DEPPE,
City Clerk.

City of Kansas—Additional ordinances—Ordinance No. 216.

[First published December 8th, 1883.]

AN ORDINANCE providing for an elevated roadway viaduct or stock drive from the corner of Seventh and James streets to the stock-yards of Plankinton and Armour's, on the north side of Railroad alley.

Be it ordained by the mayor and councilmen of the city of Kansas, Kansas:

SECTION I. That it is deemed necessary and for the public good to build, erect, construct and maintain an elevated roadway viaduct or stock drive, commencing at a point far enough west of James street in stock-yard or lot to make a practical stock drive over James street, to be not less than sixteen (16) feet above the established grade of said street; thence east on the south side of Seventh street to a point opposite the alley between James and Ewing streets, thence northerly over 7th street not less than sixteen (16) feet above the established grade of 7th street; thence through the alley to 6th street; thence over 6th street not less than sixteen (16) feet above the established grade of said street to Railroad alley; thence over Railroad alley at the same grade into the lot now owned and occupied by Plankinton and Armour's as a stock-yard.

SEC. II. That the stock drive, when built, shall not be less than twelve (12) feet nor more than sixteen (16) feet wide, and shall not have any more than two spans from curb to curb in crossing any street, which shall rest upon iron columns not less than ten inches square, in center of street, which shall stand on large, flat stones, laid at least two feet below the grade of the street, and the remainder of the posts may be of pine or oak, not less than eight by ten inches square. The floor shall be laid in two thicknesses, joints broken, one of one inch and one of two inches, to prevent dust and filth dropping upon the people when passing on the streets; and the sides shall not be less than five (5) feet high, made of two-inch plank, surfaced on the outside.

SEC. III. All the material used in the construction of the roadway or stock drive shall be of good, sound lumber, free from large knots or other defects, and the work shall be done in a good, substantial, and workmanlike manner, and all material standing in or over 6th, James, and 7th streets, shall be dressed, and shall be painted with at least two coats of mineral paint.

SEC. IV. The entire cost of building, constructing, and maintaining the elevated railway or stock drive shall be borne and paid for by the firm of Plankington & Armours, and shall be constructed without any material hindrance or obstruction to the traveling public, and they shall hold the city harmless from all damages to person or property caused by any negligence on their part while building said work or operating the same.

SEC. V. It shall be the duty of the parties using the railway or stock drive to at all times to keep the same free from all offal, mud, or other filth, and to prevent the same from becoming a nuisance or damage to adjoining property.

SEC. VI. The above work shall be commenced within ninety days, and be completed within one year from the passage and publication of this ordinance.

SEC. VII. This ordinance shall take effect and be in force from and after its passage and publication in the Kansas City Globe.

Approved Dec. 5th, 1883.

R. W. HILLIKER, *Mayor.*

Attest:

H. C. STOUT,
City Clerk.

Ordinance No. 217.

[First published December 8, 1883.]

AN ORDINANCE to prohibit bringing into this city, or keeping therein for sale, selling, or offering to sell, for any other than tanking purposes, any diseased or unwholesome meat, or any animal or carcass not in a fitting condition to be used as food or for culinary purposes as therein described, and to provide for the inspection of the same.

Be it ordained by the mayor and councilmen of the city of Kansas, Kansas:

SECTION I. No person shall bring into this city, or cause to be brought into it, in any manner, or sell or offer to sell, or keep on hand with a view to sell, or expose for sale (except for tanking purposes), any unwholesome meat, or the flesh of any dead animal that was sick, overheated, or run down or trampled upon, or injured by any animal or animals, or injured in transportation on the cars, or otherwise, before the same was butchered or slain, or which died a natural death, or was killed by accident, casualty, or other means than the usual manner of slaying or butchering animals for market or food, or any cattle with enlarged upper or lower jaws, having ulcers or running sores, commonly called big-jawed cattle, or any animal fevered or emaciated from any known or unknown disease, or suffering from any disease whatever; hogs suffering from cholera, or any animal or animals, or the carcass of any animal of whatsoever kind in a condition unfit for food or culinary purposes: *Provided, however*, That sows heavy with pigs may be brought into this city and sold under the supervision of the inspector.

SEC. II. All such meat and animals described in the previous section brought into or found at any point in this city shall be inspected by the inspector appointed by the city of Kansas, immediately after their arrival or discovery, and if found, on such inspection, to be unfit for food or culinary purposes, the owner or the person claiming to own the same, or the person in charge thereof, shall immediately, on the order of the inspector, remove and sell said meat, carcass, animal or animals to any tanking or rendering establishment exclusively engaged in such business, and if no person can be found to own or claim to own or be in charge of such meat, carcass, or animals, then the inspector shall cause the same to be sold to the highest bidder and removed, and the price received after deducting expense of removal shall be subsequently paid to the owner or his agent: *Provided, however*, That said inspector may kill cattle found at any stock-yards or other place with large upper or lower jaws, commonly called big-jawed cattle, having ulcers or running sores on them, cattle emaciated from any known or unknown diseases, hogs affected with the cholera or other diseases, or animals with broken limbs, that have become fevered, on the refusal of the owner, or the person in charge, or the person on claiming to own the same, to dispose of them and cause them to be removed after inspection, condemnation, and order of removal to a tanking or rendering establishment by the inspector, as herein provided, and after being killed the carcasses shall be removed as in other cases.

SEC. III. When said meat, or any of the said animals or carcasses above described shall be conveyed into this city, or from any point in this city to any stock-yards therein, no such meat, animals, or carcasses shall be taken from any such stock-yards before inspection, and any meat, carcasses, or animals condemned by the inspector as unfit for food or culinary purposes shall be transported by cars or other means to a rendering establishment as soon as practicable, and in a manner to conceal them and render their removal as inoffensive as possible to the public. And every stock-yard doing business now in this city shall, within three days from the publication of this ordinance, designate the gates or passage ways, under instruction of the inspector, through which only said meat, animals, or carcasses shall be taken to said cars or conveyances, and by them conveyed from the yards after inspection, when the same are ordered to the tanking establishment. And no stock-yards, or person or employé having authority to issue an order for the removal of any animal or carcasses from the yards, shall issue any such order for removal, or permit any such meat, carcass, or animals as in the first section described to be removed or taken from the yards without first having the written or printed statement or certificate of the inspector that the same were inspected, and when such meat, animals, or carcasses are condemned, no stock-yard agent, officer, or employé thereof shall permit or allow the same to be taken from the stock-yards in any manner, except as hereinbefore provided. And when said meat, carcasses, or animals shall pass through and from the stock-yards, they shall immediately and directly be conveyed to a rendering establishment.

SEC. IV. The mayor and council shall annually appoint an inspector of meats and animals usually offered or sold for food or culinary purposes, who shall be a practical butcher, or skilled in diseases of animals. Such inspector shall hold his office for the period of one year, and until his successor shall be appointed and qualified, unless sooner removed for cause. He shall give bond in the sum of one thousand dollars ($1,000), with sureties to be approved by the council, and shall perform the following

duties, viz: He shall daily attend all stock-yards and other places in this city where meats are sold or offered for sale, and where animals used for food or culinary purposes are slaughtered or kept for slaughter or for sale, or suspected to be kept, and shall make diligent inspection of all meats, carcasses, and animals so kept, found, or offered for sale at any point in the city, and any such meat, carcasses, or animals found unfit for food or culinary purposes he shall condemn and order to a tanking or rendering establishment, and in an especial manner is it made his duty to make diligent search at the stock-yards and other places in the city for the classes of meat, carcasses, and animals in this ordinance described, and to inspect the same, and make the proper disposition thereof as provided by this ordinance to prevent the same from being sold or used for food or culinary purposes, through avarice, fraud, or connivance of any parties. The said inspector shall not directly or indirectly become interested in any such meat or animals, as owner or otherwise, nor shall he receive any fee or reward from any owner or person interested in the disposition of such carcasses, meats, or animals.

SEC. V. The said inspector shall receive for his services an annual salary of nine hundred dollars ($900), payable monthly in the scrip of the city at its face value. He shall have free access to all places, yards, packing-houses, or other places where such meat, carcasses, or animals may be found; and the stock-yards, its agents, officers, and servants, when any such meat, carcasses, or animals are at its yards, shall be diligent to direct the attention of the inspector to them for inspection, and to give information of any failure in the discharge of his duty to the mayor of the city; and it is made its duty to hang up at three or more of the most public places in its yards framed copies of this ordinance.

And the said inspector is hereby authorized to make arrests on view for any violation of this ordinance, with full special police powers and authority as though he were specially appointed and commissioned therefor, and shall bring all parties arrested before the police judge for trial as soon as may be.

SEC. VI. All persons violating any provision of this ordinance, either by a positive act, or a failure, refusal or neglect to act, or violating any of its provisions in any manner in which they or any of them may be violated, shall be guilty of a misdemeanor, and punished by fine not exceeding one hundred dollars ($100), or by imprisonment not exceeding three months, or by both such fine and imprisonment.

And the Kansas City Stock-yards, as far as in its province, scope, and sphere lies, is charged with the enforcement of the provisions hereof.

SEC. VII. This ordinance shall take effect and be in force from and after its passage and publication in the "Kansas City Globe."

Approved December 5th, 1883.

R. W. HILLIKER, *Mayor.*

Attest:

H. C. STOUT, *City Clerk.*

MICHIGAN.

Laws relating to the public health, 1875.

[Chapter one hundred and fifty-nine of Revised Statutes of 1846.]

(133.) SECTION 1. If any person shall knowingly sell any kind of diseased, corrupted, or unwholesome provisions, whether for meat or drink, without making the same fully known to the buyer, he shall be punished by imprisonment in the county jail not more than six months, or by fine not exceeding two hundred dollars.—(§7726.)

[From the first annual report of the board of health of the city of Detroit, 1882.]

A BILL to incorporate the Butchers' Slaughtering, Melting, and Cattle-Yard Association of Detroit and for other purposes.

SEC. 10. Said board of health, mayor, and controller of the city of Detroit are hereby authorized to make whatever regulations may seem to them fit in order to prevent the slaughter and sale of animals unfit for human food.

SEC. 11. Amy meat brought to the city of Detroit for sale, except from the slaughter-house of said corporation, shall be first taken by the owner thereof to the central market for inspection by the proper officer, before the same shall be sold or offered for sale. The penalty for violation of this section shall not be less than one hundred dollars nor more than five hundred dollars, or imprisonment in the Detroit house of correction not less than thirty nor more than sixty days.

SEC. 17. The meat inspector and members of the police of said city shall co-operate with said board in all matters pertaining to the abatement of nuisances and the preservation of the public health, and, upon the requisition of said board, the superintendent of police shall cause the notices of said board to be served and complaints to be made for violations of the health ordinances of said city.

INDIANA.

Laws passed at the Fifty-second regular session, 1881.

SEC. 193. Whoever overdrives, overloads, tortures, torments, deprives of necessary sustenance, or unnecessarily or cruelly beats, or needlessly mutilates or kills any animal; or impounds or confines any animal in any place and fails to supply the same during such confinement with a sufficient quantity of good, wholesome food and water, or carries in or upon any vehicle or car, or otherwise, any animal in a cruel manner, or feeds cows on food that produces impure or unwholesome milk, or abandons to die any maimed, sick, infirm, or diseased animal, or being a person or corporation engaged in transporting live stock, detains such stock in railroad cars or compartments for a longer continuous period than twenty-eight hours, after the same are so placed, without supplying the same with necessary food, water and attention, or permits such stock to be so crowded together as to overlie, wound, crush or kill each other, shall be fined not more than two hundred dollars nor less than five dollars.

SEC. 194. Whoever knowingly permits any horse, mare, or gelding, affected with the glanders, to be taken from his or her premises, or to run at large, shall be fined not more than one hundred dollars, nor less than five dollars.

SEC. 195. Whoever drives or in any manner brings Texas or Cherokee cattle into this State at any time before the first day of October, and after the first day of April in any year, and whoever purchases such cattle so driven or brought, shall be fined not more than one thousand dollars, nor less than one hundred dollars, to which may be added imprisonment in the county jail not more than one year; but nothing in this section shall be so construed as to prevent the transit of any cattle through this State on the railroads to other States, nor shall the provisions of this section apply to any cattle that shall have been, during all the previous winter north of the thirty-eighth degree of latitude, and in all prosecutions under this section, the legal presumption shall be that such cattle had not been, during all the previous winter north of the thirty-eighth parallel of latitude.

SEC. 220. Whoever packs, brands, or sells, or causes to be packed, branded, or sold, any salt, beef, pork, flour, tobacco, or hay in barrels or packages, as full barrels or packages, when such barrels or packages do not contain the weight which by law they are required to contain, shall be fined not more than one hundred dollars, nor less than ten dollars.

SEC. 221. Whoever alters or erases any brand or mark of any inspector, appointed by proper authority, placed on any barrel of salt, flour, beef, pork, or hogshead of tobacco, or other article authorized by law to be inspected and branded, shall be fined not more than one hundred dollars, nor less than five dollars.

OHIO.

[From the sixteenth annual report of the health department of the city of Cincinnati, September, 1882.

AN ORDINANCE to amend an ordinance entitled "An ordinance supplementary to an ordinance to provide for the abatement of nuisances," passed June 14, 1867.

SECTION 1. *Slaughtering, and slaughtering-pens; how regulated.—Be it ordained by the city council of the city of Cincinnati,* That it shall be unlawful for any butcher or any other person, to kill or slaughter any beeves, calves, sheep, hogs, or other animals, within said city, except in the house, yard, pen, or place where killing shall take place, shall have a perfectly water-tight floor, in which there shall be no breaking of joints nor openings of any kind, for any purpose, excepting such as shall have a water-tight tube with grating, one-half inch holes, making a direct connection with the sewers, and the earth beneath it made sufficiently solid to prevent its becoming the receptacle of filth and offensive matter; also, no hog or any other animal shall be permitted to run or remain under any slaughter-house; and moreover, the whole shall be washed and cleansed at the end of each day; and, further, that each slaughter-house or place occupied for killing of animals, as aforesaid, shall be whitewashed at least once every month, between the first of April and the first of November in each year.

SEC. 3. No person shall kill any cow, sheep, or hog, that is pregnant, nor shall any animal be slaughtered while it is in an overheated or feverish condition; and the meat of any such animal shall not be held or sold, or offered for sale for human food in any market, or elsewhere, in this city.

SEC. 4. No person shall bring into the city, or sell, or offer for sale, any cattle unfit for use, or cattle which has been exposed to, or that are liable to communicate the "cattle disease," nor the meat nor milk of any such cattle. All such cattle, meat and milk shall be confiscated and destroyed.

SEC. 5. No cased, blown, plaited, raised, stuffed, putrid, impure or unhealthy or unwholesome meat, or the meat of any animal that may have died of disease or accident, or fish, or birds, or fowls, shall be held, bought, or sold, or offered for sale for human food, or held or kept in any market, public or private, in this city.

SEC. 6. No. calf, pig, or lamb, or the meat thereof, shall be bought, held, or offered for sale for human food, in this city, which when killed was less than one month old.

SEC. 15. No cattle shall be kept in any place of which the water, ventilation, and food is not sufficient and wholesome for the preservation of their health and safe condition for food.

SEC. 2137. *Penalty for violating order of board of health.*—Whoever violates any provision of this chapter, or any order of the board of health made in pursuance thereof, or obstructs or interferes with the execution of any such order, or willfully and illegally omits to obey any such order, shall be fined in any sum not exceeding one hundred dollars, or imprisoned for any time not exceeding ninety days, or both; but no person shall be imprisoned under this section for the first offense.

For a failure to comply with any or all of the foregoing rules and regulations, the superintendent of the sanitary police is directed to cause the arrest of the person or persons so offending, either on view or by warrant from the police court of the city of Cincinnati.

Passed by the board of health November 3, 1881.

A. J. MILES, M. D.,
Health Officer.
W. C. WILLIAMS,
Clerk.

[From the Sanitary Ordinances of the city of Cleveland, 1882.]

SEC. 70. No person or persons shall bring into the city or sell or offer for sale for human food in any market, public or private, any cattle, sheep, hog or lamb, nor and meat, fish, game, or poultry that is diseased, unsound, unwholesome, or that for any other reason is judged to be unfit for human food. The fact of any cattle, sheep, hog or lamb being in any stock-yard or slaughter-house pen shall be considered sufficient evidence that the same is being exposed there for sale; and the fact that the carcass of any cattle, hog, sheep or lamb, or any part thereof, is found in any slaughter-house or any public or private market or place, dressed and prepared as such meats usually are for market, shall be deemed sufficient evidence that the same is for sale for human food; and no animal nor any part thereof, nor any fish, game, or poultry that has been examined and condemned by the inspector or his assistants, shall be held, sold, or offered for sale for human food in any market or place in the city.

SEC. 71. No person or persons shall kill for human food any cow, sheep, or hog that is pregnant, nor shall any animal be slaughtered for human food while it is in an overheated or feverish condition; and the meat of any such animal shall not be held or sold or offered for sale for human food in any market or elsewhere in the city.

SEC. 72. No person or persons shall bring into this city, or sell or offer for sale, any cattle unfit for use for human food, or cattle which have been exposed to or that are liable to communicate the cattle disease, nor the meat or milk of any such cattle.

SEC. 73. No cased, blown, plaited, raised, stuffed, putrid, impure or heated or unwholesome meat, or the meat of any animal, fish, bird, or fowl, that may have died of disease or accident, shall be held, bought or sold, or offered for sale for human food, or held or kept in any market, public or private, in the city.

SEC. 74. No calf, pig, or lamb, or the meat thereof, shall be bought, held, sold or offered for sale for human food in the city which, when killed, was less than one month old.

SEC. 81. Upon any cattle, meats, birds, fowl, fish, vegetable, or other substances and materials used for human food being found by any inspector or other officer of said board in a condition which is, in his opinion, unwholesome and unfit for human food, or in a condition or of a quality in any ordinance or section of an ordinance of the city condemned or forbidden, he shall cause the same to be examined by two reputable persons, reasonably competent to judge in respect thereto, whom he may conveniently find; and if both said persons disagree with him in opinion in respect thereto, he shall take no action and give no order relative to the same till he has been instructed by the health officer; and if one of said persons agree with him in respect to said articles, then such inspector or officer may forbid the same being offered or exposed for sale, or being sold for human food till the owner or party in charge, or other proper person, has obtained the consent of the health officer, or of said board, to their being so offered, used, or sold. If both such persons agree with him in opinion, he may order the same to be removed, and thereupon, or if said board or health officer shall have approved the judgment of said inspector, it shall be the duty of the owner or party in charge to speedily remove such articles, materials, or substances from any market, street, or place, public or private, and not sell or dispose, or offer to sell and

dispose thereof for the purpose of human food. In default of such removal, and also in case of disobedience of such order, and also in all cases where, in the opinion of the inspector of such articles, materials, or substances, by reason of their being in a damaged or offensive condition would, if allowed longer to remain, be dangerous to health, the same may be caused to be removed by any inspector or officer of said board to some suitable place, at the expense of the party who should have removed the same.

SEC. 82. It shall be unlawful for any person or persons to molest or resist any member of said board or their deputies, or its health officer, in the discharge of their duties.

SEC. 109. Upon the death of any animal in the city, the same not having been killed for human food, the owner or keeper thereof, or person killing the same, shall report the same to one of the police stations of this city within eight hours after the death of such animal.

NEW YORK.

City of Buffalo—Ordinances, 1882.

§ 10. Every person who shall keep fresh meat for sale shall keep the place at which the same shall be exposed for sale in a cleanly and wholesome condition, and free from all noxious or offensive odors; and every person offending against the provisions of this section shall forfeit and pay the sum of ten dollars for each and every offense.

§ 11. Every person who shall sell or expose for sale, or cause to be sold or exposed for sale, in this city, any unwholesome, stale, emaciated, blown, stuffed, tainted, bruised, putrid, or measly meat, poultry, or provisions, shall forfeit and pay a penalty of twenty-five dollars for each and every offense.

§ 12. Every person who shall sell, offer, or expose for sale, or cause to be sold, offered, or exposed for sale in the city of Buffalo, any bruised or diseased cow, heifer, ox, steer, bullock, hog, sheep, lamb, or calf, shall forfeit and pay a penalty of twenty-five dollars for each and every offense.

§ 25. The board of health shall appoint a scavenger and a cattle inspector. It shall be the duty of the scavenger to remove to such place or places as the board of health shall designate, all dead animals that may be found in the streets, alleys, or public grounds of the city, and for this purpose he shall report to the street commissioner's office and at police headquarters once each day, Sundays excepted, to receive such orders as may there be given him for the removal of carcasses from the streets. It shall be the duty of the cattle inspector to be present at the arrival of all cattle trains in the city of Buffalo, or as soon thereafter as practicable.

§ 26. He shall immediately notify the owner, agent, or consignee of any dead cattle, hogs, sheep, or lambs that may arrive in the city of Buffalo to take the same to some bone-yard within four hours after the train upon which they arrived is unloaded. In case any such owner, agent, or consignee shall refuse or neglect to so take the same within the time herein prescribed, it shall be the duty of the cattle inspector, and he shall have power to forthwith remove the same to some bone-yard and dispose of the same to the best advantage.

§ 27. It shall be the duty of the owner, agent, or consignee of any diseased or injured cattle, hogs, sheep, or lambs which may arrive in the city of Buffalo, and are unfit to be sold in the market, to cause the same to be immediately killed in some slaughter-house adjourning the cattle-yards and sent to some bone-yard.

§ 28. It shall be the duty of the owner, agent, or consignee of any injured cattle, sheep, hogs, or lambs which may arrive in the city of Buffalo and are fit to be sold in the market, to be immediately slaughtered, dressed, and prepared in one of the slaughter-houses adjoining the cattle-yards when in the judgment of the cattle inspector it is deemed necessary.

§ 30. Any person violating any of the provisions of sections twenty-five, twenty-six, twenty-seven, twenty-eight, and twenty-nine of this chapter, shall forfeit a penalty to the city of Buffalo of not less than five nor more than twenty-five dollars.

[From the rules and regulations of the board of health, city of Albany, April, 1882.]

§ 7. No meat, fish, birds, or fowl, or vegetables, nor any milk not being then healthy, fresh, sound, wholesome, and safe for human food, nor any meat or fish that shall have died by disease or accident, shall be brought within the city of Albany, or offered or held for sale in any public or private market anywhere in said city.

§ 9. No cattle shall be killed for human food while in an overheated, feverish, or diseased condition; and all such diseased cattle, and the place where found and their disease shall be at once reported to this board by the owner or custodian thereof.

§ 15. The word "cattle," when occurring in any section or phrase of these ordinances, shall be held to include all animals, except birds, fowl, and fish, of which the body or any part thereof is used for food. The word "butcher" shall be held to in-

clude whoever is engaged in the business of keeping, driving, or slaughtering any cattle or in selling any meat.

§ 14. The keeping and slaughtering of all cattle, and the preparation and keeping of all meat and fish, birds, and fowls, shall be in that manner which is, or is generally, reputed or known to be best adapted to secure and continue their safety and wholesomeness as food. No slaughtering of cattle shall be permitted in the city of Albany without a special permit from this board.

§ 50. Every person who violates or refuses to comply with or who resists any of the provisions of this code of sanitary ordinances, or any of the rules, orders, sanitary regulations, or ordinances established or declared by this board under or pursuant to any of the provisions of chapter 431 of the session laws of 1881, will be liable to the arrest, suit, penalty, fine, and punishment in said law provided and declared, of all of which notice must be taken.

MASSACHUSETTS.

[From the manual for the use of boards of health of the State of Massachusetts. Prepared by direction of the State board of health, lunacy, and charity.]

INSPECTION AND SALE OF PROVISIONS AND ANIMALS INTENDED FOR SLAUGHTER.

102. The mayor and aldermen of cities, and the selectmen of towns may annually appoint one or more persons to be inspectors of provisions and of animals intended for slaughter. Such inspectors shall be sworn faithfully to discharge the duties of their office, and shall receive such compensation as the city council or the selectmen shall determine.

103. Said inspectors may inspect all animals intended for slaughter, and all meats, fish, vegetables, produce, fruits, and provisions of all kinds, found in said cities or towns or exposed for sale or kept with intent to sell therein; and may for this purpose enter into all buildings or inclosures where said animals, meats, fish, vegetables, produce, fruits, or provisions are kept, stored, or exposed for slaughter or sale. When such animals, meats, fish, vegetables, produce, fruit, or provisions are found on such inspection to be tainted, diseased, corrupted, decayed, or unwholesome from any cause, said inspectors shall seize the same and cause them or it to be destroyed or disposed of otherwise than for food; but if at the time of the seizure the owner of the property seized notifies, in writing, the inspector seizing the same, of his desire to appeal to the board of health, said inspector shall cause said animals, meat, fish, vegetables, produce, fruit, or provisions to be inspected by said board of health, or by a committee thereof consisting of not less than two members; and if said board or committee find the same to be tainted, diseased, corrupted, or unwholesome, they shall order the same to be destroyed or disposed of otherwise than for food; if said board or committee do not so find, they shall order said animals, meat, fish, vegetables, produce, fruit, or provisions to be forthwith returned to the owner thereof. All moneys received by said inspectors or board of health for the property disposed of as aforesaid shall, after deducting all expenses incurred by reason of such seizure, be paid to the owner of such property.

105. When complaint is made on oath to any police, district, or municipal court, or to a magistrate authorized to issue warrants in criminal cases, that the complainant believes that any diseased animals, or any tainted, diseased, corrupted, decayed, or unwholesome meat, fish, vegetable, produce, fruit, or provisions of any kind, or any veal of a calf killed under four weeks old, or kept or concealed in a particular house or place with the intent to kill, sell, or offer the same for sale for food, the court or magistrate, if satisfied there is reasonable cause for such belief, shall issue a warrant to search for such animals or articles, and all such warrants shall be directed and executed as provided in section three of chapter two hundred and twelve of the public statutes. If, upon hearing, said court or magistrate determines that said animals or articles or any of them were kept or concealed for the purposes aforesaid, the same shall be destroyed or disposed of by the inspector, or by any officer designated by the court or magistrate according to the preceding provisions; if the court or magistrate does not so determine, said animals or articles shall be returned to the owner.

106. Whoever knowingly sells, or offers or exposes for sale, or has in his possession with intent to sell for food, any diseased animal, or any tainted, diseased, corrupted, decayed, or unwholesome meat, fish, vegetables, produce, fruit, or provisions of any kind whatever, shall be punished by imprisonment in jail for not more than sixty days, or by fine of not more than one hundred dollars.

109. Whoever knowingly sells any kind of diseased, corrupted, or unwholesome provisions, whether for meat or drink, without making the same fully known to the buyer, shall be punished by imprisonment in the jail not exceeding six months, or by fine not exceeding two hundred dollars.

[The gist of the offense under this section consists in the guilty knowledge or evil intent of a party in selling what he knows to be unfit for food. The sale, of itself, is not made criminal; but it is the sale coupled with the knowledge of the diseased state of the thing sold which constitutes the offense.]

CONTAGIOUS DISEASES AMONG CATTLE.

143. The mayor and aldermen of cities and the selectmen of towns, in case of the existence in this commonwealth of the disease called pleuro-pneumonia among cattle, or farcy or glanders among horses, or any other contagious or infectious disease among domestic animals, shall cause the animals in their respective cities and towns, which are infected, or which have been exposed to infection, to be secured or collected in some suitable place or places within their cities or towns, and kept isolated; and, when taken from the possession of their owners, one-fifth of the expense of their maintenance shall be paid by the city or town wherein the animal is kept, and four-fifths by the commonwealth; such isolation to continue so long as the existence of such disease or other circumstances may render it necessary.

144. The mayor and aldermen and selectmen, respectively, when any such animal is adjudged by a veterinary surgeon or physician by them selected to be infected with any contagious disease, may in their discretion order such diseased animal to be forthwith killed and buried at the expense of such city or town.

145. They may cause all such animals to be appraised by three competent and disinterested men under oath, at the value thereof at the time of the appraisement, and the amount of the appraisement shall be paid as provided above.

146. They may, within their respective cities and towns, prohibit the departure of animals from any inclosure, or exclude animals therefrom.

147. They may make regulations, in writing, to regulate or prohibit the passage from, to, or through their respective cities or towns, or from place to place within the same, of any cattle or other domestic animals, and may arrest and detain, at the cost of the owners thereof, all animals found passing in violation of such regulations, and may take all other necessary measures for the enforcement of such prohibition, and also for preventing the spread of any disease among the animals to their respective cities and towns, and the immediate vicinity thereof.

148. Such regulations shall be recorded upon the records of their cities and towns respectively, and shall be published in such cities and towns in such manner as may be provided in such regulations.

149. They may cause every animal infected with any such disease, or which has been exposed thereto, to be forthwith branded upon the rump with the letter P; and no animal so branded shall be sold or disposed of except with the knowledge and consent of such mayor and aldermen and selectmen. A person who, without such knowledge and consent, sells or disposes of an animal so branded, or sells or disposes of an animal known to be affected with such disease, or to have been exposed thereto within one year previous to such sale or disposal, shall be punished by fine not exceeding five hundred dollars, or by imprisonment not exceeding one year.

150. Any person disobeying the orders of the mayor and aldermen or selectmen, made in conformity with the preceding provisions, or driving or transporting any animals contrary to the regulations made, recorded, and published as aforeaaid, shall be punished by fine not exceeding five hundred dollars, or by imprisonment not exceeding one year.

151. Whoever knows or has reason to suspect the existence of any such disease among the animals in his possession or under his care shall forthwith give notice thereof to the mayor and aldermen of the city or selectmen of the town where such animals are kept, and for failure so to do shall be punished by fine not exceeding five hundred dollars, or by imprisonment not exceeding one year.

152. A city or town whose officers neglect or refuse to carry into effect the preceding provisions shall forfeit a sum not exceeding five hundred dollars for each day's neglect.

153. The mayor and aldermen of cities and selectmen of towns, when in their judgment it is necessary to carry into effect the purposes of this chapter, may, within their respective cities and towns, take and hold, for a term not exceeding one year, any land, without buildings other than barns thereon, upon which to inclose and isolate any animals; and they shall cause the damages sustained by the owner in consequence of such taking and holding to be appraised by the assessors of the city or town wherein the lands so taken are situated; and they shall further cause a description of such land, setting forth the boundaries thereof, and the area as nearly as may be estimated, together with said appraisement, to be entered on the records of the city or town. The amount of said appraisement shall be paid, as before provided, in such sums and at such times as the mayor and aldermen or selectmen respectively may order. If the owner of land so taken is dissatisfied with said appraisement, he may, by action of contract, recover of the city or town wherein the lands lie a fair compensation for the damages sustained by him; but no costs shall be taxed unless the damages recovered in such action, exclusive of such interest, exceed said appraisement; and the commonwealth shall reimburse to the city or town four-fifths of any sum recovered of it in any such action.

154. The governor, with the advice and consent of the council, may appoint a board of cattle commissioners of not more than three members, when in his judgment the public safety may require it, and may terminate their commissions when in his judgment the public safety may permit it. The compensation of such commisioners shall not exceed four dollars per day for actual service in addition to their traveling expenses necessarily incurred.

155. When such commissioners make and publish any regulations concerning the extirpation, cure, or treatment of animals infected with, or which have been exposed to, any contagious disease, such regulations shall supercede those made by mayors and aldermen and selectmen; and mayors, aldermen, and selectmen shall carry out and enforce all orders and directions of the commissioners to them directed.

156. Such commissioners shall have all the power and authority herein conferred upon mayors, aldermen, and selectmen; and, in addition, may establish a hospital or quarantine, with proper accommodations, wherein any cattle selected by them may be detained and treated by veterinary surgeons or physicians. And for this purpose the commissioners may take any land and buildings in the manner before provided.

157. Mayors and aldermen and selectmen, within twenty-four hours after they have notice that any domestic animal in their respective cities and towns are infected with or have been exposed to any such disease, shall give notice thereof in writing to the commissioners.

158. The commissioners may make all necessary regulations for the treatment, cure, and extirpation of such disease, and may direct mayors, aldermen, and selectmen, respectively, to enforce and carry into effect all such regulations as may from time to time be made for that end, and any such officer who refuses or neglects to enforce and carry out any regulation of the commissioners shall be punished by fine not exceeding five hundred dollars for every such offense.

159. The commissioners, when in their judgment the public good requires it, may cause to be killed and buried any domestic animals which are infected with or have been exposed to such disease; and, except as provided in the following section, shall cause such animals to be appraised in the manner provided above, and the appraised value of such animals shall be paid, one-fifth by the cities or towns in which such animals were kept, and the remainder by the Commwealth.

160. In all cases of farcy or glanders, the commissioners, having condemned the animal infected therewith, shall cause such animal to be killed, without an appraisement, but may pay the owner an equitable sum for the killing and burial thereof.

161. A person who fails to comply with a regulation made or an order given by the commissioners shall be punished by fine not exceeding five hundred dollars, or by imprisonment not exceeding one year.

162. Prosecutions under the preceding section may be maintained in any county.

163. All appraisements made shall be in writing and signed by the appraisers and certified by the mayors and aldermen, or selectmen, or commissioners, respectively, to the governor and council and to the treasurers of the several cities and towns wherein the cattle appraised were kept.

164. The commissioners may examine under oath all persons believed to possess knowledge of material facts concerning the existence or dissemination or danger of dissemination of diseases among domestic animals; and for this purpose shall have all the powers vested in justices of the peace to take depositions and to compel witnesses to attend and testify, by chapter one hundred and sixty-nine of the Public Statutes. All costs and expenses incurred in procuring the attendance of such witnesses shall be allowed and paid to the commissioners from the treasury of the Commomwealth upon being certified to and approved by the governor and council.

165. Whenever animals exposed to contagious diseases are killed by order of the commissioners, and upon a post-mortem examination are found to have been entirely free from disease, the commissioners shall cause the same to be sold under their direction, first giving to the purchaser notice of the facts; and if the said purchaser or any other person shall sell said slaughtered animals or any part thereof, he shall in like manner give notice to the parties to whom such sales are made; and the proceeds of the sales made by order of the commissioners shall be applied in payment of the appraised value of said animals.

166. Whoever violates any of the provisions of the preceding sections shall be punished by fine not exceeding one hundred dollars and the costs of prosecution.

167. Cattle commissioners, now, or hereafter appointed, shall keep a full record of their doings, and report the same to the legislature on or before the tenth day of January in each year, unless sooner required by the governor; and an abstract of the same shall be printed in the annual report of the State board of agriculture.

City of Boston, State of Massachusetts.

[From the statutes and ordinances relating to the public health, 1873.]

INSPECTION OF PROVISIONS.

99. The mayor and aldermen of cities and the selectmen of towns may annually appoint one or more persons to be inspectors of provisions, who shall be sworn to faithfully discharge the duties of their office, and who shall receive such compensation as the city council of cities or the selectmen of towns shall determine.

100. Said inspectors shall have power to inspect all meats, fish, vegetables, produce, and provisions of all kinds brought into said cities or towns, or exposed for sale or kept with intent to sell therein; and may for this purpose enter into all buildings where said meats, fish, vegetables, produce, or provisions are stored or exposed for sale. When such meats, fish, vegetables, produce, or provisions are found on such inspection to be tainted, diseased, corrupted, decayed, or unwholsome from any cause, said inspectors shall seize the same and cause it to be destroyed or disposed of otherwise than for food: *Provided, however*, That if the owner of the property seized shall at the time of seizure notify said inspector in writing of his desire to appeal to the board of health, said inspector shall cause said meat, fish, vegetables, produce, or provisions to be inspected by said board of health or by a committee thereof, consisting of not less than two members, and if said board or committee shall find the same to be tainted, diseased, corrupted, or unwholesome, they shall order the same to be destroyed or disposed of otherwise than for food. All moneys received by said inspector or board of health for property disposed of as aforesaid, shall, after deducting all expenses incurred by reason of said seizure, be paid to the owner thereof.

101. Said inspectors shall have power to inspect all veal brought into said cities or towns, or offered or exposed for sale or kept with intent to sell therein, and if said veal is, in the judgment of the inspector, that of a calf killed under four weeks old, he shall seize the same and cause it to be destroyed or disposed of, as provided in the preceding section, subject, however, to the same provisions concerning appeal and the disposal of moneys that are therein contained.

102. When complaint is made on oath to any police court or magistrate authorized to issue warrants in criminal cases, that the complainant believes that any tainted, diseased, corrupted, decayed, or unwholesome meat, fish, vegetables, produce, or provisions of any kind, or any veal of a calf killed under four weeks old is kept or concealed in any particular house or place with the intent to sell or offer the same for sale, the court or magistrate, if satisfied there is reasonable cause for such belief, shall issue a warrant to search for such articles, and all such warrants shall be directed and executed as provided in the third section of chapter one hundred and seventy of the General Statutes.

103. Whoever knowingly sells, or offers, or exposes for sale, or has in his possession with intent to sell as articles of food, any tainted, diseased, corrupted, decayed, or unwholesome meat, fish, vegetables, produce, or provisions of any kind whatever, shall be punished by imprisonment in jail not exceeding sixty days, or by fine not exceeding one hundred dollars.

MANAGEMENT OF STOCK-YARDS.

The time that hogs are held by the owner or consignee in the stock-yards, before sold to the packers, is usually very short. Frequently they are sold on the day of their arrival, but are often held for better prices. The cost of keeping animals at the yards is so high that they can not be profitably kept for any length of time. No animals can enter or leave the yards without a "gate order" from the company, as previously stated.

In order to ascertain the system of receipt and care of hogs in the stock-yards, the municipal regulations and modes of inspection, and also the methods adopted by the Illinois Humane Society in enforcing the laws regarding cruelty to animals, the following questions were addressed to George Titus Williams, esq., the general superintendent of the Union Stock-yards; to John G. Shortall, esq., president of the Illinois Humane Society, and William Mitchell, agent of the same society, and to Oscar De Wolf, M. D., commissioner of health of the city of Chicago, and Matthew Lamb, the meat inspector of the health department, stationed at the stock-yards.

QUESTIONS.

1. Is any examination made before unloading from cars to detect diseased or injured hogs?
2. If so, what regulations govern such examination?
3. When does "delivery" by railroad company take place?

4. Are any special instructions given in regard to care in unloading?
5. What is done with hogs found to be sick, diseased, bruised, or crippled?
6. What is done with hogs found smothered?
7. What is done with hogs dead from disease?
8. Are they sold?
9. To whom?
10. For what purpose?
11. Where are they sent?
12. How are they transported?
13. What is done with healthy hogs on their arrival?
14. When are they fed?
15. What kind of food is given them?
16. What quantity?
17. How is it furnished to them?
18. Are they watered?
19. When?
20. How is the water furnished to them?
21. What quantity?
22. In the absence of orders by owners or consignees of hogs, have you any regulations authorizing the feeding and watering of hogs?
23. How are the hogs cared for in bad weather?
24. How many hogs die in the yards?
25. From what cause?
26. What is done with them?
27. What is done with diseased hogs if discovered in the pens?
28. How are these hogs disposed of?
29. How arranged to receive hogs from cars?
30. What is the size of the pens?
31. How are they protected?
32. Are they drained?
33. How can they be cleaned?
34. What are the regulations in regard to keeping the pens clean?
35. What measures are adopted to disinfect pens where diseased hogs have been?
36. Is there any inspection made of the sanitary condition of the yards or the condition and care of the hogs?
37. If so, under what authority?
38. Is such inspection sufficiently effective to secure the sanitary condition of the premises and prevent any hogs, diseased or in improper condition, going into food?
39. What is the amount of business done annually?
40. What are your total receipts?
41. What is the average weight of hogs for the year?
42. What is total value of hogs received?
43. Please state what system of supervision is adopted to prevent any diseased hogs going into food, and under what authority such supervision is exercised, whether municipal, State, or the national or local humane society.

Replies of G. Titus Williams, superintendent of the Union stock-yards.

Question 1. In answer to your first question I have to say there is no examination made in cars. But city and State health officers are here to examine stock after taken from cars.

Question 2. No regulations for examination in cars.

Question 3. When stock is taken from cars.

Question 4. Yes. Employés are directed to handle all stock with care, and State and city humane officers are constantly in the yards to see that all stock is properly treated.

Question 5. State and city health officers condemn all diseased animals and kill them, and they are turned over to the rendering company and sent to Globe, 24 miles from here, where they are rendered into grease.

Question 6. Hogs found smothered are all sent to Globe for the purposes aforesaid.

Question 7. Hogs dying from disease are treated the same way as 6.

Question 8. Yes.

Question 9. To Union Rendering Company at Globe.

Question 10. To be rendered into soap-grease and oil-grease.

Question 11. To Globe.

Question 12. In box cars.

Question 13. Yarded in covered and floored pens.

Question 14. As soon as yarded.

Question 15. Corn.

Question 16. About two bushels to a car-load.

Question 17. Union Stock-Yard Company delivers it in pens from wagons.
Question 18. Yes.
Question 19. Soon after arrival.
Question 20. There is a hydrant and trough in each pen, with plentiful supply of pure water.
Question 21. Unlimited quantity.
Question 22. Yes; all stock is fed and watered by the company when no one in charge or when neglected by owner or consignee.
Question 23. Hogs are kept in covered pens with plank flooring in good and bad weather alike.
Question 24. Not to exceed one in ten thousand.
Question 25. Mostly from being overheated, and other accidents.
Question 26. All sent to Globe, where all dead animals are sent by authority of the board of health.
Question 27. When diseased animals are discovered in the pens, the health officers condemn and kill them as above described. A diseased hog is rarely seen in the pens. I have not known of a single diseased hog being in these yards in two years.
Question 28. If any, would be disposed of as above stated in 27, and sent to Globe.
Question 29. Cars are set to a platform even with the car, and a bridge fitted in the doorway, and hogs and other animals driven over platform down an inclined plane into the yards.
Question 30. Pens vary in size; to accommodate from one to five car-loads of hogs allowing 500 square feet to each car-load.
Question 31. By plank floor and roof.
Question 32. Yes.
Question 33. They are cleaned by men with carts and teams.
Question 34. A sufficient force of men is kept constantly at work cleaning the pens.
Question 35. If diseased hogs should be discovered in any pen it would be thoroughly cleaned before other hogs would be allowed to be put in.
Question 36. A State agent is stationed at the yards, appointed by the governor for that purpose; also city officers.
Question 37. By authority of State and city of Chicago.
Question 38. Yes.
Question 39. Annual report shows for 1883, $201,252,772.
Question 40. For 1883, 1,878,944 cattle, 30,223 calves, 5,640,625 hogs, 749,917 sheep, 15,255 horses.
Question 41. For 1883, 247 pounds.
Question 42. For 1883, $84,609,375.
Question 43. Police officers are stationed at all the gates of the yards during business hours, at all times while the gates are open, and prevent any person taking dead animals from the yard, and compel all such animals to be taken to the said rendering company's platform, when they are taken by cars to Globe. No dead animal is allowed to be taken to any other place. The police officers are appointed by the Union Stock-Yard and Transit Company, and act in conjunction with the State agent, who is appointed by the governor of the State, and with the health officers who are appointed by the city of Chicago and the officers appointed by the Illinois Humane Society.

G. TITUS WILLIAMS,
Superintendent of Union Stock-Yard and Transit Company.

Reply of John G. Shortall, president of the Illinois Humane Society.

CHICAGO, *January* 25, 1884.

DEAR SIR: Herewith please find the answer of this society's officer, Mitchell, in reply to your inquiries.

I have traversed the subject with him, and have the fullest confidence in his reliability and judgment.

Very truly, yours,

JOHN G. SHORTALL,
President Illinois Humane Society.

E. W. BLATCHFORD, Esq.,
Of the American Pork Commission,
Of Department of Agriculture of the United States,
George B. Loring, Esq., Chairman.

Replies of William Mitchell, agent of the Illinois Humane Society.

1 and 2. There is no examination made of any hogs that are shipped into the Union Stock-Yards before they are unloaded from the cars.

3. The different railway companies consider their delivery perfect as soon as their cars stop at the platform in the yards.

4. There are special instructions given to the men who unload the cars by John B. Sherman, the vice-president and general manager of the yards. They must not use any clubs or poles with spikes in them upon the cattle, and any person that I find using them I immediately place under arrest and bring them before the police justice, and charge them with the violation of our State laws covering cruelty to animals, a copy of which will be found below, and which I am specially detailed at the yards to enforce by the Illinois Humane Society.

Extracts from laws of the State of Illinois concerning cruelty to animals. Criminal code, chapter 38, *section* 50.

Whoever shall be guilty of cruelty to any animal in any of the ways mentioned in this section shall be fined not less than $3 nor more than $200, viz:

First. By overloading, overdriving, overworking, cruelly beating, torturing, tormenting, mutilating, or cruelly killing any animal, or causing or knowingly allowing the same to be done.

Second. By cruelly working any old, maimed, infirm, sick, or disabled animal, or causing or knowingly allowing the same to be done.

Third. By unnecessarily failing to provide any animal in his charge or custody, as owner or otherwise, with proper food, drink, and shelter.

Fourth. By abandoning any old, maimed, infirm, sick, or disabled animal.

Fifth. By carrying or driving, or causing to be carried or driven or kept, any animal in an unnecessarily cruel manner. [L. 1869, p. 115, §§ 1, 2, 3, 4; p. 116, § 11. See "Animals," ch. 8, §§ 33–36.]

SEC. 51. By railroads and carriers. No railroad company or other common carrier in the carrying or transportation of any cattle, sheep, swine, or other animals shall allow the same to be confined in any car more than twenty-eight consecutive hours (including the time they shall have been upon another road) without unloading or rest, water and feeding, for at least five consecutive hours, unless delayed by storm or accident, when they shall be so fed and watered as soon after the expiration of such time as may reasonably be done. When so unloaded they shall be properly fed, watered, and sheltered during such rest by the owner, consignee, or person in custody thereof, and, in case of their default, then by the railroad company transporting them, at the expense of said owner, consignee, or person in custody of the same, and such person shall have a lien upon the animals until the same is paid.

A violation of this section shall subject the offender to a fine of not less than $3 nor more than $200. [L. 1869, p. 115, §§ 5, 6; p. 116, § 7.]

5. All hogs that arrive at the yards that are not dead are carted off to the different slaughter-houses, inside and outside of the yards, and killed. The duty of the city health officer is to examine the meat, and, if found unsound, to condemn the same. Condemned meat is rendered at establishments for that purpose.

6. They are sent to the Union Rendering Company's establishment.

7. Sent to the same place.

8. Yes.

9. Union Rendering Establishment.

10. To be made into grease, fertilizers, etc.

11. Union Rendering Establishment, situated at Globe Station, Ill., 24 miles from the yards.

12. By rail, in box cars for the purpose.

13. They are immediately placed in covered pens, with plank floors.

14. As soon as practicable after arrival.

15. Good corn.

16. Two bushels to car-load, a car-load being from 45 to 70 hogs.

17. Hauled in a cart to the pens, and left on the floor for them.

18. Each pen in the yard is supplied with a water-trough. There are pipes leading from the water works, supplied from two artesian wells (which are situated in the yard), to each trough, so that the water can be turned on or off at each pen without interfering with any other, and each trough is supplied with a hole in the bottom of it and a plug, so that the dirty water can be allowed to run off and the trough filled with clean water. This water is pure and good.

19. When they come in and afterwards when needed.

20. By pipes from the water-works into their trough.

21. All they can use.

22. There are two officers—one the agent of the Illinois Humane Society, and one agent appointed by the governor of the State—constantly in the yards, looking after the feeding and watering of stock. Any stock that comes in without some person in charge these officers order feed for, and in case of the absence of the officers the Stock Yard Company will feed them.

23. They are put into good covered pens with plank floors.

24. A small percentage; can not answer exactly.

25. From injuries received in transportation and from different diseases not known to me.

26. Sent to the Union Rendering Establishment.

27. If I find hogs diseased in the pens I report the fact to the city health officer stationed at the yards. My duties end there.

28. If the health officer condemns them, he sees that they are put into a tank and rendered into grease.

29. The landing platforms around the yards are built the same distance from the ground as the car doors, so that the hogs can walk from the cars to the platform, a little bridge being placed from each car door to the platform, so that the hogs' legs can not get in between the car and the platform. They are then driven into the pens.

30. There are two sizes of pens—1,500 surface feet and 500.

31. Fenced all around, roofed, and boarded floor.

32. Yes.

33. Scraped and cleaned by men.

34. They are always kept reasonably clean, and there are thirty carts used daily for hauling the dirt from the pens. Each cart hauls two yards of dirt at a load, and each cart hauls twelve loads per day.

35. Washed out with water from the trough supply-pipe.

36. There are three health officers in the yards who attend to the sanitary condition.

37. The board of health of Chicago.

38. There are three officers of the board of health detailed to look after diseased animals here, but I do not think the force large enough to detect *all* diseased hogs that arrive at the yards. It is true, further, that a large number of sows with young, "piggy sows," as they are called, are sold here for food. It is my opinion that, where animals are in that condition, some time should be determined upon after which their being used for food should be prohibited.

39.

40.

41.

42.

For answers to these questions see the annual report of the Union Stock-Yards Company, which I send herewith.

No hogs of any description are allowed to be driven into or out of the yards without an order, so it is impossible for any hogs, whether sick or sound, to get into or out of the yards without being seen by some connected with the yards, for they are all counted; orders have to be given (of which I inclose forms) to the officer stationed at the gates before they are allowed to pass in or out of the yards. If hogs come in diseased, if alive they are sold by the owners or consignees to whoever will buy them; if they die in the yards they go to the rendering establishment. No dead animals are allowed to be taken out of the yards for food.

WILLIAM MITCHELL,
Agent Illinois Humane Society, stationed at Union Stock Yards to Enforce the Laws Regarding Cruelty to Animals.

Replies of Oscar DeWolf, M. D., commissioner of health of the city of Chicago, and Matthew Lamb, meat inspector.

CHICAGO, *February* 4, 1884.

MR. E. W. BLATCHFORD,
of American Pork Commission:

DEAR SIR: Your circular letter of the 21st ult. only came to hand yesterday, on my return from the East.

In reply, I have the honor to inform you that I was appointed commissioner of health in February, 1877, and have been in sole charge of the department since that date; that it is made by law my duty to supervise the meat supply of the city, and that I might properly perform this duty, it became necessary to extend the supervision to an examination of live-stock arriving at the stock-yards. For this purpose, there are three officers of this department on duty at the yards—all of them experienced judges of stock—who are directed to vigorously cull out and condemn all stock which, from any cause, is unfit for food.

The stock-yard authorities and large packers doing business at the yards have always honorably and actively co-operated with this department in this work. They

have placed pens and yards at our disposal, over which the health officers have absolute control, and into which the authorities place all animals condemned by the officers, such animals being slaughtered by the officer and turned over to the Union Rendering Company, as explained by officer Lamb. Whenever the force of officers on duty at the yards has been inadequate for the work, I am permitted to employ more men of my own selection, for which service the packers and stock-yard authorities cheerfully pay.

The statute under which we are authorized to act in this direction is section 7, chapter 38, "Revised Statutes of Illinois," 1874, as follows:

"Whoever * * * shall sell or offer to sell or keep for sale any flesh of any diseased animal, or other * * * unwholesome provision shall be confined in the county jail not exceeding one year, or be fined not exceeding $1,000, or both, in the discretion of the court;" and also section 1399 of the Revised Code of the city of Chicago, as follows:

1389. That no cattle shall be killed for human food while in an overheated, feverish or diseased condition; and all such diseased cattle in the city of Chicago, and the place where found and their disease, shall be at once reported to the commissioner of health by the owner or custodian thereof, that the proper order may be made relative thereto.

Respectfully, yours,

OSCAR C. DEWOLF, M. D.,
Commissioner of Health.

By ordinance the word "cattle" includes all animals used for food.

OSCAR C. DEWOLF,
Commissioner of Health.

Replies of Matthew Lamb, meat inspector, Chicago.

1. Is any examination made before unloading from cars to detect diseased or injured hogs?

No.

2. If so, what regulations govern such examination?

None.

3. When does "delivery" by R. R. Co. take place?

Immediately after arrival at stock-yards.

4. Are any special instructions given in regard to care in unloading?

There are strict orders from the superintendent of the stock-yards co. as to care; also, not to use any poles with spears. Should any employé disobey those orders he is forthwith discharged.

5. What is done with hogs found to be sick, diseased, bruised, or crippled.

Those that are unfit for human food are condemned by health officer and consigned to rendering tanks.

6. What is done with hogs found smothered?

They are used for grease.

7. What is done with hogs dead from disease?

They are also used for grease.

8. Are they sold?

Yes.

9. To whom?

The Union Rendering Company.

10. For what purpose?

For rendering purposes.

11. Where are they sent?

They are sent to the Union Rendering Company's establishment at Globe Station, Ill., 24 miles from Chicago.

12. How are they transported?

By railroad, in tight boxed cars.

13. What is done with healthy hogs on their arrival?

They are put in covered pens; said pens have a floor composed of plank.

14. When are they fed?

Generally on arrival.

15. What kind of food is given them?

Corn of the best quality, which is inspected by a corn inspector.

16. What quantity?

As much as they can consume. It is a gain to feed them, as all hogs are sold by weight.

17. How is it furnished to them?

It is fed to them in the pens.

18. Are they watered?

They are; also the water is good, healthy, and a large amount of it, as the yards have a big supply from five artesian wells.

19. When?

The water is turned on when the hogs enter the pen.

20. How is the water furnished to them?

There is a stand pipe in the pen; also a tight trough with a plug inserted in said trough, so when the hogs are after drinking, the plug is withdrawn and fresh water again supplied, if needed.

21. What quantity?

22. In the absence of orders by owners or consignees of hogs, have you any regulations authorizing the feeding and watering of hogs?

Yes; there are two humane officers at the yards who attend to such things; one is a State officer; the other is an officer of the Chicago Humane Society; also the Stock Yards' Company attend to such matters.

23. How are the hogs cared for in bad weather?

They are well cared for.

24. How many hogs die in the yards?

A *very* small percentage.

25. From what cause?

From overloading in some cases, and a few from disease, also some piggy sows, which in my opinion should not be shipped to market.

26. What is done with them?

They go to the Union Rendering Company's tanks, for grease purposes.

27. What is done with the diseased hogs, if discovered in the pens?

When killed, they are inspected by me, the health officer, and if unfit for human food they are condemned and put into rendering tanks for grease and fertilizing purposes.

28. How are these hogs disposed of?

Condemned and put in tanks for grease and fertilizing purposes.

29. How arranged to receive hogs from cars?

The arrangements are perfect in all divisions.

30. What is the size of the pens?

The pens vary in size from 500 square feet to 2,000 square feet; the first size will contain one car-load, and the latter size four car-loads.

31. How are they protected?

They are roofed over and well protected.

32. Are they drained?

They are well and thoroughly drained.

33. How can they be cleaned?

By a two-horse cart being driven into them and the refuse matter loaded into said cart and it taken therefrom.

34. What are the regulations in regard to keeping the pens clean?

To be cleaned when needed.

35. What measures are adopted to disinfect pens where diseased hogs have been?

Thoroughly washed out with water.

36. Is there any inspection made of the sanitary condition of the yards, or the condition and care of the hogs?

There are three sanitary policemen assigned to do duty at said yards.

37. If so, under what authority?

Those officers belong to the Chicago health department.

38. Is such inspection sufficient and effective to secure the sanitary condition of the premises and prevent any hogs, diseased or in improper condition, going into food?

It is.

39. Please state what system of supervision is adopted to prevent any diseased hogs going into food; and under what authority such supervision is exercised, whether municipal, State, or the national or local humane society?

I am stationed at the Union Stock-Yards from 7 a. m. until 6 p. m. each day to see that no diseased, crippled, emaciated, or bruised animal is used for human food; to condemn and confiscate forthwith such animal or animals, and have them consigned to the rendering tanks. I am under the supervision of Oscar C. DeWolf, M. D., commissioner of health of Chicago, Ill.

MATTHEW LAMB,
Meat Inspector at Union Stock-Yards, Chicago, Ill.

JANUARY 21, 1884.

(See blank form of order of health officer herewith.)

HEALTH DEPARTMENT, CITY HALL.
Chicago, January 21, 1881.

Matthew Lamb, sanitary inspector, is authorized to condemn and remove ——, at ——, No. —— street, as being detrimental to health and unfit for human food.

PENALTY FOR THE SELLING OF UNSOUND MEATS, ETC.

For the further maintenance of the public health, it is ordered that, if any person shall, on and after June 10, 1868, sell, or expose for sale, in any market-house or elsewhere in said city, any emaciated, tainted, or putrid meat or provisions, which for these or other causes may be deemed unwholesome, such person shall, on conviction, be fined not less than five nor more than five hundred dollars for each and every offense; and it shall be the duty of the sanitary superintendent or health officer to forthwith seize and confiscate all such meat or provisions.

By order of the commissioner of health.

OSCAR C. DEWOLF,
Health Officer.

THE HOG IN THE HANDS OF THE PACKERS; THE MODE OF PURCHASE, SLAUGHTERING, AND CURING.

The following questions were addressed to all the principal packers of the country, either personally or by mail, and the replies were made accordingly.

QUESTIONS SUBMITTED TO PACKERS.

1. Where and how are the hogs purchased?
2. How do you buy your hogs?
3. In selecting hogs do you reject the following, viz:
4. Diseased?
5. Bruised or abused hogs?
6. Ruptured?
7. Still-fed?
8. Piggy sows?
9. Stags?
10. Crippled hogs?
11. Are hogs usually rejected for these reasons?
12. Is it customary to buy hogs from the general appearance, weight, and evenness of a lot?
13. What is done with rejected hogs?
14. How long are the hogs kept in your pens before slaughtering?
15. Why are they kept this length of time?
16. How do you care for them in your pens?
17. How are these pens constructed?
18. Do any die in the pens?
19. If so, how many and from what cause?
20. What is done with the dead hogs?
21. How are the hogs prepared for slaughtering?
22. How are hogs taken from the pens to the slaughtering room?
23. If hogs are unable to be driven to the slaughtering room, what is done with them?
24. What mode of slaughter do you adopt?
25. What time is allowed the hog to bleed?
26. Is an examination made whether life is extinct before scalding?

TREATMENT OF CARCASS OF HOG AFTER SLAUGHTER.

27. What is the next process with the carcass?
28. What time is allowed the carcass to cool before cutting up?
29. Is the carcass thoroughly cooled before going to the cutting-bench?
30. Is this rule strictly carried out?
31. Why is the thorough cooling of the carcass important before cutting up and commencing to cure?
32. Is there any inspection made to ascertain that it is thoroughly cooled?
33. What is the rule for cutting?
34. Is inspection of meat had at time of cutting up, and for what?
35. Is such inspection sufficiently thorough to detect disease or bruises?
36. After cutting up the carcass, how are the parts treated to effect a cure?

37. How are they piled to secure thorough curing?
38. What is the temperature of the room?
39. What time is required for curing?
40. Is meat ever shipped before being cured?
41. Is it desirable to effect a cure in as short time as possible?
42. Is not the curing of the meat often forced for purpose of making it salable and deliverable in as short time as possible?
43. Do you ascertain by inspection the soundness of your cured meat?
44. To what causes do you attribute unsound or "sour" meat?
45. Do you attribute it to diseased carcass?
46. Do you attribute it to a faulty treatment?
47. What quality of "sour" meat do you have?
48. What is done with it?
49. What, if any changes in modes of curing are adopted for meats destined to markets in different climates?
50. Can as reliable results of curing be had in summer as in winter?
51. What kind or kinds of salt are used?
52. Why do you give this kind or kinds preference?
53. How is meat packed for shipment?
54. What is the quality of the packages used?
55. What is the size of packages?
56. What weight of meat is put in each box?
57. Is any salt put in?
58. How much to each box of meat?
59. What is the rule?
60. Is this rule strictly adhered to?
61. Is not less salt used than the rule calls for to save expense?
62. What is the character of the salt used?
63. Is any care taken that the salt be clean?
64. What is your rule for cutting mess pork?
65. How many pieces in each barrel?
66. What is the weight of meat in each barrel?
67. What kind of salt is used?
68. What quantity of salt is used?
69. How is the quality tested?
70. Where is mess pork stored?
71. What are the regulations regarding its storage?
72. What is the temperature of the warehouse?
73. What examinations are made as to its conditions from time to time?
74. What number of hogs do you kill annually?
75. What is their average weight?
76. What parts of the hog do you use for lard?
77. What do you include as offal?
78. What is done with the head?
79. What is done with the feet?
80. What is done with the entrails?
81. What is done with the heart?
82. What is done with the liver and lights?
83. What is done with the blood?
84. What is done with the refuse from tanks?
85. Is all meat inspected before being shipped?
86. By whom?
87. Under what authority?
88. Is meat ever packed and shipped without being inspected?
89. Under what circumstances?
90. Do you ever guarantee inspection?
91. If so, under what circumstances and to what extent?
92. What course does the inspector take in examining meat?
93. Does he examine each piece?
94. What tests are made?
95. For fully or properly cured?
96. For stags?
97. For piggy sows?
98. For "sour" meat?
99. For bruised meat?
100. For what causes is meat rejected?
101. What is done with meat rejected by the inspectors?

PURCHASE OF HOGS.

Those packing companies which do business in the large cities purchase their hogs in the stock-yards from the shippers, owners, or consignees. Packers in the smaller cities of the country buy directly from the farmers. In all cases the buying is done by experts, who are selected because of their ability to judge of the condition and health of the hogs. Barrows and spayed sows are preferred; "stags" and "piggy" sows are rejected by some, by others they are bought at a reduction of 60 to 80 pounds on the former and 40 pounds on the latter, and cured for domestic markets. Diseased, bruised, crippled, and ruptured hogs, with very few exceptions, are rejected. Still-fed hogs (distillery swill) are also generally rejected, the meat being too soft and oily.

DISPOSITION OF REJECTED HOGS.

The rejected hogs are generally tanked for grease, but "stags" and "piggy" sows often go into consumption as second quality pork. Bruised and crippled hogs which do not seem feverish are also at times cured after slaughter, provided the meat passes inspection as fit for food, but the injured parts are always rejected. As a rule the larger establishments refuse crippled and bruised hogs, and these find their way, when not tanked, into the hands of the city butchers, and unless condemned by the health officers are sold for local consumption.

HOGS IN THE PACKERS' PENS.

All the packers hold the hogs alive for from 12 to 48 hours before killing, in order that the excitement of the journey may be allayed and that they may have time to rest and cool. If killed sooner than this the animals are more or less feverish and overheated, and the meat can not be cured without danger of a large proportion becoming "sour," particularly about the joints of the hams and shoulders. During this time the animals are kept in covered and floored pens, with good water constantly before them, as this greatly assists the "cooling," and they are fed with corn until within 24 hours of the time of slaughter. Very few hogs die in the packers' pens, and these mostly from crowding and smothering each other, but the proportion is extremely small, varying from 1 in 5,000 to 1 in 1,000 handled. Such dead hogs go to the tanks for grease.

SLAUGHTERING.

The animals to be slaughtered are driven from the pens up an inclined way to one of the upper floors of the packing-house. Those fit to be killed, and too fat or from other cause unable to walk, are hoisted up to the slaughter pen. In most of the larger houses the animals are then lifted by the hind legs, and killed by sticking with the head hanging down. A considerable number of companies, however, knock the hog on the head before sticking or hoisting, as they think better meat is made from hogs killed in this way, the struggles of the animal after being stuck by the other method being supposed at times to cause injuries to the joints. In any case they are allowed to hang and bleed from three to ten minutes, or until dead, when they are dropped into the scalding vat, then scraped, and the entrails removed, when, after washing, they go to the cooling room.

COOLING AND CUTTING.

The carcasses are allowed to hang in the cooling room from 24 to 48 hours before cutting, and hams and shoulders are frequently cooled 12 to 24 hours longer before salting. The necessity of thorough cooling is well understood by all packers, and they are extremely particular in regard to this part of the process. Some test the meat with a thermometer, others rely upon hourly tests of the temperature of the room, but all agree that the cooling must be thorough, or the meat can not be cured without "souring;" a careful inspection is generally made before cutting to determine if this has been carried to the proper point. The cutting and trimming differs somewhat, according to the directions of the boards of trade in their respective cities, and the market for which the meat is intended.

The rules established by the Board of Trade of the City of Chicago, State of Illinois, September 1, 1883, are here inserted:

REQUIREMENTS AS TO CUT AND PACKING OF HOG PRODUCTS.

Barreled Pork.

MESS PORK.

Standard mess pork should be made from sides of well-fatted hogs, split through or on one side of the back-bone, and equal proportions on both sides, cut into strips of reasonably uniform width, properly flanked and not backstrapped.

One hundred and ninety (190) pounds of green meat, and between March 1 and November 1 two hundred (200) pounds, numbering not over sixteen (16) pieces, including the regular proportion of flank and shoulder cuts, placed four layers on edge, without excessive crowding or bruising, shall be packed in each barrel with not less than thirty (30) pounds of coarse salt, and barrel filled with brine of full strength, or thirty (30) pounds of coarse salt, and in addition thereto fifteen (15) pounds of salt, and barrel filled with cold water.

PRIME MESS PORK.

Prime mess pork should be made from the shoulders and sides of hogs weighing from one hundred (100) to one hundred and seventy-five (175) pounds net, to be cut as near as practicable into square pieces of four (4) pounds each, the shank of the shoulder to be cut off close to the breast.

One hundred and ninety (190) pounds of green meat in the proportion of twenty (20) pieces of shoulder cuts to thirty (30) pieces of side cuts shall be properly packed in each barrel, with not less than twenty (20) pounds of coarse salt, and barrel filled with brine of full strength; or, twenty (20) pounds of coarse salt, and in addition thereto, fifteen (15) pounds of salt, and barrel filled with water. There shall also be put into each barrel twelve (12) ounces of saltpeter.

EXTRA PRIME PORK.

Extra prime pork should be made from heavy, untrimmed shoulders, cut into three (3) pieces; the leg to be cut off close to the breast, and in all other respects to be cut, selected, and packed as mess pork.

LIGHT MESS PORK.

Light mess pork should be made from sides of reasonably well-fatted hogs; and in all other respects to be cut, selected and packed same as mess pork, except that as many as twenty-two (22) pieces may be put into each barrel.

BACK PORK.

Back pork should be made from backs of hogs after bellies have been taken off, cut into pieces of about six (6) pounds each, and in all other respects to be cut, selected, and packed in the same manner as mess pork.

EXTRA SHOULDER PORK.

Extra shoulder pork should be made from heavy trimmed shoulders, cut into three (3) pieces; the leg to be cut off close to the breast, and in all other respects to be cut, selected, and packed in the same manner as mess pork.

EXTRA CLEAR PORK.

Extra clear pork should be made from the sides of extra heavy, well-fatted hogs, the back-bone and ribs to be taken out, the number of pieces in each barrel not to exceed fourteen (14), and in all other respects to be cut, selected, and packed in the same manner as mess pork.

CLEAR PORK.

Clear pork should be made from the sides of extra heavy, well-fatted hogs, the back-bone and half the rib next the back-bone to be taken out, the number of pieces in each barrel not to exceed (14), and in all other respects to be cut, selected, and packed in the same manner as mess pork.

CLEAR BACK PORK.

Clear back pork should be made from the backs of heavy, well-fatted hogs, after bellies have been taken off and back-bone and ribs taken out, cut into pieces of about six (6) pounds each, and in all other respects to be packed in the same manner as mess pork.

RUMPS.

Rumps should be trimmed with only enough taken off to make them neat and smooth; the tails to be cut off close, and in all other respects to be cut, selected, and packed in the same manner as mess pork.

PICKLED MEATS.

STANDARD SWEET-PICKLED HAMS.

Standard sweet-pickled hams should be cut short and well rounded at the butt, properly faced, shank cut in or above the hock joint; to be reasonably uniform in size, and to average, in lots, not to exceed sixteen (16) pounds. Three hundrəd (300) pounds, block weight, shall be packed in each tierce, with either twenty-four (24) pounds of salt, three (3) quarts of good sirup, twelve (12) ounces of saltpeter, and tierces filled with water; or tierce filled with sweet pickle made according to above standard.

STANDARD SWEET-PICKLED SHOULDERS.

Standard sweet-pickled shoulders should be well cut and trimmed, reasonably uniform in size, and to average in lots not to exceed sixteen (16) pounds. Three hundred (300) pounds, block weight, shall be packed in each tierce. Pickle the same as used for hams.

NEW YORK SHOULDERS.

New York shoulders should be made from small, smooth hogs, shank cut off 1 inch above knee joint, trimmed close and smooth, reasonably uniform in size, and to average, in lots, not to exceed fourteen (14) pounds. Three hundred (300) pounds, block weight, shall be packed in each tierce. Pickle the same as used for hams.

SWEET-PICKLED BELLIES.

Sweet-pickled bellies should be made from nice smooth hogs, well cut and trimmed, to average, in lots, not to exceed fourteen (14) pounds. Three hundred (300) pounds block weight, shall be packed in each tierce. Pickle the same as used for hams.

BRANDING.

The packer's name, location, number of pieces, and date of packing shall be branded on the head of each package of pickled meats at the time of packing.

UNIFORMITY OF PICKLED MEATS.

All pickled meats should be sized when packed, the light, medium, and heavy separately, as nearly as practicable.

CUT MEATS.

HAMS.

Hams should be cut short, well rounded at the butt, properly faced, cut in or above the hock joint.

SHOULDERS.

Shoulders should be cut as close as possible to the back part of the forearm-joint, butted off square on top; neck-bone and spare-ribs taken out, blood-vein lifted and cut out, breast flap to be trimmed off, and foot to be cut off in or above the knee-joint.

BLADED SHOULDERS.

Bladed shoulders should be cut the same as standard shoulders, excepting the shoulder-blade to be taken out and the corners rounded.

ROUGH SIDES.

Rough sides should be made by slitting the hog through or on one side of the backbone, and an equal proportion of both sides must be delivered on sales to make them standard.

SHORT CLEAR SIDES.

To make short clear sides, the backbone and ribs should be taken out, hench-bone or breast-bone sawed or cut down smooth and even with the face of the side; feather of blade-bone not to be taken out, and sides not to be backstrapped or flanked.

SHORT-RIB SIDES.

To make short-rib sides, the backbone should be taken out, hench-bone and breast-bone sawed or cut down smooth and even with the face of the side; feather of blade-bone not to be taken out, and sides not to be backstrapped or flanked.

LONG CLEAR SIDES.

To make long clear sides, the backbone, shoulder-bones, and ribs must be taken out, leg cut off close to the brisket, hench-bone and breast-bone sawed or cut down smooth and even with the face of the side, and sides not to be backstrapped or flanked.

CUMBERLAND SIDES.

To make Cumberland sides, the side and shoulder should be left together in one piece, leg cut off below the knee-joint; shoulder-ribs, neck-bone, and backbone taken out; blood vein lifted and cut out; hench-bone and breast-bone sawed or cut down smooth and even with the face of the side, and sides not to be backstrapped or flanked.

LONG-RIB SIDES.

Long-rib sides should be made same as Cumberlands, except that the shoulder bones must be taken out and leg cut off close to the brisket.

STRETFORD SIDES.

Stretford sides should be made from hogs weighing about 140 to 160 pounds net; back-bone and half of the ribs taken out, blade-bone taken out, knuckle left in, and leg cut off close to the breast.

BIRMINGHAM SIDES.

Birmingham sides should be made from hogs weighing about 170 pounds net; backbone, ribs, and blade-bone taken out, pocket-piece cut out and pocket nicely rounded, knuckle-bone left in, and leg cut off close to the breast.

SOUTH STAFFORDSHIRE SIDES.

South Staffordshire sides should be made the same as Birmingham, except loin taken out full up to top of shoulder-blade, leaving only a thin strip of lean along the back; knuckle left in, and leg cut off close to the breast.

YORKSHIRE SIDES.

Yorkshire sides should be made the same as Cumberlands, with ribs out and leg cut off about two inches above the knee.

IRISH CUT SIDES.

Irish cut sides should be made the same as long clear, except top of the pocket cut off, knuckle-bone left in.

LONG HAMS.

Long hams should be cut from the side by separating with a knife the hip-bone from the rump, properly rounded out, foot unjointed at first joint below the hock-joint.

SOUTH STAFFORDSHIRE HAMS.

South Staffordshire hams should be cut short, hip-bone taken out at socket-joint, hock unjointed at first joint below the hock-joint.

UNIFORMITY OF BOXED MEATS.

In packing meats in boxes the pieces should be classified, the light, medium, and heavy separately, as nearly as practicable, in packages made to suit the different sizes.

LARD.

CHOICE LARD.

Choice lard to be made from leaf and trimmings only, either steam or kettle rendered, the manner of rendering to be branded on each tierce.

PRIME STEAM LARD.

Prime steam lard shall be standard when made from the head, gut, leaf, and trimmings in the proportion in which the same came from the hog, but shall not include any material which has been salted.

The rules established by the Chamber of Commerce of Cincinnati, Ohio, are here inserted.

RULES FOR THE CUT AND MANUFACTURE OF THE HOG PRODUCT.

BARRELED PORK.

MESS PORK.

Mess pork shall be cut and packed from sides of well-fatted hogs in strips; the hog to be first split through the backbone, or, if split on one side, then an equal proportion of hard and soft sides, as they are termed, must be packed, properly flanked, and not backstrapped. One hundred and ninety pounds of green meat, nnmbering not over sixteen pieces, including the regular proportion of flank and shoulder cuts, four layers placed on edge, without excessive crowding or bruising, must be packed into each barrel, with not less than thirty-five pounds of good foreign, or forty pounds of good domestic, coarse salt, and filled up with good, clear brine, as strong as salt will make it. The pork to be cut reasonably uniform in width. The packer's name and location, the date of packing, and the number of pieces and pounds of green meat in each barrel must be branded on the head with a metallic brand, marking iron, or stencil brand, at the time of packing.

PRIME MESS PORK.

Prime mess pork shall be made of the shoulders and sides of nice, smooth fat hogs, weighing from 100 to 160 pounds, net, regularly cut into square pieces, as near four pounds each as possible, the shank to be cut off close to the breast; each barrel to contain one hundred and ninety pounds of green meat, in the proportion of twenty pieces of shoulder and thirty pieces of side cuts, and to be packed with twenty pounds of good, coarse salt, with the addition of eight ounces of saltpeter. The prime pieces should be cut clear of the blade-bone; the shoulder-pieces not to exceed eighty-five pounds in each barrel.

EXTRA PRIME PORK.

Extra prime pork shall be made from heavy, untrimmed shoulders, cut into three pieces, the leg to be cut off close to the breast, to be packed one hundred and ninety pounds of green meat into each barrel, with the same quantity and quality of salt as mess pork.

LIGHT MESS PORK.

Light mess pork shall be made from the sides of reasonably well-fatted hogs, and in all other respects to be cut, selected, and packed the same as mess pork, except that as many as twenty-two pieces may be put into each barrel.

FAMILY MESS PORK.

Family mess pork shall be made from backs of hogs, after bellies have been taken off, cut into pieces about six pounds each, and in all other respects to be selected and packed in the same manner as mess pork.

EXTRA SHOULDER PORK.

Extra shoulder pork shall be made from heavy, trimmed shoulders, cut into three pieces, the leg to be cut off close to the breast, and in all other respects selected and packed in the same manner as extra prime pork.

EXTRA CLEAR PORK.

Extra clear pork shall be made from the sides of extra heavy, well-fatted hogs, the back-bone and ribs to be taken out, the number of pieces in each barrel not to exceed fourteen, and in all other respects to be cut, selected, and packed in the same manner as mess pork.

CLEAR PORK.

Clear pork shall be made from the sides of extra heavy, well-fatted hogs, the back-bone and half the rib next to the back-bone to be taken out, the number of pieces in each barrel not to exceed fourteen, and in all other respects to be cut, selected, and packed in the same manner as mess pork.

CLEAR FAMILY MESS PORK.

Clear family mess pork shall be made from the backs of heavy, well-fatted hogs, after bellies have been taken off and back-bone and ribs taken out, cut into pieces of about six pouuds each, and in all other respects to be packed in the same manner as mess pork.

RUMPS.

Rumps shall be trimmed with only enough taken off to make them neat and smooth, the tails cut off close, each barrel to contain one hundred and ninety pounds of green meat, packed in the same quantity and quality of salt as mess pork, and the number of pieces to be similarly branded on each barrel at the time of packing.

PICKLED MEATS.

STANDARD SWEET-PICKLED HAMS.

Standard sweet-pickled hams shall be cut short and well rounded at the butt, properly faced, shank cut just in or above the hock-joint, to be reasonably uniform in size and average. Three hundred pounds, block weight, shall be placed in each tierce.

STANDARD SWEET-PICKLED SHOULDERS.

Standard sweet-pickled shoulders shall be well cut and trimmed; shank cut in or above the knee-joint, to be reasonably uniform in size. Three hundred pounds, block weight, shall be packed in each tierce.

NEW YORK SHOULDERS.

New York shoulders shall be made from small, smooth hogs, shank cut off one inch above knee-joint, trimmed close and smooth, reasonably uniform in size, and to average, in lots, not to exceed fourteen pounds. Three hundred pounds, block weight, shall be packed in each tierce.

SWEET-PICKLED BELLIES.

Sweet-pickled bellies shall be made from nice, smooth, hogs, well cut and trimmed, to average, in lots, not to exceed fourteen pounds. Three hundred pounds, block weight, shall be packed in each tierce.

BRANDING.

The packer's name, location, number of pieces, and date of packing shall be branded on the head of each package of pickled meats at the time of packing.

UNIFORMITY OF PICKLED MEATS.

All pickled meats shall be sized when packed, the light, medium, and heavy separately, as near as practicable.

CUT MEATS.

HAMS.

Hams shall be cut short, well rounded at the butt, properly faced, cut just in or above the hock-joint.

SHOULDERS.

Shoulders shall be cut at right angles to the side, and as close as possible to the back part of the fore-arm joint, butted off square on top, neck-bone and short ribs taken out, blood-vein lifted and cut out, breast-flap to be trimmed off, and foot to be cut off in or above the knee-joint.

BLADED SHOULDERS.

Bladed shoulders shall be cut the same as "Standard" shoulders, excepting the shoulder-blade to be taken out and the corners rounded.

ROUGH SIDES.

Rough sides shall be made by splitting the hog through one side of the back-bone, and an equal proportion of both sides must be delivered on sales, to make them "Standard."

SHORT CLEAR SIDES.

To make short clear sides the back-bone, breast-bone, and ribs shall be taken out, and hench-bone sawed down smooth and even with the face of the side, feather of blade-bone not to be taken out, edges to be left smooth, sides not to be back-strapped or flanked.

SHORT RIB SIDES.

To make short rib sides the back-bone should be taken out, hench-bone and breast-bone sawed or cut down smooth and even with the face of the side, feather of blade-bone not to be taken out, and side not to be back-strapped or flanked.

LONG CLEAR SIDES.

To make long clear sides the back-bone, shoulder-bones, ribs, and breast-bone must be taken out, leg cut off close to the brisket, hench-bone sawed down smooth and even with the face of the side, and the sides not to be back-strapped or flanked.

CUMBERLAND SIDES.

To make Cumberland sides, the side and shoulder should be left together in one piece; foot cut off in or above knee-joint; shoulder-ribs, neck-bone, and back-bone taken out; blood-vein lifted and cut out; hench-bone and breast-bone sawed or cut down smooth and even with the face of the side, and sides not to be back-strapped or flanked. Ribs must not be scribed.

LONG RIB SIDES.

Long rib sides to be made same as Cumberlands, except that the shoulder-bones must be taken out, and leg cut off close to the brisket.

STRETFORD SIDES.

Stretford sides shall be made from hogs weighing about 140 to 160 pounds net; back-bone and half the ribs taken out, blade-bone taken out, knuckle left in, and leg cut off close to the breast.

BIRMINGHAM SIDES.

Birmingham sides shall be made from hogs weighing about 170 pounds net; back-bone, ribs, and blade-bone taken out, pocket-piece cut out, and pocket nicely rounded, knuckle-bone left in, and leg cut off close to the breast.

SOUTH STAFFORDSHIRE SIDES.

South Staffordshire sides shall be made the same as Birmingham, except loin taken out full to top of shoulder-blade, leaving only a thin strip of lean along the back; knuckle left in and leg cut off close to the breast.

YORKSHIRE SIDES.

Yorkshire sides shall be made the same as Cumberlands, with the ribs out, the leg cut off about two inches above the knee.

IRISH CUT SIDES.

Irish cut sides shall be made the same as long clear, except top of the pocket cut off, knuckle-bone left in.

LONG HAMS.

Long hams shall be cut from the side by separating with a knife the hip-bone from the rump, properly rounded out, foot unjointed at first joint below the hock-joint.

SOUTH STAFFORDSHIRE HAMS.

South Staffordshire hams shall be cut short, hip-bone taken out at the socket-joint, hock unjointed at first joint below the hock-joint.

UNIFORMITY OF BOXED MEATS.

In packing meats in boxes, the pieces shall be classified—the light, medium, and heavy separately, as nearly as practicable, in packages made to suit the different sizes.

LARD.

CHOICE LARD.

Choice lard to be made from leaf and trimmings only, either by steam or kettle rendered, the manner of rendering to be branded on each tierce.

PRIME STEAM LARD.

Prime steam lard shall be standard, made from head, gut fat, leaf and trimmings, in the proportion in which the same come from the hog.

* CURRENT MAKE LARD.

Current make lard shall be standard, made from head, gut fat, leaf and trimmings in the proportion in which the same come from the hog; white and sweet; steam rendered.

RULES FOR THE REGULATION OF THE TRADE IN COOPERAGE.

Rule 1. The board of officers (directors) shall annually appoint a competent inspector of cooperage, who shall inspect all such cooperage as he may be called upon to examine according to these rules, determining with a wind-bellows the tightness of packages to hold liquids, lard, or pickled meats.

Rule 2. The certificate of such inspector shall be binding in the settlement of any differences as to the quality that may arise between buyer and seller, but, in the event of either party feeling dissatisfied with such inspection, an appeal may be made to the committee on provisions or whisky inspection, as the article inspected may properly belong to one or the other, and the decision of such committee shall be final.

The fees to be allowed the inspector shall be as follows:

For seventy-five (75) or a less number of barrels, half barrels, kegs, or tierces	$1
For lots exceeding seventy-five (75) packages of the same, per package	1½ cents.
For hogsheads, half hogsheads, or boxes, per package	3 cents.

Rule 4. The fees shall in all cases be paid by the party employing the inspector.

PACKAGES.

Cooperage shall be made of well-seasoned white oak, free from objectionable sap.

PORK BARRELS.

For pork barrels, staves shall be five-eighths (⅝) of an inch thick, thirty (30) inches long; heads made in an eighteen (18) inch tress, one (1) inch thick in center and three-eighths (⅜) of an inch at bevel; hoops of hickory, not more than ten on an end; barrel to be hooped not less than eleven-sixteenths (11-16).

TIERCES.

Tierces for hams, shoulders, or lard shall be thirty-two (32) to thirty-three (33) inches long, heads made in twenty-one (21) inch tress-hoops and same thickness as for barrels; staves may or may not be chamfered at the head, as may be agreed upon by the buyer and seller; shall be three-quarters (¾) of an inch, quality of staves and hoops to be same as for barrels. Tierces to be hooped eleven-sixteenths (11-16) and to have not more than ten hoops to an end. Iron-bound tierces, for pickled hams and shoulders, shall be classed as "Standard" if made in compliance with the requirements of this rule as to heading and staves, and hooped with not less than three (3) good hoops on each end; the chime hoops to be 1¾ inches in width, the quarter and bilge hoops to be 1½ inches in width, and to weigh, per set, not less than ten (10) pounds to the tierce.

LARD KEGS.

Lard kegs shall be made of same quality of timber as pork barrels and lard tierces; staves to be 16½ inches long and ⅝ of one inch thick, to be made in 11½-inch tress-hoops; hoops to be hickory, and the packages to be fully two-thirds hooped.

HALF BARRELS.

Half barrels for pork, beef, and lard shall be made of same quality of timber as barrels and lard tierces; staves to be 24 inches long and ⅝ to ¾ of an inch thick, and the packages to be made in 15-inch tress-hoops; all hoops to be hickory, and packages to be fully two-thirds hooped.

BEEF TIERCES.

Beef tierces shall be made the same as lard tierces, but to be entirely free from sap, and the second hoop from each end to be 1¼-inch iron, oiled or painted.

---

*Adopted August 6, 1875.

SLACK HAM TIERCES.

Slack ham tierces shall be made in 22-inch tress-hoops; staves to be 33 inches long, good hickory hoops, 3 hoops at the end and 3 at the bilge.

SLACK AND FLY-TIGHT HOGSHEADS.

Slack and fly-tight hogsheads shall be made in 32-inch tress-hoops; good hickory hoops; staves to be 42 inches long. Slack hogsheads to be hooped with 12 hoops and quarter bound, middle head-piece to be pine or oak. Fly-tight hogsheads to be same as slack, but to be hooped with 16 hoops instead of 12.

HALF HOGSHEADS.

Half hogsheads shall be made in 28-inch tress-hoops; staves to be 34 inches long; good hickory hoops; packages to be quarter bound (12 hoops); middle head-piece to be of pine or oak.

BOXES.

Boxes should be made of sound, common boards, reasonably dry, one (1) inch thick, dressed on one side, not over two (2) strips at each end, and three (3) strips to each side, bottom, or top; to have good, strong, hard wood, white-wood or sap-pine stays inside each corner; shall be well nailed and strapped with birch, oak, or hickory straps around each end, to lap three (3) inches on the cover. All boxes to contain five hundred (500) pounds, net, shall have three straps. Boxes shall be nailed together with ten-penny nails, and the stays nailed in with eight-penny nails.

INSPECTION OF CARCASS WHEN CUT.

At the time of cutting there is generally a rigid inspection by the superintendent of the cutting-room of the packing companies, when all objectionable pieces—bruised and unmerchantable meat—is rejected and either sent to the rendering tanks or put by itself and classed as second quality. It is believed by the packers that this inspection is sufficiently thorough to detect any diseases or bruises that may have escaped notice before the hog was slaughtered; and it certainly would be more profitable to tank the meat at this stage, if such diseased or bruised meat were discovered, rather than attempt to carry it through the process of curing to "sour" in the end, or be detected by subsequent inspections and injure the reputation of the company. The cut meats are either packed in barrels with salt and these filled with strong brine, or they are well rubbed with salt and piled with layers of salt between. At first they are only piled two or three deep, each lot is dated, and they are rehandled as necessary and afterwards piled 4 or 5 deep, and finally the piles are made 6 to 10 layers high. The pressure must not be too great or the curing is retarded. The temperature of the room is kept at 35° to 45° Fahrenheit. If too cold, the meat does not take salt well. The time for curing varies from twenty to ninety days, according to the kind of meat, the market for which it is put up, and the season of the year. Meats free from bone cure quicker than those containing bone; those for southern markets require more curing than those for markets farther north; and less curing is neccessary in winter than in summer.

Again, English and French consumers prefer meats with less salt than is used for home consumption or for shipment to the South or the West Indies, while certain brands of hams receive as little salt as possible.

SHIPPING WHEN PARTLY CURED.

Meat is frequently shipped before it is fully cured, but it is believed the age is correctly given by the seller. If thoroughly cooled before cutting it can be shipped within ten days in winter. Barreled pork can be shipped freshly packed and cures in transit. Meats are also shipped when partly cured in boxes with salt, and also in bulk, packed in cars in the same way, and the curing goes on during transportation.

There are also said to be compounds for accomplishing the same object, but according to our information they are seldom, if ever, used. As a rule, it is not considered desirable to hasten the curing; and all meat put up to be transported long distances is fully cured.

INSPECTION OF CURED MEATS.

A thorough inspection is always made of meats when they are taken from the curing floors for packing. Some packers make a double inspection at this time; that is, it is inspected when it is taken from the curing floors, and again when packed.

The object of this inspection is to detect any pieces that may have become unsound or "sour" during the process of curing. All houses reject more or less meats at this time, the quantity rejected varying from 0.05 to 1 per cent. of the whole.

UNSOUND MEAT.

Unsound or "sour" meat is the result of various causes. If animals are slaughtered too soon after arrival in the yards; or if for any other cause they are feverish; or if the carcass is not sufficiently cooled before cutting; or if there is negligence in curing or careless handling; or if there is an excess of moisture in the atmosphere, a portion of the meat becomes tainted or "sour." If very bad, this rejected meat is tanked, but otherwise it is sold on its merits, and is marketed in the South or in the West Indies, where it is said to bring nearly as much as sound meats.

SUMMER CURING.

Some establishments pack only in winter, but many others are operated the whole year. Where there are proper facilities the summer curing not only equals that done in winter, but it is believed by some to be even more reliable, as by the use of the "refrigerator rooms" the temperature can be better controlled.

SALT USED IN PACKING.

The salts most generally used in packing in the United States are the Syracuse solar salt, of which 2,500,000 bushels were manufactured last year; Michigan solar salt, of which 50,000 bushels were manufactured last year, and Turk's Island salt.

For rubbing hams, either the ground solar salt or the Syracuse factory-filled dairy salt is employed.

Some years the War Department of the United States Government caused some practical tests to be made by having meats packed with Turk's Island and Syracuse solar salt. The meats were afterwards sent to the different ports on the sea-coast, on the Gulf of Mexico, and in the interior.

The result of the experiment demonstrated the fact that the Syracuse solar salt is equal in every respect for packing purposes to the imported

Turk's Island sea salt, and since that time the United States Government has required that beef and pork packed for the Army and Navy shall be packed with Turk's Island or Syracuse solar salt.

American packers fully appreciate the importance of good salt, and are very careful in securing the best brands.

The following analyses of American and European salts show that the salts used in this country compare very favorably with those of Europe.

Analyses of salt used in the United States.

	Sodium chloride.	Calcium chloride.	Magnesium chloride.	Sodium sulphate.

AUTHORITIES FOR ANALYSES.

Analyses numbered 1 to 8 of salts used in the United States were made by C. A. Goessmann, Ph. D., professor of chemistry in the Massachusetts Agricultural College, and published in a lecture on salt and its uses in agriculture, delivered before the State department of agriculture in Massachusetts.

Analyses 9, 10, 11, and 12, of Portuguese salt is from the Mechanics' Magazine.

No. 13 is by Von Stolba, and are from Oesterr-Zeitschrift für Burg-u-Hüttenwesen, 1867.

Nos. 14 and 15 are by Von Stolba, and are from Die chemische Mittheilungen, Prag, 1880.

No. 16 is by Heine, and is taken from Knapp's Lehrbuch der chemischen Technologie, 3d ed.

Nos. 17, 18, 19, 20, and 21, are by Enders, and are from the Archiv der Pharmacie, vol. 143, p. 20.

PACKING THE PORK.

Mess pork is packed in barrels with layers of salt around and between the pieces. The salt used for this is usually one of the domestic brands, but the barrel is "capped" either with Turk's Island or a very fine quality of coarse salt which comes from Louisiana. The barrel is then filled with brine of full strength. From 35 to 40 pounds of salt is used to each barrel, exclusive of that contained in the brine. For box meats about 10 per cent. of salt is used for curing and 6 per cent. for packing. A few packers are said to have their salt tested by chemists, but the majority rely upon the brand and appearance.

The size and quality of the packages are generally regulated by the boards of trade. Barrels contain from 12 to 16 pieces, or 190 pounds, of meat, boxes from 400 to 750 pounds, and tierces from 325 to 350 pounds. The boxes are made of pine, the barrels and tierces of oak.

The following are the rules regulating packages in force by the Chicago Board of Trade:

PACKAGES.

Cooperage.

Cooperage shall be made of well-seasoned white or burr oak, free from objectionable sap.

Barrels.

For barrels, staves should be five-eighths ($\frac{5}{8}$) of an inch thick, twenty-nine (29) or thirty (30) inches long; heads eighteen (18) inches, one (1) inch thick in center and three-eighths ($\frac{3}{8}$) at bevel; hoops, hickory or white oak, to be hooped not less than eleven-sixteenths ($\frac{11}{16}$).

Tierces.

Tierces for hams, shoulders, beef, or lard, should be thirty-two (32) inches long with a twenty-one (21) inch head, or thirty-three (33) inches long with a twenty and one-half ($20\frac{1}{2}$) inch head; staves to be chamfered at the head. Quality of staves and hoops to be the same as for barrels; staves three-fourths ($\frac{3}{4}$) of an inch thick; heads same thickness as for barrels; hooped eleven-sixteenths ($\frac{11}{16}$). Iron-bound tierces for lard, hams, or shoulders, shall be classed as standard if made in compliance with the requirements of this rule, as to heading and staves, and hooped with not less than four good hoops on each end.

Boxes.

Boxes should be made of sound common boards, reasonably dry, one inch thick, dressed on one side, not over three strips to each end, side, bottom, or top; to have good, strong hardwood, whitewood, or sap pine stays inside each corner; should be well nailed and strapped with birch, oak, or hickory straps around each end, to lap three inches on the cover. Boxes should be nailed together with tenpenny nails, and the stays nailed in with eightpenny nails.

Mess pork is stored in warehouses at a temperature of 40° to 50° Fahrenheit. In cold weather it is often left out of doors.

INSPECTION OF PACKED MEATS.

The owners of pork have examinations made from time to time by rolling the barrels from time to time to learn if there has been leakage and loss of pickle. The boards of trade provide for an inspection of all hog products at time of sale, and this is made either by the regular board of trade or city inspectors, or by a private inspector agreed upon by the parties to the transaction. In all cases it is the privilege of the party purchasing to have a thorough inspection of the goods, and in the regular trade this inspection is always made by skilled experts. Very frequently the buyer prefers the inspection of the packers to that of public authorities, and the meats are guaranteed down to the consumer. If in this case they are in any way defective from the negligence of the packer deductions are allowed or the goods can be returned.

Generally but 2 per cent. of the pork in barrels is actually inspected at this time, though the buyer can have all inspected if he desires. Meats, either in boxes or in bulk, are examined piece by piece. A steel tryer is forced into every piece and its soundness determined by the appearance and odor of the instrument on its withdrawal.

Inspection is also made at this time for irregularly cut or oily meats, for bruises, for the meat of "stags" and "piggy" sows, and for any form of unsoundness, and all such meats are rejected.

The meat from diseased animals almost invariably "sours" in curing, and can not be made into first quality goods.

The meat of "stags" is distinguished by the thickness and coarseness of the skin, and that of "piggy" sows by the size of the teats and the general appearance.

The inspector is paid by the buyer, and the inspection is made according to rules and prices adopted by the boards of trade in all the larger cities.

The regulations for the inspection of provisions of the Chicago Board of Trade in force September 1, 1883, are as follows:

REGULATION 1. For the examination of provisions sold as standard it shall be the duty of any inpector properly appointed by the association, on receiving notice, to go to any packing-house or warehouse in the city to examine provisions, in such quantities as may be required, selecting the same in such a manner from the lots specified as, in his judgment, will give a fair sample of the whole.

REG. 2. If, upon examination, the property is found, in all respects, up to the requirements of the classification of the grades adopted by the association, he shall issue a certificate to that effect, which certificate shall state the number of packages, pieces, or pounds examined, and also the number of packages, pieces, or pounds in the lot to which the examination is intended to apply, and that the packages (if any) are in good merchantable order and condition. In the case of lard no certificate for inspection shall be issued unless every package is examined; but, on request of the owner or person ordering the inspection, the inspector may examine a part of a lot, and issue a certificate of such examination, stating the number of packages examined, and also the whole number of packages in the lot.

REG. 3. When necessary to remove property for the convenience of examination, it

shall be the duty of the inspector to send for the same, that a fair sample may be obtained. In no case should a certificate be granted on samples delivered by the seller.

REG. 4. The fees for inspection are established as follows: For inspection by sampling—including repacking and coopering—beef and pork, for the first five barrels, eighty (80) cents per barrel, and for each additional barrel, twenty-five (25) cents. For inspecting S. P. meats, for the first five tierces, one (1) dollar per tierce, and for each additional tierce, twenty-five (25) cents. For inspecting boxed meats, for the first five boxes, one (1) dollar per box, and for each additional box, fifty (50) cents. When the whole of a lot is inspected—labor and coopering to be furnished by the seller—for beef and pork, ten (10) cents per barrel. For S. P. meats, in lots of fifty (50) tierces or more, twelve and a half (12½) cents per tierce; in lots of one hundred (100) tierces or more, ten (10) cents per tierce. For bulk or boxed meats, in car-load lots or more, fifteen (15) cents per one thousand (1,000) pounds. For lard, in lots of one hundred (100) tierces or more, four (4) cents per tierce. For tallow and grease, five (5) cents per tierce. The fees for weighing, not including breaking down and repiling, are established as follows: Lard and grease, in lots of one hundred (100) packages or more, four (4) cents per package. Tallow, in half hogsheads, or smaller packages, five (5) cents per package; in hogsheads, ten (10) cents each. Bulk meats, not including labor, ten (10) cents per one thousand (1,000) pounds. For stripping lard or grease, at regular warehouses, not less than five (5) packages, fifty (50) cents per package. For the labor of breaking down and repiling, the inspector shall be paid three (3) cents per package, the same to be paid to the warehouseman if repiled, or to the party shipping the property if shipped without repiling.

REG. 5. It shall be the duty of the inspector, when requested by the owner, either at any packing-house, warehouse, or in yards provided by the inspector, to overhaul and inspect provisions, according to the qualifications and classifications authorized; two hundred pounds of meat, with abundance of good salt, to be repacked into each barrel, and cooperage to be put into good order; each barrel of provisions that is sound, sweet, and free from any and every defect, to have grade and date of inspection branded thereon, and the word "Repacked," as hereinafter specified; and any portion that is defective to be branded, in like manner, rusty, sour, or tainted, as the case may be; the said brand to be placed with the inspector's brand across the regular packer's brand; such provisions, according to the grade or quality, to be classed as "Repacked 200 lbs."

REG. 6. The inspectors shall use metallic letters and figures, marking-iron or stencil for their dates and class of inspection.

REG. 7. It shall also be the duty of the inspector to put his metallic brand, marking-iron or stencil on all samples of provisions in tierces or barrels that he inspects; and he shall pass no hog products in tierces or barrels, as standard, unless the real packer's name, location, number of pieces, date, and weight of the products contained therein are branded, according to these rules, on the head of every package.

REG. 8. Should the inspector be called upon to inspect pickled meats, and upon examination he should be of the opinion that the number of pounds required by these rules had not been originally packed, he shall not pass them as standard, but shall refer the matter at once to the committee on provision inspection, who shall investigate, and if a satisfactory explanation can be given or arrived at, they shall instruct the inspector to proceed and inspect and pass them; but if not satisfactory to the committee they shall, in their judgment, make the fact known to the association in any way they may think most proper.

REG. 9. Contents of each package of pickled meats must show a reasonable uniformity in weight, according to its class.

REG. 10. It shall be the further duty of the inspectors, during the packing season, to visit frequently the different packing-houses to see that provisions are properly dated and branded at time of being packed.

REG. 11. Dry salted rough sides may be made into short rib or short clear sides, and dry salted short rib sides may be made into short clear sides, if, in all other respects, they are up to the requirements, and shall be classed as standard.

REG. 12 All the foregoing regulations, and the requirements as to the cut and packing of hog products, must be justly and liberally construed, and no property shall be rejected or condemned on mere technicalities; but this shall not be regarded as giving license to departure from their general spirit and intent.

The rules adopted by the Cincinnati Chamber of Commerce for governing the provision trade, including inspection, dated August 1, 1882, are as follows:

Rules for the government of the provision trade.

RULE 1. The committee on provision inspection shall act as referees in all cases of complaints against inspectors, or the inspection of any lot of provisions, or any matters of business pertaining to the same; but the buyer shall, in all case, have the right to designate his own inspector; but in case the seller feels that injustice is being done, he shall have the right to call upon the committee of inspection, whose decision shall

be final and binding. Any inspector agreed upon by parties to a transaction shall be regarded as a regularly authorized inspector subject to the rules of the chamber, and the committee on provisions shall constitute the committee of reference.

RULE 2. All appeals from inspection must be made before the property leaves the city, packing point, or place of delivery.

RULE 3. Pork products packed between November 1st and March 1st shall alone be classed as "standard."

RULE 4. In sales of fully cured meats, or to be fully cured and delivered at a specified time, the seller must deliver in good faith according to contract, the inspector to be the judge, who shall always be fully informed of the conditions of the contract before proceeding to inspect. Where sales of dry salted meats are made without other specifications, it shall be considered that the sales contemplate meats fully cured, the inspector to be the judge.

RULE 5. In case of no specific agreement, the saltage allowed on bulk meats shall be one (1) per cent. from the 1st of November to the 1st of May; but should the buyer or seller object, the inspecter shall sweep as many drafts as he considers necessary, and the percentage thus obtained shall be binding on both parties. But from the 1st of May to the 1st of November, the tare shall be ascertained by washing in cold water with a cloth, in case of no special agreement to the contrary. A drainage of one (1) per cent. shall be allowed on pickled hams and shoulders.

RULE 6. To determine the tare on lard, the package shall first be weighed gross, the lard then removed, and the empty package subjected to dry heat and drained; after which the empty package shall be weighed, and its weight deducted from the gross weight. The difference thus obtained shall be considered the net weight of the lard.

RULE 7. Three hundred and twenty pounds, net, shall be the average weight of a tierce of lard, upon which all settlements with contractors shall be based; but the number of packages the contract calls for must be delivered, and the difference, if any, settled at the market price on the day of delivery.

RULE 8. Four hundred to four hundred and fifty pounds, net, shall constitute a box of Cumberland middles, and four hundred and seventy-five to five hundred and twenty-five pounds, net, shall constitute a box of all other English cuts of middles, shoulders, and hams, and all boxes containing over five hundred pounds of meat to have a third strap around the box. All settlements of contracts shall be made on a basis of four hundred and twenty-five pounds per box, net, for Cumberland cut, and five hundred pounds per box, net, for all other English cuts of meats.

RULE 9. If, on inspection of a fair sample of bulk meats, twenty (20) per cent., or over, is found to be sour, the buyer shall not be required to take the lot.

RULE 10. All the foregoing rules must be justly and liberally construed, and no property shall be rejected or condemned on a mere technicality.

RULE 11. The committee on provisions shall not have power of arbitration, but shall be empowered to consider all cases in reference to quality of meats, cooperage, etc., and parties refusing to abide the decision of the committee, while acting in their line of duty, shall be liable to arraignment for unmercantile conduct.

*RULE 12. In case of no specific agreement, contracts for 100 barrels of pork, 100 tierces of lard, 100 boxes dry salted meats, or for a larger amount, deliveries can be made on seller's option or called for on buyer's option, in lots of not less than 100 packages, as named above, nor less than 100 packages of one brand.

Contracts for 50 hogsheads, or 50 half-hogsheads, of bacon or dry salted meats, or more, deliveries can be made on seller's option, or called for on buyer's option in quantities of not less than 50 hogsheads or 50 half-hogsheads, and not less than this quantity of one brand.

Contracts for 100,000 pounds of bacon or dry salted meats, loose, or for a larger amount, deliveries can be made on seller's option, or called for on buyer's option, in quantities of not less than 100,000 pounds.

Contracts for 100 tierces of hams, or shoulders in pickle, smoked or canvassed, or for a larger amount, deliveries can be made on seller's option, or called for on buyer's option, in lots of not less than 50 tierces, nor less than 50 tierces of one brand.

Payment to be made as lots are delivered.

RULE 13. It shall be the duty of the inspector of provisions to weigh stuff when called upon, receiving therefor a fee of five (5) cents per each one thousand (1,000) pounds, in addition to the inspection fee—the party ordering the weighing to be responsible for the fee.

RULE 14. The inspector shall keep a record, in detail, of every examination he may make, that he may be qualified to testify positively in event of a dispute.

RULE 15. For the examination of provisions sold as "regular," it shall be the duty of the inspector (or his deputed assistants), on receiving notice, to go to any packing house or warehouse in the city to examine provisions in such quantities as may be required, selecting the same in such manner, from the lots specified, as in his judgment will give a fair sample of the whole.

---

* As amended September 27, 1875.

RULE 16. If upon examination it is found in all respects up to the requirements, according to the classification or grades adopted by the chamber of commerce, he shall issue certificates to that effect.

When necessary to remove property for the convenience of examination, it shall be the duty of the inspector to send for the same, that a fair sample may be obtained.

In no case should a certificate be granted on samples delivered by the seller.

RULE 17. The inspector shall be entitled to receive as compensation for examining provisions, as follows: For beef and pork, in barrels, five dollars for the first five barrels, the inspector furnishing labor and other requirements, and seeing that the property is properly repacked and rebrined, and fifty cents for each additional barrel examined—payable by the buyer if regular, and by the seller if rejected, and cartage when removed; and for bulk, bacon, or boxed meats, fifteen cents per one thousand pounds, payable by the buyer. For inspecting lard, five cents per package, payable by the buyer if accepted, or by the seller if rejected; and for stripping lard, one dollar per package, to be paid by the buyer. Five barrels of pork or five tierces of lard to be sufficient to sample any lot sold, unless otherwise agreed between buyer and seller.

RULE 18. It shall be the duty of the inspector, when requested by the owner, either at any packing-house, warehouse, or in yards provided by the inspector, to overhaul and inspect provisions according to the qualifications and classifications authorized; two hundred pounds of meat, with abundance of good salt, to be repacked in each barrel, and cooperage to be put in good order. Each barrel of provisions that is sound, sweet, and free from any and every defect, to have grade and date of inspection branded thereon, and the word "repacked," as hereinafter specified; and any portion that is defective, to be branded in like manner "rusty," "sour," or "tainted," as the case may be; the said brand to be placed, with the inspector's brand, across the regular packer's brand, such pork, according to the grade or quality, to be classed as "repacked, 200 pounds."

RULE 19. The inspector shall use metallic letters and figures or marking-iron for his dates and classes of inspection.

RULE 20. It shall also be the duty of the inspector to put his metallic brand or marking-iron on samples of provisions in packages that he inspects; and he shall pass no pork products as "regular" unless the real packer's name of the product contained therein is branded, according to these rules, on the head of each package.

RULE 21. In all cases of sales of provisions as "regular," the inspector shall examine and inspect when called on; and if the property be up to the requirements, he shall issue a certificate simply for so many barrels or packages of product (naming it), for so many pieces or pounds of meat (naming the kinds).

RULE 22. Should the inspector be called on to inspect pickled meats, and upon examination he should be of the opinion that the number of pounds required by these rules had not been packed, he shall not pass it as "regular," but shall refer it at once to the inspection committee, who shall investigate, and if a satisfactory explanation can be given or arrived at, they shall instruct the inspector to proceed and inspect and pass it; but if not satisfactory to the committee, they shall, in their judgment, make the fact known to the provision trade in any way they may think proper.

RULE 23. All "hog products," to be "regular," must be from corn-fed slaughtered hogs, not frozen before cutting, and shall average not less than 14 pounds for shoulders, or 30 pounds for sides, and must run at least 80 per cent. sweet.

No hogs shall be killed on the same day on which they arrive at the pens of the slaughter-house.

RULE 24. Where meat is in store it shall be weighed and inspected in store; where meat arrives by river, rail, or canal, it shall be inspected and weighed at house of buyer.

RULE 25. All bacon uncanvased, bulk meats packed between March 1st and November 1st, shall be in fly-tight cooperage.

RULE 26. In all sales of provisions for future delivery either party may call for a margin at any time, unless it is expressly understood between the parties at the time the contract is entered into that such call can not be made. In the absence of special contract either party shall be entitled to a margin equal to ten (10) per cent. of the market value of the article contracted to be delivered, the same to be kept good; twenty-four (24) hours' notice in writing to residents and forty-eight (48) hours' notice in writing or by telegraph to non-residents shall be given on a call for a margin, and where a party fails to respond to such call within the said time the property may be sold at public auction on the floor of the Merchants' Exchange during 'Change hours on the following day "for account of whom it may concern."

RULE 27.* In settlement of contracts (unless otherwise specified) the following weights shall govern:

---

*As amended September 27, 1875.

	Pounds.
Dry salted meats or bacon:	
Packed in hogsheads—	
Shoulders	1,000
Rib sides	900
Clear rib sides	950
Clear sides	1,000
Packed in half hogsheads—	
Shoulders	550
Rib sides	500
Clear rib sides	550
Clear sides	575
Hams or shoulders:	
Smoked and canvased, packed in tierces	340
In pickle, packed in tierces (green weight)	300

RULE 28. All barreled provisions offered for sale as "regular" in this market must be cut, selected, and packed in all respects as to quality and condition equal to the classification of inspection as adopted by the chamber of commerce.

RULE 29. Unless otherwise stipulated, in all sales made of any of the grades of provisions represented as "regular," the seller shall be bound to fulfill his sale by the delivery of the quality called for by such sale, and which on examination by the inspector has been certified by him to have been packed according to the classification, and is at the time of delivery in good merchantable condition in every respect.

Provisions from which any surplus gain has been removed can not be classed as "regular."

RULE 30. All provisions sold in this market, in the absence of special agreement, shall be deemed "regular," and the property must comply with the requirements of the rules of inspection of the board. All provisions sent to this market for sale which are, in all respects, in conformity with these rules, shall be classed as "regular."

RULE 31. No original weight shall be taken out of any package of provisions without removing the original packer's brand *entirely* from the head of the package, and the brand "repacked" burned in the head distinctly.

RULE 32. In all cases product should be sold "regular," but in case a particular brand is sold, and upon examination the product will not inspect "regular," the buyer shall elect to take another brand, or the difference in value of the special brand shall be settled between the buyer and seller.

RULE 33.* On sales of provisions for future delivery, on buyer's option, if the buyer call before the expiration of the month of contract, the seller, if he so elect, shall in case of barreled meats and lard in tierces have two working days' notice, and for boxed meats, pickeled or smoked hams, and shoulders in tierces, or dry salted meats four working days to prepare property for delivery; and when at the option of seller, the seller tenders before the expiration of the month of contract, the buyer, if he so elect, shall have the same time to prepare for receiving the same.

RULE 34. Buyers of provisions on time contracts shall have the right to inspect before the day of delivery, provided they send an inspector in time to allow the inspection to be completed before the expiration of the contract; but failing to do so the seller shall have the privilege of having the property inspected, the cost to be paid by the buyer.

RULE 35.† Where the buyer of provisions fails to avail himself of the privilege of inspection, in the absence of any special agreement upon the part of the seller to guarantee his product, the liability of the seller shall, as to quality, saltage, and weights, cease when the product shall have left his house.

The rules for inspection of provisions adopted by the Saint Louis Chamber of Commerce are as follows:

RULE XII.

INSPECTION AND DELIVERY OF PROVISIONS.

SECTION 1. The board of directors shall appoint inspectors of provisions, not to exceed three, upon the written application or indorsement of not less than five regular dealers in beef or hog product, either on their own account or on commission, members of the exchange, who shall be authorized, when called upon, to inspect in person or by assistants, and report the actual condition of the property inspected. The inspectors may appoint competent asssitants, said assistants in all cases to be approved

*Adopted February 8, 1877.
†Adopted September 27, 1875.

by the board of directors, but the certificate of inspection must be signed by an appointed inspector, though the inspection was made by an assistant under his direction, and the inspector signing shall be accountable to the same extent as if the property had been actually inspected by himself. Each inspector shall give bond for the faithful performance of his duty as indicated by the rules of the exchange, or by order of the board of directors, which bond shall be satisfactory to the board of directors and their successors, and approved by them before he shall enter upon his duties, for the use and benefit of any person or persons who may be aggrieved or injured on account of his official acts. Inspectors shall receive for their services the fees for inspection as established and fixed by the board of directors. The board shall also appoint five members of the exhange as a committee on provision inspection, who shall act as referees in all cases of complaint against inspectors for the inspection of any lot of provisions, or any matters of business pertaining to said inspection. The buyer, however, shall in all cases have the right to select his own inspector from the inspectors appointed by the board of directors; but in case the seller feels that injustice is being done, he shall have the right to call upon the committee on inspection, whose decision shall be final and binding. In the absence of such committee, arbitrators may be substituted. Buyers of provisions shall have the right to inspect before the day of delivery, provided they send an inspector in time to allow the inspection to be completed before the expiration of the contract; but, failing to do so, the seller shall have the privilege of having the property inspected by an inspector appointed by the board of directors, the cost to be paid by the buyer. All appeals from inspection must be made before the property leaves the city, packing point, or place of delivery. The committee shall be allowed one dollar each for every case decided by them, to be paid by the parties in default.

SEC. 2. The inspector shall keep a record, in detail, of every examination he may make, that he may be qualified to testify positively in the event of a dispute.

SEC. 3. In case of no specific agreement, the saltage allowed on bulk meats shall be (1 per ct.) one per cent. from the first of November to the first of May; but, should the buyer or seller object, the inspector shall sweep as many drafts as he may consider necessary, and the percentage thus ascertained shall be binding on both parties; but from the first of May to the first of November the tare shall be ascertained by washing in cold water with a cloth, in cases of no special agreement to the contrary. A drainage of (1 per ct.) one per cent. shall be allowed on pickled hams, shoulders, and mess pork, and they shall be free from salt.

SEC. 4. To determine the tare on lard, the package shall first be weighed gross, the lard then removed, and the empty package subjected to dry heat and drained, after which the empty package shall be weighed, and its weight deducted from the gross weight; the difference thus obtained shall be considered the net weight of the lard.

SEC. 5. Three hundred and twenty pounds, net, shall be the average weight of a tierce of lard, upon which all settlements on contracts shall be based; but the number of packages the contract calls for must be delivered, and the difference, if any, settled at the market price on the day of delivery.

SEC. 6. Pickled hams and shoulders shall be sized when packed, the light, medium, and heavy separately, as near as practicable. Number of pieces and green weight, packer's name and location and date of packing, shall be branded on the head of each package, the date to be branded with metallic letters, marking-iron, or stencil at time of packing.

SEC. 7. In English meats the pieces shall be classified, and the light, medium, and heavy packed separately, as nearly as practicable, in boxes made to fit the different sizes. Four hundred to four hundred and fifty pounds, net, shall constitute a box of Cumberland middles; four hundred and seventy-five to five hundred and twenty-five pounds, net, shall constitute a box of all other English cuts of middles, shoulders, and hams; and all boxes containing over four hundred and fifty pounds of meat to have a third strap around the box. All settlements of contracts shall be made on a basis of four hundred and twenty-five pounds per box, net, for Cumberland cuts, and five hundred pounds per box, net, for all other English meats.

SEC. 8. If on inspection of a fair sample of bulk meats twenty (20) per cent. or over is found to be sour, the buyer shall not be required to take the lot.

SEC. 9. Dry salted rough sides may be made into short ribs or short clear sides, and dry salted short rib sides may be made into short clear sides, if in all other respects they are up to the requirements, and shall be classed as standard.

SEC. 10. On all contracts for boxed meats, it shall be understood that the meat may not he fully cured, but shall have been from fifteen to twenty days in salt before boxing.

SEC. 11. On all contracts or sales of barreled pork, not less than fifty barrels of one brand shall be delivered.

SEC. 12 If, in the opinion of the inspector, one hundred and ninety pounds of green meat shall have been packed in a barrel of pork, then it shall be classed as standard, and should there be sufficient overweight to cover any irregularity of packing, then in that case it should also be passed as standard.

SEC. 13. In no case should a duplicate inspection certificate be issued by the inspector, except on sufficient evidence of the loss of the original.

SEC. 14. On all deliveries on contracts for bulk meats and pickled meats other than barreled pork, the inspection certificate shall hold good for five days, and on barreled pork for ten days.

SEC. 15. Pork product, to be standard and delivered on contracts, must be sound, fully cured, and cut, as is required by the rules of the exchange. Barreled pork, to be standard, must be packed between the first of November and the first of March, and barreled pork and hams in pickle shall not be standard or deliverable on contracts after the first day of January following the packing season in which they are made. Repacked pork shall not be classed as standard or deliverable on contracts; but this shall not apply to pork examined and repacked by an authorized inspector for the purpose of passing upon the condition thereof. No certificate of beef or hog product shall be recognized as regular unless it is signed by an inspector appointed by the board of directors.

SEC. 16. In case property does not pass inspection, the fees shall be paid by the seller. No original weight shall be taken out of any barrel or tierce of provisions without the inspector's removing the original packer's brand entirely from the head of the package.

SEC. 17. All deliveries of beef or hog products sold for future delivery, in the absence of special agreement, shall be by the delivery of warehouse receipts, issued from such warehouses or places only as shall have been declared a regular warehouse, or other place, for the storage of such property under the rules of the Merchants' Exchange by the board of directors. Such places of storage, in all cases, shall be suitable for the preservation of the property, and all deliveries shall be accompanied by the certificate of inspection of an inspector of provisions, appointed by the board of directors, which inspection shall conform to the rules of the Merchants' Exchange governing such property. Any person or persons, or corporation, desiring to have their warehouse or places declared regular, shall make application therefor to the board of directors, stating his or their location, insurance, facilities for shipping, and shall furnish such other information as may be required by the board of directors, and shall also give a good and sufficient bond in such sum as the board of directors may require, that property placed in his or their or its care shall have the necessary attention for its preservation. Any place declared and designated as regular may, for good and sufficient reasons, satisfactory to the board of directors, be declared by said board no longer a regular warehouse for the storage of provisions, under the rules of the exchange, provided, however, that property already in store in such warehouses shall continue to be regular on delivery so long as it remains in such warehouse.

The meat rejected by the above inspection is selected according to its condition; the worst quality, including all that may be unfit for food, is consigned to the offal tank, and the remainder sold on its merits, usually going to the markets of the South and the West Indies.

LARD.

There are a number of grades of lard made at packing establishments: 1. Choice lard made from leaf and trimmings, which may be either kettle or steam rendered, and has the method of rendering stamped on the packages. 2. Prime steam lard from the hog "round," which includes nearly everything from the hog not mentioned in No. 1, but should contain no salted trimmings. 3. "Off grade" lard from salted trimmings.

OFFAL.

In the offal is included the blood, hair, head, feet, heart, lungs, liver, kidneys, stomach, and intestines. The blood is boiled until coagulated, it is then pressed for the grease, ground, dried, and sold for fertilizers, the price of this being regulated by the per cent. of ammonia. The hair is sold to curlers. The tongues are pickled. The cheek meat is made into "brawn" or sausage. The head, heart, lungs, kidneys, liver, stomach, and such of the intestines as are not used for sausage casings are tanked for grease. The residue from tanks is dried for fertilizer. The feet are made into glue or pickled.

In addition to the general statements received from numerous packers in the country, a large amount of specific information was received from Messrs. Armour & Co., of Chicago, probably the most extensive packing house in the world.

The correspondence and the questions and replies are here inserted in full.

CHICAGO, *January* 22, 1884.

E. W. BLATCHFORD, Esq., *Chicago, Ill.:*

DEAR SIR: We are in receipt of your favor of yesterday with its inclosures, all of which have full consideration. We take pleasure in complying with your request and beg to hand you with this our answers to your various inquiries; we have endeavored to make them as explicit and comprehensive as possible, for we fully appreciate their importance; and if you should desire further information in connection with this matter, please be assured that our services are at your command.

Very respectfully, etc.,

ARMOUR & CO.

The following are the questions and answers:

Q. 1. Where and how are the hogs purchased?—A. At the stock-yards, from shippers and drovers, by careful, experienced men.

Q. 2. How do you buy your hogs?—A. Through our own buyers in the yards, whose instructions are positive concerning quality and condition, and to make careful selections.

Q. 3. In selecting hogs what do you reject?—A. They are told to reject everything objectionable.

Q. 4. Diseased animals?—A. Yes; invariably.

Q. 5. Bruised animals?—A. Yes, they are useless for our purposes.

Q. 6. Ruptured animals?—A. Yes; we avoid them.

Q. 7. Still-fed animals?—A. Yes, wherever it can be discovered.

Q. 8. Pregnant sows?—A. Yes, if too far advanced.

Q. 9. Stags?—A. Yes, unless at reduced valuation, and for special uses and markets here.

Q. 10. Crippled?—A. Yes, they are always avoided.

Q. 11. Are hogs usually rejected for these reasons?—A. Yes, for packing purposes.

Q. 12. If not rejected what do you do with them?—A. They are usually put into the offal tanks.

Q. 13. Is it not customary to buy hogs from the general appearance, weight, and evenness of a lot?—A. Yes, frequently.

Q. 14. What is done with rejected hogs?—A. They are either resold or put into the offal tanks.

Q. 15. How long are the hogs kept in your pens before slaughtering?—A. About twenty-four hours.

Q. 16. Why are they kept this length of time?—A. To cool off and to improve their condition.

Q. 17. How do you care for them in your pens?—A. Give them plenty of fresh water and corn.

Q. 18. How are these pens constructed?—A. They are covered and have wooden floors.

Q. 19. Do any die in the pens?—A. Occasionally, but they are closely watched.

Q. 20. If so, how many, and from what cause?—A. The number is insignificant; the cause is smothering.

Q. 21. What is done with the dead hogs?—A. They are put into the offal tanks invariably.

Q. 22. How are the hogs prepared for slaughtering?—A. By being rested, watered, and fed.

Q. 23. Is the condition of the hogs at all observed or considered before slaughtering?—A. It is, always.

Q. 24. How is the proper condition of the hog assured at time of slaughter?—A. By examination and general appearance.

Q. 25. How are the hogs taken from the pens to the slaughtering-room?—A. They are driven a short distance.

Q. 26. If hogs are unable to be driven to the slaughtering-room, what is done with them?—A. Unless healthy and in good order they are killed and put into the offal tank.

Q. 27. What mode of slaughter do you adopt?—A. They are bled to death by cutting the main arteries in the throat.

Q. 28. What time is allowed the hog to bleed?—A. Until he is dead.

Q. 29. Is an examination made whether life is extinct before scalding?—A. Yes.

Q. 30. What is done with the carcass when coming out of the scalding tub?—A. It is scraped; the entrails are removed, and it is sent to the cooling room.

TREATMENT OF CARCASS OF HOG AFTER SLAUGHTER.

Q. 31. What time is allowed the carcass to cool before cutting up?—A. From thirty-six to forty-eight hours.

Q. 32. Is the carcass thoroughly cooled before going to the cutting bench?—A. Yes; thoroughly.

Q. 33. Is this rule strictly carried out?—A. Yes; very carefully.

Q. 34. Why is the thorough cooling of the carcass important before cutting up and commencing to cure?—A. In order to remove all animal heat, and to prevent souring.

Q. 35. Is there any inspection made to ascertain that it is thoroughly cooled?—A. Yes.

Q. 36. What is your rule for cutting?—A. After hanging for forty-eight hours.

Q. 37. Is inspection of meat had at time of cutting up, and for what?—A. Yes; to detect all objectionable pieces.

Q. 38. Is such inspection sufficiently thorough to detect disease or bruises?—A. Yes; entirely so.

Q. 39. After cutting up the carcass how are the parts treated to effect a cure?—A. Well salted, and covered with brine.

Q. 40. How are they piled to secure thorough curing?—A. In cold cellars.

Q. 41. What is the temperature of the room?—A. About 35° Fahrenheit.

Q. 42. What time is required for curing?—A. About forty to sixty days.

Q. 43. Is meat ever shipped before being fully cured?—A. Very seldom.

Q. 44. Is it desirable to perfect the curing of the meat in as short a time as possible?—A. We think not.

Q. 45. Is not the curing of the meat often forced for the purpose of making it saleable and deliverable in as short a time as possible?—A. We think not.

Q. 46. Do you ascertain by inspection the soundness of your cured meat?—A. We do always.

Q. 47. To what causes do you attribute unsound or "sour" meat?—A. Negligence in curing, and careless handling, and cutting before the cooling is completed.

Q. 48. Do you attribute it to a diseased carcass?—A. No, not necessarily.

Q. 49. Do you attribute it to a faulty treatment?—A. Yes, usually.

Q. 50. Do you attribute it to a want of care?—A. Yes, generally.

Q. 51. What quantity of "sour" meat do you have?—A. It is infinitesimal.

Q. 52. What is done with it?—A. It is put into the offal tanks, or sold on its merits to home markets.

Q. 53. What, if any, changes in modes of curing are adopted for meats destined to markets in different climates?—A. No changes; but careful selections.

Q. 54. Can as reliable results of curing be had in summer as in winter?—A. Yes, with proper care and ice facilities.

Q. 55. What kind or kinds of salt are used?—A. Both foreign and domestic, coarse and fine.

Q. 56. How do you give this or that kind preference?—A. Coarse for pickling; fine for dry salting.

Q. 57. How is meat packed for shipment?—A. In boxes, sprinkled with salt, and also in brine.

Q. 58. What is the quality of the packages used?—A. Pine boxes and oak barrels and tierces.

Q. 59. What is the size of packages?—A. Boxes hold about 500 pounds; barrels, 200 pounds; tierces, 300 pounds.

Q. 60. Is any salt put in?—A. Yes.

Q. 61. How much to each box of meat?—A. About 50 pounds.

Q. 62. What is the rule?—A. No special rule; the custom is from 40 to 50 pounds.

Q. 63. Is this rule strictly adhered to?—A. We think it is.

Q. 64. Is not less salt used than the rule calls for to save expense?—A. We think not.

Q. 65. What is the character of the salt used?—A. Fine salt.

Q. 66. Is any care taken that the salt be clean?—A. Yes.

Q. 67. What is your rule for cutting mess pork?—A. From well fatted hogs; uniform strips, according to board of trade rules.

Q. 68. How many pieces in each barrel?—A. About sixteen pieces.

Q. 69. What is the weight of meat in each barrel?—A. 190 pounds packed in winter, and 200 pounds packed in summer.

Q. 70. What kind of salt is used?—A. Coarse salt.

Q. 71. What quantity of salt is used?—A. About 30 pounds of coarse salt, and the barrel filled with brine.

Q. 72. How is the quality of the salt tested?—A. By analysis, and the use of the salometer.

Q. 73. Where is the mess pork stored?—A. Generally in cool cellars.

Q. 74. What are the regulations regarding its storage?—A. That it shall be in warehouse well located.

Q. 75. What is the temperature of the warehouse?—A. Generally about 40° or 50° Fahrenheit.

Q. 76. What examinations are made as to its condition from time to time?—A. Packages unrolled to ascertain about the pickle, occasionally opened, and cooperage also examined.

Q. 77. What numbers of hogs do you kill annually?—A. About one million in our Chicago house.

Q. 78. What is their average weight?—A. From 260 to 280 pounds live weight.

Q. 79. What parts of the hog do you use for lard?—A. Leaf and trimmings.

Q. 80. What do you include as offal?—A. Portions of the entrails and general refuse.

Q. 81. What is done with the head?—A. The meat is made into head-cheese and the balance is put into the offal tanks.

Q. 82. What is done with the feet?—A. Some are thrown into the offal tank, others are cooked and pickled.

Q. 83. What is done with the entrails?—A. Some are cleaned for sausage casings and the balance thrown into the offal tank.

Q. 84. What is done with the heart, liver, and lights?—A. Some are used for sausages and the balance thrown into the offal tank.

Q. 85. What is done with the blood?—A. It is dried and used as a fertilizer.

Q. 86. What is done with the refuse from tanks?—A. It is dried and made into fertilizers.

Q. 87. Is all meat inspected before being shipped?—A. Yes, as a rule.

Q. 88. By whom?—A. By the board of trade and other inspectors and by our selves.

Q. 89. Under what authority?—A. Of the board of trade and mutual agreement.

Q. 90. Is meat ever packed and shipped without being inspected?—A. No, except by possible oversight.

Q. 91. Under what circumstances?—A. By mistake or oversight.

Q. 92. Do you ever guaranty inspection?—A. Yes, sir.

Q. 93. If so, under what circumstances and to what extent?—A. When buyers have our confidence and rejections can be returned.

Q. 94. What course does the inspector take in examining meat?—A. He goes in person, or by deputy, by mutual consent and arrangement of buyers and sellers.

Q. 95. Does he examine each piece?—A. Yes.

Q. 96. What tests are made?—A. He uses a "tryer," made for this purpose.

Q. 97. For fully or properly cured?—A. Yes, both.

Q. 98. For stags?- A. Yes.

Q. 99. For piggy sows?—A. Yes.

Q. 100. For sour meat?—A. Yes.

Q. 101. For bruised meat?—A. Yes.

Q. 102. For what causes is meat rejected?—A. For the above; also for irregular cuts and for imperfect cure.

Q. 103. What is done with meat rejected by the inspector?—A. It is selected, sold on its merits to home markets, or put into offal tanks, according to its condition.

Q. 104. What do you say to inspection?- A. We respectfully suggest that a Government inspection of exported (or other) meats would no doubt meet with general approval, and it could doubtless be harmonized or merged into the present authorized systems in each important market.

Similar questions were addressed to the leading packing houses in Baltimore, Philadelphia, Jersey City, New York, Boston, West Albany, and Buffalo. The answers in all cases were essentially the same as those received from Armour & Co., of Chicago.

PURCHASE AND SALE OF HOG PRODUCTS.

The ordinary course of purchase and sale of hog products is as follows:

When a purchase of these products is made of a packing firm, an order is issued in favor of the buyer for the number of packages or pieces of meat sold; also an order to permit the buyer's inspector to make a satisfactory inspection of the meats. The purchaser hands the order for the meats to the agent of the railroad company, and the order for inspection to his inspector or the regularly authorized inspector, as he

sees fit, giving to each such instructions as will best carry out the terms of his purchase.

The rules and regulations for the purchase and sale of provisions and their inspection adopted by the St. Louis Chamber of Commerce, of December 18, 1883, are as follows:

SEC. 14. All provisions offered for sale as "standard" in this market must be cut, selected, and packed in all respects as to quality and condition equal to the standards established by the board of directors, and the seller shall be bound to fulfill his sale by the delivery of the quality called for by such sale, which, on examination by the authorized inspector, has been certified by him to have been packed according to the established classification, and is at the time of delivery in good merchantable condition in every respect. Provisions from which any surplus gain has been removed can not afterwards be classed as "standard."

SEC. 15. In sales as standard of a particular packer's brand or cut, if the property does not pass inspection the buyer shall elect either to take the lot tendered at contract price or require that some other brand or cut be substituted therefor·that will pass inspection, or to receive the difference in value between the property tendered and such as called for by the contract; and such election shall be binding upon, and be carried out by, both parties as a settlement of the contract.

SEC. 16. In all cases of sales of provisions as "standard" the inspector shall examine and inspect, when called upon, and shall decide if the property be up to the requirements; and he shall issue his certificate, stating correctly the condition and quality of the property inspected and specify the defects, if any exist therein.

SEC. 17. In sales of fully cured meats, or to be fully cured and delivered at a specified time, the seller must deliver in good faith, according to contract, the inspector to be the judge, who shall always be fully informed of the conditions of the contract before proceeding to inspect. Where sales of dry salted meats are made without other specifications it shall be considered that the sales contemplate meats fully cured, the inspector to be the judge.

SEC. 18. On sale of provisions for future delivery, "at buyer's option," if buyer calls before expiration of contract, the seller, if he so elect, shall have at least five working days to prepare property for delivery, in the case of bacon and bulk meats. Purchasers of provisions shall have three days free of storage to remove property when in store.

The rules of the Chicago Board of Trade governing the purchase and sale of hog products and their inspection, adopted September 1, 1883:

RULE XXV.

PROVISIONS.

SECTION 1. The board of directors shall appoint five members of the association as a committee on provision inspection, who shall have and exercise a general control over the inspection of provisions, and shall act as referees in case of complaint against the chief inspector of provisions, or the inspection of any lot of provisions, or any matter of difference pertaining to the same; except as hereinafter provided. The committee shall be authorized, in determining the correctness of any inspection they are called upon to revise, to adopt any measures they may deem necessary under the circumstances for the ascertainment of its true character. The committee shall be entitled to fees amounting to $3 each for each case of appeal decided by them, to be paid by the party against whom the decision shall be made.

SEC. 2. The board of directors shall also appoint a suitable person as chief inspector of provisions, who shall be required to give a bond in such amount as may be prescribed by the board of directors, for the faithful performance of his duties as indicated by the rules of the board of trade or by order of the board of directors. Said bond shall be satisfactory to the board of directors and be approved by them before the said chief inspector shall be entitled to enter upon the discharge of his official duties. Said bond shall be made to the president of the board of trade and his successors in office, for the use and benefit of any parties having legal claims for damages against said chief inspector on account of any of his official acts.

SEC. 3. The chief inspector of provisions shall appoint, to be confirmed by the committee on provision inspection, a sufficient number of competent deputy inspectors, who shall be under his control and subject to his orders in all matters pertaining to the performance of official duty.

SEC. 4. The chief inspector, through and by his deputies, shall furnish the necessary labor and materials for inspection. The several deputy inspectors shall make a report in detail of every inspection or examination they may make, which report shall be returned to the chief inspector, and be by him preserved for future reference.

SEC. 5. The board of directors shall also appoint a competent person as registrar of provisions, whose duty it shall be to provide and cause to be kept suitable books in which shall be registered all warehouse receipts for beef and hog product issued as "regular" or for the "regular delivery" of such property in the Chicago market under the rules of the board of trade; such receipts, after being so registered, shall be stamped or written across their face with the word "registered," and the date of such registry, and signed, in writing, by the said registrar or some person duly authorized by him for that service. All warehouse receipts, before being registered, shall be plainly numbered, and shall indicate on their face the number or mark of the particular lot of property intended to be covered or represented by such receipt. All such receipts issued from or by each warehouse or other place of storage shall be consecutively numbered, and no receipts of duplicate numbers issued from the same place of storage shall be registered. All property covered or represented by registered warehouse receipts shall be plainly marked in such manner as will clearly distinguish it from all other property stored in the same warehouse or place of storage, and by such marks, numbers, or characters as may be approved by the registrar of provisions; such marks to be so arranged as to avoid the possibility of duplication or uncertainty as to the identity of the property so receipted for. No warehouse receipt shall be registered until a report shall have been received at the office of the registrar of provisions from a duly authorized deputy that the property represented by the receipt is actually in the place of storage and is marked as indicated in the receipt; such reports shall be in a form prescribed by the registrar, and shall be preserved by him for future reference. No second warehouse receipt for the same property shall be registered unless the original is presented at the time and its registration canceled by the registrar. In such case new receipts, either for the whole or parts of lots, or the consolidation of different lots, may be registered upon the report of a deputy that the property is in the place represented, and is marked as represented. All new receipts so registered shall bear the same date, as near as may be, with the originals so canceled, and no receipts differing in date more than thirty days shall be consolidated into a new receipt.

No property shall be removed from the place of storage indicated by any registered receipt issued to represent it until the registration of such receipt has first been canceled in the office of the registrar of provisions by writing or stamping across its face the words "registration canceled."

SEC. 6. The chief inspector shall receive for his services and for the compensation of the deputy inspectors employed by him, the fees for inspecting as established by the board of trade. The registrar shall receive, as compensation for his own services and the necessary expenses of his office, such sum, to be paid from the funds of the association, as may be determined by the board of directors.

SEC. 7. All claims for errors of inspection, or damages resulting from improper inspection, shall be made to the chief inspector, and in case of dispute as to the validity of any claim so made the question shall be decided by the committee on provision inspection, or by a special arbitration, if either of the parties so prefer. In the latter case the arbitrators shall be chosen either by mutual agreement, or an equal number, not exceeding two, may be selected each by the chief inspector and the claimant; and the persons so chosen shall select an additional arbitrator. Arbitrations, either by the committee on provision inspection or special arbitrators, shall be conducted under substantially the same form of proceedings as regular arbitrations under the rules of the board of trade, and shall be subject to all the provisions of regular arbitrations, except that they shall not be subject to appeal.

SEC. 8. All deliveries of beef or hog product in store, in the absence of special agreement, shall be by the delivery of registered warehouse receipts, issued from such warehouses or places only as shall have been declared a regular warehouse for the storage of such property, under the rules of the board of trade, by the board of directors; such places of storage, in all cases, to be under cover, and such as is suitable for the proper preservation of the property. All such deliveries shall be accompanied by a certificate of inspection of the chief inspector of provisions, which certificate shall state the number of packages or the number of pieces, together with their weight, in the lot to which it applies, the place where the same is stored, and the distinguishing marks upon it; also the number of packages or pieces examined, and that the same was found to be in good merchantable condition and of standard quality. In the case of barreled pork, the number of pieces and the weight in each barrel shall be stated; also the date of its packing as indicated by the packer's brand upon the packages. Such certificate shall be dated within five (5) days of such delivery; the required number of days shall include both the day of date and the day of delivery.

SEC. 9. No warehouse receipts for beef or hog product shall be registered except such as have been issued by or from a warehouse or place of storage declared to be a regular warehouse for the storage of such property by the board of directors of the board of trade; and before any warehouse or storage place shall be declared a regular warehouse for such property the proprietors thereof shall file a bond with the

board of trade for such an amount as may be deemed sufficient, and with sureties approved by the board of directors; such bond shall be made payable to the president of the board or his successors in office, for the use of any person or persons suffering damages by reason of the neglect of duty, fault, or fraud of the proprietor or manager of such warehouse, and such bond may be prosecuted in the name of the president of the board of trade, for the use and benefit of persons aggrieved or damaged by the acts of such warehouse proprietor or manager. All such bonds shall be conditioned upon the faithful and honest performance of his or their duties by the proprietor or manager of his or their warehouses, as defined by the laws of this State, or by the rules of the board of trade not inconsistent therewith.

RULE XXVI.

SALE OF PROVISIONS.

SECTION 1. All provisions sold in this market, in the absence of special agreement, shall be deemed standard, and the property delivered must comply with the requirements of the regulations of imspection established by the association. And all provisions sent to this market for sale, which, upon examination, shall be found to have been manufactured, handled, or packed, in all respects and to all appearances, in conformity with those rules, shall be classed as standard.

SEC. 2. All provisions sold as standard shall be cut, selected, and packed, in all respects as to quality and condition, conformably to the classification of inspection as adopted by the association; and, unless otherwise stipulated, on all sales made of any of the grades of provisions as standard, the seller shall deliver the parcels of the kind and quality called for by such sale, which any duly appointed inspector of the association has examined, and has certified to have been packed according to the classification, and is at the time of delivery in good merchantable condition in every respect; or, failing to so deliver, he shall be bound to settle his contract under the provisions of Rule XXIV of the association: *Provided*, That in all sales specified as for cash, the buyer shall not be bound to pay inspection fees unless he orders the inspection of the property.

SEC. 3. Lard, hams, or shoulders may be packed in tierces, either wood or iron bound, or bound partly with both. Provisions from which any gain has been removed shall not afterward be classed as standard.

"SEC. 4. All hog product to be classed as standard shall comply in all respects with the requirements of the rules of inspection adopted by the board of trade, and if delivered on or after January 1, shall include only such as has been packed on or after the first day of the previous November, and, in the case of barreled pork, shall include only such as has been packed between November 1 and March 1."

SEC. 5. No original weight shall be taken out of any package of provisions which is afterward to be offered for sale by the package, without removing the original packers' brand entirely from the head of the package, unless the property be repacked and *so branded* by the party repacking.

SEC. 6. Buyers of provisions on contracts, deliverable on the demand of the buyer within a specified time, shall have the right to inspect the same before the day of delivery, provided they send an inspector in time to allow the inspection to be completed before the proposed delivery; but failing to do so the seller shall have the privilege of having the property inspected, the cost to be paid by the buyer.

SEC. 7. On sales of provisions deliverable at the pleasure of the seller within a specified time the seller shall have the privilege of delivering, at any time during the life of the contract without previous notice to the purchaser, by the tender of a registered regular warehouse receipt, together with a certificate of inspection by an inspector of the association (such inspection having been made within the last five days), such a delivery shall be held to be regular, and the buyer shall receive and pay for the same together with the fees for inspection. If, however, within the next forty-eight (48) hours the buyer shall produce the certificate of the committee on provision inspection that the property so delivered is not standard, the seller shall immediately receive the property back, paying all accrued expenses, and substitute other property that is standard: *Provided*, That the evidence of the committee on provision inspection, as herein referred to, shall be furnished during the next forty-eight (48) hours, or as soon as said committee can report, they having been called for such examination, and the seller so notified, within the next twenty-four (24) hours. On sales deliverable on the demand of the buyer, if such demand be made, if the buyer calls before the expiration of contract, the seller, if he so elect, shall, in the case of pickled meats, have twenty-four (24) hours to prepare the property for delivery, and on bulk or boxed meats, four (4) working days.

SEC. 8. On sales of barreled meats or lard, if more than one brand is tendered, the purchaser shall be required to pay such inspection fees only as would be proper were it all of one brand.

SEC. 9. On sales of provisions as standard, or of a particular packer's brand, in case the property does not pass inspection, the buyer shall elect either to take the lot named at contract price, after being regularly inspected at cost of seller, or to require that some standard lot be substituted, but the buyer shall receive the one or the other if tendered within a reasonable time.

SEC. 10. In sales of fully cured meats, or to be fully cured and delivered at any specified time, the seller must deliver in good faith, according to contract; the inspector to be the judge, who shall always be informed of the conditions of the contract before proceeding to inspect. Where sales of dry salted meats are made without other specifications, it shall be considered that the sale contemplates meats fully cured; the inspector to be the judge.

SEC. 11. In sales of provisions, when an article is substituted or delivered inferior in quality to the sample exhibited, or which had been passed upon by the inspector as standard, the seller shall be responsible for any damage resulting from such exchange or substitution. All examinations or inspections are to be made within a reasonable time. and proper care of the property is to be taken by the owner or his agent.

SEC. 12. Joints cut from hogs that have been frozen shall not be classed as standard.

SEC. 13. In case of no specific agreement, the saltage allowed on bulk meats shall be 1 per cent.; but should the buyer or seller object, the inspector shall sweep as many drafts as he may consider necessary, and the percentage so determined shall be binding on both parties. But from June 1 to November 1 the tare shall be ascertained by washing in cold water with a cloth, in case of no specific agreement to the contrary. One per cent. for drainage shall be allowed on pickled meats.

SEC. 14. To determine the tare of lard, the package shall first be weighed gross, the lard then removed, and the empty package subjected to dry heat and drained, the empty package to be then weighed and its weight deducted from the gross weight. The difference so obtained shall be considered the net weight of the lard.

SEC. 15. In case lard in tierces be delivered of a weight more or less than 320 lbs. net per tierce, the shortage or excess shall be settled for at the current market price, but the full number of packages contracted for shall be delivered. In the settlement of contracts for lard, 320 lbs. net shall be taken as the average weight of a tierce.

SEC. 16. Provisions, if desired by the purchaser, must be delivered at cars or on teams, from packing-house or store, free of charge. All deliveries of provisions in store shall be free of storage to the buyer for five (5) days, or, if in packing-houses, for three (3) days, except when the first day of the month falls on Sunday or a holiday; in which case receipts shall be regular to the buyer, if free of storage, for four days, or, if in packing-house, two days from the time the seller signifies his readiness to deliver, and any extra expenses attending the examination of provisions are to be paid by the party ordering the same.

SEC. 17. The standard net weight of meats packed in boxes shall be between 450 and 525 pounds for each box, and in all settlements or deliveries of boxed meats an average of 500 pounds net per box shall be made the basis for settlement, and the excess or shortage from said average shall be settled at the market value of the property delivered at the time of its delivery. But in case of delivery the full number of packages contracted for must be delivered.

SEC. 18. Long clear sides shall not average less than forty-five (45) pounds; short clear sides shall not average less than forty (40) pounds; and short rib sides shall not average less than thirty (30) pounds, and dry salted shoulders shall not average less than twelve (12) pounds, to be standard and regular on delivery, either loose or boxed.

SEC. 19. On an examination by an inspector of dry salted meats, in bulk or for boxing, if over twenty (20) per cent. turns out rejected, he shall not be required to take the lot in that condition.

SEC. 20. A delivery of sweet pickled hams or shoulders shall be considered regular if they average not over two (2) pieces unsound per tierce, and a deduction of twenty-five (25) per cent. on the price shall be made on the unsound.

SHIPMENT OF HOG PRODUCTS TO SEA-BOARD.

The railroad agent having received the order for delivery, orders a sufficient number of cars sent to the packing-house or warehouse. When loaded a receipt is given by the proper officer of the railroad company in charge of the loading for the number of packages or pieces put on board. This receipt is attached to an invoice accompanied by a list of the individual weights and tares, and handed to the buyer. On this receipt a bill of lading in duplicate is issued, giving name of line or lines by which shipped, date of shipment, from whom received, marks or brands, destination, gross weight, and rate of freight per 100 pounds.

Shipments of bacon are usually made by all-rail routes to the sea-board; very seldom in any other way.

Pork and lard are shipped by lake steamers to Buffalo, and thence by canal to sea-board by rail.

Lard, and sometimes pork, is shipped in quite large quantities by lake steamers to Buffalo, and thence by canal to sea-board. This method, however, is of comparatively recent adoption.

The lard, when it reaches the canal, is placed on flat barges, or on the decks of canal-boats, covered with an awning, and, in warm weather, frequently sprinkled with water.

Experience shows that these products invariably reach the sea-board in excellent condition.

On arrival at sea-board, if intended for export, the products are held in the cars or on the boats, and the consignee, or the agent of the steamship line with which the contract has been made, is notified of their arrival. If a steamer is ready to receive the shipment, it is placed (if in cars) on board of lighters and towed to the steamer's side, or the dock, and loaded.

In case no steamer is ready, the property is sent to a warehouse to await the arrival of the next steamer. It is the custom in the trade with foreign markets to make sales upon a price that covers the cost, freight, and insurance to destination, and orders are usually made on this basis. It is also customary for buyers to state how and by what routes the goods are to be shipped.

As the re-imbursement to the seller for export depends on all the conditions being strictly adhered to, he is very careful to see that they are carried out; and no documentary exchange is complete unless the original and duplicate bills of lading and certificates of insurance and inspection accompany the draft.

The following are the usual forms of inland and foreign bills of lading:

INLAND.

[Form 100 H.]

(N) NATIONAL LINE.

(Through freight line, owned and operated by the Pennsylvania Company. All rail. Via C., St. L. and P. R. R. and Pan Handle route.)

[Cut.]	No. —.] CHICAGO, ILL., ——— —, 188–.
(N) Nat'l Line.	Received from——— ———, the following packages (contents and value unknown), in apparent good order, viz:
6,000.	
Marks.]	Marked and numbered as in the margin, to be transported by the National Line, and the steam-boats, railroad companies, and forwarding lines with which it connects, on the following term and conditions, viz:
	It being expressly understood and agreed that the National Line reserves the right, in consideration of issuing a through bill of lading, and guaranteeing a through rate to forward said goods by any railroad line between points of shipment and destination.
This bill of lading	It is further agreed that the rates given on bulk freight are given on the understanding that not less than 24,000 pounds will be loaded in each car, and that such minimum weight may, at the option of this line be charged for, whether that quantity is placed in the car or not.
from	It is further agreed that all weight in excess of 30,000 pounds per car will be charged double the rate named in this bill of lading.
Chicago, Ills.,	
to	
———.	

The rate of freight through

is to be

———per 100 pounds.

———per barrel.

It is further agreed that the said National Line, and the steam-boats, railroad companies, and forwarding lines with which it connects, and which receive said property, shall not be liable for leakage of oils or any kinds of liquids; breakage of any kind of glass, earthen or queensware, carboys of acids, or articles packed in glass, stoves and stove furniture, castings, machinery, carriages, furniture, musical instruments of any kind, packages of eggs, or for rust of iron and of iron articles, or for loss or damage by wet, dirt, fire, or loss of weight, or for condition of baling on hay, hemp, or cotton; nor for loss or damage of any kind on any article whose bulk requires it to be carried on open cars; nor for damage to perishable property of any kind, occasioned by delays from any cause or by change of weather; nor for loss or damage on any article of property whatever, by fire or other casuality, while in transit or while in depots or places of transshipment or at depots or landings at point of delivery; nor for loss or damage by fire, collision, or the dangers of navigation while on seas, rivers, lakes, or canals. All goods or property under this bill of lading will be subject, at its owner's cost, to necessary cooperage or bailing, and is to be transported to the depots of the companies or landings of the steamboats or forwarding lines, at the point receipted to, for delivery.

It is further agreed that unless this bill of lading, properly indorsed, be delivered to the agent of the National Line at destination, on or before the arrival there of the hereinabove described property, the said line is authorized to deliver the said property to the consignee, or to the party to whose care it is by this bill of lading consigned; and after such delivery, the said line shall be no longer responsible for or on account of this bill of lading or for or on account of any assignment or transfer thereof.

It is further agreed that the said National Line and the steam-boats, railroads, and forwarding lines with which it connects shall not be held accountable for any damage or deficiency in packages after the same shall have been receipted for in good order by consignees or their agents, at or by the next carrier, beyond the point to which this bill of lading contracts. Consignees are to pay freight and charges upon the goods or merchandise in lots or parts of lots as they may be delivered to them, and upon the weight as ascertained by the line's scales. The goods transported shall be subject to a lien, and may also be retained for all arrearages of freight due on other goods by the same consignee or owners.

It is further stipulated and agreed that in case of any loss, detriment, or damage done to or sustained by any of the property herein receipted for during such transportation, whereby any legal liability or responsibility shall or may be incurred, that company alone shall be answerable therefor in whose actual custody the same may be at the time of the happening of such loss, detriment, or damage, and the carrier so liable shall have the full benefit of any insurance that may have been effected upon or on account of said goods.

And it is further agreed that the amount of the loss or damage so accruing, so far as it shall fall upon the carriers above described, shall be computed at the value or cost of said goods or property at the place and time of shipment under this bill of lading, except the value of the articles has been agreed upon with the shipper, or is determined by the classification upon which the rates are based.

It is further agreed that all weights furnished by shippers are subject to correction.

This contract is executed and accomplished, and the liability of the companies, as common carriers thereunder, terminates on the arrival of the goods or property at the station or depot of delivery (and the companies will be liable as warehousemen only thereafter) and unless removed by the consignee from the stations or depots of delivery within twenty-four hours of their said arrival they may be removed and stored by the companies, at the owner's expense and risk.

NOTICE—In accepting this bill of lading, the shipper or other agent of the owner of the property carried, expressly accepts and agrees to all its stipulations, exceptions, and conditions.

——— ———, *Agent.*

FOREIGN.

[Form 743.—Foreign. N. Y.—Special.]

STAR UNION LINE.

Via Pennsylvania Railroad and ——— from Chicago to ———.

Shipped in apparent good order by ——— ———, the following property, marked or numbered as below (weight, measure, gauge, quality, condition, quantity, brand, contents and value unknown), weight subject to correction:

	Marks and numbers.	Merchandise.
	.....	.....
	.....	.....
	.....	.....
	.....	.....
	.....	.....
	.....	.....
	.....	.....
	.....	.....

To be delivered in like good order and condition, unto ——— ———, or —— assigns, upon payment in cash of freight due thereon, immediately on landing the property, at the rate of ——— —— cents, American gold, per 100 pounds gross weight, with all charges and average accustomed, without any allowance for credit or discount, one pound sterling being considered equal to four dollars and eighty cents ($4.80) American gold, under the following terms and conditions, viz:

1. That said Union Line, and its connections which receive said property, shall not be liable for breakage of packages of eggs, or for rust of iron and of iron articles, or for loss or damage by wet, dirt, fire, or loss of weight, or for condition of baling on hay, hemp, or cotton; nor for loss or damage of any kind on any article whose bulk requires it to be carried on open cars; nor for damage to perishable property of any kind occasioned by delays from any cause or changes of weather; nor for loss or damage on any article or property whatever, by fire or other casualty, while in transit or while in depots or places of transshipment, or at depots or landings at all points of delivery; nor for loss or damage by fire, collision, or the dangers of navigation while on seas, rivers, lakes, or canals. All goods or property under this bill of lading will be subject, at its owner's cost, to necessary cooperage or baling, and is to be transported to the depots of the companies or landings of the steam-boats or forwarding lines at the points receipted to for delivery.

2. It is further agreed that said Union Line and its connections shall not be held accountable for any damage or deficiency in packages after the same shall have been receipted for in good order by consignees or their agents, at or by the next carrier beyond the point to which this bill of lading contracts. Consignees are to pay freight and charges upon the goods or merchandise in lots or parts of lots as they may be delivered to them.

3. It is further stipulated and agreed that in case of any loss, detriment, or damage done to or sustained by any of the property herein receipted for during such transportation, whereby any legal liability or responsibility shall or may be incurred, that company alone shall be held answerable therefor in whose actual custody the same may be at the time of the happening of such loss, detriment, or damage, and the carrier so liable shall have the full benefit of any insurance that may have been effected upon or on account of said goods.

4. And it is further agreed that the amount of loss or damage so accruing, so far as it shall fall upon the carriers above described, shall be computed at the value or cost of the said goods or property at the place and time of shipment under this bill of lading.

5. And it is further agreed that the carriers shall not be liable for any discrepancy between the contents of the packages and the description of the same in the bills of lading, nor for any discrepancy between the mill brands of flour, as stated in the margin hereof, and those actually delivered.

6. And it is further agreed that from and after the arrival of said goods at the port of New York, and while said goods remain on the wharf or wharves waiting for further conveyance, the Union Line shall not, nor shall any of its connections—inland or ocean—be liable for delay, nor shall they, or any of them, be liable in respect of said goods otherwise than as warehousemen. It is also agreed that the said Union Line reserves the right not to forward said goods or property by first steamer or steamers, and to ship by any steam-ship or steam-ship line other than the one named herein.

7. And it is further agreed that this contract, on the part of the Union Line is accomplished and the liability of the Union Line as a common carrier or farwarder thereunder, as limited in and by the foregoing-terminates on the delivery of the goods or property to the steam-ship, her master, agent, or servants, or to the steam-ship line at port of New York when the responsibility of the steam-ship or steam-ship line begins, and not before.

8. And is is further agreed that the above mentioned property shall be transported from the port of New York to the port of ——, by the said steam-ship or steam-ship line, with liberty to ship by any other steam-ship or steam-ship line, subject to the following exceptions and restrictions, viz: That the carrier shall not be liable for damages arising out of the act of God, public enemies, pirates, robbers, thieves, by land or at sea, barratry of masters or marines, restraint of princes, rulers, or peoples; loss or damage resulting from vermin, rust, sweating, wastage, leakage, breakage, mortality, or from rain, spray, coal, or coal dust, insufficiency of strength of packages, inaccuracy, indistinctness, illegibility, obliteration of omission of marks, numbers, brands, or addresses, or descriptions of goods, injury to wrappers however caused, or from corruption, frost, decay, stowage, or contact with or smell or evaporation from other goods, or from loss or damage caused by heavy weather, or pitching or rolling of the vessel, or from inherent deterioration, risk of lighterage to or from the vessel, transshipment, jettison, explosion, spontaneous combustion, fire before loading in the ship, or after unloading, heat, boilers, steam, or steam-machinery, including consequence of defect therein or damage thereto, collision, stranding, straining, or other perils of the seas, rivers, steam and steam navigation, or land transit of whatsoever nature or kind, nor for damage, loss, or injury arising from the perils or matters above mentioned, and whether such perils or matters arise from the negligence, default, or error in judgment of the pilot, master, mariners, engineers, stevedores, or other persons in the service of the carrier; nor shall the carrier be held accountable for weight, contents, value, length, measure, or quantities or condition of contents, nor for money, documents, gold, silver, bullion, specie, precious metals, jewelry, precious stones, statuary, paintings, or other highly valued goods, or beyond the amount of one hundred pounds sterling for any one package, unless bills of lading are signed therefor and the value therein expressed, and the freight paid accordingly. The carrier is not to be liable for any damage to any goods which are capable of being covered by insurance, nor for any claim, notice of which is not given before the removal of the goods, nor for any claims for damage or detention of goods under through bill of lading, where the damage is done or detention occurs whilst the goods are not in the possession of the carrier, nor in any case for more than the known or invoiced value of the goods, whichever shall be least. Goods of an inflammable, explosive, or otherwise dangerous character, shipped without permission and full disclosure of their nature and contents, may be seized and confiscated or destroyed by the carrier at any time before delivery without any compensation to the shipper or consignee. In case any part of the within goods can not be found for delivery during the vessel's stay at the port of

destination they are, when found, to be sent back by first steamer, at ship's expense, the steamer not to be held liable for any claim for delay or sea risks. The only condition upon which glass will be carried is that the carrier shall not be held liable for any breakage which may occur from negligence or any other cause whatever. The goods to be taken from alongside by the consignee immediately the vessel is ready to discharge, or otherwise they may be landed by the master and deposited at the expense of the consignee, and at his risk of fire, loss, or injury in the warehouse provided for that purpose, and the carrier to have a lien on the goods for such charge. Parcels for different consignees, collected and made up in single packages, addressed to one party for the purpose of evading payment of parcel freight, will be charged with the proper freight on each parcel. The steamer shall have liberty during the voyage to call at any port or ports to receive fuel, to load or discharge cargo, or for any other purpose whatever; to sail with or without pilots, to tow and assist vessels in all situations, and in the event of putting back to New York, or into any other port, or being otherwise prevented in the ordinary course of her voyage, to transship the goods to any other steamer. Further, subject to any other conditions and restrictions expressed in the customary forms of bills of lading in use at the time of shipment by steam-ship or steam-ship line carrying this property.

(On the margin:)—Attention of shippers is called to act of Congress of 1851: "Any person or persons shipping oil of vitriol, unslacked lime, inflammable matches, or gunpowder, in a ship or vessel taking cargo for divers persons on freight, without delivering at the time of shipment a note in writing expressing the nature and character of such merchandise to the master, mate, or officer or person in charge of the loading of the ship or vessel, shall forfeit to the United States one thousand dollars."

NOTICE.—In accepting this bill of lading the shipper or other agent of the owner of the property carried expressly accepts and agrees to all its stipulations, exceptions, and conditions.

In witness whereof the agent signing for the said railway and steam-ship companies hath affirmed to —— bills of lading, all of this tenor and date, one of which being accomplished the others to stand void.

Dated in Chicago, Ills., ——— —, 188–.

Agent severally but not jointly.

PART III.

CONCLUSION.

III.—EXTENT OF TRICHINIASIS IN AMERICA AND EUROPE.

This subject being in the present attitude of certain foreign governments in regard to American pork products the most important of all the questions that have received our attention, we have given it a very careful consideration. The alleged frequency of trichiniasis in American hogs has been *the* reason insisted upon by the various countries which have prohibited the importation of such products; for while it is true that other objections have been advanced, particularly in France, none of these have sufficient foundation in fact to stand the test of even a superficial examination. It is, however, not a question of the prevalence of trichiniasis here and its absence in other countries, since this parasite has been found infecting the hogs and other flesh-eating animals in the most widely separated portions of the earth. Dr. Manson examined 225 specimens of Chinese pork and found 2 or nearly 1 per cent. infected.* Dr. Wartable has described epidemics near the sources of the Jordan resulting from eating the flesh of the wild-boar,† and in every European country in which inspections have been made a very considerable proportion of trichinous animals have been discovered.

Certain writers have pretended that the animals of France have never

---

* Imp. Customs Med. Report, Shanghai XXI (1881), p. 26.

† Lancet, August 4, 1883.

been infected with trichiniasis,* but this conclusion seems to have been reached without any investigations. A large proportion of the rats of Paris were long since found to be infected,† and in 1879 a serious epidemic of trichiniasis, known as that of Crépy-en-Valois, occurred, in which sixteen persons sickened from eating the flesh of a native animal.‡

That trichinæ also exist in America and infest a small proportion of American hogs is a fact that must be admitted, but it is a more difficult matter to compare the frequency of American and European infection than has usually been supposed. American hogs have usually been examined by microscopists who were competent to do the work and who would not overlook a single case, while in Germany there has been an immense number of inspectors employed (18,581 in 1881), many of whom were utterly incompetent. An examination in 1877 showed that many of the miscroscopes were useless, that glasses used were too dirty to permit the examination, and that some of the inspectors were incapable of detecting the parasite.§ Even as late as 1881 there were complaints in regard to the incompetency of inspectors, and the continued recurrence of thrichiniasis among people from eating inspected meats demonstrates that these complaints were not made without reason.‖ Even the German inspections of American meats can not be taken as a fair comparison with the average of their inspections of indigenous animals, for the reason that our meats are examined in their larger cities and by their most competent inspectors. It is absolutely necessary to bear these facts in mind in considering the figures which are given as representing the results of the miscroscopic examination of American and European pork.

PROPORTION OF AMERICAN HOGS INFECTED WITH TRICHINIASIS.

The hogs in Dearborn County, Indiana, seem to be infected in a larger proportion than anywhere else in the country, or at least were in 1874. Drs. Harding and Robbins examined 245 animals slaughtered near Lawrenceburg, and found that 40, or $16\frac{1}{3}$ per cent., contained this parasite. This seems to be far beyond the average, however, even in this center of infection, for Drs. Gatch and Miller examined 200 animals at the same place and only found 13 infected, or 6.5 per cent.¶

In 1866 Belfield and Atwood are reported to have found 2 per cent. of the hogs slaughtered in Chicago infected, and in 1878 an examination of 100 animals at the same place indicated that 8 per cent. contained trichinæ.

From 1879 to 1881, Dr. F. S. Billings, of Boston, examined 8,773 hogs, of which 347, or 4 per cent., were reported as containing trichinæ.

Dr. Deveron, of New Orleans, inspected 5,400 hogs in 1881, of which only 22, or 0.4 per cent., were trichinous.** Of these animals, 529 came from Saint Louis, and among them were 18 infected ones, being 3.4 per cent.; 241 came from Louisville and 2 of these, or 0.83 per cent., contained trichinæ; 484 from unknown parts of the West had but 2 infected, or 0.4 per cent., while the remaining 4,146, mostly from the South, were free from this parasite.

¶ A Report on Trichiniasis as observed in Dearborn Co., Ind., in 1874. By George Sutton, M. D., Aurora, Ind.
** Report of American Health Assoc., vol. 7, p. 136.

Dr. C. A. Simpson examined 30 hogs at Atlanta, which were mostly from Tennessee, without finding any infected, and Dr. R. W. Steger examined 180 at Nashville, Tenn., all of which were also free. Dr. William Myers examined 330 hogs at San Antonio, Texas, finding trichinæ in but 2, or 0.6 per cent.*

Dr. H. J. Detmers has examined from August to December, 1883, for the Department of Agriculture, 3,331 at Chicago, of which 80, or 2.4 per cent., were found to be infected. Of this number 1,126 were from unknown districts of the West, 46, or 4.08 per cent., containing trichinæ; 50 were from Michigan, among which 4 contained the parasite; 831 were from Iowa, of which 19, or 2.27 per cent., were infected; 50 were from Dakota, of which 1 was infected; 520 were from Illinois, among which were 7, or 1.35 per cent., containing trichinæ; 304 were from Wisconsin, with but 2 infected, or 0.66 per cent.; 350 came from Nebraska, having but 1 infected, or 0.28 per cent.; 100 were from Minnesota, and were free from infection.

In the laboratory of the Department of Agriculture specimens from 300 hogs have recently been examined, and of these 5, or 1.66 per cent., were found to contain this parasite.

We have above the records of the examination of 18,889 hogs from various parts of the United States, of which 517, or 2.7 per cent., contained trichinæ. It is evident from these records that a considerable proportion of the hogs from some sections of the country are trichinous, while those from other sections are practically free from infection. While it may be difficult to outline the trichinæ districts and to trace the infected animals to the farms on which they were raised, it is believed that such a study would do much to clear up the origin of this infliction.
